For those who, like ourselves, are fortunate enough to have good friends familiar with the region, and keenly alive to its natural beauties and historic associations, weeks may be spent in making such daily excursions of a few hours each; nor should it be forgotten that, if seized by the spirit of unrest which characterizes most American travellers, the temporary resident of Lulworth desires a larger field of activity, he has within easy reach—a few hours by steamer, coach, or rail—the wooded recesses of the New Forest, the barren heaths and rugged "Tors" of Dartmoor, the flowers and fertile fields of Devon (which disputes with Dorset the title of the "fairest county of England"), the bleak but picturesque coast of Cornwall, and, but little further removed, the varied scenery of the Isle of Wight, the Channel Islands, and the Scilly Islands, any of which can be reached in less than a day.

I have already spoken of the ease with which we settled ourselves here. I desire to add, in conclusion, that it is not only comfortable and interesting to keep house here, but it is cheap. There are few householders or housekeepers of moderate means who do not, when summer approaches, have to consider not only where they would like to go, but also where they can afford to go. It may interest them to know that such houses as those occupied by our friends and ourselves may be rented for from $15 to $20 per week; that a good London cook may be had for $4 to $5 a week—not a *cordon bleu*, but nevertheless an excellent cook; a "house and parlor maid" (waitress and housemaid) costs $2.50 a week; meat and milk are about the same price as in Philadelphia or New York; vegetables are cheaper; mushrooms, lobsters, fish may be had almost for the asking; wines and malt liquors are, of course, much cheaper; cigars are to the cultivated taste unsmokable. The cost of hiring horses and labor is usually much less than at home. Four trunks and much small baggage are brought six miles over a hilly road for four shillings (one dollar); a pony and cart for the day is supplied at the same price; a pair of horses, a break or wagonette, and a driver cost about a shilling a mile; a fisherman goes out for a half day, sails a boat, keeps the lines in order, baits and unhooks fish for the ladies, etc., and, when asked his fee, wants to know if "a 'alf-crown" (62 cents) is too much! An upright piano is hired for two months and is sent fourteen miles across country and the same distance back again—charge, including cartage, £2 ($10.00). The entire expense of a small family for an average week, including the rent of the cottage, the wages of servants, the food and wines, the hiring of boats, horses, and wagons, the entertainment of one or two guests, may be put down at about £10 ($50). It could doubtless be made much less; but these figures will serve to indicate in a general way the economy of such a method as this of spending the summer. I have tried to show that in addition it is an attractive place, even to those who do not have to consider the details of their expenditure.

The people themselves are hearty, plain, simple-minded, hospitable folk, well deserving the adjective "homely" in its English sense, which is altogether complimentary. They speak a dialect which at its broadest is at first almost unintelligible, but gradually becomes more and more easily understood. Both their personal characteristics and their speech are well and fairly represented by the Dorsetshire poet Barnes (from whom I have already quoted) in the following verse:

"If you in Do'set be a-roamen,
An' ha' business at a farm,
Then woon't ye zee your ehle a-foamen,
Or your cider down to warm?
Woon't ye have brown bread a-put ye,
An' some vinny cheese a cut ye?
Butter?—rolls o't!
Cream?—why, bowls o't!
Woon't ye have, in short, your vill,
A-gliëd wi' a right good will?"

As to weather, the maximum temperature in our drawing-room has been 66 degrees F., the minimum, 62 degrees F. We are now having our first wet and stormy day. A strong southeast wind is blowing, and whistles around the cottage, beating the rain in sheets against the diamond panes of the windows and bringing with it the noise of the surf against the foot of the cliffs; but with a cheerful English coal-fire in the grate, a French novel, and an American cigar, a condition of what might be called cosmopolitan comfort is easily attainable. A carved and winged leather chair, big enough for Henry VIII., and possibly contemporaneous with him, procured from a corner of Woolbridge Manor House itself, by the expenditure of a trifling amount of American money (and transported six miles across the hills at an expense of one English shilling) keeps off draughts and conduces to physical inaction. The combination of outside weather and inside comfort must be held responsible for the length of this communication, which

you may regard as personal or may inflict upon your readers, as you deem best.

J. WILLIAM WHITE.

Correspondence.

A TARIFF ACCOUNTING.

TO THE EDITOR OF THE NATION:

SIR: In your comments on the Homestead affair you have suggested that something akin to a partnership relation exists in the protected industries between employer and employee as regards those benefits conferred upon them jointly by the tariff. Does not the incident, or tragedy, together with Mr. Frick's refusal to disclose to the Congressional Committee what profits the company was making, awaken also the inquiry, What right had Mr. Frick to withhold the information sought?

The protectionist theory now is that tariffs should be levied chiefly, not for revenue, but in the interest of certain favored industries. If we concede that it is sound public policy to turn money by legislation into the pockets of individuals or private corporations, whether the money be withdrawn from the public Treasury or from any lawful custody where it would remain except for such legislation, the question of quantity, of more or less, still remains for adjustment. So with the question of application or distribution of the fund. If a tariff may be too low, it may also be too high. The Government is charged with the duty, which it owes to the whole people, of determining the true rate, neither too low nor too high, at which tariffs shall be imposed. How can it discharge this duty unless it can investigate minutely the conditions and the interests to be affected?

If pensions are to be granted, a method of ascertaining the just claims of each applicant is prescribed along with the grant, and the amount to be awarded is carefully limited. If a Soldiers' Home is to be maintained, the appropriation is made commensurate with an ascertained want, and the Government sees to it that the money reaches the parties intended to be benefited. If the "poor Indian" is to be aided so that his unprotected industry shall not lead him into embarrassment or bankruptcy in competition with his white neighbor, a disbursing officer is provided, and only so much is given as the occasion calls for. The famous Blair Bill to promote the education of our Southern colored population provided for a disbursement that was considered by the friends of that measure adequate to insure the use of the money to be granted for the purposes intended. When valuable franchises were granted to the national banks, their business was subjected to the inspection of an official bank examiner. The expenditures for rivers and harbors, in theory at least, are measured by public necessity and disbursed with great exactness. All Governments, I believe, retain the power of visitation in the case of eleemosynary institutions founded or supported, in whole or in part, by public benefactions.

In nearly all these cases accounts are kept and the records are at all times accessible to the officers of the Government. The protected industries are the wards of the Government (shall I say infant or incompetent wards?) as much as any of the public or charitable interests just enumerated. Why should not the Government possess the power to call for books and papers, place its wards under oath and examine their ledgers? If these wards obstruct the Government in this investigation, they forfeit in the forum of morals all claim to its paternal care. Law ought not to give what morals withholds.

A system may be founded in error and yet be tolerated a long time because the public are used to it or are prejudiced in its favor, or because it may seem inconvenient to change or abolish it. A really beneficent system may be so defenceless against abuses as to speedily render it intolerable. Whether protection be the one or the other of such systems, two conclusions seem to be fairly deducible from the action of the Government in other matters:

First, it ought to be made a misdemeanor for any person to contribute to any political campaign fund any portion of the revenues derived from an industry aided by the Government. This provision should apply to those who receive bounties directly from the Treasury as well as those who are permitted to levy taxes on their fellow-citizens by means of tariffs.

Second, the Government ought to collect the information it needs in order to frame its tariff bills, in its own way and at its own expense. The secret work of the lobby is abhorrent. The work done by our consular service will not be accepted because it is partisan, desultory, and fragmentary; because it is largely done by incompetent and untrained hands and minds. The collection of information should be continuous and thorough. A commissioner should be kept constantly in Europe studying wages, the rate of interest, and the cost of materials and of living. Another expert should be constantly studying the question of ocean and inland transportation and insurance. Another at home should examine into wages, profits, and all the other cognate questions, and he should be clothed with power to compel the production of the necessary evidence. The appointment of these commissioners should be regulated by civil-service rules. Their tenure of office should be either during good behavior or for a long term, and their reports should, from time to time, be published and distributed at the expense of the Government.

L. J. NASH.

MANITOWOC, WIS., September 5, 1892.

[Our correspondent will find in the *Bulletin* of the American Steel and Iron Association for September 7 a defence of thirteen Pittsburg companies or corporations, and these the largest, which withhold, as was alleged in a Washington despatch, information "of vital importance" to Superintendent Porter for the issuance of the statistics of manufactures in Pittsburg. The *Bulletin* says the manufacturers in question take the ground that some of the interrogatories are "unnecessary and inquisitorial."—ED. NATION.]

THE MISLEADING MAINE BALLOT.

TO THE EDITOR OF THE NATION:

SIR: In your criticism of the Maine Ballot Act in the *Nation* of September 1 (No. 1418, p. 157), you make some assertions and draw some conclusions that seem entirely incorrect in fact and partisan in feeling, and go far towards confirming the theory of the many people who assert that the *Nation* is a party organ rather than an independent journal.

You say: "In all laws of the kind, except that of Maine, the blank spaces for the marks are placed before the names of the candidates—that is to say, to the left of them." Now I know not what the true theory may be, but to us here in the semi-cultured Northwest it has seemed that the proper place to indicate the voter's choice is at the right of the candidate's name rather than at the left of the office for which he is running. The only ballot acts which I have at hand are those of Wisconsin and Minnesota. That of Wisconsin (Ch. 379 Laws of 1891) was passed by the Republican Legislature of 1889, and amended by the Democratic Legislature of 1891, in such a way as to introduce the party-group modification; and, so far as one can judge by your description and diagram of the Maine ballot, ours is precisely like it. The Minnesota Act (Ch. 4 Laws of 1891) does not have the party-group feature, but provides for the mark at the right, and is substantially like the laws of Maine and Wisconsin, so far as the form of the ballot is concerned.

I am not a Democrat, and have not that abiding faith in the intelligence and virtue of the Democracy which characterizes many persons—and some otherwise independent newspapers—but I have sufficient confidence in the intelligence of the Democrats of Maine to feel certain that they will not be misled by the ballot described in the *Nation*. It would rather appear that the *Nation* has been deceived into the discovery and exploitation of a political mare's nest.

Very truly yours,

J. E. MCCONNELL.

LA CROSSE, WIS., September 3, 1892.

[Our comments upon the Maine ballot were based upon the diagram of it which we published and which was copied from a Maine newspaper. If our correspondent will read those comments again, he will find that we said that "some of the laws have the marks placed after the names, but the blank spaces are so arranged that a mistake is impossible." The blank spaces on the sample Maine ballot were so arranged that a mistake was easy and natural, and it was towards this aspect of it that our criticism was directed. The Minnesota law, like the Massachusetts law, provides for alphabetical arrangement of the names on the ballot, and puts after each name a blank square in which the mark is to be made, thus rendering any mistake impossible. The Wisconsin ballot has the space for marking placed after the ballot, but, unless we are very much mistaken, the groups of candidates are much more completely separated than was the case in the sample Maine ballot. If they are not, the law is in need of amendment. —ED. NATION.]

TO THE EDITOR OF THE NATION:

SIR: In Maryland the blank spaces for the marks on the official ballots are required by law to be on the right, that is, after the name, as is the case in Maine. The Democratic tickets are here always placed on the extreme left of the official ballot, and get whatever advantage there is from such an arrangement. I do not think that it amounts to much, however, although at first the Maryland Republicans, like the Maine Democrats, feared that it would. There are serious grounds of complaint against the workings of the ballot law in this State, but the requirement that the mark shall be placed after instead of before the name of the

person voted for has not proved in practice to be one of them. Very respectfully,

JOHN C. ROSE.

BALTIMORE, MD., September 6, 1892.

TWO OF NATURE'S NOBLEMEN.

TO THE EDITOR OF THE NATION:

SIR: George William Curtis was of such noble and distinguished character that mistaken statements as to facts connected with his career are deplorable and call for correction. One of our great morning dailies states that Mr. Curtis was a member of the firm of Dix, Edwards & Company, and paid the debts of that insolvent firm; another states that *Putnam's Magazine* failed, and that Mr. Curtis paid the debts of that enterprise. Neither of these statements as to Mr. Curtis is true.

After Dix, Edwards & Company and the Putnams failed, Mr. Curtis and a Mr. Miller established a publishing house under the firm style of Miller & Curtis. Mr. Francis G. Shaw, Curtis's father-in-law, became a special partner therein. Owing to some oversight on the part of the lawyers who drafted the papers, as to a proper publication of the limited copartnership, the creditors of Miller & Curtis informed Mr. Shaw, subsequent to the failure of Miller & Curtis, that they intended to collect all deficits from him, as a general partner. Mr. Shaw made good all such deficits, and Mr. Curtis thereafter reimbursed Mr. Shaw, taking the whole load upon his own shoulders. He accomplished the task after years of arduous labor.

With both parties, Mr. Shaw and Mr. Curtis, it was a case of *noblesse oblige*. Mr. Shaw attempted no legal defence; Mr. Curtis did not entertain the idea of taxing the generosity of his wife's father. Both men were the possessors of minds wholly imbued with absolute honor. That such minds have existed and do exist is the glory of our past and the hope of our future. CHAMPION BISSELL.

NEW YORK, September 1, 1892.

SHELLEY MEMORIAL SUBSCRIPTION.

TO THE EDITOR OF THE NATION:

SIR: Publicity has been given to details of the celebration, at Horsham, Sussex, England, of the centenary of Percy Bysshe Shelley, August 4, upon which day addresses were made, and a memorial tablet, bearing the poet's name, etc., was placed in the parish church.

The Shelley Committee, headed by Lord Tennyson, includes upon its list the names of George Meredith, W. Morris, Prof. Max Müller, Prof. Dowden, Prof. Jebb, Leslie Stephen, Stopford A. Brooke, Edmund Gosse, William Sharp, Theodore Watts, W. Besant, T. Hardy, Sir F. Leighton, Henry Irving, and other well-known representatives of letters and the arts in Great Britain. It has been decided that the most fitting memorial to the poet will be a "Shelley Library and Museum," to be established at Horsham, near the place of his nativity.

The library will include, in addition to general literature, all such works as may be specially connected with Shelley. In the museum a home will be found for personal relics of the poet.

To provide the needed funds, a call is made for subscriptions, and the readers and lovers of Shelley throughout the English-speaking world are invited to contribute. Any sums which may be sent to us, by check or postal-order, will be duly remitted to the Hon. Secretary, Mr. James Stanley Little of Horsham. Receipts will be promptly given to subscribers, and a public acknowledgment will be made from time to time in the literary and daily journals.

Contributions may be forwarded to either of the undersigned American members of the Committee.—Respectfully yours,

EDMUND C. STEDMAN,
64 Broadway, New York city.
RICHARD WATSON GILDER,
33 East 17th Street, New York city.

Notes.

THE announcement that Dr. Elliott Coues is preparing a new edition of Lewis and Clarke's narrative of their expedition to and beyond the Rocky Mountains, to be published in this city by Francis P. Harper, gives the perfect satisfaction which absolute fitness in the performer for his task always inspires. Dr. Coues has already published an exhaustive bibliography of this famous work. And since we are mentioning his name, we will call attention to an illustrated article of his, "Can Ghosts be Photographed?" in the September number of the *California Illustrated Magazine*. Dr. Coues does not answer this question, but he exposes effectively the humbug of the so-called spirit photographs, and declares: "I have yet to see one which, when I had ascertained all the facts in the case, did not prove to be bogus —a mere sham!" In this matter he explicitly differs from the too credulous Prof. Alfred Russel Wallace.

That a fourth edition of Mr. Henry C. Lea's 'Superstition and Force' should be called for is a gratifying evidence of appreciation by the most thoughtful part of the reading community. It has been laboriously revised by the author, and is now passing through the press. It will be published next month by Lea Brothers & Co. Mr. Lea's 'Formula of the Papal Penitentiary,' which has been unavoidably delayed, will appear soon afterward. In the background of preparation is a 'History of Auricular Confession and Indulgences,' for which a wide vogue may be anticipated.

'Memories of the Professional and Social Life of John E. Owens,' the actor, by his wife, with twenty illustrations, is in the press of John Murphy & Co., Baltimore.

Thomas Whittaker will shortly publish 'Christianity between Sundays,' by the Rev. Geo. Hodges of Pittsburg.

Macmillan & Co. promise a new edition of Andrew Lang's 'The Library,' a book all the more in request because out of print; a few copies will be printed on large paper. In the style of 'Cranford' and the 'Vicar of Wakefield' will be a new edition of 'Sir Roger de Coverley,' illustrated likewise by Hugh Thomson. In November will appear the first of the "Dryburgh Edition" of the Waverley Novels, from the interleaved copy on which Scott made his last corrections, and with notable illustrations.

"The Bookman's Library" is the alluring title of a series of volumes about to emanate from the office of the London *Bookman*. The first will be 'The Poetry of the *Dial*,' arranged under the names of the authors, from a copy marked by Emerson in the possession of Mr. Alexander Ireland. The second will be the Complete Works of Emily Brontë, in which 'Wuthering Heights' will be reprinted from the original edition, as will her poems. The *Bookman* completes its second volume this month, and has all the marks of a sound vitality.

Two more of the ten volumes of which Mr. Reginald Brimley Johnson's dainty edition of 'Jane Austen's Novels' will consist, have been issued, viz., Nos. iii. and iv., 'Pride and Prejudice' (London: J. M. Dent & Co.; New York: Macmillan). Each has its three vignettes and the prepossessing binding of its predecessors.

Though the yachting season is drawing to a close, we will not omit to record the first issue of 'The Official Register of American Yachting,' compiled by William B. McClellan (Boston: Estes & Lauriat). It assembles in one book the fleet lists of the yacht clubs of America. The yachts are arranged in club-groups, and the usual particulars of dimensions, age, etc., follow the name of each yacht. The book is a convenient shipmate for yachtsmen, is handsomely printed, and but little encumbered with advertisements. The list of private signals is very incomplete, and adds scarcely anything to the usefulness of the book, which has to compete with the older 'American Yacht List,' now in its eighteenth year (New York: Thomas Manning).

Ever larger becomes the bulk of the 'Publishers' Trade-List Annual,' and that just issued from the office of the *Publishers' Weekly* fulfils the twentieth year of this indispensable bound volume of catalogues of books now in print.

The twenty-first volume of "Les Grands Écrivains Français" is M. Réne Millet's 'Rabelais,' with a photogravure from the portrait at Geneva. M. Millet's book is less a biography than a study, less an account of the author's works than an admiring criticism of them; and for English readers, therefore, it is perhaps less likely to be serviceable than was Mr. Walter Besant's book, which was almost the only acceptable volume in Mrs. Oliphant's "Foreign Classics for English Readers." It is announced that the volume on Froissart will be written by Mme. James Darmesteter, formerly Miss A. Mary F. Robinson.

'Le Crime et la Peine,' by Louis Proal (Paris: Félix Alcan), is written as a review and refutation of the theories advanced by the anthropological school of criminalists. The author is a counsellor-of-law in the Court of Appeals at Aix, and his work has been crowned by the Academy of Moral and Political Sciences. His point of view is that of the practical lawyer, and his object is to show the falsity and danger of regarding crime as a physiological or social fatality, and of substituting physic and reform for swift and sharp penalties. His experience as a practitioner of law and a judge has convinced him that crime is not an organic infirmity, or, in any proper sense of the term, a pathological phenomenon which physiology and anatomy can explain, but results from "a depravity of the will." The so-called criminal type, which Lombroso has taken so great pains to construct, Proal regards as a fiction, and dismisses all the physical anomalies and abnormities ascribed to it as chimerical. Prof. Lombroso, by the way, is about to publish a work entitled 'Donna Delinquente,' or, Woman as a Criminal, a companion to his 'L'Huomo Delinquente'; and a volume on saints, in which the whole subject of hagiology will be investigated from a psychopathological point of view.

'Bestie Delinquenti' is the subject of a recent work by another Italian, Carlo D'Addosio, published at Naples by Luigi Pierro, with a preface by Ruggero Bonghi. It deals, of course, with the old and hardly extinct superstition of holding brute beasts morally responsible for their injuries to the human species, of formally trying them, and of executing judgment upon them. This is a curious chapter in the history of the human mind, of cleri-

calism and of jurisprudence, and has been often explored. D'Addosio's work is said to be both learned and light of style.

We have received from Signor Chilovi, the efficient Director of the National Central Library of Florence, a description of the new building for that important institution, whose collections embrace upward of 400,000 printed volumes and 380,000 pamphlets, 17,000 MS. volumes, 950 parchments, and 190,000 pieces of autograph letters, documents, etc., etc. This library receives the copyright deposits of all works issued in Italy. It lends books in the city and out of town. It is open day and evening, but books used in the evening must be ordered in the daytime. The new structure will be lighted by electricity, and will employ the telephone, elevators, and all modern aids to quick communication and delivery, for some of which Signor Chilovi acknowledges his indebtedness to our new National Library at Washington. It will have nearly four miles of shelves in a separate stack-room, in eight stories, averaging about 12 feet high on account of the climate, but dispensing with ladders; an ultimate capacity of 2,000,000 volumes is estimated. The reading-room is about 40 x 70 feet, with the desks and seats in amphitheatrical arrangement—an innovation. The reference library will number 2,000 volumes. A Galileo and a Dante chamber are among the special collections. The exterior will bear the statues of these two great Florentines, together with Machiavelli and Michael Angelo, who represent "tutto lo scibile umano," to quote the descriptive circular. The grand staircase will be adorned with a portrait fresco, "The School of Florence," after the manner of Raphael's "School of Athens."

In the September number of the *Educational Review* there is what may perhaps be accepted as an authoritative statement of the aims of the special Committee of Ten appointed at the Saratoga meeting of the National Educational Association. The Chairman of this Committee is President Eliot, and among the other members are the Presidents of Vassar College and of the Universities of Michigan, Colorado, and Missouri, Dr. William T. Harris, and the principals of several important high schools. The Committee is to consider the means of improving and systematizing the work of the secondary schools, not with a view to any uniformity in the curriculum, but to ascertain the weak points of the present disorganized condition. The attention of the Committee is to be directed to these inquiries: (1) what topics of each subject should be taught in secondary schools, and in what order; (2) what method of presentation is most efficient; (3) how many week-hours per year should be devoted to each subject taken up; (4) what tests of proficiency in every subject can be devised. Twenty-five hundred dollars were appropriated to meet the expenses of the investigation, the importance of which is obvious. In the same number of the *Review* there is a valuable paper by Prof. Hinsdale on the British device known as "Payment by Results"—one of the most unfortunate legacies of the late Robert Lowe.

The Chicago *Dial* makes the interesting announcement in its issue for September 1 that hereafter it will be published semi-monthly instead of monthly, and will take on several new features, without ceasing to be a purely literary journal—a "journal of literary criticism, discussion, and information." Thus, it already offers several articles, a poem, communications, "Chronicle and Comment," etc. One of the articles is upon the Chicago University, and there can be no doubt that the editor of the *Dial* will find himself greatly strengthened by the accession to the city of the scholars whom President Harper is calling about him. The reviews will continue to be both signed and unsigned.

We have received the first number of *L'Amérique Française*, a weekly illustrated paper published in this city under the editorship of Napoléon Thompson, who aims to create for the French of the United States a metropolitan organ, "Français de cœur et Américain de bonne foi." It is so American as to be strongly anti-English, and to accuse President Cleveland's Administration of having been always inspired by the "English idea" "in its most exaggerated Tory acceptation"! Needless to add that Mr. Thompson is an admirer of the grand old Republican party, and will work for it in the familiar mode indicated by his quotation from the Liverpool *Courier* "after it learned that the Cobden Club had succeeded in securing Mr. Cleveland's candidacy." This seems, perhaps, a shade droller in the language of Voltaire than in English.

The seventh number of *Petermann's Mitteilungen* contains an account of very recent explorations in Costa Rica, by Prof. H. Pittier. One of these was made in an Indian pirogue along the southwest coast for the purpose of finding harbors suitable for the development of a coasting trade. In the course of it the writer claims to have discovered many errors in the maps published in Washington in 1887-1889 from the surveys of the United States steamer *Ranger* four years before. He says that they deserve confidence only in their details, as of single harbors and bays, "but that beyond these the maps are often faithful copies of old maps with all their errors." In confirmation of this statement several instances of important errors are given, such as the omission of rivers as well as the insertion of one river at least which does not exist. Among the minor notices is one upon the province of Ferghana in Turkestan. Since the Russian conquest in 1876, it has increased largely in population as well as in the production of cotton, silk, and dried fruits. The editor, referring to the attempts of "The United States Board on Geographic Names" to establish a uniform spelling of these names, objects strongly to the arbitrary changes of foreign names which are officially established, as, for instance, Baireuth instead of Bayreuth. He adds that Germany, England, and France will hardly adopt these new spellings, and hence the prevailing confusion will only be increased by the action of the Board, which should, he hints, confine its efforts to securing the proper spelling of names in the United States.

A description of a journey into the interior of Iceland, by Th. Thoroddsen, is given in the August number. In it reference is made to the oases in the desert of volcanic sand at the foot of Mt. Hecla. These are constantly changing or moving on account of the violent sandstorms which rage there. On the windward side they are encroached upon by the sand, and all vegetation is gradually destroyed, while on the other sides the grasses take root and "in a surprisingly short time barren and unfruitful spots are changed into good pasture." Dr. O. Baumann sends a short account of his recent journey to the Victoria Nyanza, remarkable for the speed with which it was accomplished; he appears to have made some important discoveries, among them of a snow-clad mountain and a large salt lake. Of the latter Dr. Emin Pasha, in a report dated August 9, 1890, had already surmised the existence, from the number of aquatic birds, especially pelicans, in the almost waterless district of Ugogo to the south of the new lake. The object of Dr. Emin's last expedition is at length revealed by his companion, Dr. Stuhlmann. It was first to communicate with the Egyptians who had remained in the Equatorial Province and render them any needed assistance, and then to push through the continent by the Welle River to the Cameroons on the west coast. This was prevented by the want of a proper equipment of men and supplies for crossing the great forest. He denies the truth of the story that Emin left a great store of ivory when he evacuated his province.

According to a recent publication of the Danish Statistical Bureau, the census of Greenland made in 1890 showed a total population in that country of 10,516, of which 309 were Europeans, the remaining 10,207 being natives. During the past decade the increase has been 5 per cent., the greatest growth being in North Greenland. In one of the "colonies," that of Godhavn, the increase has reached 35 per cent. Of the European settlers, by far the largest number are found in the south. As has always been the case, the women greatly outnumber the men. This is especially true of Southern Greenland, owing to the fact that the milder climate allows hunting and fishing from the kayak to be carried on both winter and summer. During each of the last decades the number of accidental deaths in this occupation has averaged 200 in the south to 50 or 60 in the north. With regard to occupations, 1,668 persons are engaged in the whale and seal fisheries, 365 are ordinary fishermen, 33 are netters, 47 are hunters, and 3 cattle-owners, this last industry having been introduced in Southern Greenland during the past year.

The same work contains a number of interesting figures taken from the Icelandic census of November, 1890. In that year the population of the island amounted to 70,927. According to the censuses of 1880, 1860, 1840, and 1801, the population was respectively 72,445, 66,987, 57,094, and 47,240. This first falling off in the population is due, not to increased mortality, for during the last decade the births exceeded the deaths by 4,784, but to emigration, especially from the west coast. Curiously enough, a majority of the emigrants were women. This is also the case with the whole population. Only 25 per cent. of the female Icelanders are married, and only one-third of the whole population—a remarkably small proportion. Another unusual proportion is that of servants, who compose a quarter of the inhabitants—about twice the ordinary number. About two-thirds of the Icelandic people are engaged in agriculture, the next most popular occupation being fishing, and frequently the two are combined. Although there are only 269 foreigners living on the island, their number has trebled since 1880.

The women students at Oxford have thus far not scored such signal triumphs in the examinations as their sister students at the Cambridge colleges. Although the honor examinations have, with two exceptions, theology and medicine, been open to them since 1884, and several have obtained first-class honors in modern history and in science, only two students had until this year attempted the final classical examination. Both were from Somerville Hall, and both were placed in the second class, one in 1890 and one in 1891. It has been reserved for another Somerville student, Miss Penrose, as we lately recorded, to achieve the great distinction of a "first" in the final Classical School. At the same time a Parsee student, Miss Sorabji, has accomplished the still more remarkable task of taking a third-class in the examination for B. C. L., the

most difficult law examination of the University. Of the twenty-five men with whom this foreigner had to compete, ten failed altogether, two obtained seconds, and not one a first.

The two articles from the *Nation* on "The Cost of a Small Museum" and "The Slater Memorial Museum" at Norwich, Conn., have been reprinted as brief circulars, and will be sent on application to H. W. Kent, Curator of the Museum. They furnish, in compact form, just the information needed by heads of colleges or private individuals who are contemplating the establishment of large or small collections of plaster casts. The statistics of attendance of visitors to the Museum, by the way, continue to exhibit a gratifying degree of public interest in the collections. The Museum is open three days each week, and the average attendance is about 150 persons per week. On Decoration Day there were 428 visitors, on New Year's Day 150, on Labor Day 143.

—A writer in the September *Bookman* makes a shrewd guess at the authorship of the famous *Quarterly* criticism of 'Jane Eyre'—"If we ascribe the book to a woman at all, we have no alternative but to ascribe it to one who has, for sufficient reason, long forfeited the society of her sex." The fact has lately been made public that this comment was an affront to the Brontë family which, in their opinion, could be wiped out by blood alone, and that an uncle of Charlotte's set out for London with the express purpose of killing the reviewer. He was unable, however, to discover a victim for his fury, and, if the *Bookman's* guess is correct, would have been not a little embarrassed had he got access with his deadly weapons to the offender—a woman. Her personality is arrived at in the following way: The *Quarterly* article (December, 1848) did 'Vanity Fair' as well as 'Jane Eyre,' and—as both Becky and Jane were governesses—dealt also with the Report of the Governesses' Benevolent Institution for 1847. To conclude the paper, it was said, after enumerating the many hardships of the governess's lot, "There is something that would compensate for all this, and that is *better pay*." Now, a letter of Sara Coleridge's is printed in her Memoirs, dated March 31, 1849, which says: "Miss Rigby's article on 'Vanity Fair' was brilliant, as all her productions are. But I could not agree to the concluding remark about governesses. How could it benefit that uneasy class to reduce the number of their employers, which, if high salaries were considered in all cases indispensable, must necessarily be the result?" The reference seems beyond question. Miss Rigby (afterwards Lady Eastlake) was an intimate friend of Sara Coleridge's, and if the latter was mistaken in her ascription of the article in question, it is remarkable, as the *Bookman* says, that "the mistake should have been allowed to stand in every edition of her Memoirs."

—New light is thrown, alike on Bengali philology and on Bengali ethnography, by a paper in the July issue of the *Imperial and Asiatic Quarterly Review*. The writer of the paper is Mr. Charles Johnston, of the Bengal Civil Service. It is especially the District of Murshidabad to which he confines his remarks; and his conclusions regarding the origin of its inhabitants and the peculiarities of their language are, for the most part, very unexpected. Side by side, in Murshidabad, are found, we are told, three most distinct species of Bengali—that of the Brahmans and the classes directly under their influence, that of educated Muhammadans, and that of the great mass of the people, "the true Bengali language, the speech of the illiterate millions." In the first, fifty per cent. of the words are, in form, pure Sanskrit; of the second, the same proportion of the words is pure Arabic or Persian; and the third "is an agglutinative language, like the Dravidian tongues." It is on the last, of which philologists as yet know very little, that the writer particularly dwells, entering, as he does, into critical details which can here only be referred to. Passing from the linguistic aspect of Murshidabad, the essayist discourses of its population. And in this he distinguishes ethnic types of three marked varieties, the Indo-Aryan, the Indo-Chinese, and the Dravidian. Of these the most meagrely represented is the Indo-Aryan, the characteristics of which include fine features, an aquiline nose, small and well-formed hands and feet, and "a fair, almost European, complexion." The Indo-Chinese type is exemplified in from five to six hundred thousand persons, and the Dravidian in some two hundred thousand more than that aggregate. Curious facts are adduced for the purpose of showing that the Santalis, inhabiting Central India, who have hitherto been supposed to be Dravidian, are Indo-Chinese; a position, we believe, entirely novel. Brief as is Mr. Johnston's paper, it forcibly illustrates his contention, that, towards arriving at scientific truth, ethnographic research must be combined with philological.

—That generous cultivation of astronomical science in which the French surpass all other governments is largely due to the initiative of the late Admiral Mouchez, who was appointed Director of the Paris Observatory to succeed Leverrier on his death in 1877. While there are many great astronomers among the French, it will be difficult to find among them one capable of filling the place made vacant by the death of Mouchez, at whose initiative and under whose superintendency have been developed many works of the highest scientific significance. Chief among these, of course, is the comprehensive series of photographic maps of the stellar heavens, now in progress at a score of observatories in both hemispheres, and which originated at Paris in a movement started by Mouchez; for it was at his proposal the prominent astronomers of the world assembled in 1887 to discuss the best methods of executing so vast a plan. The end of the present century will barely see the conclusion of this international astronomical campaign. But the debt which French astronomy owes to Mouchez for the establishment of national schools for the practical cultivation of that science is hardly less. It is now seven or eight years since the inception of this project, and the French Governmental observatories, already about a dozen in number, receive their trained observers directly from the graduates. The creation and erection of new observatories, both at home and in the French colonial possessions, received his active support; and new observatories at Tahiti, Tananarivo, and Zaghouan were among the favorite hopes of his later days. The interest taken by Mouchez in the development of that novel and useful instrument known as the equatorial coudé, which vastly facilitates the nightly labors of the astronomer, will long be remembered. It is to be hoped that some progressive patron of astronomy may at an early day provide for the erection of a telescope of this type at an American observatory.

—The session of the Académie des Inscriptions et Belles-Lettres on August 6 was of especial interest. The principal address was made by M. d'Arbois de Jubainville, who compared at considerable length the Celtic oath by the sky, the earth, the sea, with the Greek oath in the 'Iliad.' The Celtic oath, which invokes natural objects and not the gods, M. d'Arbois holds to correspond logically to the primitive historic period, when there was no public punishment of private crime and no public enforcement of private contracts. Private vengeance was the law at that epoch, and the life to come was conceived of as being like this. There was no idea of a divine justice that should hereafter repair the wrongs of this world, such as is found in ancient Egypt, or in Rome under the Christian emperors. The Greek oath was identical with the Celtic, and a trace of the same adjuration is found in the Gospels, where swearing by the sky and the earth is forbidden because the sky is God's throne and the earth his footstool. The oath by the gods, according to M. d'Arbois, gives evidence of an intermediate period, when men had not yet come to the notion of a retribution in the life to come, but did believe that the gods would punish those who insulted them. The violation of an oath would be a distinct insult to the gods. M. d'Arbois de Jubainville, it is perhaps needless to say, is one of the very first modern Celtists. He is a professor of the Collège de France, and is the author in chief of the great "Cours de Littérature Celtique," five volumes of which have appeared during the last nine years.

— At the same sitting of the Academy, M. Halévy reported the result of his researches in the Museum of Berlin, where he has been of late engaged in the special study of two Semitic inscriptions of the eighth and ninth centuries before our era. They were discovered in the course of some diggings made by the German Oriental Committee at Zinjirli, at the extreme border of Northern Syria. The writing is so nearly effaced as to be almost unreadable. In spite of the difficulties, however, M. Halévy has been able to make out the *ensemble* of the inscriptions, which were made by two kings of Yadi, both named Panammu, who lived in the ninth and eighth centuries B. C. Panammu II. was a vassal of Tiglathpileser III., King of Assyria, whose exploits are recorded in the Old Testament. The language of the inscriptions is not Aramæan, as was first believed, but a Phœnician dialect closely related to the Hebrew, and only lightly influenced by the Aramæan. This tongue was spoken by the people whom the Assyrians called Hatti, whom we know as Hittites. The current opinion, then, that the Hittites were a non-Semitic people, must, if the conclusions of M. Halévy be followed, be definitively abandoned. The hieroglyphs found in many parts of Asia Minor must be considered of Anatolian, and not of Syrian origin. M. Halévy proceeded to point out the part that the Hittites took in spreading the Phœnician alphabet. It was from the Hittites, and not directly from the Phœnicians, that the Aramæans borrowed the alphabet of twenty-two letters which they carried into the East. An exact knowledge of the Hittite idiom explains the existence in Hebrew of grammatical forms and of words which are found neither in Phœnician nor in Aramæan. These are elements which were introduced into Hebrew at a time when Hittite colonies were in contact with the Israelites. M. Halévy finds in this a striking proof of the accuracy of the passages in Genesis which mention Hittite tribes as existing in various places in Palestine, and especially in Hebron, the dwelling-place of Abraham and the cradle of the Davidic dynasty.

—Richard Wagner's share in the Saxon Revolution of 1849, which compelled him to live outside of Germany for about twelve years (he wrote most of "Rheingold," "Walküre," "Siegfried," "Tristan," and the "Meistersinger" in Switzerland), has always been subject to dispute, because he himself avoided detailed reference to the matter in correspondence and conversation, and his associates also preserved silence. Mr. Dannreuther, who knew the composer personally, says that "the tale of Wagner's having carried a red flag and fought on the barricades is not corroborated by the 'acts of accusation' preserved in the Saxon Police Records." Richard Pohl, another friend of Wagner, who used to call him "the oldest Wagnerite," writes in his biographic sketch that "Wagner did not, as some have asserted, stand upon the barricades, but he undertook what I may call the 'musical conducting' of the Revolution: he led the signals and the alarm bells. He also organized the detachments coming in from the outside, and by his words encouraged them to the fight." The late Ferdinand Praeger, however, in his 'Wagner as I Knew Him,' tries to make out that Wagner took a much more active rôle in the Revolution than he and his biographers were willing to admit; and he quotes especially the evidence of a man named Hainberger to prove that Wagner did all sorts of disloyal things. This accusation has aroused the ire and polemic ardor of Mr. Ashton Ellis, editor of the London *Meister* (who has made considerable progress in his arduous undertaking of translating all of Wagner's prose works into English). After firing off a few preliminary newspaper articles, Mr. Ellis has gathered together his ammunition in a 72-page pamphlet entitled '1849: A Vindication' (Kegan Paul, Trench, Trübner & Co.). Mr. Ellis shows, in the first place, what justification for revolt there was, adding that "if Englishmen, so long ago as half a century, had been treated half so tyrannously, we should have seen a repetition of the revolutions which drove the Stuarts from their throne." He proceeds to quote a document unearthed by him which makes it more than probable that some of the deeds of which the composer of "Lohengrin" was accused were done by a journeyman baker named Wagner. He beards Count Von Beust in his autobiographic den, and tells him plainly and frankly why he does not believe the report he gives of his interview with Wagner, in which the latter was charged with having set fire to the palace. There are certainly many suspicious circumstances about Von Beust's statements, including the positive misstatement that Wagner had been condemned to death *in contumaciam;* upon which Mr. Ellis comments: "However much Von Beust might have approved of this summary method of dealing with distasteful absentees, even the Saxon authorities did not dare to go so far, at least in the middle of this century, as to condemn a man to death *unheard.*" But it is against Praeger that Mr. Ellis chiefly directs his criticisms, and readers of Praeger's book would do well to follow it up with a glance at Mr. Ellis's pamphlet.

—One bit of testimony has escaped Mr. Ellis's eagle eye. In the *Deutsche Rundschau* for May and June, 1887, there appeared an article by Frau Wille which contained interesting details regarding Wagner's life at Zürich. She relates that one day Minna (the composer's first wife) said in regard to the Revolution: "My husband did not commit any wrong. He only looked from the tower for the detachments coming from the villages to assist the townfolk. He did *not* stand on the barricades, as was said of him; did *not* carry a rifle; and could save himself only by flight when the Prussian troops moved into Dresden." After all, since Wagner himself admits, "I was actively engaged in the revolutionary movement up to its final struggle, and it was a pure accident that I, too, was not taken prisoner," it seems to be immaterial just exactly what he did; and certainly no American will feel inclined to throw a stone at a man who fought for such things as trial by jury, political representation, and freedom of the press.

JULIAN'S GIDDINGS.

The Life of Joshua R. Giddings. By George W. Julian, author of 'Political Recollections.' Chicago: A. C. McClurg & Co. 1892.

Now that Mr. Julian has written the Life of his father-in-law, we may congratulate ourselves that he waited till he was seventy-five years old; for it so happens that there is a ripeness in his judgment which he could not have had before, and that he sees the events and persons of his scene in a perspective which assigns them their relative importance. Then, too, it is no little matter that he has had the terrible examples of several biographers of anti-slavery leaders to whom it has seemed impossible to do justice to their heroes without claiming everything for them, and bringing a railing accusation against all who had seemed to share with them the glory of the battle. There is not a particle of these things in Mr. Julian's book. It is written with a double modesty—that proper to the author and that proper to the man of whom he writes. His nearness to Giddings as his son-in-law, and his own part in the scenes which he describes, would have excused occasional lapses into a more subjective manner, but he has chosen to efface himself as far as possible. It is significant of his habitual course that, in speaking of the election of 1852 and of John P. Hale's 156,000 Free-Soil votes for the Presidency, he does not mention the fact that he received as many himself for the second place.

His modesty for Giddings is nowhere more apparent than in his treatment of John Quincy Adams, who for ten years was Giddings's anti-slavery leader and at times his sole companion in the lower house of Congress. To belittle Adams that Giddings might be magnified, would have been the policy of the average biographer; but Mr. Julian keeps so clear of this that, in his enthusiasm for Adams, Giddings is at times forgotten. The two men, alike in their anti-slavery ardor, had much of difference. Adams was already seventy-two when Giddings entered Congress at the age of forty-three. Their culture and experience were as different as their years—Adams's remarkably complete and broad; Giddings's as remarkably narrow and imperfect. But almost from the start Giddings's anti-slavery course was the more thorough and consistent. He was for abolishing slavery in the District, while Adams still refrained; and, in Winthrop's contest for the Speakership, he "voted agin' him" with Palfrey, while Adams's support of him was at once the closing act and anti-climax of his long political career. But Mr. Julian does not make the least attempt to economize these circumstances for the comparative glory of the younger man. They are set down as necessary to a right understanding of the situation in which Mr. Giddings was involved.

Joshua Reed Giddings was born at Athens, Pa., October 6, 1795, but spent his childhood in Canandaigua, N. Y.; and when, in 1805, his father moved to Ashtabula Co., Ohio, there was too much work to be done for the boy to be either idle or at school. His early education was well-nigh "a cipher with the rim removed." But so diligent was he in private study that at the age of nineteen he was thought capable of teaching school, and, by managing to keep ahead of his scholars, he justified the opinion of his friends. At twenty-three, having picked up a little Latin, he began to study law, and three years later entered on the practice of his profession. His six feet and two inches were an adjunct of his legal furnishing that was not to be despised. Schiller's opinion that the immortals never appear alone had a fresh illustration when, in 1833, Benjamin F. Wade became a partner; but when we read that a "lack of self-confidence" kept him to the office-work, while Giddings argued their cases in the courts, we are incredulous of his identity with the "Ben" whom afterward we knew. The firm enjoyed a great success and put their earnings into Western lands, which the financial crash of 1837 made a ruinous investment. Upon broken fortunes broken health soon followed, and life seemed to have already done its best for Giddings when his real life began. In 1838 he was elected to the Twenty-fifth Congress to fill out an unexpired term; and that he held the seat until the expiration of the Thirty-fifth Congress, March, 1859, when we consider the political changes of those twenty years, is eloquent of the impression made by Giddings's character on his constituents.

Before entering on his Congressional career, Mr. Julian gives a brief history of that slavery question which was to engross the bulk of Giddings's energy as time went on. It does not seem possible that it engrossed it to the extent indicated by Mr. Julian. He has written an account of Giddings's part in anti slavery legislation, and if Giddings took any considerable or creditable part in other matters, Mr. Julian has passed it over as of no importance. His account of the slavery question up to 1838 is mainly notable for its difference from several accounts written within the last few years mainly to show that slavery was dying out in the most lovely manner until the abolitionists began their agitation. Certain incidents to the contrary notwithstanding, Mr. Julian asserts "the unmistakable trend of the National Government towards slavery in the earlier and better days of the Republic," and that it "steadily grew stronger," while the early anti-slavery societies became less and less. He makes a singular mistake in naming Whitefield with Wesley as a "thorough-going abolitionist," when in fact he was as much in favor of slavery as Wesley was opposed to it, and did more than any one else to fasten it upon Georgia in the teeth of Oglethorpe's earnest opposition.

It is an interesting fact that it was from Theodore D. Weld, who still enjoys a wonderful old age, that Giddings got his earliest anti-slavery inspiration. He had heard him speak several times in 1837, and had been so greatly moved that he had formed an anti-slavery society. This experience determined his course for the next ten years, during which he was a Whig abolitionist, or at least an abolitionist Whig. Elected by the Whigs, he clung to them with desperate tenacity. How he could support Harrison in 1840 and Clay in 1844 is a truly marvellous thing; but early in his Congressional career he arrived at an interpretation of the Constitution radically different from that of the abolitionists. It was the interpre-

tation, "Freedom national, slavery sectional," which afterward became the watchword of the Republican party; and no other did so much as he to fix that interpretation in the men by whom the victories of the Republican party were assured—and who had no better luck than he when brought to book by the disunion abolitionists. "The starting-point and fundamental idea of his exposition was that slavery is the concern of the States in which it exists, with which the Federal Government has no Constitutional right to interfere in any way" (p. 134). "The faithful and consistent application of the principle of Federal non-intervention with slavery was the controlling aim of his public life; and his interpretation of it invested it with the interest of a political discovery" (p. 136). The second of these statements does not impress us as very happily expressed. Giddings never wasted a moment in preventing the hostile intervention of the Federal Government with slavery. The Southern slaveocrats and Northern doughfaces could be trusted to take care of that. All his energy of thought and will, all his fertility of resource, went to the prevention of any Federal intervention with slavery favorable to its life and growth. To prevent Federal complicity with slavery was his being's end and aim, and Mr. Julian has given a wonderfully interesting history of the occasions—and they were many—when he detected that complicity in some foul hiding-place and dragged it forth into the light of day. It is a pity we could not have the history of these occasions in Mr. Giddings's words. When he first went to Washington he kept a journal, and the extracts from it are immensely interesting and valuable; but they do not continue long, otherwise they would have been a remarkable pendent to John Quincy Adams's journal of the same period, and a memoir of equal service to the historian.

He took his seat December 3, 1838, and in less than a fortnight he had gauged the temper of the pro-slavery party and prepared a resolution calling for information concerning slavery in the District of Columbia. A letter from W. H. Harrison on the 11th of the same month shows that the present incumbent's management of his own canvass is an inherited audacity, though intellectually and morally the letter is perhaps the smallest ever written by a Presidential candidate. On February 7, 1839, Clay made his famous declaration that "two hundred years of legislation have sanctioned and sanctified negro slaves as property," and on the 21st Giddings made his first anti-slavery speech. From that time forward he was unflinching and persistent in his resistance to pro-slavery aggression, with its revivals of the slave trade, its slavery and slave-auctions at the national capital, its greed for new territory, its suppression of free speech and the right of petition. Into every form of its Protean transformation he followed it with a courage that subjected him to frequent insult and often put his life in jeopardy. It would appear that there was less joy of battle in his heroic service than has been commonly supposed. He did not relish misrepresentation and abuse, nor even the hatred of unworthy men; and more than once he was resolved on retiring from the conflict, but his resolve was overborne.

The Liberty party in 1840 and 1844 had for him no attractions. Somehow he convinced himself that he could safely vote for Harrison and Clay. The latter had for him a powerful fascination. Mr. Julian gives much attention to Giddings's refusal to sustain Winthrop for the Speakership in 1847—not too much, perhaps, considering the long controversy that grew out of it, and how deeply Giddings's feelings were engaged, and what maledictions of the Whigs his action brought upon his head, and their influence in absolving him from the partisan allegiance by which he had been held too long. In 1848 he was an eager adherent of the Free Soil party, and Mr. Julian first met him at the Buffalo Convention which nominated Van Buren and Adams. An interesting feature of these years is Giddings's correspondence with Sumner, who was a private citizen until 1851, but for whose opinions Giddings's regard was as complete as if Sumner had already reached the measure of his fame.

People with short memories will find many surprises in these pages, some of them full of warning and rebuke and instruction in righteousness. We are permitted to believe that Mr. Julian has taken a certain pleasure in arranging some of these, though every one of them is a natural incident of his recital. We seem to read between the lines, "If I did not remain in the Republican party as long as some others, I got there in good season and stood firmly for the highest things when many fell away." Think of Horace Greeley supporting Gen. Scott in 1852, while William Cullen Bryant, and even Robert Rantoul, supported Franklin Pierce! How strange it seems that Charles Sumner could ever have looked to Tom Corwin as the standard-bearer of the Free Soil party! But it is the rage for compromise and reaction that overtook the Republican party between the defeat of Frémont and the election of Lincoln that is the most miserable of these revelations. It was a natural sequence to the support which the Crittenden-Montgomery Amendment—by which Kansas might have been admitted as a slave State—received from every Republican Senator, with one exception, and every Representative: Giddings, albeit with horrible misgivings, going with the rest. But for that lamentable blunder he made large amends in the next years, when the New York *Tribune* was openly for "the disbandment of the Republican party and the formation of a combination against the Democrats composed of Republicans, Douglas Democrats, Know-Nothings, and Whigs" (p. 351), and when there was abundant following of that inglorious lead. The subjection of principles to politics had cost Giddings his Congressional nomination in 1858, and it was a very modest recognition of his great abilities and splendid character that assigned him to the Consul-Generalship of Canada, a position which he held until his death, May 27, 1864.

The judgment of Von Holst is final when he writes, speaking of the principle of Federal non-complicity with slavery, "To Giddings, more than to any other person, belongs the credit of having, with full consciousness, made it the constitutional basis of his entire warfare against the slaveocracy, and of having applied it with a consistency never before attained to all questions to which it was pertinent." Mr. Julian, never excessive in his estimate of Giddings, says, "He was wholly wanting in genius." Yes, unless there be such a thing as genius for character, for righteousness, for devotion to a sacred cause. Every reader of Mr. Julian's book who knows Lowell's early sonnet to the stout-hearted Giddings will expect to find it at the end, and there it is—equally honorable to the poet who wrote and the hero who deserved the praise.

The Barren Ground of Northern Canada. By Warburton Pike. Macmillan & Co. 1892.

On Canada's Frontier. By Julian Ralph. Harper & Bros. 1892.

Mr. Warburton Pike is a traveller of a species unknown until quite recent years. During the first quarter of the century a man who had visited the principal capitals of Europe was accounted a traveller. In the next generation the standard was raised considerably, and some acquaintance with the Indies, East or West, was looked upon as essential. Then came steamers and railroads in every direction, and in the third quarter no one could be regarded as a traveller who had not followed a well-beaten path round the world. But the *fin de siècle* traveller scorns palace cars and twin screws. If he fails in the search for some peak unascended by man, he contents himself with a country known only to Indians or Esquimaux, and he spends weeks of semi-starvation in the society of villanous half-breeds in order to slay a few musk oxen. Rare as these animals are, the cynic may be pardoned if he raises the question whether it is worth while to give up civilization for a couple of years in order to reach them. But the traveller of Mr. Pike's species would not hesitate for an answer. He would say that he has slept under the stars night after night, with the thermometer from 40 degrees to 60 degrees below zero, and has enjoyed a more refreshing and a healthier sleep than in St. James's Street. He would tell you that some of the most marvellously beautiful sights in nature can be seen only by him who travels and camps out in the far north in early spring or late autumn, and that no orator at Washington or Westminster is as interesting as an Indian telling stories over the camp fire of those remote days when the animals could talk as well as men.

We probably all possess, in greater or less degree, the inherited instinct of the chase, though it is commonly warped and blunted by the exigencies of city life; but only the keenest hunters will voluntarily abandon the cooking that is familiar to them, and run the risk of living for days on bits of leather softened with grease, in order to shoot a particular animal. Mr. Pike not only is a keen sportsman, but has the art of telling a story in simple yet graphic language, and his book is decidedly interesting, unadorned though it be by illustration of any kind. As he had no instruments with which to make observations, his long journeys do not add to the sum of geographical knowledge, yet he reached a point on Lake Beechey within sixty miles of the Arctic Ocean, through a country unexplored by white men since the days of Sir John Franklin.

Except for the strong love of nature and of camping out in midwinter with British America for a bedroom, Mr. Ralph has not much in common with Mr. Pike. In his journeyings he had the immense advantage of a companion in the person of Mr. Frederic Remington, whose clever sketches add much to the reader's enjoyment of Mr. Ralph's text. Mr. Pike is a serious person, and takes his pleasures sadly, as becomes a Briton, whereas Mr. Ralph is gifted with a sense of humor, and one can imagine that under provocation he might, like Jeffrey, speak disrespectfully of the equator. Moreover, when he goes into the backwoods he does not propose to live on his moccasins, with or without grease, but keeps within reasonable distance of a railroad and takes a good cook with him. But then Mr. Ralph is not every inch a sportsman—by several inches

—and it is not borne in upon him that his mission in life is to shoot a musk ox. He is satisfied with such moose and caribou as fate sends in his way, and he keeps his eyes open for many other things in Canada besides sport. He becomes intimate with the Blackfoot tribe of Indians and with the celebrated missionary Father Lacombe, who has spent half a century among them; and he reaches the conclusion that it is the railroad that demoralizes the Indians, and that the degradation of the Canadian Indians has come later than that of our tribes merely because the Canadian Pacific is newer than our transcontinental lines. Before that road was built the Blackfeet lived, fought, and died as their forefathers had done, whereas now they don't fight, but they live and die like dogs. This is rather a melancholy view of the Indian question, but unfortunately there can be little doubt of its truth.

In regard to the climate of Canada, Mr. Ralph makes a discovery which others have made before, but have failed to record in equally vivid language. He says that the reason the people do not suffer from cold is that it is a country "where every one puts on everything he owns—all his stockings at once, all his flannel shirts and drawers, all his coats on top of one another—and, when there is nothing else left, draws over it all a blanket suit, a pair of moccasins, a tuque, and whatever pairs of gloves he happens to be able to find or borrow."

Mr. Ralph gives a most interesting account of the growth of that remarkable association which Charles II. chartered in 1670 as "The Governor and Company of Adventurers of England trading into Hudson's Bay." The hunters used to say that the letters H. B. C. on the company's flag stood for "Here before Christ," because some of the posts are so remote from civilization and have been established so many years that their origin is lost in obscurity. Yet, far north as they are, there is no good reason for believing, as Mr. Ralph seems to do, that the Company will some day employ its servants in the search for the north pole. No doubt their experience of the climate would be useful in such an expedition, but the whole policy of the Company is becoming more commercial and less adventurous as the years go by. The factors in charge of the different posts are much more interested in furs than in scientific investigations, and their aim is to make money for the Company and to modify as far as possible the hardships of their own tedious existence. A good instance of this is the case of a factor stationed far up on the eastern side of Hudson's Bay who makes a gallant effort to maintain the habits of London life in that remote region. He has a complete set of the London *Times* sent him by the single mail that reaches his post in the course of a year, and each morning he reads the paper of that day in the preceding year!

Mr. Ralph is full of enthusiasm about British Columbia, which he calls the El Dorado of Canada. He expatiates on its enormous mineral wealth, the development of which is as yet in its infancy, on its magnificent trees, on its stupendous mountains, and on its rivers crowded with salmon. The story of the stage-coach which was upset by the fish banking themselves against it when it was crossing a ford, may possibly be an exaggeration, but photographs have been taken showing the fish going up the river like a tidal wave which are quite as wonderful and yet true. Of all these things and of many more, which we have no space to refer to, Mr. Ralph writes instructively and in a pleasant style. Many of his chapters have already appeared in *Harper's Magazine*, and they are well worthy of reproduction in their present permanent form.

Industrial Freedom: A Study in Politics. By B. R. Wise. Cassell Publishing Co. 1892.

THE author of this book is a native of Australia, and has been, he tells us, for seven years engaged by the side of Sir Henry Parkes in the forefront of an active political controversy with the protectionists of New South Wales. In this way he claims, and we think justly, to have gained an exceptional familiarity with the modes of thought and expression that win favor for protection among voters. This special knowledge he has used to frame a complete and scientific statement of the case for free trade, from the point of view of one who is addressing himself to the voters of a democratic country. While a considerable part, and by no means the least interesting part, of the work is devoted to a comparison of the results of free trade in New South Wales with the results of protection in Victoria, the residue contains a lucid and thorough examination of the claims and merits of the rival policies, which is as instructive reading for the voters of France or of the United States as for those of Australia.

It is contended by the author, we incline to think correctly, that free-traders have made a mistake in directing their arguments principally to the effect of their policy upon the production of wealth, instead of to the question of its effect on wages. When we consider that the Democratic party, in framing its platform for this critical year, came near committing the extraordinary blunder of conceding that a protective tariff could raise the wages of American laborers, it certainly cannot be denied that our education upon this subject is incomplete. The attention given by Mr. Wise, however, to this aspect of the question is due to the fact that he was at one time associated with the late Arnold Toynbee, and is affected with his enthusiasm in the cause of improving the condition of the poor. Like most of his school, he is inclined toward socialism and repudiates the *laisser-faire* doctrine; but he demonstrates that protection fails to satisfy the conditions of legitimate State action. His argument is, therefore, of peculiar importance for those who are misled by the claim that protective tariffs improve the condition of the laboring classes. This class includes in this country almost all protectionists who are not pecuniarily interested in preventing foreign competition; and such of them as are open to conviction will do well to study Mr. Wise's elaborate exposure of a particularly impudent fallacy.

We cannot undertake to analyze the argument contained in this book, which is of course in the main familiar to students of economics, further than to say that much is made of the distinction between the economic and the political aspect of the question. As Mr. Wise patiently shows, this distinction is almost invariably ignored by protectionist writers, who thus constantly shift their ground according to the exigencies of discussion. Another feature of value is the historical résumé of national policies, which brings out clearly the difference between the old and new forms of protection and exposes the exaggeration of the protectionist revival. In this connection the motives and expectations of the early free-trade leaders in England, which are now so often misrepresented, receive a correct statement. The recent revival of protection in Europe is explained as due to the growth of "militarism" consequent upon the development of national feeling—a view which is very ably presented. As we have already said, the repudiation of free trade by the British colonies under the lead of Victoria is explained with much interesting detail.

We cannot resist citing, as illustrating the curious manner in which economic disputants have shifted their positions, a passage taken by Mr. Wise from one of Mr. Webster's speeches. He said, in discussing the duty upon iron—and it may be well to mention that prior to 1816 there was no protection for pig-iron, although our iron products in 1810 were valued at $70,000,000—that it was unwise to attempt to force our labor to produce what was produced more cheaply elsewhere. He continued:

"We have been asked . . . in a tone of some pathos, whether we will allow to the serfs of Russia and Sweden the benefit of making our iron for us. Let me inform the gentleman that those same serfs do not earn more than seven cents a day. . . And let me ask the gentleman further, whether we have any labor in this country that cannot be better employed than in a business which does not yield the laborer more than seven cents a day? . . . The true reason why it is not our policy to compel our citizens to manufacture our own iron is, that they are far better employed. It is an unproductive business, and they are not poor enough to be compelled to follow it. If we had more of poverty, more of misery, and something of servitude; if we had an ignorant, idle, starving population, we might set up for iron-makers against the world. . . . Multitudes of persons are willing to labor in the production of this article for us at the rate of seven cents a day, while we have no labor which will not command, upon the average, at least five or six times that amount. The question is, then, shall we buy this article of these manufacturers and suffer our own labor to earn its greater reward; or shall we employ our own labor in a similar manufacture, and make up to it by a tax on consumers the loss which it must necessarily sustain?"

This quotation, which suggests that our modern tariff-reformers have an unused arsenal in the debates of their predecessors, is a sample of the interesting material that Mr. Wise has collected and arranged. His book is prefaced with a good analysis, but we are sorry to say that it lacks an index, which is, in view of its character and aim, a most serious blemish.

The Odyssey of Homer. Edited by Arthur Platt. Cambridge: University Press; New York: Macmillan.

MR. ARTHUR PLATT, who has been working for a number of years at Homer, and who is well known to all who follow the course of the English periodicals that are concerned with classical philology, is responsible for a new edition of the 'Odyssey,' such as might have been expected from the notice of Van Leeuwen and Da Costa which he wrote some years ago in the *Classical Review* (ii., p. 124). This 'Odyssey' is a part of "The Cambridge Homer," and in this Cambridge Homer a banner is set up which is suspiciously like a battle-flag. "The principle on which this edition is made," says Mr. Platt, "is that of going back, as far is is reasonably possible, to the original language of Homer." To be sure, the device is not strange to those who are acquainted with the drift of Homeric study, and there is a qualification in the heart of it that detracts from the boldness. In fact, Mr. Platt has to admit that his aim is ideal, and the motto he has chosen from Epictetus is interpreted to mean that, if his text cannot be Homer, it shall be as like him as he can make it. With this end in view, Mr.

Platt shows a certain irritation at Dr. Leaf's objection that, "however many corrections we make, we cannot be sure that we have got all, and therefore it is better to print none of them." "This," he says, "is equivalent to saying that no bread is better than half the loaf," and it is clear that Mr. Platt would have no sympathy with those despondent scholars who look dolefully at the slow progress of the Spelling Reform Association.

He evidently expects to encounter persecution at the hands of English scholars who have a strong "prejudice against laying hands on the sacred text," and he is prepared to meet it. He is ready to be offered up for the holy cause of the digamma and for the dactylic glory of the resolved diphthong, and has put on his armor to do battle in the train of Wackernagel against the hoary iniquity of the contraction and distraction of vowels. His attitude is a trifle too heroic. Many of the points are not novel, many of the changes he has made are recommended as theoretically correct in our school-books, and whatever English scholars may do, American scholars (who are almost always men of open mind) will receive with sympathy Mr. Platt's attempts to translate theory into practice. Some of the resolutions which he notes are found in our recent texts. Ἀτρείδης has been familiar since Bekker's day. Few would be shocked at αἰδιόιος and κόλος. It is possible, however, that some might boggle at ἀρένυια for ἄρνυια, and prefer their Homeric breakfast under the form of ἄριστον instead of the jigging ἀίριστον; and here and there a Philistine may be heard to say that, if one is going to give up the old tradition and elide -οιο, why is not the elision more systematically applied?

One interesting feature of the edition is the publication for the first time of a number of MS. emendations by Bentley; and, as if that were not a compelling charm, the volume is so attractive in appearance that old-fashioned scholars and new-fashioned alike must have been tempted to slip it into the satchel for the holidays.

BOOKS OF THE WEEK.

Anson, Sir W. R. The Law and Custom of the Constitution. Part I. Parliament. 2d ed. Oxford: Clarendon Press; New York: Macmillan.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 22, 1892.

The Week.

THE Presidential campaign continues to be unprecedentedly quiet. One after another of the dates set by the politicians for the outburst of enthusiasm has passed. At first they were waiting for Congress to adjourn, as the veriest tyro knows that it is impossible to rouse the country while Congress is in session. Then, when Congress did adjourn, they explained that the extraordinary heat was chilling the political impetuosity of the nation. Afterwards it was the President's letter that we must wait for before the pent-up enthusiasm could break loose. Then, when at last everything seemed propitious, the backwardness of the campaign was accounted for by the cholera scare. That has now passed away, but the politicians remind us that it is really absurd to expect imposing demonstrations of the immense interest of the people in the pending election until after the "crops are gathered in." When they are, we are now told, there will be terrible excitement. But we fear these successive adjournments are ominous, and that November will be upon us without a clearly developed political paroxysm being anywhere discernible. People act as if their minds were firmly made up, or as if they were highly indifferent and resolved to remain so. All these indications certainly favor Democratic success.

Republican organs are inclined to be somewhat downcast over the small attendance at their League Convention at Buffalo on Thursday. It had been advertised as the biggest and altogether most extraordinary gathering of the sort ever held, but rather less than half the delegates expected were present, and the spectators were so few that President Clarkson did not think it worth while to make his address. This is solemnly accounted for by the dread of cholera. The Westerners would not come to Buffalo lest they might catch the infection from this city. Moreover, it is said that "the delegations from some States were lured off to Niagara Falls to see the great cataract." But we see no occasion for the gloomy view of the meeting taken by these despondent Republican papers. They ought to remember how much they suffered from the unbounded enthusiasm which marked their canvass in Vermont and Maine, and be thankful for the absence of anything of the kind in this State. Don't they know that it is precisely such disappointments as these that make the party "wake up," "take off their coats," and "force the fighting along the whole line"?

One result of the Maine election is very significant. The People's party, as the Nationalists in that State called themselves, made an active campaign, Bellamy himself taking the stump; and before the election the leaders were loudly claiming that they would poll at least 15,000 votes. Returns from all but a few scattering towns give them only 2,934. As this total also includes most of the Labor vote, which amounted to 1,296 in the last previous election, it is pretty evident that Maine "has no use for" Bellamyism, as was shown to be the case in Massachusetts last year, when its ticket secured only about 3,000 votes out of nearly 325,000.

Although the Prohibitionists stand no chance of carrying even a single Congressional district in the whole country, it is a matter of much importance to the politicians of both parties whether their vote this year is to maintain its previous size. So far as the Vermont and Maine elections cast any light upon this question, they indicate that the Prohibitionists will gain rather than lose ground next November. In Vermont they cast 1,650 votes for their ticket, against only 1,372 in September, 1888, and in Maine 3,383, against only 3,122 four years ago. This gain, though small in each State, is significant because it was secured notwithstanding the fact that the Republicans had done nothing to offend the Prohibitionists, while in Maine their support of the amendment to the Constitution might have been expected to draw some back to their old party. If the Prohibitionists can gain strength under such circumstances, there is every reason to suppose that they will increase their poll much more largely in States where the Republicans used to bid for their support, but have now turned their backs upon them. One such State is Indiana, where in 1888 the Republican platform denounced the saloon and favored local-option legislation, whereas this year not a word is said on the subject; and another is Iowa, where four years ago the Republicans congratulated the people on having secured "the best prohibitory law in the United States," and declared that "no backward step will be taken on this question," while this year they have ignored the matter of prohibition entirely, although the Democrats are committed to a repeal of the law as soon as they get the power.

One of the most bitter opponents of ballot reform in the whole country has always been the Cincinnati *Commercial Gazette*. It is therefore no surprise to find it saying of the small Republican majorities in New England this month, that "the lightness of the vote is doubtless to a great extent attributable to the Australian ballot system, which has disfranchised more citizens of all parties than any other law that has ever been adopted in the politics of the country." But the *Commercial Gazette* is mistaken in saying that the Australian ballot system disfranchises "citizens of all parties." It is only the Republicans who suffer from it. In Vermont, for example, the Democrats polled 19,526 votes this year, against 19,527 four years ago; and the Prohibitionists 1,650 now, against 1,372 then—the only disfranchisement being of Republicans, who cast 48,522 ballots before the new voting system was adopted, and only 39,190 after that.

While so many Republican organs are calling for the repeal of Australian ballot laws on the ground that they hurt their party, it is a great satisfaction to find a prominent newspaper of the party which says that the new system is a good thing for the country, and that it must be sustained for that reason, even if Republicans do suffer from it. Such a newspaper is the Lewiston *Journal*, edited by Congressman Dingley. The *Journal* was a most earnest advocate of ballot reform when Boutelle's followers were trying to defeat it in the Maine Legislature, and it stands by it now that the Republican majority has sunk so low under it. Of the good effects of the system it says: "We have never seen so orderly and satisfactory elections in our cities as we had on Monday. The polling-places were at no time crowded, the ward heelers were out of business, there were no brawls, and everything passed off serenely, even in wards where heretofore it has been as much as a man's life was worth to get to the polls." As for the objection that so beneficent a change "hurts the party"—and it must be kept in mind that in Lewiston itself the Democratic plurality was increased from only 9 two years ago to 257 on Monday week—the *Journal* says:

> "He is not a good party man who is not first a patriot. A man who believes in his party so little that he is afraid the conscience of the voter will hurt his party, doesn't even believe intelligently in what he believes. It is not half so necessary in a free country that everybody should vote our ticket as it is that everybody should vote without an impertinent ward heeler at his heels."

The chief feature of the Massachusetts Republican State Convention appears to have been the adoption of a resolution declaring that the Republicans in the next Legislature, which is to elect a United States Senator, "should nominate in caucus." This was the work of Henry Cabot Lodge, the "scholar in politics," who is diligently seeking the nomination. In the old days the Republicans of Massachusetts used to pride themselves upon their freedom from caucus tyranny, but the man

who objects to that sort of thing now is denounced as a Mugwump.

New Hampshire promises to have a most hotly contested election this fall. The Democrats are harmonious and enthusiastic under the leadership of Congressman McKinney, a vigorous and popular stump-speaker, as their candidate for Governor. On the other hand, there is much division among the Republicans. A bitter hostility exists between Chandler and Gallinger, the two Senators. The Portsmouth *Chronicle*, a Republican newspaper, openly bolts the nomination of ex-Senator Blair for Congress in one of the two districts. In the other, the *New Hampshire Republican* has "read out of the party" ex-Congressman Moore, editor of the Nashua *Telegraph*, because of "the repeated attacks of Mr. Moore upon the character and standing of Gen. Henry M. Baker, the nominee of the Republicans of the Second Congressional District," and a man who only secured the nomination by the corrupt use of his wealth. The Democrats are also greatly encouraged by the fact that the November election will be the first held under the Australian ballot law. Harrison's plurality in 1888 was only 2,272, and if the Republicans of New Hampshire lose only half as much from "a free ballot" as their brethren in Vermont and Maine claim to have suffered, the new voting system will of itself give the State to Cleveland this year.

The nomination of a man for an office in the face of his declaration that he will not accept the nomination, always implies a certain amount of discourtesy to the person so chosen. The New Jersey Democrats, in persisting in nominating Judge Werts for Governor last week, refused to accept his repeated declaration that he would not run for the office. But political conventions, in many notable instances, have in this way ignored individual wishes, assuming that the claims of the party on any of its members are higher than any man's inclinations. Judge Werts is an able man, whose name has been associated at Trenton with many important measures, notably the State Ballot-Reform Law. He was put forward to defeat the Hudson County candidate who was most openly antagonistic to Gov. Abbett and his allies, but he is not an Abbett man, and, having accepted the nomination, if he be elected (as he doubtless will be), there is every reason to believe that New Jersey will be rid of the dictation of the family bosses who have so long made Jerseymen blush for the good name of the State.

There is a marked contrast between the attitude of the Wisconsin Republicans on the school issue this year and that of their brethren in Illinois. In 1890 the Wisconsin Republicans sustained the Compulsory Education Law (better known as the Bennett Law) as "wise and humane," and declared themselves "opposed to its repeal." The same year the Illinois Republicans declared themselves "in favor of a compulsory education law." In both States the Republicans were beaten. This year the Wisconsin Republicans have nominated for Governor ex-Senator Spooner upon a platform which declares this issue settled by the election of two years ago, and denounces any further agitation of the subject. The Illinois Republicans have renominated Gov. Fifer, who was first elected four years ago, and there has been much curiosity as to the stand he would take. He has defined his position clearly and boldly in a speech delivered at Earlville, "in the heart of the Lutheran section of the State," where the opposition to the law is most pronounced. He declared himself unqualifiedly in favor of the law, and a summary of his speech proceeds: "He said he was the uncompromising friend of the free-school system; he was in favor of compulsory education; he was for the principles involved in compulsory education, whether he was elected or not; he had nothing to conceal or cover up; he would deceive no one on this or any other question; before he would do that, he would keep the company of his self-respect and go into private life."

The Republicans have been expecting "confirmation" of the Peck contribution to statistical literature in this year's report of the Massachusetts Bureau of Statistics of Labor. The report is now published, and indicates that while, for the ten years from 1875 to 1885, the value of goods made and work done in the manufacturing establishments reporting their condition showed an average increase of 3½ per cent. a year, the increase for the McKinley period, the year 1891, was only 1.33 per cent. In some industries losses are reported; in others there have been gains. In considering all returns of manufactures for the last year it should be remembered that big crops and good prices have had a very stimulating effect. Had these returns covered a period of agricultural depression, the figures on the loss side would be much larger. But a protectionist always credits every gain in business to the blessed tariff, just as the *Tribune* a few weeks ago credited a decrease in the price of print cloths (which did not exist) to the beneficent operation of a higher McKinley duty, although that particular duty had been reduced.

We expect to see, from this time on, much circumspection on the part of the Republicans in referring to Peck. He has had immense popularity with them, and has received the endorsement of all their great authorities, including the President himself. At present, however, he is under arrest for a crime of which the penalty is imprisonment for five years, or a fine of $5,000, or both. He is charged with having burned public documents in his care. These documents were the originals upon which he professed to base his famous report. He had been very valorous and even truculent in professing to be willing to show his data to anybody who doubted the accuracy of his figures, but as soon as a serious attempt was made to get him to show the original returns, he began to fight the matter in the courts, and now, while his case is still pending, is arrested for having destroyed the documents which it was his sworn duty to preserve. He ought now to turn his hand to criminal statistics.

We doubt if there has ever been a time when the editors of trade journals were so outspoken on tariff evils in connection with the particular industries they represent. They frequently tell McKinley that his superior wisdom in levying taxes was pure folly, so far as the business they know most about is concerned, and that he has done only harm; and sometimes they address a searching word to favored manufacturers themselves. A striking instance of the latter form of speaking out in meeting is furnished by the *Iron Trade Review* in its issue of September 8. This is, of course, a high-tariff paper, but it talks about the subject of steel rails in a deplorable manner. It asks "the steel-rail manufacturers of the country" such ugly questions as this: "With Bessemer pig at $17 in April, 1885, and steel rails then selling at a profit at $26, why should steel rails now be $4 higher, with Bessemer pig $3 lower than in '85?" Then it resorts to such an odious comparison as the following: "Paying 12 per cent. *more* now for Bessemer pig than they did in April, 1885, British railmakers are selling their product at 14 per cent. *less* than in the month and year named. The rail-manufacturers of the United States, on the other hand, are getting their Bessemer pig 18 per cent. *lower* than in April, 1885, but are selling their rails for nearly 16 per cent. *more*." It goes on to say that "no one could have more interest than the friends of a protective tariff in having a stop put to manifest abuses of it." Concluding, the *Review*, which, be it noted, is published right under McKinley's nose, has this to say of the most "scientific" and "symmetrical" tariff ever put together:

> "The theory of the $13.44 duty was that steel rails called for double the protection given to pig-iron. Even on that basis, the extreme price of steel rails should not exceed $28; but it is very evident, from the decreasing ratio in England between Bessemer iron and steel rails, and the actual ratio in this country of 1.53 in 1885, that the doubling of the pig-iron duty is not called for. The rail-manufacturers might avert a summary reduction by doing the fair thing themselves."

The lessening volume of our agricultural exports requires an explanation from McKinley. The August returns show a

diminution in exports of breadstuffs of $7,750,000, as compared with the same month last year. Moreover, the price of wheat averaged in August of this year only 84 cents a bushel, as against 106 in August, 1891. Now, McKinley has assured the farmers of the West that their great sales and high prices of last year were directly due to his benign methods of taxing money out of the foreigner's pockets and into theirs. But his law is still in force, and the question arises why it does not continue to perform its beneficent functions. We hope it will not be answered that better harvests in Europe have slackened the demand, for that would seem to imply that the McKinley Bill does not, as is claimed for it, override all natural laws, and would also call to mind the fact that last year there was an extraordinary European demand for our agricultural products. This would have fallen out to the profit of the Western farmer in any case.

The Chicago *Tribune* prints with comments the results of an investigation by the Chicago *Economist* into the cost of producing silver at the new mines of Creede, Colorado. The mines are called the Last Chance and the Amethyst. Since their opening last November, their combined product has been 2,000,000 ounces, or at the rate of 3,000,000 ounces for the first year. The writer puts their real capacity at 8,000,000 ounces per annum, a supply not hitherto included in our reports of silver production, and typical of Colorado silver-mining. Special investigation was made into the cost of working. The figures for the Last Chance are believed to be close to the real facts. This mine has already paid $750,000 in dividends since its opening, nine months ago. Calculating all expenses and outlays, including cost of boarding-houses, wagon-roads, etc., it is found that the average cost of the silver produced has been 24½ cents per ounce. This cost will be less when certain items of more or less permanent character have been written off. It is asserted that the running expenses of the Last Chance mine are but 5 or 6 per cent. of the income. The cost of production at the Amethyst mine cannot be so closely ascertained, but is estimated at 44 cents per ounce after allowing for all outlays.

The Last Chance Mine has been marketing at about 88 cents per ounce silver which it has cost the mine only 24½ cents per ounce to produce. Its owners are representative of silver-men who are clamoring for $1.29 per ounce even if all trade be demoralized in consequence. Even if we take the case of the Amethyst, we find that silver under unfavorable conditions is being mined for one-half the ruling market price. We have here a fresh illustration of the oft-stated cause for the decline in the price of silver. At the present price there is enormous profit in silver-mining. How can we, as reasonable men, expect a lessening in the production of silver under such conditions? And how can we also expect anything but a continuous decline in the market price of silver until that price approximates the cost of production in the more expensive mines? Could even the adoption of bimetallism stop it permanently? "There is no reason," concludes the *Tribune*, "why the people of the United States or the rest of the world should be compelled to pay ever so much more if they can obtain all the silver they want to use at the low figures mentioned. It would be just as absurd to demand that not a single bushel of wheat shall be marketed at less than $1.50 because some few men exceptionally placed cannot afford to raise it for less, while plenty of other farmers find a fair profit in selling below $1 per bushel."

The labor market is generally thought to be pretty well supplied in this country, but there is one department in which the demand seems never to be satisfied. This is domestic service, and the complaints of the difficulty of securing women for such work, no matter how high the wages offered, are as loud in the West as in the East. A new employment bureau was recently started in Omaha, Neb., by female members of the Knights of Labor, but the *World-Herald* characterizes it as "rather superfluous, for the reason that there seems to be no one who wants employment." It says that, all over the city, women who keep house are in want of servants, and it is in vain that they offer good wages and inducements of every other sort. It concludes that "there evidently are not enough women in need of bread and butter who are willing to enter domestic service to fill the places which are vacant. The employment agencies already in existence are in many cases obliged to tell applicants for help that it is beyond their power to supply them." This universal lack of supply of domestic servants, in a country where there are so many complaints that women have to work at "starvation wages," is one of the most extraordinary phenomena of the day.

Mayor Grant's request to the President, in behalf of the city government, to exercise all the authority which he possesses "to prevent further immigration to this country until all fear of the introduction of cholera shall have disappeared," is likely to serve a useful purpose, whatever response the President may make to it. It will stimulate discussion of the question, and thus bring us nearer to the adoption of some remedy for future emergencies. There is no doubt that the stopping of immigration would remove all danger of the introduction of cholera to this country whenever it breaks out in Europe, for all medical authorities are agreed with Dr. Shakespeare of Philadelphia that "the only source of danger of cholera finding a foothold, when inspection is properly performed at quarantine, lies in its introduction by the emigrant classes." It may be that an international agreement could be made by which all migration should be arrested as soon as cholera made its appearance as an epidemic in any part of the world; but a notice on the part of our Government that no immigrants would be allowed to land would accomplish the same purpose.

Considerable tension has developed in the relations of Chili and Peru, growing out of a protocol recently signed by the Government of the former country and the French Minister in Santiago. Under the terms of the treaty of peace which closed the war between Chili and Peru in 1883, Chili was to take possession for ten years of the two guano-producing provinces of Peru, Tacna and Arica; at the end of that period the final ownership of the territory was to be determined by the vote of its inhabitants, and the country obtaining it was to pay the other $10,000,000. In the meantime Chili was to take charge of the exports of guano, reserving for herself one-half of the resulting profits and depositing the rest in the Bank of England for the benefit of creditors of Peru, principally French, whose loans had been secured by liens upon the guano product. Under this agreement there has been deposited in the Bank of England something like $2,700,000, while the share falling to the Chilians has been invested in 4½ per cent. national bonds.

Now the protocol agreed upon between the French Minister and Chili directs a pro-rata distribution among the creditors of the $2,700,000, and provides further that 80 per cent. of the amount received from the guano by Chili and invested in national bonds be likewise turned over to the French holders of Peruvian securities. This is to be taken by the French creditors as a complete discharge of all their claims against Chili growing out of the Peruvian war, and, it is alleged, by a secret article France in addition undertakes to maintain the preponderance of Chili on the Pacific. It is doubtless this last provision which is the main source of Peru's irritation, as it would bring to naught her reported alliances with Brazil and the Argentine Republic. But against even the open clauses of the protocol she has lodged a vigorous protest, maintaining that many of the French claims admitted into it were fraudulent, and that, in any case, their validity should have been passed upon by a Peruvian tribunal. The controversy, which threatens to become embittered, is particularly unfortunate in coming within a year of the time when the plébiscite must be resorted to to determine the possession of Tacna and Arica.

PARTY VALUE OF A SECRET BALLOT.

THE admission of Republican leaders and journals that wherever the Australian ballot system has been put in operation in this country "it has worked against the Republican party," is one which they will be wise not to "dismiss with a smile," for the fact has a very ominous significance for them. Of course they do not believe for a moment their own explanations of the falling off of their vote in Vermont and Maine at the recent elections. They know that there is something else than "sensitiveness" and "timidity" at work in their party when its vote falls off heavily and the Democratic vote remains unchanged. It is merely stress of weather which forces them to take the position that, while all except one of the Democratic voters in Vermont were able to deposit their ballots under the new system, over nine thousand Republican voters were either too illiterate or too indifferent to do so.

The true explanation of the case is plain enough. No intelligent person thinks it a fact that the entire Democratic vote deposited in Vermont was cast by men who had hitherto voted only with that party. There had been no active Democratic campaign, and no especial effort made to bring the Democratic voters to the polls. There was no hope of the Democrats carrying the State, as they were the same forlorn minority that they have always been. If it be reasonable to say that Republican voters stayed at home because their party was sure of a majority anyway, it is none the less reasonable to say that Democratic voters stayed away because they had no hope of success. If the new ballot system drove away nine thousand Republicans, it must also have driven away many Democrats. How could the full Democratic vote be maintained, then? Simply by having some Republicans change their votes to that side.

That there were changes of this kind in both Vermont and Maine no person capable of forming an intelligent opinion on the subject will question. It was said by the Philadelphia *Press* recently that there "is no use of disguising the fact that the Republican vote, in New York State particularly, has fallen off greatly in the localities where the party was especially strong, since the new ballot law went into effect." Here is the same excuse of falling off on the Republican side alone. What happened in this State is precisely what happened in Vermont and Maine, namely, that many Republican voters went over to the Democratic side, being helped in doing so by the shield of a secret ballot. For the first time they could vote without any one knowing the way in which they voted. In rural communities any man, under the old system, was able to see how his neighbor voted, and no man could change his party affiliations without subjecting himself to a great deal of annoyance and, sometimes, persecution. Under the secret ballot he can make the change and say nothing about it, and nobody will be a bit the wiser.

So, too, with the employee, who, under the old system, was kept close watch of by his employer and compelled to vote in the latter's interest. He can vote as he pleases now with no fear of consequences. Then there is the bribed voter. He cannot be followed to the polls to see whether or not he earns his money, and the consequence is that he is no longer bribed. Neither can the local leader or boss follow his men to the polls to see if they vote in obedience to orders. All these effects of a secret ballot were predicted by the advocates of the new system and were the chief reasons advanced for its adoption. If the Republican party is found to be the chief sufferer, it is simply because it has been the party which has indulged most in the abuses which have been abolished.

We do not see how the Republicans can hope for a more friendly working of the system in other States than they have experienced in New England and New York. It has worked very badly for them in Indiana in one State election, and there is little reason to think it will work any better for them in the national election. Certainly the Dudley "blocks-of-five" method will not be practicable under it, for the voters must go to the polls singly and must mark their ballots in secret. In every manufacturing centre in thirty-five States the employees of protected manufacturers will deposit their ballots free from all espionage and intimidation, and this is certain to "work against the Republican party." Everywhere throughout thirty-five States bribery will be impracticable, because it will be impossible to see if the bad bargain is kept.

But, above all, we believe that the most deadly effect which the new system will have upon the Republican cause will be due to the secrecy which it will throw around regular party voters who for a long time have wished to register a protest against the high-tariff abomination, but have been too timid to do it with the eyes of their party associates upon them. They can prepare their ballots in secret now and vote them in secret, and they will hasten to improve the opportunity. We believe that it is to such voters that the Republican losses in Vermont and Maine and New York are due, and that there will be similar losses revealed in all other parts of the country when the November returns come to hand.

DR. JENKINS AND THE OTHER DOCTORS.

CURIOUSLY enough, whenever we are threatened with cholera, courage suddenly loses its place among the social virtues. The cowards come out of their concealment and unblushingly avow that, although brave as lions in the presence of other dangers, in the presence of cholera they are willing to commit or connive at any species of atrocity, not simply to avoid cholera, but to avoid even a remote chance of catching it. For the chance of catching it to which a cleanly, well-fed, careful man is exposed in any modern city is almost infinitesimally small. Even in Hamburg, during the last few weeks, we could probably count on our fingers the number of such persons who have fallen victims to it. If cholera were raging in New York to-day, such persons would probably be in far less danger from it than they are from typhoid fever every fall, or pneumonia every winter. The doctors know little more about its transmission, apparently, than that *one* mode of transmission is direct contact. There may be other modes, as we see from the way it seems to drop down into streets and houses far removed from any known source of contagion. But one thing is certain, and that is that well-fed, cleanly people, whose nerves are not shaken by its approach, and whose minds are not occupied with it, seldom if ever catch it. This, which has been long known, has almost received scientific demonstration from the experiments which Dr. Jenkins has been making, as on a *corpus vile*, on the cabin passengers of the *Normannia*, *Rugia*, *Wyoming*, and other ships in the lower bay—experiments which no physician would have dared to make in any hospital in the world, and which nothing but the cowardice of the intelligent and well-to-do class in New York would have permitted for one hour.

For be it remarked, in the first place, that these performances of Dr. Jenkins have been and are clearly illegal. The statute from which he derives his authority (chap. 486 of the Laws of the 115th Session, passed May 5, 1892, section 26), prescribes:

> "That, on the arrival of an infected vessel, all well persons on board shall have their freedom as soon as possible consistently with the regulations prescribed by, or pursuant to, the present law. All sick persons shall be *immediately* transferred to the hospital set apart for their reception, and the vessel unladen, purified, and admitted to pratique as soon as possible. Persons sick with different diseases shall be kept separately."

Section 4 of the same statute says that the Quarantine Commissioners

> "may make such rules and regulations, *not inconsistent with law*, as they shall deem necessary for the care and protection of each portion of the quarantine establishment, for the government of employees therein, for the regulation and conduct of all quarantinable persons, and for the prevention of communication or intercourse with any quarantinable vessel. *Well persons shall not be detained unnecessarily*, and in cases of exigency all means conducive to the protection of the public health shall be adopted."

Now, the Health Officer, acting under this statute, has in the case of the *Normannia* held 500 well persons in confinement for a fortnight on board ship, and in the case of the *Rugia* 80 well persons for more than two weeks, in close contact with disease, apparently for the purpose of seeing whether, under these most unwholesome conditions, they would not catch cholera. Was this "conducive to the public health"? Under what regulation

"not inconsistent with the law" was it done and is it being done now?

These are important questions, but there is a more important question still: Why did and do the bar, the press, the doctors, and the clergy stand by and see it done? Where are the "patriots" who wanted to go to war with Chili because two or three drunken sailors were killed in a street fight? Is there a man among us who would consent to save this city from a foreign invader by giving up 600 innocent women and children and infirm to be tortured by him? Who among us would agree to arrest such an invader by poisoning wells, or killing or starving prisoners, or sending infected clothing to his camp? And what is there in the danger of cholera to convert us into helpless cravens, ready to resort to or connive at any means, however cruel, or illegal, or unscientific, in order to avoid it—nay, even to abjure the usages of civilized warfare in our treatment of our own countrymen at our own gates? *All* means of escape from danger are not open to civilized Christian communities. The measures taken for this end must be plainly necessary; they must be humane; they must be remedial; and they must be carried out by competent sanitarians. The Health Officer at the port of New York ought not only to stand high among doctors, but to have enough administrative talent to command a division in time of war or manage a great railroad.

Nor is this the worst. We have handed and are handing these unhappy people over to a man who not only has not the moral or intellectual, but has not the legal qualification for his place. Of his capacity as an administrator we need not speak after the events of the last ten days. The statute we have already quoted, art. 2, sec. 12, wisely provides that the Health Officer of the Port of New York

"shall be a doctor of medicine of good standing of at least ten years' experience in the practice of his profession, and *practically familiar with quarantinable diseases.*"

Quarantinable diseases are yellow fever, cholera, typhus and ship fever, smallpox, scarlet fever, diphtheria, measles, and relapsing fever, or any disease of an "infectious or pestilential nature." Now, we challenge Dr. Jenkins and his supporters to say where or when he ever practised his profession even for two years, and where and when he ever treated a case of quarantinable disease. Dr. Jenkins was graduated from the Medical Department of the University of the City of New York in 1882, at the age of twenty-six. He spent the two years while at this college, as young doctors usually spend them, we presume, in some kind of dispensary practice, and in the year of his graduation became a deputy coroner or post-mortem doctor, which place he filled till appointed, in January of this year, Health Officer of the Port of New York, at a salary of $12,500!

It is impossible, we are sorry to say, to acquit the doctors of the city of the largest share of responsibility for this great national scandal. The press, it is true, started the panic which developed the selfishness and cowardice that gave Jenkins his chance. But what medical man has said one word *publicly* to quell it, to restore the reign of reason and humanity, or to make the world acquainted with the incompetency of the man on whom the city was relying to "keep out the cholera"? What other body could have spoken with the same authority? How was it that they, knowing well that this barbarous and illegal quarantine which Jenkins was enforcing had been abandoned as useless and cruel by other civilized nations, never said so *openly*, never called attention to the immunity of England from cholera, though ten times more exposed than we are, without other quarantine than two days' watching of the well in their own homes, and the treatment of the sick in the hospital, without inflicting any suffering or indignity on any human being? We have received the following explanation from a leading member of the profession in a private letter, but we must honestly say that it does not explain the failure of the profession to speak out. He says:

"Politics, incompetency, and inhumanity have played a sad part in your lives during the past few weeks. That the *Normannia's* passengers have escaped in spite of the odds against them may well be a subject of national thanksgiving. The medical profession were bound hand and foot, so far as practical usefulness was concerned, until Dr. Jenkins accepted the assistance of the Advisory Board, through the pressure brought upon him by the Chamber of Commerce and public opinion. I have heard frequently through colleagues during the past fortnight of the condition of affairs at Quarantine, which they denounce in no uncertain terms, but which they were powerless to change. The general medical opinion is that there is not a single redeeming feature in Jenkins's case. To know that an office which demands equally an administrative ability of the highest order and technical knowledge can be bestowed on one lamentably deficient in both, is a sad reflection upon the power of politics for evil, and the powerlessness of public and professional opinion for good, in questions even affecting the health and life of a nation."

This is all true, but, if true, why was the Chamber of Commerce meeting on Friday week allowed, without a word of protest, to "put on record its hearty appreciation of the energetic action of the Health Department of the city of New York"; and why was the meeting of citizens on the evening of Thursday week, which contained at least two eminent physicians, allowed to "recognize the successful efforts put forth by Dr. Jenkins as Health Officer of this port to keep the cholera out of the city of New York"—the said Jenkins being at that time actually engaged in the perpetration of an atrocious and illegal attack on the public health in the lower bay, by the deliberate and protracted exposure to infection of some 600 or 700 men, women, and children? Do we not find in these things some excuse for the cowardly and rabid exploits of the Long Island clam-diggers?

PROTECTION IN CANADA.

THE Department of Agriculture of the Dominion of Canada has recently published a bulletin showing the number of industrial establishments in the Dominion, the number of persons employed therein, and the wages paid these employees now as compared with the wages paid in 1881. When this bulletin appeared, we examined it with some care, but reached the conclusion that its results, so far as comparative wages were concerned, were unworthy of confidence. Our conclusion was based upon the fact that the census of 1881 furnished no information as to the number of days during which the establishments reporting were at work. The census of 1891 showed that of 75,768 establishments 48,748 had been running full time during the year ending April, 1891, 12,981 half time, and 14,039 quarter time. It is obvious that when aggregate wages for the year are given, the average wages per diem depend greatly upon the number of days worked. The only possible way, therefore, of comparing the average wages of 1891 with those of 1881 was to assume that the number of days worked was the same in both years. This was the method employed by the Department of Agriculture, and while it may have been the only method available it is not scientific. It may lead to correct results, but it can do so only by chance. The inference, therefore, that the average wages paid in Canada are from 16 to 18 per cent. higher than those paid ten years ago, we were unable to regard as justified by the evidence, although we do not regard it as improbable.

But this bulletin has now become invested with an extrinsic interest, owing to the fact that the New York *Tribune*, in its desperate clutching at straws, and perhaps in its anxiety to distract attention from Commissioner Peck's blunders, has seized upon it as a possible argument for the McKinley Law. It must be confessed that its argument is extremely ingenious; so much so that it may be doubted if it would have suggested itself to the ordinary protectionist. He would have been apt to say, on seeing this bulletin, "See what protection has done for Canada!" without thinking of the meagre advance in wages in some unprotected industries in this country, and the decline in protected industries, disclosed by the Senate's Committee on Finance. The *Tribune* has been more astute, and boldly takes the position that the advance in wages in Canada has been due to protection in the United States. It concedes, apparently, that if they had had the genuine American non-exportable article of protection in Canada, the result might have been different; but, owing to the fact that the Canadians have tried to get along with a cheap and inferior substitute, a "hesitating and partial protection," their wages have been lower than ours. Wages being higher here, the pauper laborers of Cana-

da have flocked hither, and the diminution of the supply of labor there has had the natural effect of raising wages.

The argument of the *Tribune*, however, lacks completeness. There are inferences to be drawn from it about which the *Tribune* is silent, but which the laboring-men of this country will not overlook. The most obvious of these inferences is, that, since a diminution of the number of laborers in Canada has caused the rate of wages there to rise, the increase in the number of laborers here caused by the Canadian emigration must have caused wages here to fall, or at least not to rise to the same extent as they would have risen but for this emigration. It is therefore an undeniable consequence of American protection that, by stimulating the importation of cheap foreign labor, it has injuriously affected the condition of American labor. There is nothing new about this proposition, but it is well that it should be publicly confessed as the real doctrine of the Republican party.

As if by way of emphasizing this confession, the *Tribune* has recently published several letters from Canada which contain statements to the effect that there are over a million French-Canadian emigrants in the United States; the emigration amounting to 40,000 or 50,000 this year—say 4 per cent. of the population of the province of Quebec. This emigration, it is added, has been enormously stimulated by the McKinley Act. Without "American protection" these people would have for the most part remained at home, but the McKinley Act is driving them into this country in hordes. It is true that some of them, like the heathen Chinese, return, carrying their savings with them, and that "an enormous amount of money is sent by French-Canadians in the States to their friends in Canada." But this does not discourage the *Tribune's* correspondent, who cheerfully assures the laboring people of America that the Canadians who are here are going to stay, that the exodus will greatly increase, and that these people are distinguished by their willingness to accept low wages. Moreover, he adds, it is the most prolific people in the world, and he cites the case of ten couples in a single community of 1,200 inhabitants who rejoice in descendants numbering 527 souls. According to the view of the *Tribune*, Quebec is to become, under the beneficent policy of McKinley, a mere breeding-ground for laborers who are to hasten across the frontier as soon as they are able, and enter into competition with American citizens. Democratic campaign orators will do well to impress this upon their audiences.

No one who has visited the interior of Quebec can have failed to be charmed with the many virtues of the people, and we are far from saying that their emigration to this country in moderate numbers is undesirable. But their standard of living is undeniably low, they are ignorant, superstitious, and, where there is an admixture of Indian blood, often dangerously vicious. We can assimilate them if they do not come in masses, but if the McKinley Act has the effect attributed to it by the *Tribune*—and we are inclined to believe the statement to a certain extent in spite of its authorship—of forcing the French-Canadians off their farms and compelling them to crowd into New England, it had better be repealed. The policy of "building up our industries" by imposing a tax upon all Americans for the benefit of any foreigner who chooses to emigrate here with all his "pauper laborers," bringing his machinery with him, is one that fills the *Tribune's* heart with joy and exultation. It has little to recommend it, either to the American manufacturers or to the American laborers, who find foreign competition more tolerable on the other side of the ocean than at their own thresholds. Not thus is either the American manufacturer or the American home to be protected.

THE UNIVERSITY OF CHICAGO.

No little attention has been called, during the past year, to the University of Chicago. The rapid enrolment in America and Europe of a large staff of professors, many of whom have been attracted by larger salaries from established institutions of the highest character; the number and variety of courses announced and projected; and, above all, a certain audacity of initiative and dash in execution, which may be unacademic but are none the less typically American—all these things have excited interest, and have also (we say it without the slightest intention of criticism) secured for the enterprise that liberal advertisement without which nothing appears to "go" in our day and country. But in the multitude of press notices too little heed has been taken of the innovations of real interest, and the educational experiments of indubitable value, that are outlined in the preliminary circulars of the University. We base our comments on the *Quarterly Calendar* for June, the issue announced for September not having reached us; but it is unlikely that any of the principal features of what is clearly a carefully considered scheme will be modified before the University opens in October.

Any criticism must necessarily be prefaced by a statement of the general plan of organization, which is in some respects a novel one, and an explanation of the terminology employed, which is even more novel. In ordinary phraseology, the University may be said to consist of a graduate department and a college proper. There is also a divinity school, and other professional schools are projected; and there is a separate department of "university extension"; but these call for no especial comment. In the college proper there are three parallel courses of study, leading respectively to the degrees of A.B., Ph.B., and B.S. These several courses, at Chicago, are termed "colleges" of "liberal arts," of "literature," and of "science." There is also a cross-line of cleavage between the sophomore and junior years of each of these colleges; the two lower years being termed the "academic college" and the two higher years the "university college." We have thus six "colleges," three "academic" and three "university"; and two more are projected, with the view of creating a four years' course in "practical arts." In the general construction of the three parallel courses which are to be thrown open in October, there is little that is new. It is the familiar "group system." To obtain the degree of A.B., the student must devote more than half of his freshman and sophomore years to Greek, Latin, and mathematics, and at least one-third of his junior and senior years to mathematics, languages, and the political and social sciences. For the degree of Ph.B. an increased amount of work is required in the modern languages and in history, with less mathematics and no Greek. For the degree of B.S. an equivalent for Greek is found in the modern languages and natural science. All these courses contain the same amount of obligatory Latin. In the entrance requirements we find a real innovation—anticipated in principle, it is true, at Harvard, but carried through more logically at Chicago. There are no less than six groups of subjects, and in three of these there is no Greek. Substitutes are found in the modern languages and the natural sciences, in varying proportions. Latin, however, is required in all cases. All this, with one exception, is in accordance with the educational tendencies of the day. The exception is the multiplication of baccalaureate degrees. We cannot see why each of these "colleges" should not award the degree of A.B. Each curriculum contains a fair amount of classics, modern languages (including, of course, English), history and political science, mathematics, and natural science. Each, therefore, affords the essential elements of a liberal education. We do not perceive why those students who have devoted a greater amount of time to natural or political science and to the modern languages and literatures should be put off with a B.S. or a Ph.B.—degrees which are commonly regarded as inferior.

An especially interesting innovation is to be found in the manner in which the course chosen by each student is to be accomplished, as regards the arrangement of subjects and hours. Each student is held to attend fifteen hours of class-room work per week, and this time is to be devoted to only two or three subjects at once. The normal arrangement restricts him to two subjects at a time, one of ten and one of five hours. The unit of measurement, called a "major," is a ten-hour course running through six weeks. A five-hour course running the same length of time is a "minor," and this, of course, is reckoned as half a unit. Under this system the "academic" students, *i.e.*, the freshmen and sophomores, work off their required subjects two at a time. A candidate for A.B. might devote himself, as a freshman, to Greek, Latin, and English exclusively, and complete in that year all that is required in these departments during the first two years. In his second year he would then confine himself to mathematics, natural science, French and German, and history. Within each year the concentration of subjects would go still further: all the required Greek, for example, could be completed in a portion of one academic year. This is an interesting reaction against the scattering system now in vogue. In many of our colleges the time of the student is frittered away in one hour and two-hour courses, and his attention distracted by the pursuit of half-a-dozen different subjects at once. But we think that the reaction has been carried too far. If it is true, as many teachers complain, that a course of one or two hours a week is almost useless, it seems to us, on the other hand, that a course of ten hours a week is strikingly near a "cram," and

that its results must be as evanescent as those of other "crams." If a boy of eighteen be thus "railroaded" through a portion of the 'Odyssey' in six weeks, what residual impression can there be in his mind when he is twenty-eight?

This system becomes even more questionable when it is applied to juniors, seniors, and graduates. The principle of concentration, indeed, becomes more justifiable; for with increasing maturity the student may specialize with increasing profit. But the majors, or ten-hour courses, are open to criticism on other grounds. It is clearly recognized by the Chicago authorities that the method of instruction in the "university colleges" and the "graduate school" should be different from that followed in the "academic colleges." Instead of recitations there are to be lectures. In many of the ten-hour courses the lectures are to be "informal," and there are to be "discussions." The students are to be held to outside reading, and are to prepare essays on special points. It is obvious that courses of this character are what the Germans call "Seminaria"; and the fact that in the Chicago plan they are called "courses," while other similar courses are called "seminaries," does not establish any real difference. Fifteen hours a week of this sort of work, we think, is quite too much to demand of a university student. If he is really to be trained in investigation, he needs more time in the library and less in the classroom. Moreover, the experience of the German and of the leading American universities has demonstrated that a capable instructor does not need to meet seminary students more than once a week for a couple of hours in order to learn what they are doing and direct them in what they are to do. If the students have more time than this for "discussion," their remarks will be of a very speculative and a-priori character, and the University seminary will degenerate into a sophomoric debating society. We venture to predict, therefore, that in courses of this sort the "informal lectures" of the instructor will assume great prominence; that they will practically become lecture courses.

Viewed from this standpoint, they are still too heavy. There are few subjects in which the student can profitably listen to ten or even eight lectures a week. He can scarcely assimilate what is given him, and he certainly cannot supplement the lectures by a proper amount of outside reading. There is, we concede, a great difference in the amount of time that can be advantageously employed in the class-room in different subjects. In some of the German universities there are law courses of twelve hours a week in a single subject (Pandects), and we have no doubt that the same amount of time could be used to still greater advantage in an American law school in discussing cases on the Harvard plan. It may be that President Harper can make good use of ten hours a week in exercises on Genesis i-viii in the Hebrew, and it is not unlikely that the same amount of time can be improved in reading the "inscriptions of the Achæmenian Kings" in the Old Persian; but we doubt whether Prof. Starr will get as good results from his "major" in general ethnology as he would obtain by giving a "double minor," *i. e.*, a course half as heavy and running twice as many weeks. And we are quite sure that the historical professor who is to rush advanced students through the Renaissance, the Protestant Revolution, the Thirty Years' War, and the Age of Louis XIV. in twenty-four weeks, will obtain very unsatisfactory results indeed.

It is significant that this professor has not been found, or at least had not been found up till June. It is significant that the professors who have been appointed and who have (presumably) fixed their own courses, offer to the university students minors only in philosophy, in political economy, in history, and (with the one exception above noted) in social science and anthropology. In these departments we find 111 courses announced or projected, of which only seven are to be majors, and for six of these majors the professor is not yet found. In these departments, accordingly, the system is obviously breaking down before it is fairly initiated. It is a step in the right direction that the university majors and minors may, under the existing regulations, be cut down from ten and five to eight and four hours. It would be still better to reduce them to six and three hours respectively.

But there is a further objection to the whole system. The designation of certain courses as major and of certain others as minor, whether it proceeds from the University authorities or from the several professors, is an arbitrary designation. It is the first principle of true university work that one subject is as important as another, and it is a necessary corollary of this principle that the university student should be permitted to determine for himself on what lines he will do his chief work, *i. e.*, that he should make his own major. In the Eastern universities, *e. g.*, at Columbia and Johns Hopkins, this is fully recognized and provided for. Any subject that is taught may be selected as a major subject for the degrees of A.M. and Ph.D.; and any subject may be taken, at the pleasure of the student, either as a major or as a minor. The student who takes a subject as his major is required to do more work, and particularly more original work. Under this system, of course, the crude measurement of the student's work by hours of attendance in the lecture-room is discarded. It seems to us that the Chicago authorities have made a mistake in carrying this system of measurement into the university years. The mistake is the more serious because it is the announced purpose of the University to devote its chief attention to its more advanced instruction, and as soon as possible to throw off its "academic" work upon "affiliated" institutions.

Some final reflections, suggested by the Chicago *Calendar*, touch the government of the University. It is, we think, one of the greatest errors of American university organization that so much power is exercised by the trustees and by the president, and so little by the corps of professors. The professors really make the university, and they ought to determine its educational policy. At Chicago it seems to us that far too much has been settled in advance by the president and trustees without the possibility of consultation with the faculties. The circumstances, of course, are exceptional; the University had to be organized in some fashion before there could be any faculties to consult. But was it necessary to elaborate the educational plan in such detail? And is the dictatorship of the president, necessary as it may be in such a formative period, to be prolonged after the University is fairly in operation, or is a constitutional era to be inaugurated?

The *Calendar* informs us that, under the trustees and in addition to the president, the deans, etc., there are to be two organs of university government. The "University Council" consists of deans and other administrative officials. It is clearly an administrative body, pure and simple. But the "University Senate" is composed of professors, and this body is to "discuss *and decide* matters relating to the educational work of the University." This seems satisfactory as regards the powers of the Senate. But its composition is open to criticism. It consists only of "Heads of Departments of Instruction." This excludes all junior professors, and makes the body ultra-conservative. In Columbia, which has not commonly been regarded as a radical institution, the central organ of the professors, the University Council, consists of delegates from the several faculties; and in the election of these delegates the junior and assistant professors have the same voice as their seniors. It is certainly surprising to discover that a more conservative, not to say reactionary, policy has been adopted at Chicago.

OUTLETS TO THE GREAT LAKES.

North Bay, Ont., September 9, 1892.

I have just discovered a link in the geological history of the Great Lakes which cannot fail to interest the general public as much as it will the scientific world. As frequently happens, however, the discovery is not unexpected, but has been made in following out lines of inquiry suggested by earlier discoveries of many investigators.

Now that the railroads have completed so many surveys of the territory surrounding the Great Lakes which lie along the frontier between Canada and the United States, we are able to engage in special explorations of the region under peculiar advantages, and to forecast results in a way that would have been impossible a few years ago. Accurate topographical surveys of the region bring impressively to light the fact that the direction which the vast volume of waters in the upper four of our Great Lakes should take, depends upon a very slight accident of nature. Lakes Erie, Huron, and Michigan are substantially on the same level—a little less than 600 feet above the sea. Lake Superior is but thirty feet higher, and flows into them. A moment's inspection of any map will show that the watershed around these lakes is surprisingly narrow. The tributaries of the Mississippi rise within a few miles of Lake Erie, and penetrate almost to the limits of the city of Chicago, while the Mattawan, one of the tributaries of the Ottawa, reaches to within three miles of Lake Nipissing, which is but little above Lake Huron and tributary to it. Thus it appears that these lakes occupy a saucer-shaped general depression near the height of the tableland in the centre of the continent, and that a slight tilting of the edges of the plateau one way or another would determine the direction of overflow. At present the status of the plateau is such that the water runs over the precipice at Niagara. But an elevation of less than fifty feet at Niagara, or a depression of an equal amount at Chicago, would turn the stream into the Mississippi through the Illinois River. The fact which has been brought clearly to light by recent surveys is that a subsidence amounting to only a trifle more than a hundred feet would turn the current from Lake Huron through Lake Nipissing into the Mattawan and thence into the Ottawa. The discovery referred to in the opening sentence is of the fact that this was probably for a considerable period the actual outlet, and one which then robbed Niagara of the most of its glory.

The surmises leading to this discovery are connected with the history of the glacial period. It now seems clear that the glacial

period was preceded, and perhaps brought on, by an extensive elevation (probably not over 3,000 feet) of the land south and east of James Bay. During this period of elevation nearly all the rivers of the Atlantic Basin excavated deep gorges and cañons, like those of the Saguenay and the Hudson, which then extended a hundred miles or more further out than at present over a plateau which is now covered with comparatively shallow water. But the culmination of the great ice age was marked by a depression of the glaciated area, which increased in amount towards the centre of ice-accumulation. The subsidence, which was 230 feet on the south shore of Maine and about the same east of Lake Ontario, was 500 feet at Montreal, and in the far North 1,000 feet or more. This is shown by deposits of sea shells overlying the glacial deposits in these regions.

Reasoning from this differential northerly subsidence, it was surmised by Mr. Gilbert of the United States Geological Survey some years ago, that it was probably sufficient to change the attitude of the rim of the Great Lakes, so that their outlet would be turned into the Ottawa. The correctness of this surmise and the actual course of the early outlet are fully established in my own mind by the investigations of the last few days. In pursuing them it has been intensely exciting to see with one's own eyes direct evidence that the engineers of the Canadian Pacific Railroad, when following the trail of Champlain, the earliest white explorer of this region, were not only paying tribute to the skill of the Indians in selecting the lowest passes from one valley to another, but were also unsuspectingly utilizing one of the most remarkable of nature's highways.

In the year 1613 Champlain worked his way up the Ottawa from Montreal about 200 miles to the site of Fort Coulonge, the gathering-place at that time of the Ottawa Indians. Here he heard of the Nipissing and Huron Indians, and established trading connections with them. Two years later, or in 1615, the great explorer set out again in the same direction, following close upon the footsteps of Father Le Caron, a Catholic missionary who had already started to preach the Gospel to the Hurons. Passing the limits of his former expedition, Champlain reached the mouth of the Mattawan River, about 300 miles above Montreal, and, turning up that stream along the trail of the Hurons, he found himself conducted through various long and narrow lakes (one of which still bears his name), separated by short portages, to the shore of Lake Nipissing, where lately there has sprung up the bustling railroad town of North Bay. In early post-glacial times, there can be little doubt, this part of his route, from the mouth of the Mattawan to Lake Nipissing, was occupied by a stream which is now represented in its mission by the Niagara. The evidences of this can be briefly stated and easily understood.

Lake Nipissing is scarcely seventy feet above Lake Huron, emptying into it through French River. The western extremity of Trout Lake, the source of the Mattawan, is less than three miles from North Bay on Lake Nipissing, and is separated from it by a wide swampy channel, which is only about twenty-five feet above the level of either lake. This portion of the channel we have explored and determined its capacity for conducting the waters of the Great Lakes over into the present watershed of the Ottawa when called upon to do so, and there is no other passage so low between the upper end of Lake Erie and Hudson Bay.

On looking for more positive evidence, we find it in a clearly defined shore-line of well-rounded pebbles extending upon the north side of the channel from one lake to the other, and at a uniform height of about fifty feet above the connecting channel. This shore-line is as well defined as that on the banks of the Niagara River just west of the present cataract. Such a deposit could not have been formed along this connecting depression except by a stream of vast size passing from Lake Nipissing into the Mattawan.

It is, however, on going down to the junction of this outlet with the Ottawa that the most positive and striking evidence is seen. For ten miles above the junction, signs of the old river terraces are more or less visible high above the present stream; but at the junction there is an accumulation of river deposits unparalleled, probably, by anything else in the world. The lower angle of the junction between the two streams is filled to a height of eighty feet or more above the present water level with a boulder bed about half a mile in width and extending up the Mattawan for nearly a mile, where it shades off into finer material. On the upper angle the Mattawan is bordered by a terrace equally high, but consisting for the most part of fine gravel. These boulders in the lower angle are well rounded and many of them of enormous size. Thousands of them are several feet in diameter, while some which we measured were thirty feet in diameter and were resting on loose material. The trough of the Ottawa is here 500 or 600 feet below the general level of the country, and this accumulation is clearly a terrace and not a simple glacial moraine, for it is level-topped and has every characteristic of the deltas which are built up where a tributary of rapid descent joins a large valley. It is peculiar only for its enormous amount and for the enormous size of its constituent material. That it is a delta brought down by the Mattawan and not by the Ottawa is shown by the fact that it has dammed the latter stream, producing in it deep water above and rapids below. This action of tributary streams is finely illustrated in Gen. Warren's report upon the characteristics of the Upper Mississippi River, from which it appears that in this stream there is shallow water below the mouth of every considerable tributary and deep water above. The explanation is that the rapid-flowing tributary brings into the slower-moving current of the main stream coarser material than it can handle, and so a bar is pushed out completely across the larger and broader channel. This is just what has been done by the Mattawan at its junction with the Ottawa; and the material of both the delta and the bar is such as only a stream like Niagara, rushing down a declivity of several feet to the mile, could transport. In this case, however, it is not probable that the larger boulders were transported far by the river. They had first been brought into the lower part of the valley of the Mattawan by the ice movement, which, all over this region, is from the northeast.

The scenes thus brought to the mind's eye by these significant phenomena contrast strangely with those which have greeted our senses during the past weeks of exploration. Then it was the roaring rapids of Niagara, crowded into still narrower compass, and rushing through a treeless and tenantless waste which the long winter of the glacial period had just released from its relentless grasp. Now, in their impression upon the senses, the noises of the destructive saw-mill and of the sluggish freight-train alternate with the splash of the voyageur as he pushes us along in his birch-bark canoe through the still water of narrow lakes bordered by luxuriant forests from whose depths come the cheerful, but, to us of the south country, unseasonable, song of the spring bird and the chickadeedee. The romance of science, of history, and of vacation life are here united to perfection.

Since the scenes of the earlier time, many thousand years have rolled by, and meanwhile the northern country, which had been so much depressed beneath its load of glacial ice, has been slowly returning towards its former position. The current of the Detroit River has been reversed, and now we have Niagara, whose age is pretty well known. At the present rate of the recession of the falls, less than 10,000 years would be required to form the gorge above Queenstown. Of late this has been taken as a glacial chronometer. But this discovery of an earlier northern outlet for the Great Lakes will, as Mr. Gilbert some time ago surmised, considerably lengthen our calculations.

In conclusion, it is well to remark that summer tourists in this region can obtain much pleasure for themselves and confer a great favor upon the world by working out and publishing the details of this theory, now so well established, concerning the later geological history of the Great Lakes. Not only can they trace out more carefully the evidences of the actual existence of the outlet here described, but, by collecting facts concerning the height and extent of the terraces of clay and gravel surrounding the lakes, they may do much toward giving definiteness to our knowledge concerning these recent changes in level which have determined in so large degree the history of man upon this continent. One has but to pass the fleets of steamers now necessary to conduct the commerce of these inland seas, and to stand for a few hours beside the lock which admits a part of this commerce through the Sault Ste. Marie, to be overwhelmed with the significance of these providential waterways.

The commerce which even now passes into Lake Superior far exceeds that which seeks the Orient through the Suez Canal. As we passed that great portal into the largest of the lakes, a few days since, twenty great steamers were waiting their turn to enter the lock which should admit them to the broad waters above, and as many were waiting to descend with their burdens of ore and grain. In 1890 more than 10,000 vessels passed through this outlet, carrying more than 9,000,000 tons of cargo. Within a year another lock, 800 feet long, 100 feet wide, and 21 feet deep on the sills, will be completed. The future of the commerce passing in and out of these natural gateways to the interior can be estimated only by the growth of the whole country.

In the light of all these facts it certainly is somewhat startling to reflect how delicate has been the balancing of natural forces through long geological ages which has determined the location of our inland cities and the course of our inland commerce. First there was the late tertiary elevation of the continent, brought about by geodetic forces too obscure to admit of calculation. During this period the main characteristics of the larger valleys of the northern part of the continent were determined. Then followed the marvellous and apparently capricious accumulation of snow in which originated the majestic forces of the glacial period, which in their slow march southward to the Ohio River prepared and distributed the soil destined to furnish the seat of empire upon the continent. Bordered for many

thousand years by icy walls which prohibited egress to the north, the drainage of all the northern part of the continent was from the Red River into the Minnesota, from Lake Michigan into the Illinois, and from Lake Erie into the Wabash—all reaching the Mississippi. Then there was for a while a change. When the Mohawk Valley was first cleared of ice, the drainage of the Lakes sought access to the ocean through the Hudson. At a later stage this drainage was directed through the Ottawa along the line above described. It was only after many thousand years that Buffalo and Cleveland and Chicago and Duluth could come into existence by virtue of their advantageous commercial situation. Considered from a geological point of view, the present conditions are but temporary. But, as human history goes, geological changes are so slow that, when once established, human effort can easily maintain the centres of trade and the lines of commerce upon these lakes where they are until the immense natural resources of the region shall be exhausted. After that, no matter if the deluge does come! G. FREDERICK WRIGHT.

IRISH AFFAIRS.

DUBLIN, September 5, 1892.

FOR the first time in Irish history we have an English Government in office pledged to make an earnest effort to settle the Irish question—that is, to grant legislative independence to Ireland in all Irish matters and to arrange the relations between the two kingdoms on a just and equitable basis. The great change that has taken place during the last fifteen years is well illustrated by one incident: during the last month Michael Davitt, ex-convict, imprisoned over and over again for treasonable practices and speeches, went to Newcastle to support the reëlection of an Englishman as Irish Secretary; and so far as the result was due to any one man's influence and exertions, he was the chief instrument in securing John Morley's return.

The Irish Nationalists have, however, in my opinion, made a very great mistake in adhering, under present circumstances, to their resolution not to take any office until a satisfactory home-rule measure has been introduced. Their position may be consistent with their past declarations, but is utterly unreasonable. They profess confidence in the intentions of the Liberal party and are in open alliance with them. It is well known that three-fourths of the Irish officials are violently opposed to any home-rule measure; they belong by association, interests, and training to "the classes," and have no sympathy whatever with democratic tendencies; and yet it is these very officials who must be consulted on every point of law, statistics, practice, and precedent in the framing of the Home-Rule Bill. The Irish Parliamentary party may be on the best of terms with the English Government, but their advice is given from a standpoint of irresponsibility, and without the requisite acquaintance with and access to official records and returns which may be perverted to suit the views of their opponents. The English Liberal Government might reasonably have refused to deal with the home-rule question unless upon the terms of every political office vacated by the change of parties being accepted by a Parliamentary Nationalist. The position of the Irish Secretary, whose subordinates are bitterly opposed to his political views and objects, will be most difficult. The late W. E. Forster, who came to Ireland with the best and most kindly intentions, completely succumbed to his environment; Mr. Morley will not succumb, but he will work under the greatest disadvantages and difficulties.

No new legislation can be introduced for six months, and the interval ought to give plenty of time for careful preparation of the Home-Rule Bill. In the meantime, the existing laws must be enforced, and it is believed that the landlord party is deliberately preparing to embarrass the Government by evicting tenants systematically, enforcing legal rights which they refrained from doing during the late Government's administration. Such a course of action will, however, only prepare the way for more radical reforms. The rent-fixing tribunals were appointed by a Government out of sympathy with and ignorant of the necessities of the people; they were composed of individuals drawn exclusively from the landlord class, with the result that the greater number of judicial rents are not only too high to enable tenants to "live and thrive," but in many cases impossible of payment. The reductions of rent decreed by the Irish land courts are generally much less than those which have been voluntarily given by English landlords. Any general campaign against the tenants will therefore only make legal reductions on the first opportunity imperatively urgent.

The evicted-tenants question is that which for the moment occupies political attention. It is supposed that there are about 5,000 families, most of whom belong to estates where the "plan of campaign" was put into operation. With the exception of Smith Barry's Tipperary estate, where the tenants surrendered their holdings as a protest against the landlords' conduct in interfering to prevent a peaceful settlement on a neighboring property, the evicted tenants lost their holdings and homes from inability to pay exorbitant rents; in most cases they might have had "fair" rents fixed by the land courts, but these tribunals did not possess the confidence of the farmers, and in the plan-of-campaign districts were fixing rents at an impossible figure. Mr. Gladstone suggested that landlords might find it wise to agree with their tenants, and so obviate the necessity for legislation. In the absence of any such conciliatory action, a royal commission might usefully investigate these cases and recommend legislation. No government should permit the continued existence of such centres of disturbance as these estates have become from mismanagement, political passion, and enforcement of unjust laws.

Another subject which needs investigation before legislation is the fiscal system of the United Kingdom, which is admittedly unjust in its effect on Ireland. The poorest country in Europe is fiscally linked to, and is taxed as if it were an integral part of, the richest country, with the same requirements for defence, foreign relations, and protection of commerce. Mr. Robert Giffen, the best known of English statisticians, estimated in 1886 that Ireland's capacity for taxation was one-fiftieth that of the United Kingdom, yet for many years Ireland has been paying one-twelfth of the imperial revenue. The income-tax assessment is £17 per head in England and £5½ per head in Ireland, yet the rate of imperial taxation is 6s. in the pound in Ireland and only 3s. 1d. in the pound in England. Ireland's assessment is stricter than that of England, and it includes four or five millions of Irish rents paid to and wholly spent by persons resident in England. If allowance is made for these facts, the rate of imperial taxation is three times heavier in Ireland than in England. It is not surprising that Mr. Giffen should have stated that in these circumstances "there can be little accumulation of wealth in Ireland," and that "nearly the whole taxable income of the Irish people is absorbed by the State." Ireland has no need of the expensive defence and diplomatic services which Great Britain requires, yet she is expected to contribute a full proportion. If royalty is an advantage to Great Britain, it is certainly not to Ireland, yet we not only pay a proportion of that costly service, but have to pay separately for the Lord Lieutenant, who receives a larger salary than the President of the United States.

Unless the fiscal aspect of the home-rule question is fully considered and satisfactorily disposed of, a very substantial and vital Irish grievance will remain an open sore. Irishmen will very properly object both to paying more than their due proportion of the revenue fixed according to Ireland's comparative capacity for taxation, and to paying for services from which Ireland can derive no benefit. At present, financial solidarity is insisted upon in collection of the revenue, but is disclaimed in matters of expenditure. Ireland, from her remoteness from the political centre, and less requirements for defence, imperial show, and dignity, does not and cannot derive any benefit from a large part of the imperial expenditure, which is on a scale unsuited to the circumstances of a poor country like Ireland, where the chief and almost sole occupation of the inhabitants is farming. The cost of the Irish police and of education is now paid out of the imperial revenue, and if these expenses were thrown on the Irish revenue, a contribution of two millions instead of eight millions would appear to be what Ireland ought to pay on the principle of equality, and to be as much as she could afford. AN IRISHMAN.

BOSSUET AS AN HISTORIAN.

PARIS, September 1, 1892.

I HAVE read with much curiosity—few people, I am afraid, will imitate me—a compendious book on 'Bossuet, Historian of Protestantism,' by M. Alfred Rébelliau, who left not long ago our Superior Normal School, and is now a professor in our Faculty of Letters at Rennes. Bossuet's name is sure to draw the attention of whoever cares for our classic French literature; but I am afraid the number of such persons is diminishing day by day.

M. Rébelliau's subject is very limited: he does not speak of Bossuet as a writer, as a preacher, as the author of immortal "oraisons funèbres"; he deals only with Bossuet the historian. As such, Bossuet comes before us with two great works, the 'Discours sur l'Histoire Universelle' and the 'Histoire des Variations des Églises Protestantes. M. Rébelliau has not much to say on the first of these two works, which is a general survey of the history of the world, written by a professor for a pupil—a pupil who was to be the King of France; he regards Bossuet chiefly as the author of the 'Histoire des Variations,' and here he exhausts completely his subject, with an abundance of notes and of documents which does great credit to his industry. Renan has professed to be scandalized because the 'Discours sur l'Histoire Universelle' still remains on the programmes of our classical education; and surely nothing can be more different from our modern historical method than the method of Bossuet. Scherer, one of our best modern critics, in an imaginary conversation between a few writers, says of Bossuet: "Bossuet! a man who had read nothing, who knew nothing!" Sainte-

Beuve is much in the same spirit: he cares little for Bossuet as an historian; he is under the charm only of his beautiful style. He recognizes in the Bishop of Meaux "the man of all the authorities and of all the stabilities," a "sacerdotal" character, incapable of yielding, without any elasticity, devoid of all scientific instinct. Even in Bossuet's time, in 1686, Jurieu, the great Protestant writer, accused him of ignorance. "M. de Meaux," said he, "is one of those court bishops whose business it is to study nothing."

M. Rébelliau has undertaken to prove that as an historian Bossuet does not deserve such a severe condemnation. He has undertaken to study the documents which Bossuet used in his history of the Protestant churches, and to judge the manner in which he used them. How was Bossuet led to write the history of what he calls the "Variations in the Protestant churches"? Was it because he had under his eye a book printed in Geneva in 1654, 'Syntagma Confessionum Fidei,' etc., a collection of the discordant articles of faith of the various Protestant sects, condemning each other on many points? No, he had a higher aim: he wished to renew, to rejuvenate the old controversies between the Catholics and the Protestants. At the time of the Reformation these controversies were very ardent and very encyclopædic: they touched a hundred different points. Richelieu had taken part in them, and, not content with having taken La Rochelle, he had hoped to bring back the Protestants to Catholicism by discussion and persuasion. Mazarin, though he was a Cardinal, did not care much for theology; and it may be said that during the reign of Louis XIV. the Catholic Church and royalty were more inclined to use force than persuasion. Heresy was looked upon as a danger to the State. Theological discussion had almost ceased entirely when the Jansenist movement began. It has been said that Jansenism was, so to speak, a second edition of French Protestantism. Though the moralists and theologians of Port Royal defended themselves against the imputation of Calvinism, they had a visible affinity with it: they showed it in their mysticism, in their horror of superstition, in their Puritanic morals, in the sobriety, discreetness, and dryness of their ceremonies, in a certain severity of doctrine and of life. The Jansenist movement, which has been so carefully studied by Sainte-Beuve, was a curious sort of revival of the ideas which the Protestants of the sixteenth century had defended sword in hand. It was an aristocratic movement, like the Calvinistic movement; only, as it manifested itself at the time when monarchy was absolute, it never left the domain of thought and remained purely theological.

If Bossuet had espoused the ideas of Jansenius, he would perhaps have made a revolution in the French Church, and accomplished what the doctors of Port Royal were unable to do; but Bossuet was in essence conservative, and he wrote the 'History of the Variations' chiefly in order to prove that the true character of the Church lay in unity of doctrine. He condemned the Protestants because they were divided into various sects; that would, perhaps, have been enough, from his theological point of view, but, as the cause of the Church seemed to him absolutely tied to the cause of monarchy, which he could not conceive otherwise than as orthodox and sacerdotal, he condemned the Protestants also as enemies of the State. Here the historian came forward, and he had to give a history of the religious wars of France during the sixteenth century. I will not enter here into the theological part of the work of Bossuet; the spirit of it is condensed in a line on the first page of the 'History of the Variations,' in which he says that "the truth which comes from God has at once all its perfection." It became a favorite argument of the Catholic theologians, after Bossuet, to charge against the Reformation the variations and the variability of the several confessions of faith of the Protestant churches, and there has often been manifested in the Protestant churches themselves a desire to reunite once more all the churches in one universal church. The historical part of Bossuet's work is entirely subordinate to the theological; but this secondary part was, however, important. M. Rébelliau takes great pains to prove that Bossuet had prepared himself well for it. Historical studies were certainly not held in so much honor as they are to-day. Descartes and the Cartesians looked on them with some contempt; Malebranche and La Bruyère laughed at the "savants de mémoire." But there was a group of men who did not despise the original documents on which history is founded: Le Nain de Tillemont, though a Jansenist, was a good historian; the Benedictine monks, Mabillon in particular, who were very erudite, were in correspondence with Bossuet. Modern criticism has many faults to find with the 'Discours sur l'Histoire Universelle,' but on the whole Bossuet's errors are trifling; you may discuss the spirit of the work, the facts are generally exact. I turn at once to the history of the religious wars in France. Bossuet explains in these words why he introduced this subject in his great work on the 'Variations':

"The Protestants," he says, "began in France as well as in Germany by declaring very loudly that they would not use violence in order to defend their persecuted faith and to bring about the triumph of their religion. This principle was inscribed in the confessions of faith and other public acts of the party; it was proclaimed by the doctors, by Calvin and Beza, as well as by Luther and by Melanchthon. It was a dogma of the Reformation at its origin. In 1560, however, a religious war breaks out in France, and it finds theologians to absolve it, synods to encourage it. There is a dogma dead as soon as born; there is a new variation to be added to the list of contradictions of the Reformation."

Was it very necessary in 1665, when the Court was visibly meditating the violent suppression of Protestantism in the kingdom, to represent the Protestants as animated by a spirit hostile to the French monarchy? Neither Mazarin nor Louis XIV. had ever had to complain of the loyalty of the Protestants. Ever since the Duke of Rohan signed the peace of Alais, the Protestants had ceased to exist in France as a party; it was ungenerous to recall the long and bloody struggles of the past. It is clear that, consciously or unconsciously, Bossuet was preparing the overthrow of the Edict which still protected the last Protestant churches. Had he a right to reproach the Protestants with having defended their churches, sword in hand, when the parlements and the intendants were asking for the revocation of the Edict of Nantes?

Bossuet has no other object in the historical part of his work than to throw suspicion on the loyalty of the French Calvinists and to find arguments against the perpetual validity of the Edict of Nantes. It is idle now to discuss the legitimacy of the religious wars of the sixteenth century and of the beginning of the seventeenth century. The answers made by Jurieu, Burnet, Basnage to the part of Bossuet's work which relates to that period forced him to write in 1691 a 'Defence of the History of the Variations.' Here again Bossuet tried to demonstrate that the French Reformers "began the civil war 'par principe et en corps d'église.'" He used freely the declarations of some of the synods.

The 'History of the Variations' was much read and it had a great influence even on the Protestants. It somewhat changed the character of their polemical works. It probably did not convert a single reformer, but it forced the Protestant writers to change, on some questions, their argumentation. Jurieu and others boldly vindicated for the French reformers the right to rise against tyranny. "M. de Meaux," says Jurieu, "must learn that we are not ashamed to find in our synods decisions from which he concludes that we do not consider it always forbidden to use arms in favor of religion." The first Protestant writers had looked upon the Albigenses, the Vaudois, and the other heretics of the middle ages as their spiritual ancestors. Bossuet takes advantage of this solidarity; since his time the great majority of French Protestants have disavowed the doctrines of those heretics. Beausobre, for instance, sees only essays at reformation in their attempts. "I have looked," he says, "for ancestors for our *réformés;* the Albigenses cannot be these ancestors."

Bossuet had drawn striking portraits of Luther, Melanchthon, Calvin, Beza; he had shown their weaknesses, their failings. Jurieu, Basnage, and others wrote on the founders of the Reformation with a modesty which was not felt by the first Protestants. But the chief point of the 'History of the Variations,' the chief argument, was the doctrine of the perpetuity of the Catholic faith as opposed to the variability of the reformers. Jurieu tried to prove that the invariability of the Catholic doctrine was not real; that the most essential dogmas of Christendom till the fourth and fifth centuries of the Church had changed their external form; that the Church had undergone an evolution, and that this evolution had not come to an end. Here Jurieu struck at the very root of the question. Inconstancy is the lot of man. You may enclose a doctrine in a network of formulas and of words; the ideas which these words embody will evaporate in the end and nothing will be left of them. "Variation," writes Basnage, "far from being a proof of falsehood, is often necessary to the pursuit of the truth."

Correspondence.

THE BOSTON PUBLIC LIBRARY'S LIBERALITY TO AUTHORS.

To the Editor of The Nation:

Sir: My attention has been called to the following statement in your paper of August 18, 1892:

"We regret to learn that the Boston Public Library no longer exercises that discretion which led it, by an enlightened view of its duties and its interests, to grant to persons actually engaged in authorship the privilege of occasionally drawing books, although non-residents. The custom which has been discontinued was a generous one, but it illustrated the liberal public spirit which Massachusetts men desire to have characterize their institutions. It is certainly not far beyond the sphere of a great public library that it should assist literature upon necessary occasion or proper convenience; yet, at present, the loan of a book only for a few hours is refused."

Will you permit me, in the interest of the Library, to state in the columns of your paper that there is not a particle of foundation for the above statements, and that the

policy of the trustees has always been, and still is, to increase the facilities for the use of the Library rather than to curtail them?

Very respectfully yours,
SAMUEL A. B. ABBOTT,
President Trustees.

PUBLIC LIBRARY OF THE CITY OF BOSTON,
September 12, 1892.

[We were aware of the printed rule which permits non-residents to draw books by special vote and "for weighty reasons." Until within two years, we believe, it was customary to issue books to persons engaged in literary work without this formality; and, in particular, authors residing at a distance were permitted to receive books by mail or express through responsible officers of the Library who kindly charged themselves with this duty. This was the custom which we referred to as a generous one, which is used at the British Museum, is common on the Continent and is gaining in this country, and which was discontinued at the Boston Library. In consequence of orders then given, forbidding subordinate officers to send away books in response to such requests, authors who had drawn in this way ceased to do so, understanding that they were debarred. Two instances of this have been brought to our notice. There is little reason to question that the effect which the measure had was aimed at, as the printed rule does not contemplate the case of an author who cannot present himself in person at the desk.

The incident which occasioned our comment was a much simpler matter than sending books to authors at a distance. It was the refusal of the loan of a book for twenty-four hours to Prof. George E. Woodberry. In editing his new edition of Shelley's poems, which is to contain the variorum readings of all editions and all known MSS., he went to the library to verify certain readings in his proofs by the facsimile of the MS. of "The Mask of Anarchy," published by the Shelley Society. On examination he found that changes must be made in proofs already returned to the press and immediately to be cast, and a vexatious delay could be avoided only by taking the book to Beverly for the night. A single star showed that the volume was open to restricted circulation; it was of the value of ten shillings, and, though one of an edition of 500 copies, could at present be easily replaced if lost; its only use was that to which Prof. Woodberry would have put it. He thus relates what took place:

"I sent in my card to the librarian, and, on his coming out, shook hands with him, showed the book and my proof, explained the situation, and made my request. 'Beverly,' said the librarian, 'is, I believe, not a part of Boston.' I replied that the favor would oblige me and the printers. 'I know of no rule,' he said, 'which permits it.' I remained silent, being, indeed, somewhat abashed by the brief lesson in geography which I had received, and he turned and left me. What followed was more singular. I went to the publishers and ordered the types held, but, on explaining why, was offered one of the firm's cards on which to obtain the book. I returned to the library, but, although the assistants and one of the officers, to whom I was well known, kindly made a half-hour's search, the book was 'lost.' I was told that it should be reserved for me at the desk, and the next day found it there with a written slip, 'Not to be taken out. By order of Mr. Dwight.' The intention of the librarian that I should not have the book, even on an entitled card, was plain. The librarian of the Providence Library, on hearing of the affair, placed any books there at my disposal, and the Harvard College Library immediately sent the book by mail."

The refusal, on the ground of non-residence, was direct, responsible, and not further explained. There was no intimation that non-resident authors could obtain books in any way; on the contrary, the impression plainly meant to be conveyed was that they had neither rights nor privileges in the Library. The rules were cited and the request disposed of as a matter of routine in the ordinary course, as one of a class of cases. It was, as we characterized it, an incident "unfit to happen" in such a place. If the Board should grant the librarian a share of that discretionary power in which he is apparently so poor, it would materially assist in carrying out the intention of usefulness expressed by its President; and if the Board should find some simple mode of obliging authors at a distance, on necessary occasion or proper convenience, as we said, the Library would escape unfavorable comparison with Harvard and Providence, as well as with its neighbor, the Athenæum, Yale, the American Antiquarian Society, and other libraries which are as excellent in their administration as they are rich in special collections.—ED. NATION.]

MR. ADAMS'S QUINCY ADDRESS.

TO THE EDITOR OF THE NATION:

SIR: As you have mentioned my name in connection with the charter of the city of Quincy, I should like to say a few words with regard to it. The professed object of that charter was to concentrate power and responsibility in the hands of the Mayor, but it must be admitted, so far as I can learn, that it has failed to accomplish this object. The control of the city finance and administration is still in the hands of the Council, with very little check by the Mayor. The city expenditure is parcelled out by a log-rolling process among the districts, with very little consideration of the total. I do not think that the election of councilmen-at-large, instead of by districts, would make any difference. I believe the experiment has already been tried in Boston, and it was found that the elected members represented districts just as before. Again, it would take a good deal of compulsion to make some men serve in positions where their reputation is sure to be tainted, where they can get no credit for good work, and must bear their full share of blame for bad. I am not sure that a term in the State's-prison would not by many be regarded as a desirable alternative.

The object to be aimed at remains the same, even if the Quincy charter has failed to accomplish it—namely, such concentration of power and responsibility in individuals that the best and largest part of the voters—those who can, and do, give the least attention to politics—shall be able to see clearly where praise and blame belong, and award them with a minimum of effort. Now the mainspring of city as well as all other politics is finance. The English national is beyond comparison the first public finance in the world, simply because Parliament never proposes an expenditure or a tax. The whole subject is in the hands of the Chancellor of the Exchequer, who manages it like his private purse, though subject to his responsibility to Parliament and the nation. The next drastic step in city government would be to have a city treasurer appointed by the Mayor on his sole responsibility, and to leave to that treasurer the whole subject of revenue and expenditure, allowing the Council or Aldermen only to accept or reject his proposals—or, in other words, the veto power. That would very speedily bring the district politicians into line. Something like this already exists in the Board of Estimate and Apportionment in Brooklyn and I think in New York, but that is also an impersonal body, and its plans are sent to the Aldermen in writing, so that there is still a failure of public discussion and criticism and of individual responsibility.

One other firm conviction has been forced upon me by years of study and observation, that the only way to effectively improve city government is to attack its source in that of the State. The whole organization and administration of the cities are dependent upon the State governments; and, though the evil is less directly felt, these are by far the worst of the two. Nowhere in the country does this omnipresent problem of the confusion of executive and legislative power, and the absorption of the former by the latter, project itself more offensively or call more loudly for reform. I covet, with exceeding greediness of desire, for Massachusetts the honor of being the first to lay her hand to this work. In this Presidential year nothing can be done, but next year I propose to try once more whether the attention of the people of this State, and particularly of the young men, from whom the most and a great deal of generous and disinterested work is to be expected, cannot be directed to this important subject, and whether State politics cannot be turned towards some other distinction than that, the absurdity of which you so justly stigmatize, between Republicans and Democrats. GAMALIEL BRADFORD.

BOSTON, September 17, 1892.

BERLIN'S MUNICIPAL GOVERNMENT.

TO THE EDITOR OF THE NATION:

SIR: In the May number of the American edition of the *Review of Reviews*, Dr. Albert Shaw published an extremely interesting article on the municipal problems of New York and London—an article that has attracted widespread attention. As an American student of municipal government, I beg to analyze some of the statements made by Dr. Shaw, as well as to raise some doubts as to the validity of some of his applications of European experience to American conditions. In taking examples from Continental cities I shall limit myself to Berlin, with which I am most familiar. It is generally agreed by students of municipal government that of all the modern metropolises, Berlin is without a doubt the best and most economically governed. Its citizens pay less and receive more than those of London, Paris, New York, or Philadelphia. From this it by no means follows that its institutions would allow of transplanting to American soil. The traditions of the Prussian monarchy, the position of the Prussian municipalities in the

organism of the State, the admirable civil-service system which pervades every branch of the State and local administration, a more earnest conception of the duties of citizenship rather than its rights—all these are elements which make the premises of reasoning in the two cases totally different, and which render direct comparison extremely difficult—yes, well-nigh impossible. And yet there are certain political, economic, and ethical principles pervading all the different branches of the municipal administration which are very well adapted to furnish us with a criterion by which to judge the state of our American municipalities, the causes which have led to their degeneration, or rather stagnation, and to give us certain hints as to the direction of our development if we wish to fulfil the mission that civilization has placed upon our shoulders.

In this short communication I wish to direct attention exclusively to the two main tendencies of the article in question:

(1.) The idea that London and its recent reorganization should serve us as a model for the future reforms in American municipal government.

(2.) A seeming neglect of the experience of Continental cities, or, when they are mentioned, a misunderstanding as to the real factors that have so largely contributed to their efficiency.

While it is true that the problems of "Greater New York" would in many respects be analogous to those of London at the present day, it is equally true that those of "Greater Berlin" would offer the same analogies. For the present, however, it is *New York as she is* with which we have to deal. Such being the case, it is surprising that the author should have taken London as the standard of comparison, whereas Paris, and to a much higher degree Berlin, could furnish us with (in many respects) brilliant examples of the solution of some of the most difficult problems of municipal government—problems which London as yet has been unable to solve satisfactorily. The constitution of the "New County Council" is nothing more than an experiment, the results of which must be more definitely known before a decisive opinion can be expressed.

Dr. Shaw says (p. 287):

"The European cities have found that they can best govern themselves by reposing authority in a good-sized central e ective body known as the Municipal Council, of which the Mayor, as a rule, is simply the presiding officer. All appointive authority and administrative power, as well as authority for the raising of municipal revenues and for the appropriation and expenditure of municipal moneys, is centred in this Municipal Council. Every ramification of the complicated system flows from the central reservoir of authority and of administrative energy."

We do not know what cities Dr. Shaw may have in mind; at all events, the conditions above described are not in harmony with either of the two great Continental cities, Berlin and Paris. In point of fact, the very organization against which Dr. Shaw throws the full weight of his judgment and authority is here realized to a greater or less extent. He says (p. 286):

"American city government has had a curious system. Its purposes have generally failed to be properly conceived, and attempts have been made to organize it upon mischievous analogies. The Common Council has been treated as if it were a legislative body, and the Mayor has, in a general way, been regarded as the chief of an executive department. But there has been no logical partition between the two because the analogy at the outset was a false one. The whole government of a city exists properly to carry on a series of business enterprises which grow out of the massing at a central point of a large body of people. There is no pertinence in the attempt to separate the executive head from the body which makes municipal regulations and votes upon income and expenditure."

It is not my object to go into the details of either the Berlin or the Paris administration. Where, however, this autocratic, this "all-appointive and administrative authority" of the Municipal Council is to be found, is to me unknown. At any rate, of the two great Continental cities, Paris and Berlin, the latter offers Dr. Shaw by far the stronger case, for it can hardly be possible that the author would think of exemplifying his doctrines by means of the Paris administration, which is in reality no more of a municipality, in the true sense of that word, than is New York.

At Berlin, however, it seems to me that the division of authority is pretty closely drawn, and along the same lines as in the case of the State authority. As to the Municipal Council being an autocratic body, this is far from being the true state of the case. If it be possible to speak of one of the integral parts of a municipal organism as being the more important, I should be tempted to give that place to the "Magistrat," which occupies in some respects the position of a select council, whereas in others it is the executive organ of the city administration. The members of the "Magistrat" are elected by the Municipal Council, but their election requires the confirmation of the King of Prussia. They are elected for six or twelve years, according to their position. As a matter of fact, those members whose functions are of a more technical nature, requiring long preparatory study, generally remain in office for life. As presiding officer of the "Magistrat," and at the same time as highest representative of the personality of the city, stands the "Oberbürgermeister." He is the real executive, for under his leadership and control the "Magistrat" exercises its executive authority. He also has a veto power upon the bills passed by the Municipal Council and "Magistrat."

These are but the very barest outlines of the Berlin administration, which would necessarily undergo some modifications in a detailed description, especially in treating of the exact relation between Municipal Council and "Magistrat" and between "Magistrat" and "Oberbürgermeister." It is true that the Municipal Council of Berlin possesses very great powers, but these powers resemble closely those of a House of Representatives—that is, a "purse power" and financial control. But as to having by itself an appointive and administrative power, that is out of the question. In reality, its financial powers are limited by the fact that the "Magistrat" has to prepare the bills to be laid before the Municipal Council, has the right to send representatives to the Council to uphold these measures, and, after passage by the latter body, has still a practical right of veto. The only redress for the Council is an appeal to the "Bezirksausschuss," a kind of administrative court which has peculiar legislative powers. The relation between "Magistrat" and Municipal Council reminds one in some respects of the position occupied by the Imperial Council and Imperial Diet of the German Empire.

To go any deeper into this part of the subject would exceed the limits that I have set myself. At least one point I hope to have made clear, viz., that an appeal to the present conditions of Continental cities as examples of administrations with almost autocratic municipal councils of which "the Mayor, as a rule, is simply the presiding officer," is by no means justifiable, and is entirely misleading as to the true state of affairs. This being the case, the question very naturally arises, Is all that against which Dr. Shaw argues with such vehemence really as worthless as one would be led to infer from his statements? Is it an illogical division of municipal powers to regard "the Common Council as a legislative, and the Mayor as the chief of an executive, department"? Is the theory that a city is not much more than a business corporation on a large scale a correct one? In these three points it seems to me that Dr. Shaw has erred in carrying to their extremes three doctrines which are true only when kept within certain limits.

As regards the first question, a sufficient answer should be the description of the organization of Berlin. The weak point in American municipal government does not lie so much in our *principle* of the division of authority as in the haphazard way in which such authority is actually divided. The anything but satisfactory experiences made with our present system have led Dr. Shaw to throw the whole principle overboard, which is, however, by no means necessary. Without in any way attempting to sketch plans for reform, it is evident that rather than unduly to strengthen the power of the Common Council, it must be our endeavor to strengthen the position and clearly define the responsibility of the Mayor; and where a second chamber (Select Council) exists, to strengthen its financial and administrative control. The possibility of an extension of the system of honorary offices, and the development of a more efficient system of administrative responsibility and control, is too complicated a question to be entered upon here.

Before closing, I wish to add a short comment upon Dr. Shaw's apparent conception of the municipality as a large business corporation. As he expresses it, "the whole government of a city exists properly to carry on a series of business enterprises which grow out of the massing at a central point of a large body of people." This is true as far as it goes, but the conception is a too narrow one, and would result in erroneous ideas regarding the true functions of a municipality. A municipality is much more than a large business corporation. It is clothed with certain public functions which cannot in any shape or form be crowded into the framework of any such corporation. The mischievous results of a conception such as the author's show themselves in the doctrines of municipal taxation of the extreme individualistic school of political economy. Their doctrines have had only too great influence in the actual development of municipal taxation upon the Continent. To a more liberal conception the future undoubtedly belongs.

LEO S. ROWE.

BERLIN, June, 1892.

FORM OF BALLOT IN PENNSYLVANIA.

TO THE EDITOR OF THE NATION:

SIR: Ballot-reformers generally may be interested to learn that the form of ballot finally adopted under the Pennsylvania law, in accordance with the opinion of the Attorney-General of the State, is much more favorable to honest, intelligent voting than that hitherto presumed to have been required by the language of the act. As originally drawn, the bill provided for the system of grouping by offices and individual marking adopted in Massachusetts and several other States—the "non-partisan ballot," as it may rightly be called. The Senate Committee on Elections, under or-

ders, as is generally believed, from Quay, made many changes for the worse, including the introduction, as was supposed, of the "partisan ballot" in its worst form—complete party tickets to be voted by a single mark; and the Secretary of the Commonwealth prepared a draft of the ballot in this form, presuming that to be what was required by the words used in the hastily-drawn substitute for the original provision.

The ballot-reformers had been so thoroughly disgusted at the treatment which their bill, in spite of its well-known popularity, had received, that they gave the whole matter little further attention, so that criticisms of the official interpretation came first from the Republican State Chairman and others of his party, who, though the partisan ballot was obviously in their favor, they having usually a large majority, had no desire to risk the electoral vote of Pennsylvania on a ballot of doubtful legality. After a conference between the party leaders, the matter was referred to the Attorney-General, who, though upholding the arrangement of names in parallel party columns, advised that the names of the candidates of each party must be placed, not in a single group, to be marked by one cross-mark, but in as many groups as there were certificates of nomination, *i. e.*, the State ticket in one group, the Congressional district ticket in another, and so on (a single candidate being in many instances required, in the language of *Dundreary*, to "flock all by himself" in a group of one), and each group must be marked separately.

Under this system even the most rigid partisan cannot vote the straight ticket by a single mark, but must make at least one mark for each of the five or six groups, while the man of average independence is at all events not encouraged to vote on strictly party lines in order to save trouble. In those legislative districts where the desire to secure a vote against Quay has produced either disaffection or a positive split among the Republicans, the Attorney-General's opinion is naturally received with great satisfaction by those engaged in the anti-Quay fight.

CHARLES C. BINNEY.

PHILADELPHIA, September 16, 1892.

Notes.

DUPRAT & CO., 349 Fifth Avenue, announce for publication early in November 'The Book-lover's Almanac for the Year 1893,' with twelve full-page illustrations in color by Henriot. Only 600 copies will be printed, on Japan and on Holland paper, by the De Vinne Press.

T. Y. Crowell & Co. have in press Matthew Arnold's selections from Wordsworth, illustrated in photogravure by E. H. Garrett; and Walton's 'Complete Angler' in two volumes, reproducing Major's edition, illustrations and all.

G. P. Putnam's Sons expect to continue their edition of Edmondo De Amicis's writings with a translation of his latest volume, 'School and Home,' and with the romance on which he is now engaged, 'The First of May.'

'College Requirements in English,' compiled by the Rev. Arthur Wentworth Eaton, for the various fitting schools of the country, with specimen examination papers, will be issued by Ginn & Co.

Two books somewhat akin are announced for publication this winter by Longmans, Green & Co. One is the autobiography of Sir Henry Parkes, to be called 'Fifty Years in the Making of Australian History'; and the other is 'The Biography of Robert Lowe (Lord Sherbrooke),' by Mr. A. Patchett Martin.

Capt. Cook's journal of his first voyage round the world, never before printed, is to be edited by Capt. Wharton, R. N., and supplied with maps and charts, for publication by Elliot Stock, London.

Three volumes by Prof. Adolf Bastian, 'Ideale Welten nach uranographischen Provinzen in Wort und Bild' (Berlin: Felber), are on the eve of publication. The first will contain a description of his travels in India in 1890; the second will be devoted to ethnology and history and their mutual relations, especially as exemplified by the races of India; and the third will give an account of Indian cosmogonies and theogonies, including a thorough examination and critical analysis of the system of the Jainas.

Prof. Willard Fiske is passing through the press at Florence one of his "asides" from bibliographical labor. This is a trial list of vulgar Arabic words, which he has edited in collaboration with Mr. Socrates Spiro of Cairo. The list is followed by a grammatical synopsis, consisting chiefly of paradigms and examples, both given in the simple but ingenious modification of the Latin alphabet designed by the late Spitta Bey, a man who deserved well of Egypt, not only for his work on the vulgar Arabic, but for his organization of the Khedivial Library. Prof. Fiske, however, omits the semi-vowels as making the system too complicated. The list generally presents the irregular or *broken* plurals of the nouns and the principal part (the imperfect) of such verbs as are irregular in that form. The sentences in the grammatical parts exhibit the capacity of the language of the people to treat almost any subject—historical, scientific, etc. Whatever the shortcomings of the work, it will at any rate be a modest beginning in the laudable endeavor to make the spoken language of the Arabic people its literary tongue, recorded by means of an alphabet far easier to acquire than the cumbrous one now in use. The volume will be privately printed at the Landi press in Florence, and will be in modern Arabic down even to the bastard title.

Mr. Charles Warren Stoddard's 'South Sea Idyls' makes its reappearance after nineteen years with the imprint of Charles Scribner's Sons. Mr. Howells, in a flattering introductory letter to the author, bespeaks a better reception for the book than it had when the late J. R. Osgood first published it on the eve of the financial panic of 1873. We are now, however, in the midst of a cholera panic and a Presidential campaign, unimpassioned though the latter is. Moreover, while Mr. Stoddard's fantasy and humor have probably still a power to charm and amuse, he now has to compete in style and theme with Robert Louis Stevenson and Rudyard Kipling, who were unknown and unexpected in 1873.

Another reprint by the same firm is a pretty two-volume edition of J. G. Holland's 'Kathrina' and 'Bittersweet,' each with an etched frontispiece and a "cameo" binding. These poems are just a quarter-century old and call for no renewal of criticism. No more does the Baroness Tautphoeus's evergreen 'Initials,' which the Putnams have just brought out in a handy "Hildegarde Edition" in two volumes of clear type, fit to be re-read by eyes no longer young.

Like McPherson's Political Handbooks, Mr. Edward Stanwood's 'History of Political Elections' has become a permanent necessity. A third edition, revised, has just been issued by Houghton, Mifflin & Co. Its novelty consists in its added chapter on "The Second Harrison." This deals, of course, not with Mr. Harrison's Administration, not yet closed, but with the events which led up to his renomination. The exposition of facts is marked by the same candor and non-partisanship which so much enhance the value of Mr. Stanwood's compilation of platforms and electoral statistics. He calls attention to a discrepancy in the "official" footings of the total vote of 1888, amounting to more than 3,000, for which he cannot assign a cause. In the appendix, the Conventions of 1888 are replaced by those of 1892.

To all lovers of choice literature of the older school the retrieval from oblivion of anything by Thomas Fuller cannot but be most welcome. And we have, in good part, such a retrieval in the two volumes of his 'Selected Sermons, 1631-1659,' lately published by Pickering & Chatto, London. While, to the general reader such as he is in our age of rush and hurry, these discourses are of too little interest to warrant detail of their contents, it is enough, for those who are qualified to appreciate them, simply to announce their appearance. As specimens of typography, their place is in the first rank; and harmonious with their quaint external daintiness is the reverent and critical care which has been bestowed, editorially, on these scattered remains of a famous old divine. The idea of collecting and annotating them originated with the late Mr. John Eglington Bailey, already favorably known by his excellent 'Life of Fuller,' and had been largely realized by him at the time of his premature death. For the completion of Mr. Bailey's unfinished undertaking we are indebted to his friend, Mr. William E. A. Axon. Of the manner in which their task has been accomplished it would be difficult to speak in terms of praise exaggerating their deserts.

The concluding parts of the current Annual Supplement to 'Meyer's Konversations-Lexikon' (New York: Westermann) are now at hand. Among the noticeable features are a fourteen-pages-long list of German romances from the seventeenth century to 1891, by way of exhibiting its wealth of subject; an elaborate article on socialistic fiction (*Staatsromane*), from Sir Thomas More's 'Utopia' and Harrington's 'Oceana' to Bellamy's 'Looking Backward,' in many subdivisions; a review of Social Democracy, with the text of the German platform and a glance at receipts, expenditures, and growth of its newspaper organs; a survey of national debts; an account of the various parliaments of Europe and the United States; statistics of city and suburban railroads, New York included, with maps. To these add articles on typewriting machines, on reform in the studies of universities and high schools; on Troy, with Dörpfeld's plans based on Schliemann's last excavations; on the habitability of the sun and Mars, etc.; on slavery and the slave-trade in Africa, etc. As last year, there is an analytic table of contents and a necrological conspectus.

The bibliography of Ibsen grows apace; not only are there magazine essays and newspaper articles in plenty, but of books also there are not a few. The latest is one of the best; it is a critical study of 'Henrik Ibsen et le Théâtre contemporain' (Paris: Lecène, Oudin & Cie.; New York: F. W. Christern), by M. Auguste Ehrhard, a professor of the faculty of Clermont-Ferrand. M. Ehrhard makes four groups of Ibsen's plays, the Romantic, the Philosophic ("Peer Gynt"), the Modern (from the "League of Youth" to "Ghosts"), and the Symbolic (from "An Enemy of the People"

to "Hedda Gabler"). The classification is a little arbitrary, but it is obviously convenient. M. Ehrhard does not insist quite as strongly as he might on the perfect understanding of the theatre which Ibsen has.

Maps of the battlefield of Antietam are the main feature of Part 6 of the Atlas to accompany the 'Official Records of the Union and Confederate Armies' in process of issuance by the War Department at Washington. But South Mountain, Gettysburg, Sharpsburg, Fredericksburg, Stone River, and other famous fields are also depicted by Federal or Confederate officials, and there is even a map of the region about Washington, dating from July, 1861, at the opening of McClellan's session in front of the capital.

G. W. & C. B. Colton & Co. have revised their folding map of Brooklyn, showing the new ward boundaries, railroad lines (of which there are 46 on the surface), etc. The scale is four inches to a mile.

The Stralsund sheet of Dr. Vogel's map of the German Empire (Gotha: Perthes; New York: Westermann) might, in itself considered, as appropriately be called the Copenhagen sheet, since the capital and much of the insular part of the Danish kingdom are shown on it, with a part of Sweden. A second sheet, designated Bromberg, takes us away from the coast into the glacial lake-region of West Prussia.

Thomas Hardy is another English author whose American editions get bedevilled. He writes to the *Critic* that he could not control the omission of the explanatory preface which appears in all the English editions of his 'Tess of the D'Urbervilles.' He further illustrates the crudeness of our present copyright law when he says: "I may add in this connection that the necessity for (at least) simultaneous publication in America of English books, to secure copyright, renders it almost impossible that the latest addenda of an author should be incorporated in the foreign imprint. Could even a fortnight's grace be allowed, final touches, given just before going to press on this side, would not be excluded from American copies, as they now are in so many cases."

—A unique institution is about to be established in Weimar. It is neither university nor academy, nor yet, strictly speaking, a library, but it is, nevertheless, an intellectual workshop of great importance to writers and scholars the world over. It is an enlargement of the scope of the well-known Goethe-Schiller Archives, out of which it has developed naturally and organically. In 1888 Baron von Gleichen-Russwurm, the grandson of Schiller, and one of the foremost landscape painters of Germany, made over to the Goethe Archives all the papers of his celebrated grandfather, and the Archives thereupon took the double name of the poet pair. The papers of Herder and Wieland having already been deposited there, it was an easy step to the idea of a universal German archive; this idea has now taken definite and practical form. The new institution is to serve a twofold purpose: it is primarily a place of safe deposit for the literary remains and manuscript treasures of all the great writers of Germany, in whatever field of intellectual activity they may have labored; and it will furthermore afford unrivalled facilities to investigators, scholars, editors, and critics who wish to have access to the original sources and to study their authors at first hand. The Archives will continue under the supervision of the scholarly Prof. Suphan, and the present name, which will lose none of its appropriateness under the new conditions will probably be retained. The success of this enterprise is now assured, and a special building for the purpose is to be erected at the expense of the Grand Duchess herself.

—It has been thought fitting that an opportunity should be afforded to all persons interested in German literature of associating their names with this institution, and an appeal has accordingly been issued, signed by some forty of the most prominent men of Germany. Although the funds for building have been appropriated, money will nevertheless be necessary for the enlarging of the library to be used in connection with the work of the Archives. Even the smallest sums will be acceptable; the essential point is that America should manifest her interest in an enterprise of such importance to the world of letters, and that the names of a goodly number of her citizens should appear on the list of founders and be deposited in the corner-stone of the building, which is soon to be erected. The presentation of the fund thus subscribed is to take place upon the occasion of the golden wedding of the Grand-Ducal pair, on the 8th of October next. Contributions should therefore be sent at once to the banking firm of Robert Warschauer & Co., Berlin.

—Mr. N. H. Thompson contributes to the current number of the *Political Science Quarterly* a valuable article upon the control of national expenditures. From an early day, Congress has endeavored to check the extravagance of administrative officers. Gallatin successfully labored for Congressional restrictions upon the discretion of heads of departments in the use of public moneys, and labored with more earnestness but with less success in securing general compliance with the rules after they were prescribed. But we have had few finance ministers as watchful as Gallatin. He gave every hour of the day and many of the night for the first two years of his service in order to understand and control all the details of the office, and, as he used afterwards to say at the end of his twelve years' term, he "was fairly worn out." It would be impossible at the present stage of our growth for a Secretary of the Treasury, with the McKinley Act and the cholera on his hands, to exercise any supervision over disbursements of the appropriations. Moreover, as Mr. Thompson contends, such supervision cannot be beneficially exercised by the officer who himself gives thousands of orders for the payment of money. His preliminary order "forecloses his subsequent judgment as to its legality." Granting that Congress should assume to give minute directions concerning the manner of disbursing the public money which it grants, it must be admitted that it should employ efficient means to enforce its commands. Administrative officers cannot be depended upon for this. Congress cannot directly control. But the accounting officers, if properly equipped and sustained, would prove, as Mr. Thompson thinks, an admirable agency. He suggests that they be organized anew—converted into an independent, semi-judicial body, distinct from any executive department. He would do away with the system of double examination of accounts, and provide for a greater degree of responsibility upon the part of clerks. He urges the unification of the several accounting offices, the contraction of their jurisdiction, and the enactment of a statute of limitation to bar public demands.

—The Department of Audit which Mr. Thompson advocates is a familiar institution in many European governments. If we should ever have a court of accounts, presided over by eminent magistrates holding office during good behavior, and authorized to select their own assistants, it would not be necessary for Congress to direct with minuteness the duties of the subordinates, or to take pains to give them that protection which Mr. Thompson now implores for them. On this subject the author, who is well qualified to speak, says:

"The present Civil-Service Law . . . throws its protecting ægis over the clerks only, and but partially and imperfectly over them; for among them a class which needs its protection most urgently is now left to bear the brunt of the affray and is slaughtered without mercy. When the Treasury Department was reorganized in 1875, chiefs of division were established in the various offices, it being the intention that these chiefs should be selected from the principal clerks, who, by reason of their knowledge, experience, and special training, would be well qualified to superintend and direct the other clerks in the discharge of their duties. From what has been said of the importance of the duties of the clerks in the accounting offices, it will be obvious that this was a judicious and admirable provision. Moreover, it offered a goal for the commendable ambition of meritorious clerks, and encouraged fidelity and proficiency. But the rules adopted by the Civil-Service Commission most inexcusably excepted such chiefs of division from examination. The effect of this injudicious concession to the patronage system has been to permit those important positions to be filled with inexperienced and merely nominal chiefs, incompetent to instruct and direct their trained subordinates. The rule thus operates in practice as a bar to the promotion of even the most worthy and meritorious clerks; for, being the only important positions in the departments at Washington which are in the free gift of the Secretary, they are regarded as choice plums to be exchanged for reciprocal favors, past or prospective, and they command a price in 'influence' which is beyond the reach of a department clerk."

—In a recent letter to the London *Guardian*, Archdeacon Cheetham pointed out some ecclesiastical inaccuracies, one of which was serious, in the latest volume of the 'Dictionary of National Biography.' In the life of Kitchin, Bishop of Llandaff, it was stated correctly that he was expected to take part in the consecration of Archbishop Parker, but in fact did not do so. The writer then goes on to say: "No bishop consequently took part in the ceremony; a fact which gave rise to the great controversy as to the validity of English orders." Parker's consecrators were, of course, Barlow, Scory, and Coverdale; and, moreover, if the fact had been that "no bishop took part in the ceremony," it would not have raised, but settled for all time, the question of English orders. The author of the article explains in the *Guardian* of August 10 the cause of the misstatement. He wrote "bishop in office"—that is, in undisturbed possession of his see—but the words "in office" were accidentally dropped in the printing, making an omission trifling in form, but vital in effect. Mr. Shaw, the writer, adds that it was as far from his intention as it would be from the traditions of the 'Dictionary' to treat the question controversially from any standpoint. He ends his letter by expressing his satisfaction at finding that the 'Dictionary' is being so closely watched.

—Dr. Arthur Schuster, President of the Mathematical and Physical Section of the British Association, concluded his address at the recent meeting of that body by stating some problems the solution of which seems not beyond the reach of the physics of to-day: (1.) Is every large rotating mass a magnet? If it

is, the sun must be a powerful magnet. The filaments of the solar corona probably consist of electric discharges. The effect of a magnet on the discharge is known, and careful investigation of the streamers of the corona ought to give answer to this question. (2.) Is there sufficient matter in interplanetary space to make it a conductor of electricity? Dr. Schuster believes the evidence to be in favor of that view. (3.) What is a sun-spot? The general appearance does not show marked cyclonic action; and (4) if the spots are not due to such motion, is it not possible that electric discharges setting out from the sun, and accelerating artificially evaporation at its surface, might cool those parts from which the discharge starts, and thus produce a sun-spot? (5.) May not the periodicity of sun-spots, and the connection between two such dissimilar phenomena as spots on the sun and magnetic disturbances on the earth, be due to periodically recurring increase of the electric conductivity of the regions of space surrounding the sun? Such an increase of conductivity might be produced by meteoric matter circulating round the sun. (6.) What causes the anomalous law of rotation of the solar photosphere? As all causes acting within the sun might cause its angular velocity to be smaller at the equator than at other latitudes, but could not make it greater, the only explanation open to us is an outside effect, either by an influx of meteoric matter, as suggested by Lord Kelvin, or in some other way. On the whole, the exceptional behavior of the solar surface deserves more careful attention, and its explanation seems likely to carry with it that of many other phenomena. It is gratifying to find that a young American astronomer, Mr. George E. Hale, recently elected to the University of Chicago, seems to have gone about this matter in the right way.

THREE BOOKS ON GREEK ART.

Histoire de la Sculpture Grecque. Par Maxime Collignon. Tome premier. Ouvrage illustré de 11 planches hors texte, en chromolithographie ou en heliogravure, et de 278 gravures dans le texte. Paris: Firmin-Didot & Cie. 1892. 4to, pp. x. and 569.

Antiquités du Bosphore Cimmérien (1854), rééditées avec un commentaire nouveau et un index général des *Comptes Rendus* par Salomon Reinach. Paris: Firmin-Didot & Cie. 1892. 4to, pls. 86, and pp. 213.

Handbook of Greek Archæology: Vases, bronzes, gems, sculpture, terracottas, mural paintings, architecture, etc. By A. S. Murray. With numerous illustrations. Charles Scribner's Sons. 1892. 8vo, pp. v. and 483.

It is now nearly ten years since Mrs. Mitchell published her admirable 'History of Ancient Sculpture,' and although work in the field of classical archæology has been active in the meantime, and new discoveries have led to essential modifications of many theories which were then generally accepted, no complete history of the art has usurped the place which was at once given to the work of that conscientious and painstaking woman. A number of small and condensed handbooks have made their appearance, and Mr. Murray has issued a second edition of his 'History of Greek Sculpture,' but Mrs. Mitchell's book has remained the standard compilation on the subject by the common agreement of German and French authorities, not less than by that of our own.

In the present rapidly developing state of our knowledge of Greek remains, classical archæology may be perhaps regarded as the least exact of all the sciences. Probably in no other branch of investigation does the discovery of to-day so frequently upset the theory of yesterday; and while with each decade the body of our fixed and established knowledge becomes larger and more strongly supported, the sum total of it is still so small as to discourage many of the ablest authorities from undertaking a work of such permanent character as a history purports to be. The story is told, and we believe with a basis of truth, that an eminent German professor completed a history of Greek sculpture some fifteen years ago, and has been deterred from bringing it out yet by the fact that he cannot keep the revision of his text abreast of the new theories and discoveries bearing upon different parts of it.

Such being the case, and with the knowledge that no history of this subject written at the present time, however carefully it may be prepared, can pretend to be the final word upon it, our gratitude is especially due to any scholar of the first rank who is willing to take the time and the trouble to present, in a popular form, a summary of what is known or thought at the period when he writes; and when he does this with the completeness and skill exhibited in this first volume of M. Collignon's History, he has produced a book of permanent value, no matter what the discoveries of another day may bring forth. Of small abridgments and manuals we have had enough and to spare during the last few years, and M. Collignon has wisely chosen to treat his subject in a larger and fuller manner, taking plenty of time and space to explain to his readers the different theories regarding such vexed questions as that of the "Mykenean" or "Ægean" civilization, for example, so that the layman, after reading his chapter on this subject, is in a position to appreciate any new essay which may appear upon it, while the lecturer or advanced student finds in this discussion of it suggestive material to freshen the memory, not to mention the value of M. Collignon's own contributions.

The present volume is divided into four books. In the first of these, "Les Origines," the prehistoric epoch of Greek sculpture is described, beginning with the most primitive plastic productions of Troy, Cyprus, and the islands of the Archipelago, and continuing through the Mykenean, with sufficiently detailed accounts of the discoveries at Mykenæ, Tiryns, Vaphio, and the other centres of this civilization; then the period in which the influence of the Orient was strong, the art of the age of Homer; and finally the beginnings of plastic types, the work of the period when the Greek instinct was beginning to assert itself. To those who have been unable to follow the advances made in our knowledge of Greek art during the last ten years, no part of the volume will be more valuable than this first book, or more convincing of the necessity of a successor to Mrs. Mitchell's History, much of the material here described being still unknown when she wrote. We regret, by the way, to note that M. Collignon alludes to her book as an English production, the number of workers in this field which America has contributed being still too few to make us indifferent to the loss of credit for any one of them.

In the following books, "Les Primitifs," "L'Archaïsme avancé," and "L'Époque des grands maîtres du Vème siècle," M. Collignon carries us from the rude works of the early island and Attic schools through that wonderful period of rapid development which culminated in the Parthenon. Though some account of Pheidias is given, the sculptures of the Parthenon, with the exception of the colossal Athena, are left for the next volume. There are chapters on the sculptures of Olympia, on Myron, and on Polykleitos. As to the Olympian pediment figures, M. Collignon judiciously refrains from entering into the discussion of their arrangement, as being a question "toujours pendante" and impossible of absolute determination at present; though, in regard to the eastern pediment, he admits that he prefers the order adopted by Treu to that of Curtius. In his description of these and all other sculptures it is refreshing to find that warm appreciation of them as works of art, and not merely archæological dry-bones, which distinguishes French archæologists from their German colleagues and makes their writings pleasant as well as profitable reading. Pressure of space prevents our discussing the details of the volume or giving it more than this general description, but we welcome it cordially as a valuable contribution to the literature of the subject, and we hope we may see the completed work translated into English at no distant day. The illustrations are quite up to the standard of the house from which they come, and we notice as an agreeable innovation in popular books on Greek sculpture the colored reproductions of the archaic statues found on the Acropolis. Though inferior to the German plates of the same figures in the 'Antike Denkmäler,' they serve their purpose satisfactorily in enforcing the existence of one element in the original effect of Greek sculpture which we are too apt to overlook.

M. Reinach's new book will appeal more to specialists. Last year we had occasion to call attention to the excellent service he had rendered in republishing Millin's and Millingen's unwieldy folios on Greek vases, in a convenient form and with editorial notes which made modern books of them. He has continued his work in this direction by bringing out the 'Antiquités du Bosphore Cimmérien' in the same convenient quarto form, and with a thoroughness of editorial revision which must excite admiration not less than gratitude among those who have occasion to consult the book. The original of the 'Antiquités' is probably the most inaccessible of all archæological books, in spite of its great value to students. It was published in 1854, by the order and at the expense of the Czar, to illustrate the unparalleled discoveries of Greek jewelry, pottery, and other minor arts which had recently been made in the Crimea. In the preparation of the three folio volumes, no expense was spared to make the illustrations worthy of the originals; but the edition was limited to two hundred copies, none of which were placed upon the market. One hundred were distributed among the leading libraries of the world, and the rest, we believe, sent as presents to societies and individuals whom the Czar chose to honor in this manner. As a result, it has been almost impossible to purchase a copy, at whatever price, and the number of public libraries possessing the book is naturally very limited, especially in this country. M. Reinach says that as much as 2,000 francs has been given for one copy, and he knows of but six in Paris, four of which are in the large libraries. Consequently the obligation under which he would have placed students merely by reproducing this "rarissimo" in a form and at a price which place it within reach of all, would be great in any case, but he has done more. He has subjected the text to a careful editorial sifting, retaining for his volume only so much of the original as is of permanent value, and bringing

the subject-matter of this up to date with his own notes and references.

As a supplement, he has added a complete and minute index to the *Comptes Rendus*—the periodical work in which the publication of the Greek treasures of the Ermitage was continued from 1859 to 1881—an achievement of which he may well be proud, for it constitutes a compendium, like Overbeck's 'Schriftquellen' or Brunn's 'Griechische Künstler,' which no archæologist can afford to be without. Stephani, the editor of the *Comptes Rendus*—or we might more properly say their author—was, to use M. Reinach's words, "un prodige d'érudition," but with learning as unwieldy as it was colossal, his essays being full of enormous digressions on topics remotely connected with the subject in hand. In his description of the representation on a vase, the presence of some unusual bit of ornament or jewelry on a figure was sufficient to call a halt while he went into an interminable disquisition upon all other known examples of the same or a kindred kind; and because one of the fragments of Greek textiles from the Crimea was decorated with a b rder, his account of it branched off into a thesis, with a classified list, on all the types of Greek borders and patterns to be found among all the surviving monuments of Greek art. With an index this encyclopædic knowledge is of inestimable value by way of reference, whereas, unindexed, the essays have remained unread, unless by the very patient. It is not too much to say, therefore, that in this work M. Reinach has built a monument to the Russian scholar.

We must confess to a feeling of disappointment that the illustrations have not resulted more successfully. In this respect the book is decidedly inferior to M. Reinach's former one. Piccard was unquestionably the most exquisite draughtsman and engraver ever called upon for archæological work. From personal observation we can testify to the fidelity with which he rendered the originals in the Ermitage, and the delicacy and spirit of his drawings alone make the Russian publications a delight to the lover of art, whether archæologist or not. This very delicacy has apparently prevented their successful reproduction. The fault is not in the reduction, which still remains clear enough, but the lines have lost their subtlety, many of them appear feeble and broken; and the photographic process to which it has been necessary to have recourse has reproduced the grain and imperfections of the paper, sometimes with unpleasant prominence. It also seems a pity that the chromolithographs of the original work should not have been reproduced in color—at least the most important of them. As it is, with these as with the line-drawings, the facts are there, but the spirit is gone; and while archæological students will find M. Reinach's edition an indispensable addition to their book-shelves, our public libraries ought not to relax their endeavors to acquire the original.

Mr. Murray's 'Handbook of Greek Archæology' labors under the disadvantage of all manuals which try to get too much into a limited space. We have before this expressed our inability to comprehend the purpose served by these crowded handbooks which appear in constantly increasing numbers. They are necessarily so condensed that the beginner in the study of ancient art gets but a bewildering impression of names and facts from them; the attractiveness of the subject is entirely lost to him, whereas to the more advanced student the material is already familiar, and he has therefore no need of such books. Mr. Murray's present volume is no exception to the rule. Had he given the same amount of space and labor to any one of the seven branches of Greek art of which he here attempts to summarize the history, he might have produced a manual of extreme value, alike to beginner and specialist, by expanding his subject so as to bring out its interest, and treating it with a thoroughness—possible within the size of this volume—which would have made it a useful work of reference. However, this he has not chosen to do, and his book must be judged by what it is. The keynote of his purpose may be found in a sentence in the preface, in which he says that "we have now a large body of accepted truth to which we can refer as such without at every step citing a mass of facts in support of it." The aim of his book is to put this "accepted truth" before the reader, and while this is done as a rule in a conservative spirit, the principle is a dangerous one, in the present state of our knowledge, inasmuch as there must inevitably be some doctrines which, though they appear indisputable to the author, have not yet been accepted by everybody; and, moreover, his desire to state them without citing too many authorities sometimes leads him to render scant justice to the men who first published these "accepted truths," and with whose names it seems to us highly desirable that the beginner should become familiar in connection with the subject. Such men are, for example, Prof. Ramsay and Mr. Flinders Petrie, who have made most valuable contributions to our knowledge of the early civilization of Greece. Although Mr. Murray favors the theory of the former as to the date of the Lions of Mykenæ (p. 178), he does not credit him with it, and Mr. Petrie is disposed of in a foot-note. But the most glaring omission of this nature is in the chapter on Terracottas, which contains no allusion to M. Pottier's little manual on the subject, though it is by far the best handbook on this branch of Greek art that has yet appeared, and should be brought to the notice of all students or lovers of the art.

On the whole, however, Mr. Murray's book, although dry in style, treats its subject carefully and contains a valuable lot of information in a compressed form. If we must have these abridgments of the whole range of Greek art, this is certainly to be recommended as one of the most trustworthy that we have yet seen.

ROGERS'S INDUSTRIAL HISTORY OF ENGLAND.

The Industrial and Commercial History of England: Lectures delivered to the University of Oxford by the late James E. Thorold Rogers. Edited by his son, Arthur G. L. Rogers. G. P. Putnam's Sons. 1892.

It was said, we believe, of Sir Humphry Davy that he made great discoveries in chemistry by examining what previous experimenters had thrown away, and a somewhat similar judgment might be passed upon the work of the lamented author of these lectures. Political economy as a science requires very broad generalizations, which, however true in the main, are subject to important limitations and exceptions. The determination of the relative influence of custom and competition in fixing both rents and wages has been a field especially fruitful in results of this kind, and by his extensive and minute investigations among mediæval records Prof. Rogers succeeded in bringing to light facts that have led to some important modifications of economic doctrine. It may be that he exaggerated the importance of his discoveries—we are unable to follow him in his view that he had exploded Ricardo's theory of rent by declaring that rent is the outcome of profits, not prices. But this is to be expected of discoverers in general; and the fact that things look larger to him who fixes his whole attention upon them does not extinguish our gratitude to him for making us acquainted with their existence.

It may seem surprising that, as we are informed in the preface, the audience to which these lectures were delivered consisted of about a dozen men, although they were free to all members of the University. The topics discussed are those concerning which the present generation is much troubled, and the erudition of the lecturer was as extensive as it was unique. He illustrated Bacon's maxim that much reading maketh a full man, and the glimpses which he offers into the mysterious life of past ages are often fascinating in their suggestiveness. But to a great extent these lectures consist of material that has appeared in the published works of the author, they contain many repetitions and a good deal of padding, and they are extremely discursive. They are the talk of an antiquary, full of recondite information, poured forth as it rises in the memory, guided by the association of contiguity rather than by any definite plan. Moreover, it must be admitted that, like many other antiquaries, Prof. Rogers was not free from a certain opinionated acerbity. The almost exclusive possession of knowledge of a certain kind seems to lead men to mistake their special superiority for a general one, rendering them not only impatient of criticism, but intolerant of any difference of opinion.

Thus, Prof. Rogers, disliking the expression that men are the creatures of circumstances, calls those who use it fools and poltroons. This is nearly as bad as Adair's story of his first meeting with Burke, when he unfortunately asked that statesman some question concerning the wild parts of Ireland, and got the answer, "You are a fool and a blockhead. There are no wild parts in Ireland." In Prof. Rogers's case this intemperate language occurs so frequently that we fear that it is a sign of hastiness of judgment. We are quite aware that this charge is, under the circumstances, a very serious one to make. Prof. Rogers occupied the position of an expert witness. He testified as to the existence of facts which were and must always remain inaccessible to most people. He visited unexplored regions, and his hearers were absolutely dependent upon his report as to what he had seen. It is indispensable in such cases that there should be accurate and intelligent observation, careful verification, and conscientious recognition of the evidence against as well as in favor of proposed explanations and theories. If we feel that we can depend upon the presence of these conditions, we listen to the witness as to an inspired prophet. If we find that these conditions are not observed in any instance, our confidence is gone; and suspicion, once aroused as to a single particular, beclouds the whole of the evidence. It is to such cases that the legal maxim, *Falsus in uno, falsus in omnibus*, applies, not as expressing a fact, but as warning us of a possibility.

In order to test the credibility of Prof. Rogers as an expert, we have selected certain statements that fall within the ken of American readers, although in making them to an English audience Prof. Rogers must have been aware that they would be taken upon his au-

thority. He is accumulating evidence to show the effect upon cultivation of fixed tenure of land, and mentions as one fact that "the soil of New England is exceedingly sterile as a rule, but the hedges are full of peach trees." We leave it to our readers to judge if the English listener would be led to form a true mental picture of the region in question. Prof. Rogers, we may add, had visited New England, and, we believe, more than once.

If his recollection of what his eyes had seen is not altogether trustworthy, what shall we say of his report of what his ears had heard? Norwich, he tells us, was the principal town in the early history of Connecticut, and in the meadows which lie by its river was the meeting-place of the Six Nations. Statements like this imply a good deal more inaccuracy than they express. The matters involved may be intrinsically of little importance, but when we find an author who is so dictatorial in his language, and so cocksure in his manner, guilty of carelessness of this kind, our confidence is severely shaken. Another instance of inaccuracy is to be found in the statement that the Bank Act of 1844 "has been imitated by no other civilized community." The peculiarity of that act consisted in its separation of the banking from the issue department, and this principle was adopted by the State of New York, and again by the United States in its National Bank Act. Strictly speaking, it may be maintained that this was not an imitation of the English act, for the New York statute was passed in 1838, and the United States statute was an imitation of that of New York. But the principle had been announced in England by Mr. Lloyd before it was adopted in New York, and we apprehend that Prof. Rogers's language would be likely to mislead an English listener as to the extent to which the characteristic features of the Act of 1844 prevail.

Although we are thus admonished that it is not safe to follow Prof. Rogers blindly, it would be unjust to make no reference to the numberless points upon which his lectures throw light. His treatment of economic subjects is so broad, and his knowledge really so extensive, that it is impossible to listen to him without profit, and, in spite of the harshness and abruptness of his style, without pleasure. His historical illustrations continually remind us of the importance of scrutinizing our stock of theories and modifying our cherished generalizations. The following passage from his account of the history of the Bank of England illustrates the power of his method:

"To me the fall of near 30 per cent. [in the Bank stock] in 1710, consequent upon the election of the Tory Parliament and the establishment of a Tory Government, . . . is worth a thousand guesses at the motives of Swift and Atterbury, Harley and St. John, Harcourt and Masham, and the whole procession of dim shadows which pass over the stage of history at this age. And similarly I am more instructed by the rise of 10 per cent. at the death of Anne than I am at the picture of the Whig peers pressing into the council chamber as Anne was in her last lethargy, and forcing from her almost unconscious hand the nomination of Shrewsbury to the office of Treasurer, and the repudiation of the Pretender and his hopes. . . . To my mind, the English Constitution has been as much guarded and developed in Grocers' Hall and Threadneedle Street as in the Palace of Westminster."

Upon the whole there is so much of shrewd and suggestive observation in the book that it is to be recommended, but with the caution that the author's opinions are not always to be accepted without question. If his knowledge is not always accurate, he at least causes his readers to examine the accuracy of their own —a service which is not to be underrated.

SUGGESTION AND FICTION.

Die Suggestion und die Dichtung: Gutachten über Suggestion und Hypnose. Herausgegeben von Karl Emil Franzos. Zweite Auflage. Berlin: F. Fontane & Co. 1892. Small 8vo, pp. 129.

THE youthful but vigorous science of Hypnotism emerged some fifteen years ago from obscurity and the odium of charlatanism into the clear light of scientific research and academic recognition. Within this time it has deeply influenced medical practice; has propounded new problems for the jurist and the moralist; has furnished the experimental psychologist with a new method of research; requires a bibliography of more than a thousand numbers to index the recent contributions to its study; and now threatens to disturb the prevalent conceptions of the relation of man to man, in the delineation of which the novelist and the poet find their material and their *motif*. The distinguished editor of *Deutsche Dichtung* fears that this influence may not be altogether wholesome; that the discoveries of science may be falsely and prematurely applied in the realm of fiction. He is apprehensive, too, that, among so many new and startling results, there may be some more novel than true; that the facts may have been distorted by the nebula of exaggeration, misinterpretation, ignorance, and bias by which science is so often surrounded. Moreover, strongly suspecting that the modern "medicated novel," as Dr. Holmes calls it, in which hypnotism and allied states play so large a part, diverges as much from scientific accuracy as it does from artistic truth and propriety, he has appealed to the most eminent physiologists and psychiatrists of Germany and Austria, asking for an expression of opinion upon the value of hypnotism, and in particular upon its bearings upon the ever vital issues of free-will and responsibility. These opinions—from Professors Helmholtz, DuBois-Reymond, Preyer, Mendel, Jolly, and Eulenberg of Berlin; from Krafft-Ebbing, Exner, Meynert, Nothnagel, and Kahler of Vienna; from Forel of Zurich; from Binswanger of Jena; from Fuchs of Bonn; from Hirt of Breslau—are here collected. Within a month after publication they passed into a second edition.

To give definiteness to his inquiry, Herr Franzos cites three cases reported in the daily press as of actual occurrence, and asks whether science regards them as true and recognizes suggestion, with or without hypnotism, as an adequate explanation of the extraordinary personal influence upon which the tales turn. The first of these alleged incidents tells of a young artist, the protégé of a millionaire and his wife, whom he accompanies to their villa near Florence. He there falls in love with a fair member of his craft and is accepted. He becomes possessed with the idea of founding a grand institute for the advancement of art, and is covetous of his benefactor's wealth for this purpose. The latter is suddenly called away on business, and a few hours thereafter the young artist, despite his betrothal, persuades his benefactor's wife to elope with him to Rome. The artist is there discovered by the husband, is arrested, confined in an asylum, and finally released. His first thought is to find the lady of wealth, over whom he is confident that he possesses unusual powers. Failing in this, he attempts suicide, but recovers. The lady, who remembered nothing of her flight to Rome, is informed of what has happened and consents to a divorce. She thus comes into possession of her own property, and her first act is to endow an art institute.

The second case is that of a young man who gains a mysterious power over an old bookbinder, to whom he was formerly apprenticed, and whose rival he has now become. Through the unexpressed wishes of the young man, aided by potent glances upon casual meetings, the bookbinder is forced to commit a variety of foolish and unseemly acts, finally necessitating his removal to another town.

The third case is similar. A young man, upon the plea of needing funds to perfect some invention, swindles his employer of a considerable sum of money. He is convicted, and, after serving his sentence, again passes forged papers into his former employer's hands. At the trial he at first admits his guilt, but suddenly claims that he wrote the papers simply to practise his handwriting, that the plaintiff was aware of this, and knowingly took them into his possession. The plaintiff is recalled, and, in contradiction to his former testimony, corroborates the defendant's new version of the transaction. The story, like the preceding one, involves the direct transference of thought from one mind to another, and the control by this means of another's actions and utterances.

How far, Herr Franzos asks, does science corroborate such tales? in what respect must the doctrine of free-will be modified to accord with new discoveries? in what way may writers of fiction utilize such incidents and remain true to fact?

To expect unanimity among sixteen German professors upon such a question, is to presume for the German professor as well as for present science an approximation to Utopian harmony that is hardly warranted by past experience; and yet it is possible in some respects to outline the tenor of these replies without injustice to individual differences. All are agreed that the incidents as told involve gross exaggeration and misrepresentation, and that an explanation of what really occurred would be possible only after the minutest details of personnel and incident had been supplied; and if a definite "yes" or "no" be required, the verdict must be that these tales and their kind are neither true nor verisimilar. The writer of fiction who introduces hypnotism into his work in this guise and with such accompaniments diverges very far from legitimate realism. Thought transference, or telepathy, is pronounced by all not proven, by some impossible; while a few are tempted to use quite unparliamentary epithets in their characterization.

At this point the differences of opinion begin. The most unfavorable opinion is that of Prof. Fuchs, who regards the entire hypnotic movement as pernicious, and those who act as "subjects" as seekers of notoriety and victims of the passion of deception; he would like to see university professors and not hysterical women hypnotized. Prof. Nothnagel is opposed to the popularization of hypnotism and is inclined to be suspicious of its results. The others clearly indicate their belief in the reality of the hypnotic condition and the importance of studying it. A considerable number regard the state as pathological, though equally many hold that persons in normal health are hypnotizable. All who touch upon the point are agreed that no one can be hypnotized without his knowledge, and most would add "consent"; and this is an additional reason for refusing credence to the tales above told. Further than this, the various contributors under-

stand the inquiry so differently, commenting upon the points in which they are personally most interested, that any statistical analysis of their opinions becomes impossible. There are, however, certain general impressions which the volume leaves and which may be noted.

The two phenomena most important to the issue raised by Herr Franzos are the post-hypnotic suggestion and the criminal suggestion. The former term stands for the fact that suggestions given during the hypnotic state may be carried out after waking while the subject is in a normal condition. The subject forgets the source of the impulse to do the suggested deed, and so accepts it as his own. The suggestion may be entirely proper, or have no moral significance, but it may also be criminal in intent, and thus apparently deprive a responsible agent of his responsibility. This possibility naturally takes deep hold upon the novelist and the reading public, and its discussion both from a legal and a moral point of view can hardly be much longer postponed. Criminal suggestions during the hypnotic state have been given, but different experimenters are not agreed upon their interpretation of the facts. Some hold that the subject appreciates that it is a "laboratory crime" that he is committing, while others hold that it is dead earnest. It is certainly true that the subject is not a mere automaton; his character and morality are not annihilated, and yet his power of resistance is weakened. Just how far this increases the possibilities of suggested crime it is difficult to say; but it is important not to lose sight of the fact that suggestibility, like responsibility, is of all kinds and degrees, and that the action of hypnotic suggestion is not so far different from that of the environment and other recognized influences as one is apt to imagine.

The novelist must remember that in addition to the ordinarily recognized and patent factors by which conduct is influenced and character formed, there are many others, subtle, unconscious, and difficult of description, but no less real and potent; he must remember that both sorts of influences differ widely in the kind and degree of their effects, passing by imperceptible gradations into the abnormal; and finally he will do well to bear in mind that no good can result from the indiscriminate introduction of states and phenomena that arise in unusual and quasi-morbid circumstances, into the everyday lives of everyday people.

This seems to be the outcome of Herr Franzos's inquiry. Nothing but confusion results from explaining a phenomenon by calling it hypnotism or suggestion unless these terms be used with an adequate consideration of the facts established by scientific research, and not with the loose and meaningless connotation which they bear to the popular mind. Here, as everywhere, mental health depends upon the power of drawing distinctions, of absorbing the actual and vital while rejecting the unreal and parasitical. The study of hypnotism is doubtless destined to add to our insight into man and his mental operations, but not by loose generalizations and sensational applications of dimly suspected truths.

Le Choléra, ses causes, moyens de s'en préserver. Par le Dr. G. Daremberg. Paris: Rueff & Cie. 1892.

THE savagery that has lately disgraced our shores, and the shot-gun quarantines from time to time established against epidemic disease, are barbaric expressions of the natural dread of illness, and especially of the fear when the approach of a pandemic threatens general desolation. Fortunately, those rude outbreaks are but the uncouth and cruel illustrations of a common feeling that finds a more intelligent and profitable expression in preventive medicine. This science is aggressive. Its pickets have long been in the enemy's front, and now it has fairly established permanent outposts, here and there, within his former lines. And although occasional errors are committed and untenable positions have to be vacated, the progress, one decade with another, is steady and positive. This little book is the very latest and one of the most lucid and trustworthy of the despatches sent back from the advance guard. Its author is well known and respected among the leaders of science, and it contains material collected as late as August, 1892. Although written especially for French conditions, its intelligence and its warnings are full of value to us.

The preface describes it truly as a work of practical hygiene, representing researches and opinions in relation to cholera control originally presented to scientific bodies and now set forth in abstract for the benefit of municipal authorities, upon whom rests the possibility of perpetuating or abolishing "the unhygienic horrors in the midst of which we live without protest." But as, particularly with us, laws and regulations unsupported by popular opinion can be enforced with difficulty, such studies should be taken to heart by every intelligent citizen, who, in turn, should become a propagandist of the gospel of sanitation.

It is unnecessary to describe anew the march of the fierce epidemics that during the past three score years have laid waste both hemispheres. It is now clearly shown that they follow the lines of human intercourse, at least in Europe and America. Cholera in India is a problem by itself. If there is no transportation of persons and things, there will be no spread of cholera. But must every case in Europe proceed from a recent preëxisting case? Leaving out of sight the views of a few who find no difficulty in believing that, given a long succession of favorable conditions, the disease may arise, let us say, in the delta of the Amazon or of the Mississippi, as well as in that of the Ganges, or that by natural evolution a harmless microbe may become virulent, Dr. Daremberg maintains that the cholera cause, once deposited in the soil, may lie dormant but vital to renew its activity after a term of years. As a matter of fact he announces that the existing Parisian epidemic has no relation to the present Russian and North German disease, whose immediate connection with India may be traced by a chain of well-defined links. This very grave assertion will be referred to later.

Although not yet accepted by some excellent Indian authorities, we may assume with the writer that the comma bacillus of Koch holds a causal relation to epidemic cholera. Forewarned as to the habits of that microbe, we may forearm ourselves against its effects. It is pretty certain that it withstands all natural cold; that boiling (in water) will destroy it; that it multiplies in ordinary drinking-water with variable rapidity; that it survives, at least for a time, in the soil; that, wet or dry, it may cling to any article it touches, preserving a prolonged vitality, thus making clothing, food, the dust of the house or of the street, as well as unclean hands and utensils, mediums of infection. Just how long it may survive when dried by the forces of nature is yet undetermined.

Ever since Dr. Snow's experiment with the handle of the cholera pump, no English-speaking student has doubted that water may be a vehicle. Concerning the earth, there have been two schools, and, notwithstanding Pettenkofer's ground-water theory, the prevailing belief has been that the pathogenic bacteria are destroyed either in conflict with other microbes or by the oxygen in the upper layers of the soil. But our author is a strenuous advocate of their prolonged vitality within the earth, so that, when brought to the surface by turning up the soil or by capillarity, and mingled with the dust, they, like the bacilli of tubercle, are ready to convey their special poison. He insists, therefore, that sewage-irrigation farms which have received choleraic discharges not disinfected, are constant menaces to the public health, and that the great farm of Gennevilliers is responsible for much of the special disease of Paris. Disinfected discharges are of course harmless. This challenge from such authority must be met by renewed sanitary investigation before such farms can be safely advised; for it follows that if the cholera bacilli preserve their vitality, they may attach themselves to such vegetables as are eaten raw as well as mingle with the dust and so with the atmosphere.

But what is of more immediate popular interest is the avoidance of the disease when it is at hand. Land quarantine on a large scale has no value, and only creates a false sense of security. Quarantine by sea that does not involve complete disinfection, is useless as to the country to be protected and destructive to the voyagers. A quarantine of observation with complete disinfection of vessel, passengers, and freight, involves short time and moderate expense and is sufficient. The station at the mouth of the Mississippi is cited as a typical example of intelligent prevention. Except as to the arrangements for observing suspected passengers, it has always been supposed that the facilities for disinfection at New York were adequate to prevent the entrance of an epidemic here.

The destruction of the cholera germ itself depends upon its inability to withstand 212 degrees F., to live in an acid medium, or to survive certain other germicides, the most important of which is corrosive sublimate. Heat and acids are as serviceable for private families as for the public. It was long ago published as an empirical fact that acid drinks guard against cholera, although the guard may be forced. But this was neither generally known nor believed. It has now been determined by exact experiment that very slightly acidulated fluids kill the comma bacillus, and the frequent immunity of well-fed persons of good digestion appears to rest upon the natural acidity of the gastric secretions. Certainly, as herein advised, the habitual use of about six grains of citric acid to a pint of water, as an ordinary drink in the presence of cholera, not only destroys stray bacilli in the water itself, but fortifies the stomach against attack in that direction. Wherever groups of people work together, the management should supply them with this cheap and pleasant beverage. A very dilute mineral acid has the same good effect.

Two popular fallacies are disposed of here. Alcohol, the broken staff upon which so many lean in danger, predisposes the stomach to the reception of the bacilli. Opium, sought for the relief of pain, is not disengaged through the inflamed kidneys, and hastens the end. Boiled water drunk soon after boiling is safe, but if exposed it may serve to nourish germs accidentally introduced. One can never be

sure of ice. Porcelain filters daily and scrupulously brushed with acidulated water may be depended upon. All others either become clogged or do not detain the poison. Alum, whose ability to clarify muddy (alluvial) water has long been known, is here announced as a germicide also. It is claimed that three grains agitated through a quart of water will not only leave it clear at the end of twenty-four hours, but also free from germs (*ne contient plus aucun microbe*). Preventive "vaccination"—an odious word as applied to counter inoculation—by very recent experiments seems a preventive, but this epidemic will pass before that can be popularized. Very little space is given to treatment, properly enough in a book on prevention. What is suggested looks to the slaughter of the invading bacilli and to replenishing the body-fluids drained in the profuse discharges. That does not seem enough. Bacilli may be the cause, excessive outpourings are a part of the consequence, but the disease proper is something else, probably a derangement of the organic nervous system.

But to be clean, to be clean, to be clean, is the burden of the book. Cleanse the mouth, the nose, the skin, and above all, the hands, and use for this purpose as well as for drinking only disinfected water. Keep the body warm and well nourished. Cut short the preliminary painless diarrhœa. Be always scrupulously clean, and for the sake of others disinfect all emitted fluids. For its manner and inspiration the book itself should be consulted, and its immediate translation into English would be to the popular good.

Kolokotronis, the Klepht and the Warrior. Sixty Years of Peril and Daring: An Autobiography. Translated from the Greek with introduction and notes by Mrs. Edmonds, with a preface by J. Gennadius. London: T. Fisher Unwin; New York: Macmillan & Co. 1892.

THE Life of Theodore Kolokotronis, told by himself to his friend George Tertzetis, reads like a modernized narrative from the 'Iliad.' It gives a vivid history of the Greek War of Independence from the point of view of one of its heroes and chief actors. Although most personal narratives err on the score of partisanship, and are generally more or less tinged with egotism (and this is no exception to the rule), we are told by Mr. Gennadius in his preface that, on the publication of these reminiscences (which took place firstly in 1846 privately, and subsequently in their entirety in 1852, at which time many of the fellow-combatants of Kolokotronis were still living), no material contradictions were called forth—only a few emendations as to incidents of slight importance—and that no one has ever questioned the exact veracity of his part in the war. Those who are not thoroughly cognizant of the history of Greece at the moment of this struggle will find some difficulty in grasping the import of much of the story. The old warrior never had any intention of furnishing material for a book. He could read, and it is said that he thought education would do more for Greece after it became a kingdom than the sabres of its pallikars; but he could not even write beyond scratching his own signature, so it was only at the repeated urging of his friend that he consented to dictate his memoirs. This he did in the simple idiom of the Greek mountaineer, and Tertzetis had the good taste to change nothing. He did not even add any supplementary notes, so that, as the narrator presupposes a knowledge of the events he refers to, and does not lose time by explanations, the uninitiated reader remains unenlightened. This is decidedly unfortunate in a work which is evidently mainly intended for boys, belonging as it does to the Adventure Series.

Mrs. Edmonds has in a measure supplemented this defect by giving us an historical sketch of the klephts, this term meaning the free mountaineers who carry on open warfare against their oppressors, and not brigands whose object is plunder. After the fall of Constantinople in 1453, the mountains of Olympus, Pindus, Pelion, and Agrapha became gradually peopled by men who would not submit to Ottoman rule; they occupied the mountain fastnesses, and were beyond the power of the Turk. The rough, untrammelled life they led had a great attraction for adventurous spirits, and their numbers continued to increase. The attitude the klephts maintained with regard to the Ottoman Government was encouraged by the Venetians, who held maritime ports in their neighborhood, and who called the klephts to their aid when they found it necessary to fight against the Turk. After these combats many of them returned to their mountain homes, while others, hoping for some fresh opportunity of fighting the common enemy, remained in the Venetian service. The Porte also, on her side, enrolled as many klephts and Greeks as she could persuade to fight for her; and during the reign of Solyman the Magnificent, between 1534 and 1537, terms were offered to the mountain people which they could accept without feeling they had offered submission. Ibrahim, the Grand Vizier of Solyman, a man of great intelligence, favorably disposed towards the Christians, being himself of lowly Christian origin, divided Greece into fifteen districts, and appointed a Christian as captain or armatolos (a man at arms), whose function was to keep order on the highways and to repress outrages through his province. In 1627, Amurath, fearing the armatoli were getting too powerful, destroyed all their forts on the defiles and put Ottomans in their posts. The armatoli on this formed themselves into a body and revenged themselves on the Turks who had been put in their places by killing them and ravaging the district. The Greek historian Sathas says: "On this account they first received the name of klephts, from κλέπτειν—to steal or rob—by which name they were ever afterwards known to the outside world."

The Turks in vain sought by every means to check their deeds of violence, but, every measure failing, they were obliged to issue a new firman reinstating them as guardians of the roads, charged also to collect taxes on flocks. They were thus allowed the possession of the hills on condition of the payment of a small tribute and of defending the country against Albanian brigands. For this purpose they were enrolled as armatoli, *i. e.*, the captain of each band was an armatolos, and the men received the name of pallikars (from πάλλομαι, I bound or leap), and this term still remains to designate a brave warrior. The companies of armatoli were entirely composed of Christians; no Turk could ever be enrolled among them. The beneficent effect of this arrangement was soon felt by the dwellers on the plains, who had previously been unable to protect their flocks and lands. Even then many of the fiercest klephts would not hear of treating with the Turk, and held their mountain heights, governing their districts in their own way, regardless of pasha or bey. But the armatoli and the klephts were continually exchanging rôles, it would seem, for the Turks found it to their interest to entice the fiercest into their service, while, on the other hand, the armatoli sometimes preferred the freer, more untrammelled life of the klepht. A very significant difference in their costume was that the klephts wore a long cord wound round their waists and tied in front, to serve them to bind their captives with; otherwise they were dressed alike in fustanella, with vests adorned with silver buttons, according to their means, and rich embroideries on jackets and greaves. These wild mountaineers had necessarily to come down from the barren crags on which they lived to plunder, in order to live; and they did not hesitate to pillage their Greek compatriots when they had any grudge against them; they especially preyed on tax-gatherers, wealthy prelates, and the monasteries. Their animosity against the monks was on account of the latter never giving them assistance in time of need, from obsequiousness to the Turk; otherwise, like all Greeks, they were strictly attached to the forms of the orthodox faith, giving offerings to the saints and invoking God's blessing on the success of their arms on every perilous adventure. They would never lay hands on the vessels of the sanctuary, although they had no scruples as to plundering monks. Mrs. Edmonds also tells us how temperate and chaste the klephts were. She goes on to describe the many risings which took place before 1821, mostly miserable failures, but always instigated by klephts to liberate their country from the intolerable oppressions and persecutions they were enduring under Turkish rule.

Kolokotronis came of a family of klephts who had held their own against the Turks for three hundred years. The revolt of the Morea, in which his father had taken part, was just suppressed when he was born under a tree on the hills of Rama in Messenia, in 1770. Already an orphan at twelve years old, he was bringing a load of wood to sell for his mother at Tripolitza, when he was met by a Turk, who gave him a beating. This indignity so enraged him that he bought himself a sword with the price of the wood and vowed vengeance on the oppressor of his country. His very name, and the traditions of his family, must also have opened this path to him. When only sixteen, the Porte gave orders that the whole clan of Kolokotronis should be extirpated, and we read that thirty-six of Theodore's brothers, cousins, and relatives, and one hundred and fifty followers were butchered in this struggle; but, notwithstanding this, Theodore had himself recognized as chief of the armatoli of Megalopolis. He had the year following to fly to Zante on account of a conspiracy against him. We have not space to describe his adventurous career, so full of thrilling crises. At one moment the people of the Morea wished to proclaim him their king, at another he was condemned to death. He seems to have met all these variations of fortune with indomitable courage, having always the good of his fatherland as the aim before which all personal affections and ambitions were sacrificed. This is the trait which strikes one all through the autobiography as the dominant one, and it is at least gratifying to the reader to learn that the first act of King Otho, on attaining his majority, was to release Kolokotronis from prison, and that for ten years he lived in Athens, enjoying the high esteem of his countrymen, who regarded him as the chief factor in their war of independence.

The illustrations are among the worst we have seen in any recent book.

Sohm's Institutes of Roman Law. Translated by James C. Ledlie, of the Middle Temple and of Lincoln College, Oxford, with an introductory essay by Dr. Erwin Grueber, Reader in Roman Law. Oxford: Clarendon Press; New York: Macmillan. 1892.

Prof. Rudolph Sohm of Leipzig is an acknowledged authority on Roman Law; his book, in so far as it treats of the internal development of that law from its rude beginnings to the days of Justinian, fills worthily the place which Hugo's utterly unreadable treatise occupied, for want of anything better, at the beginning of the century. Grueber's essay refers to the study and application of the Roman Law from the days of Accursius at Bologna to the present time, in Italy, France, and Germany, and does not aid us in understanding or appreciating Sohm's great work. Throughout the latter so much room is given to the growth and change of law—Justinian's legislation being never expounded except as the final outcome of a slow and gradual development—that one might prefer to call it Sohm's History of the Evolution of Roman Law. We find everywhere, whether the law of persons or of things, whether obligations arising from contract or from tort, whether rights or remedies are discussed, the same progress from the compound of savagery and of helpless formalism which constitutes the old Jus Quiritium, and is left almost intact by the Twelve Tables, to the polished and world-embracing body of equitable rules making up the Corpus Juris Civilis of the later Empire, which Justinian at last by his 'Novellæ' freed from all remnants of unreason and of harshness. This progress is shown to have taken on all the modes pointed out by Sir Henry Maine in his 'Ancient Law'—fiction, equity, and statute. The great defect of Maine's work is the scantiness of illustration. Were it to be published with Sohm's 'Institutes' broken up into copious notes, it would, at least to the thinking lawyer, be most interesting reading.

Prof. Sohm himself sometimes speaks in a footnote of some bizarre or harsh rule in old German law, such as it existed before the Civil Law was introduced early in the sixteenth century, and points out its analogy to the rude customs of the earlier days of Rome; but he cannot trace the parallel development of the two systems, for Germany, when it became philosophic and civilized, threw away the bulk of its own jurisprudence instead of developing and improving it, so as to conform it to modern wants. And here, we think, the translator, Mr. Ledlie, has allowed a great opportunity to slip. An English lawyer has material for comparison which the German lawyer lacks. Sir Henry Maine evidently had the progress of both English and Roman Law in his mind when he sketched the progress of law in his painfully general way, relying upon the reader's ingenuity to fill up the canvas. As all Roman transfers of property started from the *mancipium*, to which soon the fictitious judgment known as *in jure cessio* was added, so in England all transfers of land began with livery of seizin and fine. As the Roman Law had its *obligatio verbis*, in which a consideration was not essential, so the English law has its sealed contract, "importing a consideration." In both systems under their later forms the consideration may be drawn into dispute. As the oldest Roman Law knew no mortgage other than in the form of an absolute sale, so the English mortgage is still a sale in form, but is now in effect pretty much like the *hypotheca* of the latest Roman Law. The analogy of the Roman prætor to the Chancellor, and of the judex to the common-law judge, was noticed by Gilbert in his 'Jus Prætorianum' a hundred and fifty years ago; the similarity of the *formula* to the English paper book (but for the conciseness of the former and the prolixity of the latter) is most striking. The helplessness of the early Roman judges, who could adjudge nothing but a sum of money, reminds us of the English action of trover; the late Imperial Constitutions, which provided for a restoration of the thing in dispute, did the same for Romans deprived of highly valued articles that the English Chancellor did for the owner of an heirloom in Pusey vs. Fusey. The older Roman Law for executing money judgments was cruel mainly from helplessness; and so was the English and even the American law at the beginning of this century. Men were imprisoned or outlawed merely because the simple idea of taking just enough of the debtor's property to pay the creditor's judgment was beyond the narrow formalism of George the Third's England, as it had been beyond that of Cæsar's or even of Hadrian's Rome.

In his introductory essay Dr. Grueber expresses the hope that the publication of Sohm's treatise in English will not "interfere with the present [English] system of instruction," which is "based immediately on the study of the Roman sources, *i. e.*, chiefly on the text of the Institutes of Gaius and Justinian." Sharing this hope, we add a brief review of the work that has been done of late years in England in the editing and translating of the texts of the Roman Law. Dr. Moyle's excellent version of the Justinian Institutes has reached a second edition. Moyle's command of contemporary literature is not so complete as that exhibited by Prof. Muirhead in his 'Roman Law,' but the translation is faithful and the notes are valuable. Poste's text and translation of Gaius has also reached a second edition; but his text is not so correct as that given by Muirhead in the latter's Gaius and Ulpian. Prof. Holland's text of the Justinian Institutes, "edited as a recension of the Institutes of Gaius," in which the passages borrowed from Gaius are distinguished by different type, enables the student at a glance to grasp the relations of the classical and the Justinian law. In this respect it serves the same purpose as the numerous Continental "Syntagmata"; but the latter have the advantage of giving a complete text of Gaius as well as of Justinian. Finally, Holland's and Shadwell's 'Select Titles from the Institutes of Justinian' furnish well-chosen material for more advanced reading.

The text editions of Muirhead and Moyle (supplemented by Mommsen's edition of Bruno's 'Fontes Juris Romani,' Lenel's 'Edictum Perpetuum,' and Mommsen's and Krüger's 'Corpus Juris Civilis'), with the treatises of Muirhead and Sohm, will be found to constitute an excellent working library for the study of the Roman Law. All that is now really needed is a good English book on Roman civil procedure. Will not the Clarendon Press, that has already done so much for English and American students, give them a translation of Wach's latest edition of Keller's 'Römischer Civil-Process'? The older English books, original or translated, can then be relegated to their proper place—the stack-rooms of our libraries.

Secret Service under Pitt. By W. J. Fitzpatrick, F. S. A. Longmans, Green & Co. 1892.

The author of this portly volume claims a credit for diligent research which apparently is no more than his due. But his subject, which is the identification and the history of Irish spies employed under the Government of Pitt, while it may have an interest for Irish patriots, has little interest for any other class of readers. A Government threatened by conspiracy at home in concert with impending invasion from abroad will, of course, employ spies in its defence, and will look for them in the ranks of the conspirators. It is mournfully notorious that an Irish conspiracy has always in it a spy. The book contains, so far as we can see, no very startling revelation except in the case of the Franciscan Father Arthur O'Leary, whose sinister connection with the Government had already fallen under the notice of Mr. Lecky.

Father O'Leary was a brilliant and popular writer, who in pleading the Catholic cause took the line of moderation and national amity. If he was really a spy, or employed as a paid agent in the secret service of the Government, he must have played his part with consummate skill, for he died in the odor of the purest public virtue, and panegyric followed him beyond the grave. In the very year in which (if the charge now brought against his memory is true) he undertook "to get at the bottom of all secrets in which the Catholics were concerned," a gold medal was presented to him by the Cork Amicable Society, in which

"he was represented in the habit of his Order, crushing with his right foot the hydra of religious persecution, with his right hand opening the gates of the Temple of Concord, and with his left beckoning his countrymen (emblematically represented by the harp) to enter the sacred edifice forgetful of their prejudices against each other, while the genius of his country was represented with outstretched arms over his head, each bearing a crown, one of science, the other of victory."

Grattan said of O'Leary that if he did not know him to be a Christian clergyman, he would suppose him, from his writings, to be a philosopher of the Augustan age. The evidence adduced against O'Leary in this volume does not seem to us perfectly conclusive. There is a little doubt about the identity, the Christian name not being given in the incriminating documents, though Mr. Lecky puts this doubt aside. Apart from this, however, we should say nothing more is absolutely proved than that O'Leary was not so independent as he professed to be, and was possibly rather slippery in character. As a moderatist avowedly opposed to rebellion, he might naturally have intercourse with the members of the Government; and though it seems that he received, or was ready to receive, £100 for some service, the service is not specified, and it is somewhat harsh to assume that it was the service of a spy. At the same time, Mr. Fitzpatrick is able to state that Lord O'Hagan, who had kept O'Leary's portrait in his study and regarded O'Leary's writings as his political guide, mournfully admitted the force of the evidence.

It does not appear that Pitt himself soiled his fingers with this dirty work, though he must of course have been aware in a general way of what was going on. Whatever may have been his errors, he was, like his father, high-souled, and he would be sure to leave the reptile department to others. Mr. Fitzpatrick largely quotes and freely cites Mr. Froude, who is not so good an authority as Mr. Lecky, and the investigation into whose accuracy opens a wide but unfruitful field. However, the work will no doubt be interesting to Irish patriots, to some of whom it may at the same time read a salutary lesson.

BOOKS OF THE WEEK.

Allen, W. B. Gulf and Glacier; or, The Percivals in Alaska. Boston: D. Lothrop Co. $1.

Hyde's (W. De W.) Practical Ethics. 12mo, 208 pp. Mailing price, 88 cents.

A book for sub-collegiate classes. Its theory is nowhere abstractly stated, but is imbedded in its structure. The proof offered is not a metaphysical deduction from first principles, but simply the presentation in a rational and intelligible order of the concrete facts and consequences of conduct. Duties and virtues are enumerated, not by exhortation, but by showing the place they occupy in a coherent system of truth and the part they play in a symmetrical development of character.

Shaw's (E. R.) English Composition by Practice. 12mo, 203 pp. Mailing price, 83 cts.

This book sets the pupil at writing rather than at correcting the writing of others, and it does not demand bricks without straw. It develops inductively the elementary principles of composition from inspection of examples of good writing, themselves of the sort and of sufficient length to awaken the pupil's interest.

Jagemann's (H. C. G. von) Elements of German Syntax. 12mo. 170 pp. Mailing price, 88 cents.

A supplement to the regular grammars. The facts most important in rendering into German are systematically presented from the point of view of English, instead of that of general descriptive grammar.

The annotated English text of the author's 'German Prose Composition' will be issued in a preliminary pamphlet, without the vocabulary, about September 24. Teachers interested are invited to send their names for a copy.

HENRY HOLT & CO.,
29 West 23d St., New York.

A GENTLEMAN WITH ABILITY and ambition to pursue journalism is offered the assistant editorship of a literary weekly of first-class character and financial promise. No salary first year, but the suitable person can control, by investment, 30 shares ($3,000) of capital stock. An agreeable and valuable experience for a young man of capacity and moderate property. Address WEEKLY, care of *Nation*.

Dictation Exercises from Lowell, Hawthorne, Emerson, Irving, Addison, etc. Cordially endorsed by superintendents and teachers. Specimen copy, postpaid, 24 cents. JAMES H. PENNIMAN, 4322 Sansom Street, Philadelphia, Pa.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 29, 1892.

The Week.

THE calm tone of Mr. Cleveland's letter is entirely suited to that of the present campaign. If the country is quiet and is entering upon a Presidential election free from the excitement and uproar which usually accompany such contests, Mr. Cleveland is equally undisturbed. He states his principles and his attitude towards the leading questions of the canvass, and submits his fortunes and those of his party to the verdict of the people, without making any effort to excite their prejudices. The strongest portion of his letter is naturally that relating to the tariff issue, for it is with this that he is most closely identified, and it is upon this that the election will turn. Those persons who have been hoping that he would "dodge" on this question and fail to stand squarely upon the Chicago platform, will be disappointed. He does nothing of the kind. He accepts the platform in the spirit in which every genuine tariff-reformer accepts it. He believes in a "tariff for revenue only," and that "Republican protection is a fraud"; but, while believing this, he does not propose to do, what Mr. Harrison declares to be the Democratic purpose, viz., "blow up" the entire existing system without delay, and put absolute free trade in its place.

A great many Republican newspapers and stump-speakers are in a state of unconcealed agitation over the financial dangers which would be involved in Democratic success. It is a pity that they are so alarmed by the imagined evils of the future that they cannot stop to discuss the actual evils of the present and point out what party is responsible for them. Perhaps they are content, however, to leave financial journals to do the work for them. The last number of the *Financial Chronicle* has articles upon "The Financial Situation" and "The United States' Position in the World's Gold Movements," both of which, it says, "go to prove the imperative need that exists for the speedy repeal of the 1890 Silver Law." After showing that the "merchandise result" in our foreign trade for August was "about $19,000,000 worse" than for the same month last year, and pointing out the bearing of this fact on gold exports, it speaks of the "respite" afforded during the past week by the falling of foreign exchange, but says: "We call it a respite because all know that so long as that 1890 Silver Law remains on the statute-books, the evil is at work even during these seasons of apparent rest. No doubt under recent experience the country has become more fully convinced of the mistake that law was and is." When conservative financial organs are saying such things as this, it is in order for the Republican party to give a little more thought to its own financial folly, as embodied in Republican legislation, and a little less to the dreadful financial plots of the Democrats, all as yet in the future.

One of the "silver Senators," Mr. Stewart of Nevada, has bolted his party on that issue, having refused to support Harrison and declared for Weaver. This confirms previous indications that so many of the Nevada Republicans are going over to the third party on this issue that Weaver will carry the State. In Colorado the Republicans are trying to "straddle" upon the silver question. The platform adopted at their recent State Convention declares that the portion of the Minneapolis platform which says that "the Republican party demands the use of both gold and silver as standard money, with restrictions and under provisions to be determined by legislation," is to be interpreted to "mean that such wise legislation, if passed by the legislative branch of the Government, which represents the people, would be sanctioned by the executive." This, being interpreted, means that President Harrison, if reëlected, would, in the opinion of the Colorado Republicans, be bound not to veto a free-coinage bill if Congress should pass one. Meanwhile Eastern Republicans are urging his reëlection on the ground that he is the only man running for the Presidency who can be trusted to block free-coinage legislation.

The Ohio Wool-Growers' Association—the well-known *alias* of Messrs. Lawrence and Delano—has been at it again. Its annual session was held at Columbus on September 16, and the "semi-annual address" of President Lawrence contained bad news for the country in general and the Republican party in particular. The fact is that the duties on wool are too low, and have got to be raised at once, or the "80,000 voting wool-growers of Ohio" will know the reason why. The insatiate Lawrence reminds the Republicans that their platform of 1888 declared for "full and adequate protection" for wool. That the McKinley duties do not fill the bill is evident from the fact that the price of wool is lower than before they were put on. Wool-grower Lawrence admits that McKinley meant well, but says that his "purpose has been in part defeated by the decline in foreign prices, which was not expected when the law was passed." There can be no question, of course, what "the remedy" is—namely, "increased protection." Accordingly, "wool-growers should know from every candidate for Congress whether he will aid in securing this, and, if not, then refuse to vote for him."

This declaration of war may in part account for the sudden Republican nervousness over the situation in Ohio. McKinley and Foster are reported to be cancelling their outside engagements in order to take the stump at home in a "sure State," and Senator Sherman is booked for twenty speeches, all in "rock-bound Ohio." Secretary Foster is singled out by Lawrence for especial warning. The latter says that "on June 1, 1891, Mr. Delano and myself addressed an argument to the Secretary of the Treasury, demonstrating, as we believe, that Chinese wools should be dutiable as first-class wools." Sad and strange to say, "as yet no answer has been received." And no later than August 9, he called Mr. Foster's attention to the pernicious importations of "white-flannel cuttings from France" at 10 cents a pound duty, when, "in fact, they are waste, dutiable at 30 cents per pound." He wanted the "dumping" on us of "all the clippings of Asia and Europe" stopped at once, but "as yet I have no answer." This looks ominous for Secretary Foster, but we think he has a perfectly good defence. He ought at once to write Lawrence and Delano that all his time is taken up, in company with all the leading Republican orators, in denouncing any "change' in the tariff. How can he and the rest of them keep on with straight faces demanding that the tariff be "let alone" if every dissatisfied Republican who wants more protection begins already to serve notice that he must have it?

Quay no longer receives from the Republican press tributes, as "a practical politician and statesman, the leader of a great campaign, the admiration of the country," such as were paid him so profusely four years ago; but an interview with him still commands a certain measure of attention. He tells an inquiring reporter that he thinks Harrison will be elected, and he also tells why he thinks so. It is because he believes "Cleveland will be beaten by dissensions in the New York Democracy—nothing else"; "a split in his party, a lack of unity in sentiment for him, is what is going to defeat him." Except for Democratic dissensions, Quay frankly confesses that he has no hope. Other reasons which are alleged for believing in Harrison's election he thus dismisses:

> "I have seen some statements to the effect that, by reason of a fear of the trade disturbances incident to the tariff legislation, which would be inevitable with a Democratic Congress and a Democratic Administration, business men in the New York Democracy favor Harrison's reëlection. But I don't take any stock in this. My belief is that the business people throughout the country would as soon have Cleveland for President as Harrison, as far as their business interests go. The financial interests all over the country swear by Cleveland, especially the bankers."

Quay is a little more frank than some

others, but, when he is pressed, every Republican whose opinion is worth anything will admit that his sole dependence is what is fast proving the broken reed of Democratic dissensions.

Mr. Blaine has written a letter to explain that the reason he did not vote in the recent Maine election was because he found a Democratic friend who was ready to "pair off" with him, and save him the three days' time and 250 miles of travel it would have required for him to go from Bar Harbor to Augusta, get his name on the register, and cast his ballot. This, of course, "lets him out," but it does not explain why so many thousands of Maine Republicans followed Mr. Blaine's example in staying away from the polls without taking the trouble to "pair off" with Democrats. The Lewiston *Journal* publishes full returns of the election, which show a total Republican vote of only 67,870, against 79,398 in the corresponding election of 1888, and 78,912 in September, 1884, while the Democratic vote was 55,390, against 61,350 in 1888 and 59,061 in 1884. This allowed the Republicans a plurality of only 12,480 this year, against 18,048 in 1888 and 19,851 in 1884. In other words, about 6,000 Republicans who turned out in the September elections of the last two Presidential years did not go to the polls this year, and did not "pair off" either.

Mr. Hackett, Chairman of the Republican State Committee, has issued another confidential circular to faithful Republicans, which has a very suspicious look. In his first one he asked all the postmasters of the State for contributions to the Republican campaign fund, and in the second he proposed to them to make their offices branches of the Republican State Committee by sending to him the "names of from eight to twelve of the most active, earnest, discreet, and trustworthy young Republicans who get their mails at your Post-office," adding: "I particularly wish, also, that you keep this request a secret, even from those whose names you furnish me. . . . Your prompt service in this matter will not be forgotten." In the third circular, which was revealed to the public on Saturday, and which is addressed to "active, earnest, and sincere Republicans," who hold "Republican success dear to their hearts," and which is presumably sent to the persons whose names have been furnished by the postmasters, Mr. Hackett says:

"It is the desire of the New York State Republican Committee to be permitted to request you to do some particular service for the Republican cause from time to time during the canvass. Such service will call for the exercise of discretion and the ability to keep a secret. Are you willing to undertake such duty to help secure Republican success? If you are willing to do so, send me the name of a Democrat among your acquaintances whom you believe *can be induced to vote the Republican ticket this fall.* If more than one, give their names and place your letter in the enclosed envelope. Please sign the list with your full name and Post-office address plainly written. You may be sure that any service you may be able to render will not be forgotten."

When questioned about this circular, Mr. Hackett said on Friday that there was "nothing wrong about it," that he is "conducting an educational campaign," and that his "inducements" would consist entirely of documents and campaign literature. If this is the case, why is he so strenuous in all his circulars about the "exercise of discretion" and the "ability to keep a secret"? Does it require great "discretion" to distribute campaign tracts, and is it a business which a man should keep secret lest he be caught and punished for it?

The Question Clubs of Massachusetts have been putting some queries to Senator Dawes in regard to the McKinley tax on wool, reminding him that he was in favor of free wool in 1860, and asking him if it was true, as reported in the Boston *Journal*, that he believed that "whenever raw material entering into manufacturing here cannot be produced here in sufficient quantities and at such cost as to make its use in manufacturing here profitable, it should be admitted free of duty." The Senator answered that he had been correctly quoted, and that "by that test the clause alluded to [the one increasing the duty on carpet wools from 25 to 32 per cent.] must, with me, stand or fall." But he does not think the McKinley Bill can "be best judged by piecemeal, any more than a house can be best judged by testing here and there a brick in it." That is to say, the Senator would be in favor of knocking out the wool brick and many others, in accordance with the demands of his constituents, but thinks the riddled McKinley edifice would still be fair to look upon. At any rate, he is unusually bold and frank for a Republican in a Presidential year, though we fear it must be charged to the fact that he is not seeking reëlection. It is impossible to conceive of the Hon. Henry C. Lodge at this interesting political juncture admitting, with Mr. Dawes, that the "McKinley Law is not perfect."

The greatest living authority on the theory of protection, Prof. (or ex-Prof.) R. E. Thompson, has been called in to the aid of the distressed American Protective Tariff League to explain why protection has not increased wages in accordance with McKinley's promises. He furnishes two articles to the organ of the League on "Wages and Protection," in which he advances some novel views on the subject of the rate of wages and what determines it. After admitting that the tariff does not affect wages "directly or by any prescription of their rate," he boldly attacks the question, "What, then, is it that determines the rate of wages?" and says that the "first of the various forces which coöperate to this is public opinion." He explains his meaning to be that "the country has a certain notion of the way in which its workmen ought to live, and in a thousand ways it emphasizes its demand that they shall do no worse than this. If it be shown that they or any large body of them are away below this standard of living, it makes its disapprobation felt." This shows how great a mistake it was for the Homestead strikers to appeal to cost of production and claim an undiminished share of the increased profits of the Carnegies. What they should have done was to call mass-meetings in various parts of the country, and get Prof. Thompson to threaten Mr. Frick with "disapprobation." That would doubtless have brought him to terms long ago.

The learned professor attaches much importance to trades unions as a means of raising wages, but the one great source of blessing to workingmen, in his mind, is war. He sketches the history of our country, and shows how our various wars acted as providential substitutes for protection, and so blessed the workingmen. "The war for independence served as a protective tariff of the highest rate." When it was over, all was misery and starvation again until "the war of 1814-15 wrought a temporary improvement." But peace "caused a general prostration" as soon as it came, and it was not until our legislators learned at last the wisdom of maintaining war taxes in time of peace that the "cowboy" ceased to be "the typical American industrialist." These profound views of Prof. Thompson make it all the more incomprehensible to us why he was turned out of his chair in the University of Pennsylvania.

The Writing-Paper Manufacturers' Association (please do not say Trust) met at Springfield, Mass., last week and determined to shut down their mills for a month. This would look as if the market must be overstocked and as if paper might be cheaper. On the contrary, these distressed manufacturers announce that "an increase of two cents a pound for paper seems extremely probable." We should say this means it is certain. These same manufacturers have been doing great work in Australia of late. They are boldly meeting English competition in that country and crushing it out. But in their own land they would be ruined were it not for the duty of 25 per cent. by which their product is protected. In Australia they put their prices down. At home they put them up, and it is the duty which enables them to do so. All this throws light upon the assertion of the Democratic platform that "Republican protection is a fraud."

The failure of the attempt to hold the *South Portland* for violation of the neutrality laws, in having shipped a cargo of

arms, presumably for use in the Venezuelan civil war, was foredoomed. There was not a particle of evidence that the steamer was fitted out as a cruiser, or that she was to carry an expeditionary force. She was engaged in nothing but a commercial transaction, so far as our Government had a right to judge. As Prof. Woolsey recently said, and as the courts decided in the *Itata* case to the confusion of the self-made jurists at Washington, it is "lawful for our merchants to sell arms to all the world, at peace or at war." Balmaceda had his rights of capture of contraband articles in the *Itata*, and the Venezuelan Government, in like manner, could have intercepted the *South Portland*, if sailing to a Venezuelan port, and forcibly taken off the munitions of war found on her. But to hold her in New York harbor on the ground of shipping arms was a proceeding which, as the event shows, could not be sanctioned by law.

It is so seldom that courts exercise any proper degree of discrimination in regard to naturalizing foreigners that it is a great satisfaction to find judges who show some sense of their duty in the matter. While Judge Gildersleeve of the Superior Court issued final papers on Thursday last to 154 applicants, Judge Giegerich of the Court of Common Pleas, sitting more hours, admitted only fifty and rejected eighteen. Judge Pryor is still more rigorous, and a few days ago accepted only about 10 per cent. of the applicants who appeared before him. Indeed, the attachés of this court say that an applicant for citizenship has to pass "a regular civil-service examination," five minutes at least being devoted to an investigation of his fitness for citizenship. The judges of the Court of Common Pleas are of opinion that a man cannot be attached to the principles of the Constitution unless he displays some acquaintance with those principles, nor can he be well disposed to the good order and happiness of the country if he be an Anarchist; and the "civil-service examination" is intended to satisfy them upon these points. This is the course which ought to be pursued by all judges who have the power to make citizens of aliens, and it is a reproach to our courts that the policy of Judges Pryor and Giegerich should attract attention by its very novelty.

The only fear of cholera now remaining in the newspapers of this city seems to be a fear that they cannot reverse themselves on the subject fast enough. It is safe to say that if they were now following the methods they adopted one month ago, we should now be, to judge by their "scare" headlines, in the midst of a dreadful epidemic. At that time "Is It Cholera?" or "Is Cholera Here?" was the usual heading for every reported case of cramps; but now we have had actual cases to the number of a dozen or so, and yet they are all brushed aside as merely "suspicious cases," "probably not cholera." Commercial motives have doubtless been stronger than shame in leading to this change, but we believe that shame has had something to do with it. The actual demonstration that cholera can be sporadic in this city without being allowed to become epidemic, makes the insensate shrieking and pitiable cowardice of last month seem so absurd and contemptible that we do not wonder that those who were foremost in it are now saying: "Cholera? We never heard of it. Anyhow, it's nothing to be afraid of."

Nothing is more curious in the home-rule controversy than the extent to which it is carried on by English statesmen in the columns of American periodicals. The Duke of Argyll has just drawn out Mr. Gladstone in the pages of the *North American Review*, and now, we are told, Mr. Balfour is to follow Mr. Gladstone. We presume that about a dozen articles in all have appeared in American reviews from Englishmen prominent in public affairs on this Irish question. Their object in carrying on the debate here is hard to see. American opinion cannot possibly settle the matter, and, if it could, there would be great difficulty in finding out what American opinion on it is, in spite of Mr. Chauncey Depew's attempt to give Mr. Gladstone the exact figures of the American vote on it, if such a vote could be taken. Then, as everybody knows, the interest felt in the subject in this country, except as a question of English politics, by anybody except the Irish, is very small. Moreover, there is no question now before the world which requires so much knowledge of the facts of Irish political and economic history for even a slight comprehension of it, and we doubt if one hundred Americans all told possess any such knowledge or would take the trouble to acquire it.

The opinion of most Americans about home rule in other countries is that home rule is good for those who can secure it, on the principle laid down by George III., that every man was fit for any office he could get. But no American holds the doctrine, which underlies nearly all the addresses made to the American public by English opponents of Irish home rule, that home rule is something in the nature of a Sunday-school prize, only to be given to good boys. When they show us that the Irish are wicked people, or anyhow not "nice" or agreeable, they think they have proved their case, whereas they simply make it ridiculous. Yet this is about all the Duke of Argyll has to say, and will probably be the gist of what Mr. Balfour is going to say by and by. The rest of the world has, however, got far past this kindergarten view of politics. The world, happily or unhappily, has ceased to be governed, if it ever was governed, by truly good and gentlemanly men, who never would abuse their power. The old Liberal view, which has been applied by Englishmen of all parties to every country except Ireland, is that home rule is a cure for bad behavior, and not a reward for good behavior. The expectation in England that Mr. Gladstone was going to reveal his home-rule plan in detail first to the American public has, we are glad to say, been disappointed, for anything of the sort would have been absurd as well as undignified.

Le Temps complains that during August the customs receipts in France fell not only below the amount estimated in the budget, but below those of August, 1891. The deficiency below the budget estimate is more than 7,000,000 francs, and it is 2,000,000 francs as compared with the receipts in the corresponding month of the previous year. A higher tariff has therefore produced a smaller revenue, and the difference must be made up by increased taxation, which will not be paid by the foreigner. The termination of the commercial treaties, if carried out, must result in increasing the cost of many of the raw materials required by French industries and thereby diminish their productiveness. After a severe struggle the protectionists were defeated in the attempt to impose higher duties upon some of the most essential of these materials, but they threaten to overthrow the Government upon this issue. The results of the new tariff, however, are not such as to recommend their plan to public favor.

It is reported in Madrid that the Spanish Prime Minister is about to take a leaf out of French experience, and request the Pope to enjoin upon all the Spanish episcopate frank and full recognition of the boy king, Alfonso XIII., as the only and legitimate heir to the throne. If such directions from Rome should be given to the Spanish bishops, it would be as bitter a pill to some of them as were to many of the French episcopate the Pope's commands to submit to the Republic. The Carlist agitation has had a large part of its strength in the support of some of the stoutest Churchmen in Spain. Limited as it is to day, it is strongest where the Church is most absolute and unites its royal claims with the most extreme ultramontane pretensions of the Church. It would certainly be a great stroke for the pacification of Spain if Cánovas could induce the Holy See to intervene and deprive Carlism of all ecclesiastical sanction. Don Carlos is such a devout son of the Church, and has always been so profuse in his expressions of loyalty to Rome, that, though he might seem to have put himself beyond danger of having his claims disowned by the Pope, he would have no resort left if the Pope's ecclesiastical support were to be withdrawn.

CHANGED CONDUCT OF FOREIGN AFFAIRS.

THE Administration has now two important foreign complications on hand—the controversy with Canada over the canal tolls, and the negotiations with Venezuela over the denial of the right of asylum in an American merchant ship in the harbor of Puerto Cabello. No one can have failed to notice the great gain in sobriety and dignity which has marked the handling of both these cases by the State Department, compared with the methods followed last fall and winter at the time of the Chilian imbroglio. There is a perceptible improvement in the tone of the official papers relating to these disputes, and also in the personal utterances of the officials of our Government who have to do with them; but the greatest gain of all is in the unofficial and newspaper conduct of foreign affairs. Eight months ago we had to deal not alone with State papers and public debate, but with a great mass of "inspired" utterances in the press, and interviews with persons "enjoying the confidence of the President," in all of which the attempt was made to rouse a warlike spirit in the country, to give the impression that the Chief Magistrate was in a state of highly inflamed patriotism, and that the army and navy were fairly aching to get a chance to blow somebody to pieces.

We are very glad to record the passing away of all this. Both the President and the new Secretary of State have been very quiet and free from hectoring in their official correspondence with the Canadian Government, and have either denied themselves entirely to reporters who sought their opinions on the subject, or have contented themselves with regretting the difficulty and hoping for its speedy adjustment. And in the Venezuela affair they have so far refrained from any of that frothing and being "deeply affected" and "striking the Cabinet table with his clenched fist," which were too common in all the weeks when a war with Chili was talked of. But such changes in the spirit of dealing with the foreign relations of the country do not come about without adequate causes, and it is worth while inquiring into them. Why is it that when an American seaman is killed in Genoa in 1892, and the killing is explicitly stated to have been due to hostility to the uniform of the United States which he wore, the event should pass almost unnoticed, whereas, when a similar occurrence took place in Valparaiso in 1891, the country was kept for weeks in uncertainty whether it was not to be hurried into a bloody war?

The first and most obvious reason for the changed spirit is the fact that the foreign policy of a year ago was so evidently unpopular and politically futile. Everything that could be done to kindle a war sentiment in the country was done, and the result was an absolute failure to kindle any whatever. The patriotic note was valorously sounded in Washington, and the President carefully listened for the response of the country, but the only response he got was a distinct rebuke. The religious press was unanimous in disapproving the talk of war, and all the secular press that is not professionally blatherskite and pugilistic took the same position. A similar tone was held by business corporations and commercial bodies. In fact, there was never a more signal demonstration of the truth that a "brilliant" and "aggressive" foreign policy, leading directly to international disputes and probable war, is the most unpopular of all things in this country. It is not strange, then, that there has been no desire on the part of the Administration to repeat an experiment which turned out so disastrously every way.

But we do not believe that a fair account of the change under notice can be given without referring to the retirement from political life of the man who first gave the Republican party the idea that there were votes for it in a pushing and overbearing foreign policy. This was one of the shifts to which Mr. Blaine's fertile mind resorted in order to make good to his party the defections with which it was threatened by his candidacy. The appearance of the "Blaine Irishman" in American politics marked the beginnings of the theory that votes lost by moral decadence and surrender to monopolists at home could be made up for by striking a heroic attitude in all our foreign relations. And the undoubted fact that Mr. Blaine did in a measure succeed in his schemes, although as a whole they miserably failed, has had a malign influence on his party ever since. It has been continually on the watch for some brilliant diversion by which it might somehow get around the good sense of the people, and no diversion has been more in favor than that of glory gained through overriding some foreign nation. But when put to the decisive test in the Chilian business, the theory did not work at all. The "Blaine Irishman" has accompanied the author of his being to political retirement. The advent of a quiet gentleman into the State Department, and the return to the recognized proprieties of diplomatic methods, have been the natural result.

Upon it the country has every reason to congratulate itself. If we have any "destiny" at all, or any "place among the nations of the earth" to be jealous over, it is the destiny and the honor of working out in peace the industrial and social problems that are taking on such vast proportions in our land. As a fighting nation we have nothing to teach the world, and the search for glory and aggrandizement abroad can make us only offensive and ridiculous. What the world looks to the United States to do, is to demonstrate the possibility of maintaining under democratic institutions a stable government without endangering individual liberty; and anything that stands in the way of that, be it a jingo foreign policy or a monopolistic tariff, ought to be got rid of as speedily as possible.

BISHOP POTTER ON SUNDAY OPENING.

THE article which Bishop Potter has contributed to the October *Forum* on "Sunday and the Columbian Exposition" will reopen the discussion of this question, temporarily discontinued with the action of Congress a few weeks ago in making national aid contingent upon the closing of the gates on Sunday. Such a reopening is on all grounds most desirable, for there is a strong feeling among thoughtful people that the decision of Congress did not represent "the sober second thought" of the nation.

Bishop Potter points out that the institution of Sunday as we have it in America consists of two things—the institution itself and "its modern accretions," by which latter phrase he means "all that Sunday has taken on of more precise and more austere restriction in connection with the Puritan movement, whether in England or in America." The Bishop draws this striking contrast between Sunday as it was established by the Founder of Christianity and maintained for some centuries, and the Sabbath introduced by the Puritans:

> "There can be little doubt that while the Christian First Day, or Sunday, took over from the Sabbath its venerable conception of a rest day, with it scarcely less venerable traditions of religious worship, it dismissed on the one hand that earlier strictness that would not on the Sabbath day pull an ox or an ass from the pit into which they had fallen, nor pluck an ear of corn even to satisfy the most urgent demands of hunger, while, on the other, it imported into the day an element of gladness and festivity which made the Sunday of primitive Christianity in many respects not unlike our own Christmas or Thanksgiving Day. What we who are native to America are most of all familiar with—its asceticism of domestic usage, its absolute prohibition not merely of amusement, but of recreation (the two are very different things) on Sunday, its dreary denial even of innocent occupations, its stern rebuke of the gayety and mirthfulness of children, its hard constriction of the domestic affections and of neighborly courtesies—by none of these characteristics were the Sundays of the first Christian centuries distinguished. A true picture of them may by anticipation be found in the pages of the New Testament itself, where Christ is found on one Sabbath day healing a paralytic, much to the disgust of a ruler of the synagogue, who roundly denounces him; or on another dining with a Pharisee and making this kindly intercourse the means of the loftiest teaching, thus expressively proclaiming that humaner law which was to govern men henceforth in their observance of all holy days, whether Sabbaths or Sundays."

Quite apart from the source of this law, Bishop Potter thinks it difficult to see how it could be improved. He refers to the attempts so often made to "reintroduce a rule of prohibitive asceticism which Christ, in his own person, once and for ever dismissed," and the failure of all these attempts to produce "those choicer fruits of conduct which have never ripened save as men have faced life and conquered it—have 'used the world as not abusing it.'" So it will be, in his opinion, whether the question concern the observance of a day, the mastery of the appetites, or the enfran-

chisement of the will. It follows that "we shall get a good Sunday in America when men learn to recognize its meaning and its uses—not when we have closed all the doors which, if open, might help to teach them that lesson." One of those doors, it seems to him, is the door of a library; another, the door of a well-arranged and well equipped museum; still another, the door of a really worthy picture gallery—and he shows how all such opportunities must exercise an enlightening, refining, and instructive influence. The principle is thus applied to the Chicago case:

"And this would seem to indicate that, consistently with the scrupulous observance of Sunday as a day of rest, a great assemblage of the achievements of human art and industry might wisely be made a silent schoolroom of the progress of human civilization. Let the Columbian Exposition proclaim by the hush of all its varied traffic and machinery—no wheel turning, no engine moving, no booth or counter open to buyer or seller, no sign or sound of business through all its long avenues, and, better still, by its doors closed till the morning hours of every Sunday are ended—that the American people believe in a day of rest. But if there be those who would later seek its precincts to look, it may be, more closely at the handiwork of man, to study the progress of the race in the story of its artistic and industrial and mechanical achievements, and to recognize thus, it may easily be, in the study of such achievements, with Job, that 'there is a spirit in man, and that the inspiration of the Almighty giveth him understanding'—that certainly can be no unworthy use of some hours of our America's rest day."

Moreover, the Bishop proceeds, it is not a question of doing the best possible thing, as the all-day Sunday closers seem to think, but of doing the best practicable thing; and therefore one should not leave out of sight the alternative if the crowds of idle strangers in Chicago are kept out of the Exposition grounds, and find the doors to saloons and worse places wide open. This consideration is the more important "in view of facts that are abundantly well known as to the use that people shut out from the Exposition made of their Sunday afternoons in Philadelphia."

There remains the argument that "if you begin to make concessions, you never can tell where you will stop," and what the Bishop says regarding this is the more weighty because he confesses that the argument is one by which he has himself been greatly influenced in considering the question of particular relaxations of a stricter Sunday usage in a great city. He sees two answers to the proposition. The first is found in the question, "Are the concessions demanded intrinsically reasonable and a just reaction from previous over-strictness?"

The Bishop's second answer is, that "what may be called the Christian theory of life as enunciated by Christ himself demands, most of all, as between things tolerable, permissible, and prohibited, what I may call the habit of discrimination"; that "it does not follow, therefore, that where one makes a righteous concession he never can tell where he will stop"; that "to know where to stop is, in one sense, of the very essence of his Christian liberty and responsibility." A man need not wear a Quaker coat in order to observe a decent simplicity in the matter of dress, nor take a monastic vow of celibacy or poverty in order to live a pure and unselfish life. He must deal with every question that arises—the Sunday question of course included—according to the dictates of an enlightened judgment and conscience. This, then, is the conclusion of the whole matter:

"He has not suddenly become a godless and profane person because he differs with other equally honest and conscientious people about Sunday, or because he holds that there are inherited views as to the observance of that day which cannot by any process of ingenuity be read into the pages of the New Testament nor in to any canon by which Christendom is bound either in its interpretation of that book or of the Lord's Day. Those inherited views, however dear to some of us, have just so much weight as can be gained for them from the study of the history of the origin and institution of the Christian Sunday—and no more. And if such a study makes plain to us the value of the day of rest, of worship, and no less of a cheerful and manly exercise of our Christian liberty in things indifferent in the observance of such a day, we may wisely consider whether a Sunday wisely guarded for such uses is not the best Sunday, alike for Exposition times and for all times."

The source of this deliverance, the force of its arguments, and, above all, the admirable spirit which characterizes it, must give it great weight. It is not too much to hope that it may lead to general revision of views and a change of attitude in many cases. The misfortune of the desultory discussion which ended in "Matt" Quay's appearance as the successful champion of the Puritan Sabbath in Congress was the fact that the opposition to Sunday opening was "worked up" most industriously by some zealous fanatics, while its friends made no really effective attempt to present their side of the case. There is still time to develop a more intelligent public sentiment which will sustain Congress in reversing next winter its ill-judged action at the last session.

MR. MORLEY'S TROUBLE.

THE taunt against Mr. Gladstone and the Liberals which produced most effect in the debate which closed the existence of the Salisbury Ministry, was Mr. Balfour's warning to Mr. John Morley that he would not be able to govern Ireland without the aid of the Coercion Act—that is, without the use of extraordinary and arbitrary police powers. There were two reasons why this sent a little tremor through the Liberal ranks. One was the knowledge that the Irish irreconcilables, or "Parnellites," led by Mr. John Redmond, and containing probably all the turbulent element of the population, including whatever remained of the old Fenians, were not well affected towards the Gladstone Ministry. Mr. Redmond did not on their behalf promise any very faithful support, and it was feared that if this element were let loose as the winter approached, and began a course of "outrages," they would plunge Mr. Morley into terrible embarrassment. The other was the knowledge, which might have been called common knowledge, that nearly all the Irish landlords had aided Mr. Balfour to the utmost extent of their power in making the coercive policy seem a success, by refraining from pressure on tenants in arrear, and by the almost total abandonment of evictions for non-payment of rent. The result was, that Mr. Balfour was able to prepare for the general election by announcing that Ireland under his system was at last perfectly peaceful, or, as he boasted on the stump, that "they [the Tory Ministry] had at least shown that they knew how to govern Ireland." His defiance to Mr. Morley in the debate, therefore, was so pointed as to have almost the air of a promise to make trouble for him, and it was so treated by Mr. T. P. O'Connor (better known as "Tay Pay," on account of the richness of his brogue), who followed him in a powerful speech.

These fears were felt by the bulk of the Irish members more seriously than by the English Liberals, and the former have, therefore, been straining every nerve since the election to conciliate the anti-Parnellites and keep them quiet, and apparently with a considerable measure of success. But no influence can be brought to bear on the landlords to induce them to refrain from exercising their rights in the most extreme form, and the latest news is that they are preparing, as politicians would say here, to "put Morley in a hole," by taking out writs of ejectment on a great scale. If these evictions are carried out, Mr. Morley will have to lend the police and troops to assist the Sheriff; and even if there should be no resistance, he will be held responsible in Irish eyes, and in English Radical eyes, too, for some of those clearances of population off the soil on a great scale which no other country in Europe has ever witnessed, and which, as Lord Russell remarked fifty years ago, are one of the greatest scandals of both English and Irish history.

Mr. Morley is likely to have trouble enough without this, in dealing with what has been known during the discussions of the last few years as the case of "the evicted tenants"—that is, of the tenants who, under the "Plan of Campaign," refused to pay more than a certain amount of rent to their landlords, and, when it was refused, turned it over to the Treasurer of the National League. A great many of these men were consequently evicted, and since then the great bulk of the farms thus vacated have been lying idle, few or none having the courage to take them in the teeth of popular hostility. Whether the original tenants were fools or knaves is not now a matter of practical importance. They generally acknowledge their error, but they have no money to pay up their arrears of rent, although they are very eager to reoccupy their farms. In any other country than Ireland a compromise of some kind would ere now have been effected, but in Irish politics every-

body would sooner lose money than an opportunity of making the other side smart. Accordingly, one of the great joys of the landlords and the English Tory politicians during the past five years has been the exhibition of the evicted tenants as the victims of home-rule folly and wickedness, whom it would be almost a sin to restore. At last the tenants, in despair, got into the way of believing that, when Gladstone came back to power, he would in some manner reinstate them; but when he was pressed on this point on coming into office, all he could say, of course, was that he hoped, in the course of the winter, that some means would be found of bringing the landlords and them to terms. This was the language of a humane and rational man, but it was received by his enemies with a howl of delight, as showing that on this point he had no fixed policy, and that in this matter at least there would be found plenty of material for harassing him.

Everything now depends on the ability of the Irish leaders to control the people when exposed to various forms of legal provocation. Whether this ability exists, time only can show. Should there be an outbreak of agrarian disturbance which would compel Mr. Morley to use any of the weapons of his predecessor for the restoration of order, it would give the Ministry, by the time Parliament met, a very serious blow. If it be asked why, after the establishment of judicial rents—that is, rents fixed by judicial appraisers—these rent difficulties should keep constantly recurring whenever there is a bad season, the answer is that hardly any Irish land is really capable of paying rent at all, any more than land in New England or along the Hudson River, after leaving the tiller of the soil a decent living; and that all Irish rents, even "judicial rents," are fixed under traditions concerning the tenant's standard of living to which the latter are less and less willing to submit.

NOVELISTS AND DRAMATISTS.

THE theatrical dry season in London has been enlivened by a discussion of the relations of writers of fiction to the drama. One morning paper set about drawing from a number of well-known novelists their opinions on the general question, and also their explanation of the fact that they had never themselves attempted a play. Mr. William Archer, the dramatic critic, had gone on record with the opinion that novelists not only might be, but ought to be, playwrights as well; as he expressed it: "They owe it to themselves and to literature to make some essay at any rate in dramatic form." He had pointed out, too, how marked was the contrast between the practice of the English and the Continental novelists in this respect. Nearly all the more famous French novelists have written for the stage. Even in Spain, where dramatic writing has been held as a profession by itself more rigidly perhaps than anywhere else, the French example has begun to tell, and the veteran novelist, Galdós, has only this year produced his first play. In Mr. Archer's mind, it is within the power of English novelists to rescue the stage from the inanities to which he thinks it is almost wholly given over, and hence it is something like a call to duty that he addresses to them.

Their replies, however, so far as they have been made public, are not very encouraging. Mr. Hardy thinks he will stick to the novel as the best means of getting his ideas before the people, inasmuch as, in his opinion, "the novel affords scope for getting nearer to the heart and meaning of things than does the play." He has especially in mind "the play as nowadays conditioned, where parts have to be moulded to actors, not actors to parts." A truly original play he thinks no manager would take the risk of bringing out. He also would object to submitting himself to "the exigencies of scene-building," which demand that scenes should be "arranged in a constrained and arbitrary fashion, although spectators are absolutely indifferent to order and succession provided they can have set before them a developing thread of interest." Mr. W. E. Norris, who modestly claims to speak only for the "smaller fry," puts the case as follows:

> "Why should we, who assuredly are not men of genius, and who therefore cannot hope to trample an opposing host of difficulties under foot, expose ourselves not so much to the danger as to the certainty of a fiasco? Let it, for the sake of argument, be boldly assumed that we could, if we chose, produce comedies about equal in merit to the novels which we have written, and which have found acceptance with a portion of the novel-reading public. Well, in Paris there would be a chance for us. In Paris our piece—the piece as we had written it—would be faithfully rend red, and our audience would no more think of demanding from it what was neither in it nor intended to be in it than of searching for peaches in a strawberry bed. In Paris such a play, for instance, as 'L'Ami Fritz,' a play in which there is absolutely no dramatic incident or situation whatsoever, is not only tolerated, but appreciated. But can it be pretended that London would put up with delineations of character, with little *genre* pictures of contemporary life, or gentle satires upon contemporary manners and morals?"

Other novelists whose views were sought objected to the stilted style demanded in dramatic writing and the constant necessity for making "points," and some dwelt upon the inherent distinctions, as they conceived them, between the novelist's art and that of the dramatist. The New York theatre-going public has just now an opportunity to witness a practical demonstration of the difficulty of turning a novel into a drama. The dramatization of 'The Scarlet Letter,' it seems agreed on all hands, presents an entirely inadequate idea of the real dramatic movement of the original. This, of course, makes against the adaptation only, and does not necessarily argue against Hawthorne's power to have written a play, instead of a romance, in the first instance. But who that reflects how great a part of the effect of his book depends upon the subtle suggestion of his description, will believe that it could all have been put into the dialogue and action to which dramatic writing is restricted?

Hawthorne, it is true, is by his peculiar genius an extreme case, and so not a fair test of the kinship of fiction with the drama. But there are real and important differences between the two, and between the powers of the men who do successful work in one and in the other. To speak only of a very obvious matter, what, after all, does "dramatic ability" consist in but a profound acquaintance with the methods of the stage and the limitations under which the ideas of a drama can be expressed? That play-writing is not merely a question of creating characters, but of creating them under the conditions of stage representation, and so requires a separate apprenticeship and mastery of a separate technique, is clearly perceived by one of the English novelists referred to above. He asks why, having painfully flogged himself up the hill of novel-writing, he should begin over again and go through the same unpleasant process in writing for the stage. The same truth is involved in Mr. Hardy's complaints of the artificiality of the stage; to the practised dramatist the conventions of the stage have become second nature, and to write in Mr. Hardy's fashion would be for him the artificial and impossible thing.

Mr. Archer declares the modern English drama to be in a very bad way, and we suppose no one will assert that the American is more fortunate. Yet we do not see how its elevation can be seriously hoped for at the hands of novelists as long as the professional writers for the stage are content to go on as they do. They probably can gauge the public taste and managerial favor better than anybody else. If they perceived a general demand for something more worthy the name of literature than are the wearisome melodrama and more wearisome farce that monopolize the theatres, they would doubtless try to satisfy it; the fact that they do not, would indicate that a novelist who set about elevating the stage would need to be highly disinterested, as he would have to ignore the usual motives of popularity or profit.

FÊTES AND CENTENARIES.

PARIS, September 12, 1892.

DURING the summer months we are now passing through, home politics are in almost complete abeyance: Deputies and Senators are on holiday, and the Ministers, sure of not being turned out of office on the morrow, are giving themselves up to the delights of their rural retreats. The profound calm has nothing to disturb it apart from the festivities of several kinds that are succeeding each other—official visit of the President of the Republic, with its necessary accessories, reviews, fireworks, distributions of decorations; and celebration of centenaries of various events belonging to the first Revolution. Though, to tell the truth, none of these manifestations has

any direct political import, they are none the less interesting to observe, as revealing symptoms and tendencies worthy of note.

It is an old reproach against the French that they are the most frivolous people on the face of the earth. The accusation is doubtless exaggerated. It is certain, however, that our fellow-countrymen have a most pronounced taste for anything in the way of fêtes, demonstrations, and official and pompous manifestations. If they are, as their votes seem to imply, sincerely attached to the Republic, they certainly have no desire for the severe, austere Republic that certain revolutionists acclaim. Their ideal would rather appear to be a republic surrounded with all the pomp and parade of a monarchy. No doubt a minor, but yet a real, cause of the popularity of Gen. Boulanger was the legendary black horse on which he was wont to caracole, and his gay uniform, which, in the chromolithographs that were distributed in the country places, threw into the shade the modest black coat of the President of the Republic. If M. Carnot enjoys throughout the country a popularity that M. Grévy never acquired, he assuredly owes it in a large degree to the attention he has always bestowed on the representative part of his duties—a part absolutely neglected by his predecessor. He has multiplied fêtes and receptions; he inhabits during the summer what was formerly a royal residence; last and not least, he visits in succession every part of France, showing himself to the public from eight o'clock in the morning to midnight, undergoing with exemplary patience in each town at which he stops the interminable receptions of functionaries, the speeches and the banquets, and leaving generous offerings to all the charitable institutions of the neighborhood.

The object of his last journey was, as is known, to visit Savoy. In reference to this journey rumors of all kinds were put in circulation. It was announced, for example, that the visit of M. Carnot to the King of Greece, as he passed through Aix-les-Bains, where also he was to see M. de Giers, would give to this journey a very considerable importance in respect of our relations with Russia. The avowed reason of this journey was to be present at the fêtes celebrated at Chambéry in honor of the centenary of the reunion of Savoy to France. It will be remembered that Savoy was first annexed under the Revolution in 1792. She returned to Piedmont in 1815, and remained in that connection until the campaign of Napoleon III. in Italy restored her to France. Such being the facts of the case, it was difficult to pass over in complete silence the date of 1861, and the official speeches were compelled to recall it. The name, however, of Napoleon was mentioned by no one, and all professed to see in his achievement only the natural crowning of the work undertaken by the Revolution. This is a fact characteristic of a tendency that one sees manifest itself more and more.

The farther we go, the greater transformation do we see in the rôle attributed to the Revolution of 1789 and the public conception of it. It is no longer simply a great political and social movement, to be admired in certain of its actions, to be blamed in others, and one whose consequences have profoundly modified France and Europe throughout. It is becoming the starting-point of all one can consider good and great. It is the unique ancestor of republican and democratic France. Then, in proportion as it is thus exalted, grows the attempt to ignore whatever has been done outside of it, and outside of the Republic, which claims to be the sole outcome of it. And if in past centuries men are found whom the advanced Republicans wish to honor, they are proclaimed, often to the great detriment of historic truth, forerunners of the Revolution. All French Republicans, it is true, do not go so far as this; but a fanaticism of the kind is to be found, more or less accentuated, in a large number of cases.

One natural consequence of the tendency we speak of is to multiply the ceremonies commemorative of the various events of the Revolution. In addition to the fêtes of Chambéry which exhibit, as a matter of course, more of a local character, we had the celebration of the 10th of August; and the anniversary of the proclamation of the first Republic will be celebrated on the 22d of September by an official fête. A certain number of allegoric cars will parade the streets of Paris—the car of the Marseillaise, the car of the Republic, etc.—and choirs will sing hymns composed for the occasion, while persons dressed up in theatrical costume will exhibit in various places a number of appropriate scenes. What the effect of this masquerade will be—whether superb or ridiculous—we cannot beforehand predict. But this conception even of the fête, and the commentaries of some of the newspapers, are curious to remark. This "Sacred Car" of the Republic, this triumph of allegory, this mixture of the religious sentiment and the art of the strolling player, seems a far-off echo of the "Fête of the Supreme Being," with its symbolic decoration, and of the "Fête of Reason," celebrated in Notre Dame with the assistance of the *corps de ballet* from the opera.

The anniversary of the 10th of August did not have any official character. The Town Council of Paris had voted 200,000 francs with a view to its due and proper celebration, but the Government interposed its veto, judging, indeed, rightly that the anniversary of the invasion of the Tuileries by the people, and of the massacre of the Guards, ought not to be fêted, and esteeming quite useless the celebration of an insurrection. The manifestation, therefore, had a strictly private character; it nevertheless managed to surround itself with a certain lustre. Radical and socialist committees had organized a number of reunions and banquets in which orators vaunted, in speeches more or less inflammatory, the glorious day they were called together to celebrate. These men, who thus made the apotheosis of a day of insurrection and massacre, were not, however, anarchists; there were among them good sort of folks, incapable of doing harm to any one—for instance, a former president of the Council. But then, by reason of the tendency we indicated a moment ago, the Revolution is for many Republicans a thing henceforth scarcely to be discussed. In the first place, new legends spring up every day which completely change the aspect of events. Next, the Radicals have now for a long time proclaimed that the Revolution formed an indissoluble whole, a compact block from which nothing could be taken away, to the extent even that one must necessarily come to the point of exalting massacres as glorious feats of arms.

It needs to be remarked, however, that the great events of the Revolution are not all fêtes in the same sense of the word, and the choice made among them is at times significant. The 10th of August is celebrated with noisy demonstration, and the 4th of August—the day on which the clergy and the nobility in 1789 made spontaneous renouncement of their privileges—is passed over in silence. The second of these dates, which recalls an act that no one in France thinks at the present time of censuring, would shock no political party, while the 10th of August is to the taste only of the advanced radicals. It would seem that in this manner of glorifying the Revolution in its errors and in its crimes there is a desire to shock and annoy political opponents. In any case, if it is not intentional, the result is the same.

There are parties in the history of the Revolution which many people cannot admire, less often from political conviction than from their manner of judging, their habit of mind, their moral opinions, or their family traditions. Most Conservatives belong to this class. Many of them are certainly quite willing to come over unreservedly to the Republic, especially, as may be well imagined, to a republic having some of the lustre of a monarchy, and presided over by a chief worthy of respect, respected by all, and knowing how to set off the dignity of his office and to treat with the various crowned heads of Europe. But if the existing Republic fulfils in a measure some of these conditions, the tendency of certain politicians to identify it with the whole of the Revolution, and the particular choice of anniversaries which are solemnized—all this is not calculated to increase and hasten adhesions.

But such, it may be said, are quite subordinate questions, and all these manifestations of a purely outward kind cannot have any great political import. That is so, and we do not pretend that they are of themselves able to bring about a change of the public mind. But with a people whose character is like ours, they may help to create such a change; and this is why it is necessary to reckon with them.

S.

A PLEA FOR THE DISCOURAGEMENT OF ART.

LONDON, September 9, 1892.

THE advantage or drawback—which is it?—of going into retreat for a while in a little French provincial town, is the ease with which you lose touch with the outside world. Your news comes to you so late that either you feel the folly of being interested in it at all, or else you consider it far more seriously than time would allow had it reached you in the ordinary course of events. This was the case with me when, in the August *Atlantic Monthly*, I read Mr. Stillman's article on "The Revival of Art" fully a month after the average magazine-reader had forgotten it. Perhaps it appealed to me the more because it fitted in so admirably with the train of thought which recent experiences in Paris had started. As far as I can gather, the main facts Mr. Stillman desires to point out are that the world to-day does not want art, and that the present theory of art education is all wrong. I have already, in writing about this year's Salons, referred to the former of these facts as an explanation of the deplorable tendency of contemporary painters to resort to any trick or meretricious effect in order to catch the public's eye. No one can know anything of artist life in Paris, of the common talk and gossip of the studios and schools, without being brought face to face with the truth that much of the vaunted art education, supposed to be had in perfection in that capital, is a humbug. Mr. Stillman was chiefly concerned with the latter-day theory of teaching; in detail I disagree as often as I agree with him. But I am not writing to confute his arguments, especially as I find that the present degradation of art—you can call it by no other name—is due chiefly to other causes; causes which it is high time for the sentimentalists who pose as art patrons, to recognize. The art-

ist cannot be destroyed by theory; but the mod rn practice of education can flood and is flooding the world with painters and sculptors, illustrators and designers, who were meant by nature to sell sugar or tape over a counter, or to run up endless columns of figures at an accountant's desk. The philosopher may go on theorizing for ever and no great harm be done; but our new and benevolent system of practical education threatens to make the art of the twentieth century a laughing-stock for all time.

It is not many years since a variety of reasons—it is not worth while to discuss them here—brought about that *renascence* over which so much "yearnestness" has been expended. The old anti-macassar went out and "art muslin" came in; the reign of *bric-à-brac* was inaugurated; and the preacher, lay or clerical, welcomed art as a factor in the regeneration of the human species and the onward march of civilization. All this might have been simply amusing if converts to the new creed had not looked upon it as their appointed mission to create artists. Mr. Stillman hits the nail upon the head when he speaks of the "ignorant and substantially superstitious respect, often amounting to reverence, for the artist," and of the religious fervor with which his patrcns encouraged him. For them he replaced the wicked heathen of the East and the cannibal of the jungle. They devoted themselves to making artists where of old they had made Christians; this was all the difference. Now the worst of it was that while the elect were busy reviving art, the report was spread abroad that there was no easier way to turn an honest penny than to contribute work to this revival; the poor schcolma'am, by beating brass or painting *menus* in her leisure moments, could eke out sumptuously her modest income; the full-fledged artist could hope to rival the speculator in stocks in the princely measure of his profits. There was a fair amount of truth in this report. The art-worshippers, with all the zeal of converts, fell down indiscriminately before everything "done by hand," as promptly as the children of Israel before the golden calf; popular painters could ask any sum for their pictures with the certainty of getting it. This phase, however, could not last. When the millions took to doing things by hand, then art patrons began to look for those which were artistically done; when the thousands took to painting pictures, then only the exceptions could afford *not* to be dependent for popularity on their prices. At this juncture it probably occurred to the creators of art, the would-be Medici of the nineteenth century, that the training given to artists and the uncongenial influences to which they were exposed must be hindrances. For if, despite all that was being written or said about art, they proved themselves no greater than artists born in the Dark Ages, it could only be because opportunity had not been provided them for the full development of their powers. Right and left schools of design, usually modelled after South Kensington, were established; students, supported by private patrons or public bodies, were despatched to Paris, with the result that never have there been so many professional artists (I say nothing of the legion of amateurs) as to-day, never so much bad work turned out. And now comes the inevitable crisis: on the one hand, a public whose art enthusiasm is fast evaporating; on the other, a vast army of art students to whose numbers the thoughtless rich American, for his own glorification, s continually adding. For this crisis the theory of education is far less responsible than the practice. It is easy to show wherein part of the evil lies, and a little plain talk on a subject too often shrouded in sentiment may help to clear the air.

That in leading schools the methods are at fault there can be no doubt. South Kensington, as I say, has been the model for many an English and American school, and yet the failure of South Kensington is proverbial. Manufacturers still cry in vain for good designs; the artists who owe their inspiration to its classes can be counted on the fingers of one hand. Only the other day, one of the official Government Examiners told me that among eighteen hundred students whose designs were submitted to him, but one showed signs of individuality or even the least understanding of what was expected of him. But the root of the evil goes deeper still. Artists cannot be created. A far healthier state of affairs would result from the discouragement than from this form of the encouragement of art. South Kensington has not so far manufactured good designers and decorators, but in its many provincial branches the post of the master depends largely, I am assured, upon the number of students he can muster, though the best service he could render to his country would be to reduce rather than to increase their ranks. However, it is in Paris, because Paris has the reputation of being the centre of art, that this absurd system of encouragement reaches the very lowest stage of demoralization.

One hears much about the advantage of living in an art atmosphere, of the stimulus and facilities to be had by working in the Paris ateliers, being in the midst of French artists, studying the Old Masters, and so on. And now, what is the truth? why mince matters? In the facilities which I know are not indispensable to the production of good work, but which are great aids to it—in light and space and general comfort—Julian's and Colarossi's, where our students mostly flock, cannot be compared to our schools at home. This would be a minor loss if the gain outbalanced it. The stimulus, I suppose, is thought to come from the visit of this or that French master, but what personal interest does he really take in countless pupils whose language he cannot speak, save, now and then, when he recognizes the promise of genius in drawing or study? It is out of all reason that, simply because he makes the rounds of the studio, he is a genuine influence in it. And outside of the studio, how many of the students see or know him? If they did, how many would understand him or be able to talk with him? Indeed, once work is put away for the day, the American might as well be back at home in New York or Chicago. He lives in a little colony of his fellow-countrymen and Englishmen, and into their quarters, whether in Montparnasse or Montmartre, Frenchmen seldom penetrate; a French word is seldom heard in them. And his haunts there he rarely leaves, unless, perhaps, for the parlor of the rich American in the Champs-Élysées. Probably in the old days when English and American students were few, they may really have seen something of French artists, have lived in the French art world. But there are too many of them now. They have made a world of their own, and in it they remain so entirely and so securely that, ten to one, they can tell you less than you know yourself of art in France. The artist, though fresh from New York, if he cares is better posted as to movements and schools and revolutions in Paris than the student who has been at Julian's for a year. And as for the Old Masters, how often has he time to go to the Louvre to study them? And when he does manage it, what do the Old Masters mean to him? I know an artist of years and discretion and sound principles, who, after a first visit to Italy, declared, in the terse speech of the studio, that all the old work there was "rot." If this be the first impression of the average painter of experience, what can be expected of the callow fledgling who has never seen an Old Master before? Besides, the truth is, Paris offers too many distractions. I am no prude; the Bohemia of Mürger and his friends does not terrify me out of all common sense. But I realize that for the American, used at home to utterly different conditions of life, oftener than not the influence to which he is exposed means ruin—artistic as well as moral. There are certain forms of vice fostered—not necessarily—by the atelier life, which eat away the very foundation of intellectual and industrial effort, and send the student home not an artistic wonder, but a moral wreck. These are things to which in polite society one does not refer, but when the mania for sending youths to Paris to study art has attained its present proportions, politeness may profitably be dispensed with.

I do not mean to say that it is useless for students to go to Paris. For the man who has it in him to work, for the man who has already learned what can be learned in the schools at home, for the man who is an artist, the art atmosphere of the place is as unquestionable as it is invaluable. He may be safely left to himself to prefer the world of work and industry to the reunions in Montparnasse, to the dances and afternoon teas in the Champs-Élysées. He may be trusted to find time for the Luxembourg and the Louvre, and, moreover, to repeat his visits thither again and again, until he can appreciate what at first may have puzzled him in the old work, startled him in the new. But it is the despatching of unfledged youths to Paris by rich men who establish scholarships or support individuals, and so seek to shine by reflected glory, it is the same course pursued by art clubs and institutions, which is productive of so much harm. Paris now, in its schools, is but little better than Rome, but we are filling the French capital with our students just when Frenchmen are waking up to the absurdity of sending theirs to the Villa Medici on the Pincian. The "prix de Rome" has degenerated into the veriest mockery, as most French artists will admit. It at least has the warrant of tradition; but we are priding ourselves on the foundation of new scholarships on very similar lines, which, in the long run, cannot but prove an unmixed evil. It is but a few months since I received a circular from the founders of the latest Paris prize, and it seemed but typical of the prevalent folly that of the jury of appointment almost one-half were men knowing nothing of art, the others local artists—none of international, only two of national, reputation.

If there is so much ready money to be spent upon art, if there are so many influential men interested in students, money and interest need not be wasted. I do not believe that, the world over, better schools, in point of construction, could be found than many of ours. Do we need the proper masters? It is a want easily supplied. Bring them from Paris instead of bundling off our students to them there. I doubt if, now the hard times have come, there is a French painter of note (except Puvis de Chavannes, Monet, and one or two others, perhaps) who would not, for a good salary and the promise of commissions,

be willing to teach in an American town for six or seven months of the year. Let Paris lose a little of its artistic and Bohemian glamor, let the hard work be done at home, and I think before long the weeding-out process would begin of itself; fewer men would go in for art, and only artists already trained would find their way to the galleries and studios on the Seine. In a late number of the *North American Review*, Mr. Crosby, in recommending Florence as a residence for the art student, qualified his recommendation by stating that it applied "to the matured artist or student rather than to the mere pupil." He could have made the same assertion with equal truth had he been writing of Paris. To stop the present flow of immature pupils to its studios would be a step in the right direction—a step towards that discouragement of art which must precede its establishment on a rational basis. Correspondence.

THE COST OF LIVING.

To the Editor of The Nation:

Sir: With their usual faculty for looking at but one side of a question, the Republican press and protectionist speakers generally are making much of conclusions drawn from Senator Aldrich's "Report on Retail Prices and Wages," recently published by the Senate Committee on Finance, to the effect that, since the passage of the McKinley Act, wages have increased and the cost of living decreased.

As the report is most carefully and fairly prepared, there is no thought of questioning the accuracy of its figures; but, as the statistician, Dr. Falkner, shows on p. l., the reduction in the relative cost of food from June, 1889, to September 1891, is due entirely to the drop in sugar attendant on the removal of the duty on that item. In figures, the cost of all food necessaries was as 99.39 in 1891 to 100 in 1889; but if sugar be omitted from the group, the cost in 1891 was as 102.32 to 100 in 1889. A comparison of the two dates is also made by omitting seasonable articles, the cost of which varied greatly; though this lessens the difference (101.51 in 1891 to 100 in 1889), a decided increase is still shown.

If it be admitted that wages have increased about three-fourths of 1 per cent., as claimed, the report shows conclusively that the cost of living has advanced at a much greater rate if, as is obviously fair, the item sugar be omitted. The great fall in the price of that article on the removal of the tariff showed who paid the tax; and since the reduction in sugar is all that has saved the average cost of living from a material increase, we must conclude that whatever effect protection has on prices is to raise the cost to the consumer. President Harrison, in his letter of acceptance, gleefully claims the advantage of the protective tariff as proved by the report referred to. Of the kind of protection that makes sugar and other necessaries free, let us have much more!

Respectfully, A. G.

Philadelphia, September 19, 1892.

THE STATE BANK OF INDIANA.

To the Editor of The Nation:

Sir: In the *Nation* for September 15, you take occasion to defend the plank in the Democratic platform demanding the repeal of that part of the National Bank Act imposing a tax of 10 per cent. on the circulating-notes of State banks, and you point to the old State Bank of Indiana, with its numerous branches, as having been "as sound as the Bank of England." Had you said "sound as a national bank in the matter of circulating-notes," it would have been rather stronger if anything. The successor to this eminently safe financial institution, "The Bank of the State of Indiana," with its numerous branches, was also sound, and it is not of record that any of its depositors suffered any loss by reason of their confidence in it; but some of its note-holders did. Not but that its notes were always redeemed at the counters of the parent bank and all its branches, as long as they existed; but after they had ceased to transact business as banks, and a certain specified time had elapsed, the notes of its issue no longer found a redeemer, except through courtesy, where some former president or cashier would, out of personal pride, redeem the scattering offerings; and within the past year the writer has had personal knowledge of notes, issued by the branch formerly located in this place, returned to senders for redemption unredeemed, as no one could be found who cared to extend the courtesy of redemption to the wandering promises of an institution which left no redemption fund for such as these, and to which accrued as profit all such unredeemed paper. Has any national bank done so badly? Can one do so badly if the republic lives? Have you ever known the note of a national bank to suffer a discount on the score of distance from the place of issue? Yet old merchants will tell you that the notes of even so good a bank as the State Bank of Indiana, while good as gold at home, were usually discounted 5 per cent. or more when they crossed the Allegheny Mountains to pay Western debts.

Not but that State banking laws might be good enough, but the very probable lack of uniformity in the laws to be enacted for this purpose by the different States, as regarding the time and place of redemption of such circulation as might be authorized, would have the tendency to render such notes of unequal value; and in view of the number of wild financial schemes proposed for our people in the not very distant past, it is at least among the possibilities that some one or more of them would find a home in some State or States, to the serious derangement of a financial system better than any yet devised, and good enough to be spared until something better than a variegated system, or lack of system, under State laws, can be found to supplant it. The experience of business men in this Western country does not confirm your "truth," that "the bad banks were the exception, and not the rule." "Theory" is good in some cases, but the financial facts of history constitute a "condition" with which the experienced merchants of the Middle West do not care to be again confronted. J. F. Reeves.

Richmond, Ind., Sept. 20, 1892.

THE BOSTON PUBLIC LIBRARY AGAIN.

To the Editor of The Nation:

Sir: The letter in your paper (No. 1421) from President Abbott of the Boston Public Library is simply astounding, and raises the question what the English language means in his use of it. For years, up to last year, Hartford workers in literature or science have been enabled by the kind services of Mr. F. B. Gay, the present librarian of the Watkinson Library, to supplement the Hartford resources by drawing on those of Boston; I have done so repeatedly, and the service was beyond price. But a year ago, without any notice whatever, the privilege was suddenly withdrawn, an application of Mr. Gay for the customary loan being flatly refused, not only for that occasion but for the future. Is this what Mr. Abbott calls "increasing the facilities for the use of the Library"? The Trustees have a right to do what they will with their own, but why make statements which hundreds of people (to put it moderately) know to be untrue? F. M.

Hartford, Conn., September 22, 1892.

Notes.

The Messrs. Putnam's fall announcements include the fourth and final volume of Prof. Johnston's edition of the 'Writings and Correspondence of John Jay,' the fourteenth and final volume of Mr. W. C. Ford's edition of Washington's Writings, and the first of ten volumes of 'Writings and Correspondence of Thomas Jefferson,' edited by Mr. Paul L. Ford; 'Nullification, Secession, Webster's Argument, and the Kentucky and Virginia Resolutions,' by Caleb William Loring; 'The Church in the Roman Empire, A.D. 64-170,' by Prof. W. H. Ramsay; 'Studies of Travel in Greece and Italy,' by the late Edward A. Freeman; Leroy-Beaulieu's 'The Empire of the Tsars and the Russians,' from the third edition; 'A French Ambassador [le Comte de Cominges] at the Court of Charles II.,' by J. J. Jusserand; 'Short Stalks,' an illustrated narrative of hunting trips, by Edward N. Buxton; 'Notes for the Nile,' by Hardwicke D. Rawnsley; 'Japan in Art and Industry,' from the French of Félix Régamey; 'The Genesis of Art Forms,' by Prof. George L. Raymond of Princeton; 'The Customs and Monuments of Prehistoric Peoples,' from the French of the Marquis de Nadaillac; 'Scenes from the Life of Christ,' edited by Jessica Cone, with photogravures from celebrated paintings; the "Ariel Edition" of Shakspere's works in 39 volumes of pocket size, with 500 designs by Frank Howard, each volume being sold separately; Irving's 'Conquest of Granada,' in a style companionable to last year's "Darro Edition" of the 'Alhambra'; 'Fairy Tales of India,' collected and edited by Joseph Jacobs and J. D. Batten; 'The Supernatural: its Origin, Nature, and Evolution,' by John H. King; 'The Philosophy of Individuality,' by Antoinette Brown Blackwell; and 'Hygienic Measures in Relation to Infectious Diseases,' by George H. F. Nuttall of Johns Hopkins University and Hospital.

'Essays in Miniature,' by Miss Agnes Repplier, and 'Under Summer Skies,' by Clinton Scollard, illustrated by Margaret Landers Randolph, are in the press of Charles L. Webster & Co.

J. G. Cupples Co., Boston, announce 'Dramas: Comfort in a Corner; The Rogues' Mirror,' by E. J. and A. W. Sanborn; and 'Vagabond Rhymes,' by an Idler.

Thomas Whittaker publishes directly 'Early Bibles of America,' by the Rev. John Wright, D.D., in two editions, one on large paper.

To artists the most interesting book in English publishers' announcements for the autumn is Quevedo's 'Pablo de Segovia,' with illustrations by Daniel Vierge. Quevedo is one of the great Spanish humorists, all but forgotten outside of his native land; his story of Pablo, "the Spanish Sharper," is by far the most entertaining and clever of his many productions. It was well enough known a century ago, when it was translated into English. But since then

it has been lost sight of by general readers, and the republication of the old translation is a literary event of some importance. Still, it must be admitted that the chief interest of the book centres in its illustrations. Those who have seen the illustrated French edition, issued in 1882 by Bonhoure, need not be reminded of the little masterpieces with which it was adorned. But in it the reproductions were far too small to do full justice to the work of a man who has been one of the strongest influences in revolutionizing modern illustration in France. Besides, the last few chapters were unillustrated; before the series was finished, Vierge had been stricken with the paralysis that for several years—until he had learned to use his left hand—kept him idle. Now, however, he has completed the work, the greatest he has yet undertaken. Mr. T. Fisher Unwin, his English publisher, is bringing out the new edition on a scale worthy of the illustrations, so that now for the first time Vierge's 'Pablo,' more than a rival to Quevedo's, can be seen adequately and in its entirety.

'Essex: Highways, Byways, and Waterways,' by C. R. B. Barrett (London: Lawrence & Bullen), is a pleasantly written and admirably illustrated volume. It is not a comprehensive survey of Essex, but describes objects of interest along the route from Bradwell Point via Maldon and Witham to Thaxted and Saffron Walden, thence eastward to Layer Marney, Coggeshall, Colchester, and Castle Hedingham—one of the most attractive sections of the county. The work seems to be especially designed for tourists, or for those who know Essex and desire a pleasant memento of its buildings and landscapes. A large part of the book is devoted to objects of antiquarian interest, local legends, the lives of Essex worthies, and historic buildings (old inns, castles, religious houses, etc.). The historical account of the chief towns is somewhat rambling; that of the Borough of Colchester breaks off abruptly with Roman times. The preface says that the gilds of Essex form a subject of consideration, but they are disposed of in a few lines. We do not, however, seek a connected historical narrative of gilds and municipalities in a book of this sort. The illustrations (including nine etchings) and the whole mechanical execution of the work are worthy of much praise. The index is meagre.

The younger Dickens makes a short introduction to the Macmillan reprint of the first edition of his father's 'Barnaby Rudge.' It was a novel which involved a breach with Dickens's former publishers and an engagement with new, and was attended with much trouble in its execution. H. K. Browne's illustrations are here reproduced with the text of 1841.

Cantillon's 'Essai sur le Commerce' has been reprinted for Harvard University (Boston: G. H. Ellis), the edition being as nearly as possible a reproduction of that of 1755, even to the extent of leaving typographical errors and irregularities unchanged. The essay should not be disregarded by those who are curious in the rather juvenile antiquities of economic science, and it may still be found suggestive. An appreciative estimate of Cantillon's work, by Mr. Henry Higgs, appeared in the *Quarterly Journal of Economics* for July, 1892, which may be advantageously consulted by readers of this volume.

A second edition of Mr. M. M. Trumbull's 'Free-Trade Struggle in England' appears apportunely from the press of the *Open Court* Publishing Company, Chicago. An interesting feature of this book is the parallel exhibited between the arguments of the English protectionists and our own. In Mr. Trumbull's language, "had the English arguments for protection been preserved in Mr. Edison's phonograph, the unwinding of the machine would not have more faithfully reproduced them than they have been reproduced by the American protectionists in the debates in Congress—excepting this one, 'The foreigner pays the tax.' In all the debates in Parliament between 1841 and 1846, I cannot find it of record that any member was foolish enough to think that or daring enough to say it."

A second edition of Mr. James M. Swank's 'History of the Manufacture of Iron in All Ages, and particularly in the United States from Colonial Times to 1891,' is published by the American Iron and Steel Association, Philadelphia. This work demonstrates throughout the vigorous growth of the iron industry, not only without protection, but in the face of legislative discouragement by the mother-country, and concludes with a chapter devoted to maintaining the proposition that this growth is due to protective tariffs.

In Sewen's 'Studien über die Zukunft des Geldwesens' (Leipzig: Duncker & Humblot), the main point is the proposal to introduce the "Getreide-note," or grain certificate, as currency, and thus break the "intolerable monopoly" now enjoyed by the precious metals as standards of value. This privilege, which governments have conferred upon gold and silver, our author regards as artificial and conventional, a manifest usurpation founded on no law of nature, and thinks the time has now come for wheat and rye to assert their equal rights. The intrinsic value of these products of the field as measured by their power of ministering to the wants of man being far greater than that of the products of the mine, Herr Sewen cannot conceive why their exchangeable value should be less. Is it not another example of the triumph of superficial brilliancy and glitter over real worth?

The fifth volume of Moltke's "Gesammelte Schriften und Denkwürdigkeiten" (Berlin: Mittler) contains a second instalment of letters to members of his family, besides a considerable number addressed to public men and personal friends, the present King Albert (then Crown Prince) of Saxony, and several officers of the army. There is also a long letter written from Copenhagen, October 1, 1891, by the Danish Lieut.-Gen. von Hegermann-Lindencrone to Moltke's nephew and namesake, giving interesting reminiscences of the distinguished strategist. The funeral discourse of the "evangelical field-provost of the army," Dr. Richter, and the admirable eulogy delivered by Prof. Ernst Curtius at a meeting of the Royal Academy of Sciences in Berlin, July 2, 1891, are reprinted. The illustrations consist of portraits drawn by Moltke of his sisters, Auguste and Magdelene. The volume closes with a chronological list of 328 letters written by Moltke between June 5, 1823, and April 13, 1891. There is a full table of contents, but no index.

A new contribution to American quatercentenary literature is Pater Bonaventura Hammer's 'Die Franciscaner in den Vereinigten Staaten Nordamerika's von der Entdeckung durch Columbus bis auf unsere Zeit' (Cologne). It begins with the services rendered to Columbus by Juan Perez, prior of the Franciscan monastery of La Rábida, in 1491, and gives an account of the missionary labors of the Franciscans in America and especially in the United States, down to the present time, with numerous views of the missions themselves. The materials are derived largely from Shea's 'History of the Catholic Church in the United States.'

The first number of the *Harvard Graduates' Magazine* will be issued October 1; the first edition being of 14,000 copies. It will contain 176 pages of reading matter, and an engraved portrait of the late Dr. H. I. Bowditch, with contributions by Dr. A. P. Peabody, Theodore Roosevelt, President Eliot, Wendell P. Garrison, Prof. William J. Tucker, F. W. Thayer, W. C. Lane, Prof. C. E. Norton, and many others. The office of the magazine is at No. 6 Beacon Street, Boston.

Das Jahrhundert der Frau is the title of a new weekly journal to be published at Weimar as an organ of woman's rights in a somewhat conservative sense of the term. It will advocate the extension of woman's sphere, not so much in politics as in education and industrialism, claiming for her equal rights with man to develop her faculties and to use them for her own support.

Our Paris correspondent had lately something to say about Fénelon's relations with Mme. Guyon. In the *Revue Internationale de l'Enseignement* for August 15, Prof. Eugène Ritter of the University of Geneva comes to the defence of the genuineness of letters alleged to have passed secretly between the Bishop and the mystic from December, 1688, to December, 1689, and first published by Dutoit, a disciple of Mme. Guyon, in 1767, but discredited as manifestly supposititious by the editor of Fénelon's correspondence from the original MSS. in 1827. Dutoit's compilation is now well forgotten, and it was very carelessly arranged. Prof. Ritter reduces it to order, and begins the printing of all of Fénelon's letters, thirty-eight in number, breaking off at Number 13. He compares Fénelon's discrepant statements as to his first acquaintance with the apostle of quietism, and reminds the reader of Bossuet's charge against him of "hesitations and tergiversations" in the matter of his spiritual union with Mme. Guyon. In the *Revue* for August 15, there is a long article on the French archæological discoveries in Algeria and Tunis, which Renan has pronounced among the glories of France in the present century.

In the August number of *Insect Life*, a monthly bulletin devoted entirely to economic entomology, an especially valuable publication of the U. S. Agricultural Bureau, the Entomologist, Prof. Riley, takes occasion to publish some conclusions of general interest to zoologists in his paper "On some Interrelations of Plants and Insects." Three lines of variation are recognized: (1) the absolutely essential, which are acted upon by natural selection; (2) the non-essential, but secondarily advantageous; and (3) the fortuitous, the unessential and superficial, taking place in all directions of no counteracting resistance. The conviction is asserted that insect life and development give no countenance to those who deny hereditary transmission of functionally acquired characters, but, on the contrary, they furnish the strongest refutation of the views held by Weismann and his followers. To give Prof. Riley's own wording: "I recognize the physical influence of environment; I recognize the effect of the interrelation of organisms; I recognize, even to a degree that few others do, the psychic influence, especially in higher organisms—the power of mind, will, effort, or the action of the individual as contradistinguished from the action of the environment; I recognize the influence of natural selection properly limited, but, above all, as making

effective and as fixing and accumulating the various modifications due to these or whatever other influences, I recognize the power of heredity, without which only the first of the influences mentioned can be permanently operative."

The August issue, No. 6, of the new magazine *Natural Science* (Macmillan) maintains the excellent standard set by the earlier numbers. The publication is a monthly review of scientific progress; it is devoted to condensed articles, such as the busiest find time to read, and notices, news, observations, reviews, criticisms, and correspondence. Among the "notes and comments" of the present number there is a notice of Marcou's pamphlet attack on the U. S. Geological Survey, in the course of which it is stated that such a map as is suggested by Marcou, "in ten or twelve large sheets for the whole United States," prepared in ten or twelve years with three or four additional years for publication, including the reports, descriptive and other, would be entirely inadequate unless a mere sketch map was all that was desired. On the charge of extravagant expense the editor says that in England "the United States has usually been regarded as furnishing a noble example—for surely parsimony is detrimental to the growth of science." The Permanence of the Great Oceanic Basins, by A. R. Wallace; The Climate of Europe during the Glacial Epoch, by Clement Reid; Death, by P. C. Mitchell; The Geology of the Central Himalaya, by H. B. Woodward; The *Albatross* Expedition (on Prof. Agassiz's report), by W. E. Hoyle; Professor Lloyd Morgan on the 'Grammar of Science,' by R. J. Ryle; and Technical Education in Surrey, by J. Percival, are the articles in this number. The reviews are mostly unsigned, which tends to greater freedom of expression. In the list of supporters are included the names of such authorities as Prof. Morgan, F. E. Beddard, R. Lydekker, A. S. Woodward, G. A. Boulenger, J. T. Cunningham, J. W. Davis, P. L. Sclater, and others of the first rank in their special studies. There is a marked absence of a bias in favor of Darwinism.

Within a few weeks the publishers of Worcester's Dictionary have sent out a circular containing the requirements in English for admission to Harvard College, taken from the Harvard Catalogue of 1890-91. They assure us that they give "the exact words of the catalogue," and call special attention to the footnote, "Worcester's Dictionary is the standard." They add: "We take a reasonable pride in being the publishers of a work thus highly distinguished, and feel that we are warranted in quoting the above words as the highest commendation possible." All this is very edifying to most readers, who probably do not ask why the catalogue of 1890-91 is quoted in the summer of 1892, when the catalogue of 1891-92 would seem to be the natural authority for the present position of Harvard College. But the fact is that the last Harvard catalogue omits the footnote relating to Worcester's Dictionary altogether and makes no mention of that work.

—The latest literary venture in England is the *Fagan Review*, the organ, its editor announces, of the "younger generation" (*les jeunes*) of Great Britain. The announcement is useless. Youth, and extreme youth at that, breathes from every page and every line; it reveals itself in the delightfully foolish *noms de guerre* adopted by its unknown supporters; while its would-be shocking motto, "Sic Transit Gloria Grundi," at once gives the keynote to its programme. It is to deal with life stript of the veil of convention; it is to supply literature dominated by the various forces of the sexual emotion; it is, in a word, to be very modern and very French, to be in journalism what the nude is in art—the pet horror of the British Matron. Paganism is a large name for so puny an ambition. Its fulfillment, as set forth by the first number, recently published, falls far short of the programme. The contents are neither strikingly audacious nor promisingly clever. Rather lurid tales and poems, plentifully scattered with sumptuous adjectives, and giving a faint echo of the preciousness of Mr. Wilde, are scarce an improvement upon the literary fare provided by the ordinary magazine. Indeed, to the outsider a suspicion occurs that many represent MSS. which had in vain gone the rounds of Philistine editors. There is no other characteristic to note, unless it be the acceptance of Mr. George Meredith and Mr. Thomas Hardy as the British gods to worship by these Neo-Pagans. The interest attached to their new publication is really negative rather than positive. It reflects the emptiness of the present "younger generation," who are so proud of their own ripe talents. In the last decade or two we have had one such venture after another: the *Hobby-Horse*, the *Dial*, the *Whirlwind*, the *Albemarle Review*. And yet we must go back to the *Germ* for an organ of *les jeunes* who really had something quite their own to say, and who, to borrow a phrase from the Pagan Reviewers, could give artistic expression to the artistic inwardness of their new creed. Among our "younger generation" literature seems as barren as art.

—"Columbus and the Fourth Centenary of his Discovery" is the subject of the principal article in the September Proceedings of the Royal Geographical Society. The author, Mr. Clements R. Markham, wisely avoids a recapitulation of well-known facts, and confines himself to a lucid discussion of certain points in the discoverer's life which are still matters of controversy. These are the place and date of his birth, which he shows from cumulative evidence to have been in Genoa in 1447, and the character of the assembly at Salamanca. This, it has generally been supposed, consisted of representatives of the University, who formally condemned the proposals of Columbus for a western voyage to the Indies. The truth seems to be that he passed a winter at a farm-house three miles from Salamanca, to which were wont to come professors, Dominican monks, and persons attached to the court, to hear his arguments for his scheme; for he was "gifted with a charming manner, simple eloquence, and great powers of clear exposition." The traditional spot of these assemblies is the crest of a small hill near the house, still known as the "teso de Colón" and marked by a stone pyramid surmounted by a globe. At these gatherings and at similar assemblies in the great hall of the Dominican convent in the city, he gained many influential friends, who finally turned the scale in his favor when the matter was brought before Isabella. After a brief reference to the size and equipment of his ships, Mr. Markham proceeds to show from "overwhelming" evidence that the landfall of Columbus must have been Watling Island. Charges of carelessness and inaccuracy have been frequently brought against him, but on the other hand there are abundant proofs of his "great capacity for taking trouble," as well as of the extraordinary accuracy of his observations at sea; while the most serious error attributed to him is now known to be a scribe's blunder. An original portrait of Columbus exists at Como, of which Mr. Markham secured a photograph. An engraving from it is given in the Proceedings, representing him as a "venerable man, with thin gray hair, the forehead high, the eyes pensive and rather melancholy." To the paper, which is an unusually fresh and interesting contribution to a well-worn topic, is appended an elaborate note giving the reasons which lead Mr. Markham to believe that Amerigo Vespucius's alleged first voyage was a fabrication. He "merely wrote to interest his friends at Florence" and to get credit by magnifying his exploits, but without any idea of robbing Columbus of any part of his fame. Still less did he connive at the suggestion of the name America. "It is very unlikely that he ever heard of the suggestion of Waldseemüller."

—The Proceedings, as well as the *Scottish Geographical Magazine* for September, give the Presidential address by Prof. James Geikie before the geographical section of the British Association. It is a technical discussion of the light thrown by recent deep-sea exploration and geological research upon the geographical development of coast-lines, and appears to be mainly an exposition of the theory of Prof. Suess in his 'Das Antlitz der Erde.' This is, in general terms, that the variations of the sea-level are not wholly or perhaps even largely due to the elevation of the land, but to the subsidence of the oceanic trough and to sedimentation within the continental area. In developing this theory he pictures, at times graphically, the changes in the coast-lines in different geologic ages. Among the curious facts stated in the course of the address is the abruptness with which the continental plateau rises from the oceanic trough. "A depression of the sea-level or an elevation of the plateau for 10,000 feet would add only a narrow belt to the Pacific Coast between Alaska and Cape Horn, while the gain of land on the Atlantic slope of America between 30 degrees N. L. and 40 degrees S. L. would not be much greater." He also refers to the higher level of the sea on the borders of the continents than in the mid-ocean, as well as to the variation of height at different places on the same coast. "The attraction of the Himalaya, for example, suffices to cause a difference of 300 feet between the level of the sea at the delta of the Indus and on the coast of Ceylon." An admirable map of the globe, showing the heights of the land and the depths of the sea, accompanies and well illustrates the paper.

—Mr. Edwin B. Frost contributes to the *Astronomische Nachrichten* his observations on the thermal absorption in the solar atmosphere, made at Potsdam under the direction of Prof. Vogel. Secchi, Langley, Cruls, and others have studied the effect of the sun's own atmosphere in absorbing the heat rays, but the results present very considerable discordances. Mr. Frost, aided by the resources of the Potsdam Observatory, constructed his apparatus himself—a thermopile so modified as to preclude systematic errors. His observations were made in September and October, 1891, and in March, April, and May, 1892, and the original paper must be referred to for the tabular statement of results. While earlier observers had found the heat radiated from the southern hemisphere of the sun to be only three-fourths that from the northern, Mr. Frost's work enables him to conclude that the heat transmitted from points in the neighborhood of the sun's poles is at present practically the same as that from points on the equator equally distant from the centre of the disk, while the difference between northern and southern

hemispheres, if real, is exceedingly small. Of heat radiation emitted from the sun and passing along its radius, about one-fourth part is absorbed in the sun's atmosphere; and the earth would receive from the sun, if the atmosphere of the latter were removed, 1.7 times the present amount.

—Mr. Frost's observations relate not only to the photosphere, but to the sun-spots as well, and a rather surprising result was that occasionally spots were found to be relatively warmer than the surrounding photosphere. These were spots very near the sun's limb, so he attempts to find out whether such dark objects follow the same law of absorption as the photosphere. His data were unfortunately insufficient for absolutely establishing that the spots are subject to a considerably less absorption than the neighboring photosphere, but there is ground at least for the suggestion that they may lie in a higher stratum than the photosphere. Still, the individual character of sun-spots is often so different that it is scarcely allowable to combine them together in taking average thermal effects. Langley's observations on the thermal conditions of sun-spots in 1874-75, with which Mr. Frost compares his own, were made about three years after a solar maximum, while the recent work was done two years after a minimum. Attention is wisely directed to the great importance of further and systematic observations in favorable climates and with adequate instruments, inasmuch as the present state of our knowledge of this subject renders it impossible to assert that the thermal conditions of spots (and perhaps even of the photosphere and atmosphere) are invariable during the eleven-year period of solar activity.

—The noble series of American portraits which we owe to the skill of Mr. G. Kruell, member of the Society of American Wood-Engravers, has just been extended by one of the author of 'Uncle Tom's Cabin.' The likeness is all that the intimate friends of Mrs. Stowe could desire, while the execution is on a level with Mr. Kruell's finest work. The quality of the flesh, the expression of the eye and mouth, the complex of physical traits which reveal the character of the best-known of the Beecher family, have been rendered with the same sympathy and sureness that so distinguished this artist's portrait of Grant—an admirable study in contrasting technique. Another interesting comparison is afforded by the steel engraving after Richmond's idealized portrait of Mrs. Stowe thirty to forty years ago. Mr. Kruell has taken the plain, strong face of this New England woman and endowed it with an inner, not an outward grace, much as the novelists of her section have beautified their homely types of New England womanhood. The result is the truest portraiture, satisfactory alike to those who demand photographic fidelity of form and feature, and to those who seek a manifestation of the spirit which transcends physiognomy. Mrs. Stowe has indicated her readiness to sign these Japan prints in token of her approval, and this compliment she pays to art and not to flattery.

—In the preface to his new edition of the Letters of Adrienne Lecouvreur, M. Georges Monval, the learned and acute archivist of the Comédie-Française, furnishes more information as to the life, and especially as to the death, of that amiable and ill-fated actress than has hitherto been available. It has long been believed (and MM. Scribe and Legouvé have set it forth on the stage) that she was poisoned by the Duchess de Bouillon through jealousy of Maurice de Saxe. In point of fact, this is a question which it is extremely difficult to settle. M. Monval has unearthed the police reports of the affair in the archives and library of the Arsenal, and finds in them a story more romantic than anything Dumas ever wrote. Leaving out all the details of oaths and masks and midnight meetings, the main facts in the case seem to be these: the Duchess of Bouillon employed a humpbacked abbé named Siméon Bouret to carry to Adrienne Lecouvreur a box of lozenges, probably poisoned. Bouret promised, but afterwards repented and gave warning to the actress. At once a great scandal arose. The Duchess vehemently denied the charge and complained to the lieutenant of police, who promptly shut up the unhappy Bouret in the underground cells of the Bastille. While the scandal was at its height, Adrienne died suddenly, and the public was not slow to connect her death, which was possibly accidental, with the incident of the lozenges. Her hasty and rude burial, in unconsecrated ground, with no funeral rites, in a grave filled with quicklime, confirmed the suspicions of some. But this was only the common burial of a player; even Molière came very near sharing it with her.

HARRISSE'S DISCOVERY OF NORTH AMERICA.—I.

The Discovery of North America: A critical, documentary, and historic investigation, with an essay on the early cartography of the New World, including descriptions of two hundred and fifty maps or globes, existing or lost, constructed before the year 1536. To which are added a Chronology of one hundred voyages westward, projected, attempted, or accomplished between 1431 and 1504; biographical accounts of the three hundred pilots who first crossed the Atlantic; and a copious list of the original names of American regions, caciqueships, mountains, islands, capes, gulfs, rivers, towns, and harbors. By Henry Harrisse. London: H. Stevens & Son. 1892. [380 copies printed in quarto, 815 pp.]

This is in every sense a weighty book, and its scope is a broad one. The title shows that it is by no means confined to North America We begin our notice with a full acknowledgment of its immense importance to the student of the early history and hydrography of the two Americas, and of the peerless rank in this department of knowledge which Mr. Harrisse—an American citizen, by the way, though for twenty-five years a resident of Paris—possesses. We are anxious thus to show in advance our high appreciation of the book, because we propose to question certain qualities of the critic and to discuss some mooted points; and we would not have our estimation of the book deduced from our opinion upon these few points.

Mr. Harrisse has traversed nearly all his present paths in earlier books and papers which were written almost entirely in the French language; but in this summary of his labors now given in the English tongue he has availed himself anew of all these discussions, added a good deal, and revised not a few of his former beliefs. The learning of the book is very great. It would have been too serious a task to verify his numerous citations in our very careful reading for the present notice; but we are bound to say that, observing his discredit of some of the passages which he quotes from a contemporary American writer, and struck ourselves with the apparent inexactness of the statements in these extracts (pp. 579, 646, 647), we were led to compare his citations, and, to our surprise, we find them incorrect and even garbled, and in one place where he had queried (thus [?]) the fact, we were surprised to find the doubt pertained to one of his own interpolations in the extracts. We are loath to believe that there are other instances of like flagrancy, but must confess our confidence has been a trifle shaken.

Referring to his own purpose, Mr. Harrisse says:

"Our sole object has been to investigate anew the exactness of the current allegations, which, by being constantly repeated, are now received as historical truths, and to establish on a solid basis the principal elements of discussion. Some of the results obtained, so far from seeming new, may be considered simply as confirming opinions shared at present by the generality of critics. Others will doubtless create doubt and surprise, although they are here presented with an array of tests and deductions deserving, we think, of the attention of analytical historians."

In one place he recapitulates forty-three mooted points upon which he claims to have thrown new light. We cannot attempt to examine all these points, some of which would be better grouped than differentiated; but a few will engage our attention.

As respects American studies in this field, since they were put on a recognized basis by Dr. Kohl, and have later been pursued with such assiduity by Carson Brevoort and Henry C. Murphy—not to name those among the living—there has been much done to augment the sum of correct knowledge. It must be confessed, however, that the helps to such investigations are not altogether so generally available in this country as in Europe. Still, we are becoming richer and richer every day. That Mr. Harrisse finds as much difficulty in not missing contributions to this knowledge which appear here, as Americans on their part find in making sure of everything which appears in Europe, may be true. The difficulty, however, might well prompt him to qualify some of his frequent assertions that historians have always been in error. Take an instance: Referring to the Cortes map of the Gulf of California, whereon it is said that Cortes discovered that water on May 3, 1535, he says that *all* historians have followed the lead of Gomara and Lorenzana, and have deduced that Cortes went to California in 1536. In this he overlooks a distinguished Spanish scholar, Fernandez Duro, who brought the map before the Congrès des Américanistes, and produced an historical paper upon it, some years ago. Moreover, as early as 1883, Dr. Hale brought a photograph of the map from Spain, and this was reproduced in a well-known American history in 1886.

It would seem that different sections of the present book were written so far apart in time that the author's estimates had changed in the intervals. In one place he deems the existence of the map which Dom Pedro of Portugal is said by Galvano to have brought home in 1428 from his travels, to be impossible (p. 637), and in the next section (pp. 652, 655) he says that Prince Henry sent Cabral in search of the islands which appeared on this very map. In one or two other places he is evidently confused in mind, though this is far from being his habit. He questions (p. 658) a map of the "sixteenth century" because "it can scarcely be of a date prior to 1500." In one place (p. 653) he says that during ten years after the

discovery of America there were 240 "navigations to and fro," not including clandestine and official expeditions; and again he says that he has "succeeded in finding for the same period about eighty transatlantic voyages." It may be that "voyages" mean expeditions of one or several ships, while "navigations" count each vessel. Whichever be the case, so much more is yet to be done in such inquiries that Mr. Harrisse does not think he has discovered more than a quarter of the maritime ventures of that period.

In taking up a few cases, we begin with Columbus. We have never seen so good a chronicle as is here given of the numerous experimental voyages which, for sixty years before 1492, were made towards the west to iscover new islands, and even a *continent*, which some of these adventurers professed a hope of reaching. These were mainly under royal Portuguese auspices. Harrisse jumps perhaps too hastily to his conclusion that Columbus's communication with Toscanelli was in 1479. He argues that when Toscanelli, on sending a copy of the letter which is dated 1474, said that it was originally written before the wars in Castile, he implied that when he sent it to Columbus those wars had ceased, as they did by treaty in 1479. Markham, in a paper published the present month, contends that the interval was but a short one, and that accordingly it must have been in 1474 when Columbus appealed to Toscanelli, this proving, as he thinks, that Columbus had begun to brood over the ocean problem before leaving Savona. Harrisse elucidates more satisfactorily than any one before the problem of the way in which the news of Columbus's return and of his discovery reached Rome. The usual story has been that some Genoese carried it from Spain; but it seems that even before Columbus reached Barcelona, the word had been despatched from Lisbon after Columbus had put into the Tagus, and had reached and was recorded in the Papal city as early as April 11, though it was not officially communicated to the Pope till towards the end of that month, by Bernardino de Carvajal—the first papal bull being issued May 3.

It was the bull of the next day, it will be remembered, which put the line of demarcation a hundred leagues west of the Azores. The prompt sending out of an expedition by Portugal to discover if Columbus had transgressed earlier bulls confirming ocean privileges to Portugal, and the hope of assuring for this rival Power some share of these new lands, led to the diplomatic interchange of views between Spain, Portugal, and the Holy See. It has always seemed to us that Portugal's anxiety may have been stimulated by the Basques, whose fishing voyages were perhaps thus early made to the banks of Newfoundland, over which Portugal would be desirous of securing control. When the library of the Vatican was a few years ago thrown in a certain way open to investigation, it was hoped that this tripartite diplomacy would be explained in more detail than we now have; but we are still in the dark, and students have long ago come to the conclusion that they must know precisely what they want and ask for it by title, before anything can be got from the keepers of that collection. In the absence of anything like a calendar or catalogue, the chance is but small of getting any satisfaction even on presenting definite titles. Harrisse refers in one passage to the way in which an "outsider" is debarred there in making researches, and the present writer knows himself of these obstacles. The result of this three-fold diplomacy was, as is well known, the treaty of Tordesillas, June 7, 1494, by which the line of demarcation was pushed to 370 leagues west of the Cape de Verde Islands. Columbus was then absent on his second voyage, and the treaty was sent to him. It could not have satisfied him, for it was likely to shut off his participancy in the wealth of the easterly parts of that continental land of which he had got a vague suspicion as lying to the south. Harrisse points out how the codicil to his will, which he made eight years later, shows that he did not recognize the treaty as binding on him.

There are two new documents respecting Columbus and his views which Harrisse offers to students here. It seems that while Columbus was still in Spain, after his return from his first voyage, and before the fruits of his discovery had spread outside that small circle of cosmographers and potentates who were interested in it, a learned Doctor Jerome Münzmeister, in Nuremberg, had, on July 14, 1493, written a letter to King John of Portugal, in support of an appeal which the Emperor Maximilian had already made to that monarch, to send out an expedition to discover western lands. Without any reference to Toscanelli or Columbus, and citing precisely the reasons which that Florentine physician had urged upon Columbus, based upon the representations of Aristotle, Seneca, and Pierre d'Ailly, "and many other illustrious persons," this Nuremberg savant rehearsed the old traditional views of western lands, which he thought confirmed by bamboo stalks having at times drifted from the west upon the shores of the Azores. We know that Martin Behaim was in Nuremberg not long before this time, at work upon his famous globe; and so we are not surprised to find that Münzmeister recommends Behaim to the King as a fit commander for the undertaking. The inference is that Maximilian may have been in his imperial city of Nuremberg at about the same time. From a letter of Behaim, March 11, 1494, it seems clear that the confident savant was a friend of his. That Behaim or Münzmeister should not have known of Columbus's persistent urging of just such an expedition and of his successful return from such a one, is surprising; but then it does not seem so strange when we reflect that the *Nuremberg Chronicle*, which aimed to bring down the progress of the world's events to July, 1493, makes no mention of Columbus. This letter goes a good way toward establishing the fact, which has often been in discussion, that Behaim, a courtier, had never known of Columbus, an adventurer. The letter itself is a good example of the impediments to research in an obscure subject which distance of place imposes. We are not aware that any American student ever heard of this letter, and yet it appeared as a *Tractado da Spera do Mundo* at Lisbon before the middle of the sixteenth century, probably. But one copy of the little book is known, and that is in the library at Evora, in Portugal. Further, it was reprinted in a periodical at Evora in 1865, was again printed (but privately) at Coimbra in 1878, and was finally edited by Ernesto do Canto at Ponta-Delgada in the Azores in 1879. The present writer has at times been in correspondence with the Azorean editor, but he never heard of it till he found it in the book before him.

The other new document gives unexpected clearness to one of the most disgraceful acts of Columbus, his forcing his companions, during his second voyage and when on the coast of Cuba, to make oath that they believed themselves on the coast of Asia. Mr. Fiske, in his recent 'Discovery of America,' has made light of the incident in this fashion:

"Nobody seems to have had any dissenting view, and there is no reason for supposing that anybody signed the declaration reluctantly. For the owlish gravity with which some modern writers use this incident in evidence of the Admiral's alleged deceitfulness and weakness of character, the proper answer is a peal of Homeric laughter."

Mr. Olindo Guerrini has lately found in the University Library at Bologna a manuscript account of this second voyage of Columbus, by one Cuneo, who was of the ship's company. We learn from this account, which Harrisse brings to our notice, the interesting fact that Columbus laid down on his sailing chart island after island as he passed them; but of more interest is the fact of which Cuneo also advises us, that a "majority" of those who swore to that oath were forced to perjure themselves by the threats from Columbus of personal violence, while one among them, "a learned cosmographer and an abbot," was so emphatic in his private dissent that Columbus later took steps to prevent his returning to Spain, where the Admiral feared he might prejudice his interests with the sovereigns. It is well known that Columbus took away from his men maps which they made on their own account, and Harrisse points out how Juan de la Cosa, who was one who took the oath, when out of the Admiral's reach recanted, and recorded his true opinions in making Cuba an island in his famous mappemonde of 1500.

We mark, also, some new points about the Cabots. It was never quite evident to the late Dr. Charles Deane—who, since Biddle's time, has been, among our American students, the best versed in the history of the Cabot voyages—that Sebastian Cabot could be unqualifiedly charged with the authorship of the famous Cabot mappemonde of 1544. This map was discovered nearly fifty years ago, and still remains a unique possession of the great library at Paris. Dr. Deane would hardly have sought to unravel the mystery of the inconsistencies of the Cabot story by accounting Sebastian Cabot a mendacious fraud, as seems to be the opinion entertained of him by Harrisse. Cabot's reputation among his English contemporaries was certainly unsavory, and apparently he did not mind selling the same opinions and cartographical data to rival buyers, when he could gain by it. Still, it has never been perfectly manifest that he should be credited with all the deceit which is associated with his career, for we get the story not always at first hand, and know not how the stories of him have been colored in passing through other minds. We have been inclined to give him the benefit of the doubt; Mr. Harrisse has no doubts, and even gives Cabot the credit or discredit of the authorship of the great map, and leaves the reader to understand that whatever in that map is contrary to truth sprang from the inability of Cabot to tell the truth. The map as it now appears has a series of printed legends pasted on its margins, purporting in one of them to emanate from Sebastian Cabot himself. This does not necessarily imply that Cabot did more than furnish the data. Now it turns out that Harrisse has discovered what he thinks the original draft of these legends in the handwriting of Dr. Grajales. A manuscript *Declaratio de Tabla Navigatoria* in the King's Library at Madrid has been considered by Humboldt, and by others who have followed that writer, as a work of Columbus simply because it contained an account of the third voyage of the Admiral; but Harrisse,

by a recent examination, has found that the document which gives the MS. its name is really these well-known legends of the Cabot map, and that the *Carta de Navegar* referred to in it is simply the Cabot map itself. The map was reëngraved in England by Clement Adams, and we have indications of several editions in circulation in England while Sebastian Cabot himself was still in that country—which renders all the more singular the disappearance of all but the single copy now in Paris. We know of various manuscript maps of Cabot—Harrisse enumerates them—but they, too, have disappeared.

The chief interest of the map is that it marks the landfall of Cabot's first voyage at Cape Breton, and this notwithstanding all the authorities from La Cosa (1500) down, some of them clearly deriving their information from Sebastian Cabot himself, had placed the land first seen at various points, as well as one can judge without the help of precise indications of latitude, on the Labrador coast. Harrisse's theory is that Cabot in 1544 marked the landfall at Cape Breton to curry favor with the English authorities—he was now in England—and to give them ground for offsetting the claims to the St. Lawrence which France was just establishing through the explorations of Cartier and Roberval. The supposition is rather violent, especially since Harrisse himself cannot find that any one ever formulated a claim for England based upon Cabot's discovery, before Dr. John Dee did so in 1580, thirty-six years later. Dr. Deane, who had a propensity to stand by an historical document until it was proved dishonest, hesitated to depart from the evidence of the Cabot mappemonde, and he found it distinctly confirmed by Galvano. Some recent investigations by Bishop Hawley of Newfoundland, by Dionne, one of the younger historical students of Canada, and by Prof. Packard, in his scientific studies of Labrador, have agreed in the conclusion that the coast of Newfoundland was the point first seen.

Another of the mysteries of Sebastian Cabot is the discrepancies of his statement respecting his voyage of 1498. Henry Stevens looks upon Cabot's claim to have reached the latitude of Gibraltar on the Florida coast as a simple absurdity, and he bases his distrust mainly on the ground that Cabot, when presiding over the congress of Badajos, would not have recognized the rights of Spain arising from the expedition of Ponce de Leon if he himself had already skirted that coast. It is certainly staggering to find Cabot in 1535 testifying before the Council for the Indies that he did not know if there was a continuous coast between Florida and the Baccalaos. Harrisse, however, believes not only that Cabot was on the Florida coast, but that his ships must have carried to that region the English whom Ojeda was sent, in 1501, to warn off.

CANOES ON THE DANUBE.

The Danube, from the Black Forest to the Black Sea. By F. D. Millet. Illustrated by the author and Alfred Parsons. Harper & Bros. 1892. Pp. 327.

Paddles and Politics: Down the Danube. By Poultney Bigelow. With illustrations by the author. Charles L. Webster & Co. 1892. Pp. 253.

In 1891 three canoeists dedicated the summer to a voyage down the Danube. The start was from Donaueschingen, the official source of the river, and its mouth was reached in seventy-eight days. Twenty-eight days were spent in delays or excursions. The distance, 1,775 miles, was accomplished in fifty days of paddling—an average of thirty-five miles per day. The three canoes were all of the same *Rob Roy* pattern which has been reproduced with small variations for nearly thirty years from the original invented by McGregor in London, and doubtless named *Rob Roy* in honor of his freebooter namesake. McGregor's canoe weighed eighty pounds, those of the latest Danubians not an ounce less. Aluminium will greatly reduce the feather-weight of this egg-shell craft and of its equipment as well.

If the makers of the first book above named had not written any letter-press at all, we should learn much from the pictures, which, half as numerous as the pages, tell their own story. About one-third of them, namely, the rural and urban views, are by Mr. Parsons; the others, showing each change in many-colored human life, are by Mr. Millet. There are no portraits save of the paddling trio and the author of "Die Wacht am Rhein," but we see the physiognomy of many nationalities, all in their own costumes, varying with age, sex, occupation, as well as with working or festal days. Distaff spinning; wooden hay-forks and other tools as primitive; caryatid bearers of hay, or telescopes of half-a-dozen tubs each higher than the carriers; monks, soldiers, porters, fishermen, frontier-guards, all in their own surroundings—are a tithe of the life-scenes depicted. Then we see bulbous domes, towers of more stories than Babel, high-peaked gables, town-walls, castles perched like eagles' nests on topmost crags, modern fortresses, mosques and minarets, cathedrals, monasteries scarcely surpassed by their mother and model, Monte Casino. The river—the longest in Europe save the Volga, and surpassed by only two or three of ours—is given us by instalments in half-a-dozen sectional maps. In the illustrations, thirty-five of which are full-page, it comes before us now as a mirror in which its banks are duplicated, now rushing through the Iron Gates and cañons yet more sublime, now in cascades where the canoe-men, braced among the rocks, are letting their barks at the ends of painters dart down into calm water below. All that time has spared of Roman riverside roads, Trajan's bridge and his commemorative inscription cut in the living rock, is brought before our eyes by the artist's pencil. The engravings have also a special interest since they enable laymen to understand what manner of boat a *Rob Roy* is, as well as how it is worked, and that better than pages of description. We see the adventurer carrying the craft that has carried him. It is all before us—how he shoots a rapid, buoyant as a bladder; how his sail turns to a tent pitched on his deck, with a lantern for evening lucubration, till he wraps the drapery of his couch about him and lies down to pleasant dreams.

But Mr. Millet's narrative is worthy of his pencil sketches, and it may be doubted which of them owes the more to the other. His first sentence, to be sure, seems too long for a short book, and violates a familiar rhetorical rule, but his style is clear and flowing. He tells us so much we like to know that we are loath to lay the book down. He sweeps us along as the river did him. When he talks shop, his chief admirers must be professionals like himself; but we can all share in the ovations which greeted, and sometimes surprised, his party in boat clubs at Ulm, Vienna, and Buda-Pesth.

As the source of the Danube is well-nigh half a mile above the sea-level, the flora near its head-waters is sub-alpine. As it descends to lower levels and latitudes, careering across more than half the continent, it shows a very diversified vegetation. Luckily one of the party was a botanist, assured that he would be as wise as Solomon if he only knew the hyssop, the cedar, and all plants between them. No sooner had two days of the cruise ended than Mr. Millet began to copy in his own work from the botanical notebook of Alfred Parsons. He continued to make such extracts now and then all the way to the sands of the Black Sea. On his last page but one he mentions fifteen plants which Mr. Parsons had thought worth chronicling there. These botanical leaves the general reader will skip, but to the initiated each of them will shine like a Horatian purple patch on Millet's plain homespun.

Along the lower Danube primeval peculiarities were encountered. The guards along shore seemed ignorant of lucifers, and when Mr. Millet begged one for a cigarette, a soldier ran to the camp-fire and brought a live coal in his hand, no doubt protected by ashes. The moment Mr. Millet approached the bank his passport was demanded at the muzzle of a rifle. It was at once taken from him, and he could not embark again till he went to headquarters in search of it. Sometimes he kicked his heels for hours watching and waiting before he could obtain the return of a paper the lack of which held him like a fish on a hook, and which he found a master-key not only for passing gates, but for passing anywhere either on land or water—a veritable *passe-partout*. The passport plague so lately world-wide is now cooped up in a dark corner of Europe.

He who takes up Mr. Bigelow's book after reading that of Mr. Millet will find it hard reading—unless he be a canoeist. Professional brothers will enjoy his talk of a shell "that feels the twist of every eddy, that dances to the music of every rapid, that rushes with impetuous zeal down slopes of pale-green shallows, and that narrowly escapes being sucked into the back current at the river corners," etc. Much of Mr. Bigelow's book is padding. Of this nature is a chapter on priestly miracles, made up largely from a rare volume in the British Museum, and exposing a mediæval fountain of anti-Semitism. He is shocked that a statue of the Virgin is believed to shed real tears; yet the mythical talk concerning this marvel may be analogous to his own language about his canoe, *Caribee*, which he says "*remarked* to him in confidence" this and that. 'Down the Danube' is the title of Mr. Bigelow's book. How far he went he nowhere states, but in many ways would make us think his canoe voyage to have been longer than it was. The truth is that he left his two comrades at the Iron Gates, as Mr. Millet tells us (p. 205), while twenty days of paddling were still before them. This point is about two-thirds of the distance from the Black Forest to the Black Sea, and far above Widin, which, according to Mr. Millet, is the real head of Danubian navigation for sailing vessels (p. 234). Mr. Bigelow, however, paddled his own canoe as far as Widin, having previously at Orsova shipped his luggage up the river (p. 188). He gives us a drawing of *Caribee* borne by Bulgarian porters, but does not tell us of its bearing him a mile further.

Mr. Bigelow's alternative title to Paddles is Politics. Politics, cropping out early in a pilgrim climb of the Hohenzollern Mount Sinai, pervades all his concluding chapters. The oracles he consulted enjoined Jewish expulsion,

but the secret of their inspiration was jealousy. This is clear when we learn that the lucrative sturgeon fishery at the Danube mouth is all in the hands of five Jews, each of whom employs more than 300 fishermen. Mr. Bigelow, when a boy at school, is reported to have sometimes beaten the present Emperor William, but has now become his worshipper, believing that the Kaiser is destined to master the entire Danube, and thus to usher in the millennium. He fills long chapters with bacchanalian revels and all-night dances at an ex-brigand Hungarian's house. He was almost in a fig-leaf paradise, and had never been treated so well—nor so often. His seventh heaven, however, was among gipsies. A sentence will give the keynote of his rhapsody. He says: "Several of the gipsy faces might have been studied from the life and treated as the ideal *Hamlet;* the Christs of Ary Scheffer and Doré were suggested to me as I looked into these interesting faces," etc. (p. 152).

On the whole, our canoeists have overrated their exploit, and remind us of doctors who pronounce an illness dangerous with an eye to doubling their fame and fees. At several points they were warned of danger and called foolhardy by persons who either thus hoped to turn a penny, or who repeated traditional commonplaces, or who had never seen a *Rob Roy.* But the real peril was small. In fifty days of paddling, the only mishap was a momentary capsize of one boat, which the paddler at once set upright again, as he had doubtless done a dozen times in America, and thought nothing of it. The acme of peril for the canoe fleet was thought to be at the Khasan Pass, but here, according to Admiral Bigelow, what capped the climax of difficulty was "the wash of a mail steamer" that was running through the same narrows. Very likely some lady on the deck of that vessel will describe the storm there as so furious that she could scarcely hold up her parasol.

Our canoe trio did nothing that had not been done and outdone many a time. A quarter of a century ago McGregor did more paddling down the Danube to Ulm, a dozen other rivers, and even the Jordan, and that alone. Mansfield did more forty years ago, descending the Danube in a pair-oar boat to Pesth. He visited the Walhalla, which our trio passed by on the other side, "leaving unseen a wonderful piece of work which not to have been blessed withal has wonderfully discredited their travel." Had they not thrown this pearl away they might have been as lucky as Mansfield, who was there invited into a palace to dine with a princess and then brought on his way by her. "Down the Danube" was child's play compared with the doings of our artist Catlin. Sixty years ago Catlin was on the first steamer that ever ascended the Missouri to the Yellowstone. He there made a dugout of a green log, and, with two half-breed paddlers, navigated it all the way to St. Louis, hundreds of miles further than from the Black Forest to the Black Sea; in want of all things save what his rifle could supply, through regions uninhabited unless by wild beasts and wilder men.

Sir Philip Sidney: Type of English Chivalry in the Elizabethan Age. By N. R. Fox Bourne, Author of 'The Life of John Locke,' etc., etc. G. P. Putnam's Sons.

WHEN Shakspere wrote "of the courtier's, scholar's, soldier's eye, tongue, sword," and of the "expectancy and rose of the fair state," he might well have had Philip Sidney in his mind. The expectancy of the state Sidney was, in a marvellous and almost unaccountable degree. He was thirty-one years old when he died. He had performed one or two public missions, not of great importance, with creditable success, and he had stood well at court; but he had never held high office or been a privy councillor. He did not belong to the highest order of the nobility, and he was so far from being rich that his corpse was kept above-ground for three months because creditors were unsatisfied. His writings had brought him reputation in his own circle, but they had hardly brought him general renown. He had fallen gallantly in a cause dear to the nation, but so did many another English officer whose sword was drawn for the Netherlands against Spain. In the maritime or colonizing enterprise of the day, though he had taken an interest, he had not personally shared. Yet his death was felt as a great national calamity. All England went into mourning. "It was accounted a sin for any gentleman of quality for months after to appear at court or city in any light or gaudy apparel." Queen Elizabeth, who was not emotional, on the day when the corpse was landed in England put off a visit to Walsingham for fear of renewing their common grief. The Netherlands wished to retain the body, and promised a monument worth its weight in gold, but England claimed the precious remains. The funeral pomp was royal. It is almost a singular case, apart from the cases of young heirs to thrones, of a nation and the world so fixing their eyes on an "expectancy" and bewailing its cutting off by death. "Indeed," Fulke Greville writes of Sidney, "he was a true model of worth; a man fit for conquest, plantation, reformation, or what action soever is the greatest and hardest among men; withal, such a lover of mankind and goodness that whosoever had any real part in him found comfort, participation, and perfection to the uttermost of his power; like Zephyrus, he giving life where he blew." The gift of winning hearts here indicated was probably a great part of the talisman.

Sidney, as his biographer says, was the type of that Protestant chivalry of which Spenser was the poet and the 'Faerie Queene' is the mirror. Fairfax, the translator of Tasso, was another literary member of the circle, which perhaps lasted long enough to embrace his kinsman, Sir Thomas Fairfax, the Parliamentary General, who was a man of culture and a poet as well as a politician and a soldier. The chivalry of the Elizabethan age, Mr. Fox Bourne says, was in some respects out of date, in others immature. He thinks that it strove to conform to a tradition unsuited to society in England of the sixteenth century, that its ideals were in the mediæval past, but that "all its dignity came from the efforts of its heroes to help on the great change from mediæval to modern ways of thought and action, and to reshape the old ideals in forms proper for the future." This may be true; but all special types of character are fleeting, and this does not prevent them from being interesting or important in their own day. The Protestant chivalry did as good and as indispensable service to humanity in its time by fighting the "Beast" as mediæval chivalry had done by fighting the dragon. The heroism which saved the sepulchre was not more practical or seasonable than the heroism which saved Zutphen.

In another way Sidney belongs to a type of character now bygone. At the present day we are all specialized. A good many of us, working in factories, are specialized to the extent of becoming mere human hammers or spindles, doing mechanically a section of a work which we do not even see as a completed whole. But few or none of us unite "the courtier's, scholar's, soldier's eye, pen, sword." Few or none of us combine high culture with action. Much less can we combine universal culture with action. Scientific culture demands a life by itself. In the days of Philip Sidney and the Admirable Crichton universal perfection did not seem so unattainable. It was the mark at which they aimed. The gentry under the Renaissance had become cultivated, had even been fired with the enthusiasm of culture, without having lost the active and military vigor of their class in the Middle Ages, while the circle of knowledge was still limited enough to be traversed in the leisure hours of a life of action. The great men of the English Commonwealth combined culture and speculation—at least religious and political speculation—with action in council and in the field to an extent at present almost unexampled. Will specialization ever find its limit? Will the world ever see another attempt, by turning out a completely developed, fully equipped, and perfectly balanced man, to fulfil the aspiration of Sidney and Crichton?

We cannot, at this distance of time and with evidence so imperfect, look closely enough into Sidney to say whether his moral perfection was not in some degree marred by a too great consciousness of his own position. He felt himself that he could hardly be a courtier without some detriment to his character; nor do we like to see him asking for a share of the confiscated property of Roman Catholic recusants. His literary style savors, to say the least, of affectation. But there was nothing affected in the battle or in the deathbed at Zutphen.

Mr. Fox Bourne seems to have made the most of his materials, and he has given us a clear outline of the character if he could do no more. As few can now pretend to read the 'Arcadia,' an anthology in the appendix might have been welcome. The illustrations are a very attractive feature of the book, which is tastefully got up in all respects.

Italian Child Life; or, Marietta's Good Times. By Marietta Ambrosi. Boston: D. Lothrop Co.

AN honest record of child life in Italy is naturally full of interest, and describes scenes and experiences which American children will delight to read of—vintage time, wine-making, silk culture; all the feasts and processions which are such important factors in the picturesque quality of Italian life; the games and toys of Italian children, their amusements. And Marietta Ambrosi tells her story with all the charm of sincerity and faithful detail. The wandering life her family led, her childhood being spent partly in the Tyrol and then in the towns of Peschiera, Brescia, and Mantua; the stirring times of the war of 1859, and of 1866, when the Garibaldians were quartered in every family; the visitation of the cholera; besides all the small events occurring in every family which take such gigantic proportions in a child's mind—all is naïvely described, with great feeling for local color. It is therefore unfortunate, since Marietta's life was full enough of adventure to make a very interesting book for children, that her editor should not have insisted on its being written in a language entirely comprehensible to the children it is intended for. As it is, there is such a mixture of Italian words quite untranslated, and Italian words ill translated, that there is

much to puzzle the reader who has never lived in Italy. We cite page 86, where "piazza dell' erbe" is called "square of the greens" instead of *vegetable market*. Such mistakes, too numerous to quote, occur all through the book, and the style is essentially that of a foreigner using English with difficulty.

The value of the book would have been increased tenfold had the publishers seen to its having been thoroughly revised. The illustrations are not well executed and seem to have been chosen at random.

BOOKS OF THE WEEK.

Alexander, Mrs. The Snare of the Fowler. Cassell. $1.
Beattie, H. S. Joshua Wray. U. S. Book Co. $1.25.
Bernard, Rev. T. D. The Central Teaching of Jesus Christ. Macmillan. $1.50.
Berwick y de Alba, La Duquesa de. Autógraphos de Cristóbal Colón, y Papeles de América. Madrid: M. Murillo.
Besant, W. London. Harpers. $3.
Bolton, Mrs. Sarah K. Famous Types of Womanhood. T. Y. Crowell & Co. $1.25.
Brugmann, Prof. Karl. Comparative Grammar of the Indo-Germanic Languages. Vol. 3. Morphology. Part II. B. Westermann & Co. $3.25.
Child, Theodore. The Desire of Beauty. Harpers. 75 cents.
Doudney, Sarah. Through Pain to Peace. John A. Taylor & Co. 50 cents.
Ewing, Mrs. J. H. The Story of a Short Life. E. P. Dutton & Co. $1.50.
Ford, P. L. Writings of Christopher Columbus. C. L. Webster & Co. 75 cents.
Garnier, R. M. History of the English Landed Interest. London: Sonnenschein; New York: Macmillan. $3.50.

Springer, W. M. Tariff Reform the Paramount Issue. C. L. Webster & Co.
Stanwood, Edward. A History of Presidential Elections. 3d ed. Boston: Houghton, Mifflin & Co. $1.50.
The *Gentleman's Magazine* Library. English Topography. Part II. Boston: Houghton, Mifflin & Co. $2.50.
Tyndall, John. Fragments of Science. 2 vols. Appletons.
Wilder, Mrs. C. F. Polly Button's New Year. T. Y. Crowell & Co. 75 cents.
Wright, Rev. John. Early Bibles of America. Thomas Whittaker. $1.50.

JUST PUBLISHED:

Goodell's Greek Lessons.

Part I. The Greek in English
Part II. The Greek of Xenophon

By Prof. Thomas Dwight Goodell of Yale. 16mo, 378 pp. To teachers, by mail, $1.33.

Extends the Greek in English, so far as to make a sufficient introduction to Xenophon. About a third of all the Greek words used have similar English forms. The Anabasis is taken up in bulk much earlier than in other "Greek Lessons," and the exercises given entire. The method is rational and original, and the book is complete in itself and of value even to those who will study Greek no farther. It largely avoids the old-time "learning by rote."

Dyspepsia

Dr. T. H. Andrews, Jefferson Medical College, Philadelphia, says of
Horsford's Acid Phosphate.
"A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

It reaches various forms of Dyspepsia that no other medicine seems to touch, assisting the weakened stomach, and making the process of digestion natural and easy.

Descriptive pamphlet free on application to

The Nation.

NEW YORK, THURSDAY, OCTOBER 6, 1892.

The Week.

THE nomination of William E. Russell as their candidate for Governor by the Democrats of Massachusetts for the fifth time calls national attention once more to a remarkable political career. In four successive campaigns Mr. Russell has been the leader of his party—twice defeated and then twice successful; and each year he has borne himself with such credit that, whether presented to the convention as a private citizen or as the Executive, he has been renominated with entire unanimity and with the greatest enthusiasm. But the hold which Gov. Russell has secured upon his party is less remarkable than the place which he has won in the respect and affection of the people, without distinction of party. There have always been more Republicans than Democrats in Massachusetts, and yet he has twice been elected Governor. Gov. Russell's first success in 1890 was ascribed by the Republicans to "the campaign of misrepresentation regarding McKinley prices," and it was confidently predicted that, after a year's experience of the new tariff and a twelvemonth of reflection upon the folly of voting for Democrats under any circumstances, he would be repudiated in 1891. But election day came, and although the voters turned out in numbers never before equalled in any save a Presidential year, Gov. Russell was reëlected by nearly as large a plurality as in 1890. In each year he owed his success to the votes of thousands of men who were Republicans and who supported the Republican State ticket as to all the minor offices, thus electing Republicans as Lieutenant-Governor, Secretary of State, etc.

Moreover, Gov. Russell has helped his party as much as he has helped himself. He could not carry the rest of the Democratic State ticket into office with him, because there were a good many thousand Republicans who would not support any one else on that ticket; but under his leadership the Democratic party came much nearer carrying Massachusetts last year than ever before happened when there was anything like a full vote. Here are the figures on the Lieutenant-Governorship in the last three elections:

	Dem.	Rep.
1889	112,030	132,821
1890	150,630	137,160
1891	143,865	157,216

The total vote in 1891 fell only about 20,000 short of the Presidential record in 1888, and had never before been approached in a purely State contest, and yet the Republican plurality, which had been above 32,000 for Harrison and as high as 37,000 for several State officials elected on the same day, was less than 12,000 for an exceptionally popular Lieutenant-Governor running for reëlection.

Dr. William Everett of Quincy has again gallantly taken the field against Mr. Cabot Lodge in the Seventh Congressional District of Massachusetts. At the last election in 1890 he cut Lodge's majority down from 5,294 to 1,023. It is not too much to hope that he may this year wipe out this little remnant altogether. In 1890, however, Lodge was preaching the beauties of dearness. The more a man paid for his clothes and furniture, Mr. Lodge intimated, the better off he was, and he spoke scornfully of cheapness as a low foreign invention. Of course this silliness must have hurt him greatly in addressing sane audiences. This year he may possibly preach the beauties of cheapness. In 1890 he was maintaining that the McKinley Bill would raise prices; this year he may maintain that it has lowered prices. Now, although Mr. Lodge would be better off as an apostle of cheapness than he was as an apostle of dearness, he is, nevertheless, just the kind of man to be hunted down by Dr. Everett. Dr. Everett has a keen scent for both humbug and absurdity. Moreover, he is a powerful exponent of the true political gospel, ready, keen, lucid, and sincere. Lodge will not be comfortable when he hears his horn, and Dr. Everett has our heartiest wishes for his success.

Mr. George Ticknor Curtis, "the widely-known constitutional lawyer," has announced to Mr. Wilbur F. Wakeman, the "General Secretary of the American Protective Tariff League," that he is going to leave the Democratic party and vote for Harrison, because of the free-trade plank, he says, in the Democratic platform. But he also tells the unhappy Wakeman that "in future communications he will show that in laying duties on foreign products it is perfectly constitutional for Congress to lay them so as to encourage our American industries, and that a tariff for revenue only would bring ruin on the Government and upon the people." Now we are quite sure that this is far more than Wakeman bargained for or can stand. So we advise Mr. Curtis to have him "shadowed" to prevent his escape till he gets home on him with the "communications." What makes Wakeman's case a sad one is that he is doubtless already satisfied on the constitutional point, or ready to be convinced by a mere wink, whereas Mr. Curtis proposes that, before "owning up," he should submit to a process which may put his life in peril or at all events unhinge his reason.

The *Tribune* continues to derive a great deal of comfort from the sufferings of English operatives thrown out of work by the McKinley Bill. It had on Tuesday a man in Scranton, Pa., telling with great glee how "the town of Saltaire" "is literally dead now," and Sir Titus Salt, "whose cloth and plush manufactures are known the world over, is a ruined man." This is only an instance of the way "the McKinley Bill has crippled English industries." We can recall no parallel for this frame of mind which exults over the distress of others, except Tertullian's conception of the bliss of heaven, a large part of which, he thought, would consist in gloating over the torments of the damned. What a falling off has the baleful spirit of protection wrought in the American spirit, which used to pride itself on sympathy with the "oppressed of all nations"! Now we do our best to bring misery upon thousands of our fellow-beings, and then break out into rejoicings over their wretchedness.

It does not make this heathenish spirit any more Christian to show that it is mistaken as to its facts. The Boston *Journal of Commerce*, which cannot be accused of bias against protection, states in its issue of October 1:

> "One of the reasons for the liquidation of the house of Sir Titus Salt, Bart., Sons & Co., in England, is owing to the unprofitableness of the plush industry. Our tariff laws contributed somewhat to its unprofitableness, no doubt, by cutting off the American market, but the decrees of fashion have proved more potent in this instance."

It explains what it means by saying that the manufacture of seal plushes at Bridgeport, Conn., over which so many McKinley flourishes have been made, "has been given up because of changes in fashion." We read in the same paper that the August statement of the United States Consul at Bradford, Eng., shows that the value of exports to this country of worsteds and woollen goods showed an increase of nearly 48 per cent. over the same month a year ago. It will doubtless turn out to be true, in the long run, that the exultation of leading Republicans over the hunger and want they have caused in other countries, is without any foundation in fact; but that does not at all lessen the discredit which attaches to them for taking delight in what Christianity and civilization have agreed hitherto in asserting is a ground of delight only to devils in hell.

Two Democratic and two Republican judges of the five constituting the Supreme Court of Wisconsin have concurred in a decision annulling the apportionment act passed at the special session of the Legislature a few weeks ago, as a little earlier the same tribunal had overthrown the similar act passed at the regular session of the Legislature. The chief ground of the de-

cision in each case is the evident failure to obey the constitutional requirement that the Legislature shall divide the State into districts as nearly equal in population as possible, one (Democratic) Senate district having barely 30,000 people, while another (Republican) had more than 65,000. This was the same ground upon which the Supreme Court of Michigan, Republican and Democratic judges concurring, annulled the gerrymander passed by the Democratic Legislature of that State at its regular session last year; Chief Justice Morse, who is now the Democratic candidate for Governor, declaring that "there is no higher privilege granted to the citizen of a free country than the right of equal suffrage, and thereby to an equal representation in the making and administration of the laws of the land." The greed of the dominant party in these two States has resulted in causing one special session of the Legislature in Michigan, and two in Wisconsin (as a second must now be convened), with the result of disgusting many doubtful voters with a party capable of such performances.

Outside those Republican managers who are ready to applaud any device which promises to help their party, the people of the United States, without distinction of party, will hope that the scheme to nullify the Australian ballot system in Indiana may fail. Elections in Indiana in Presidential years had become such a national disgrace that the whole country rejoiced over the adoption of the secret-ballot system by the Democratic Legislature of 1889. The Republicans bitterly opposed the reform at the time, and have never become reconciled to it, the President's home organ, the Indianapolis *Journal*, having recently complained that "the Republican loss in Indiana in 1890 was due not a little to the radical change in the method of voting." There is now a plot to have the Supreme Court declare the legislative apportionment of 1885 unconstitutional, and then have the Australian Ballot Law of 1889 set aside on the ground that the Legislature which enacted it was elected under that apportionment, and was therefore an illegal body. That the apportionment of 1885 was a bad gerrymander is notorious enough, but it would seem to be absurd to nullify all acts passed by all Legislatures elected under that apportionment. The Michigan Supreme Court did no such thing when a similar question was recently submitted to it. It decided that the gerrymander of the last Democratic Legislature was unconstitutional, and that the gerrymander of the Republican Legislature of 1885 should be annulled for the same reason; but it did not throw the State into inextricable confusion by declaring that all legislatures elected under that gerrymander were illegal bodies, and all acts passed by them null and void. We can hardly believe that the Indiana judges will do what is expected of them.

But what a commentary it is upon Republican professions in favor of "a free ballot" that the party is everywhere complaining of the Australian system, and is ready to adopt any possible expedient to overthrow it! In his speech at the Cooper Union "rally" last week, the candidate for Vice-President called for "the organized and the individual effort of active Republicans everywhere" to do various things—among them "to have the full Republican vote registered, and then to have it, in spite of the Australian ballot and other new difficulties, fully cast and fairly counted." The *Tribune* on Monday followed up this warning.

We observe that Republican organs in the East always put down North Dakota in the list of "sure Republican States." But candid Republican observers in the Northwest frankly admit that at best it is no better than a doubtful State, and that the chances now are in favor of its being carried against Harrison. The Republican majority sank from 14,071 in 1888 to only 6,535 in 1890, and this year there is an apparently harmonious fusion of all elements of the opposition. South Dakota is another State which is always put down as "sure Republican." It may prove to have been properly so ranked, but it should not be forgotten that in 1890 the Republicans cast only 44 per cent. of the total vote, and would have been beaten by nearly 10,000 majority if the Democrats and Independents had all supported one ticket. Fortunately for the Republicans this year, there is no such harmonious fusion of the opposition in South Dakota as in its northern neighbor. But these new States are unreliable, being more subject to "tidal waves" than older and more conservative commonwealths.

The Prohibitionists certainly have reason to feel encouraged over the full returns of the Maine election, which show that, while the Republican vote fell off from 79,405 in September, 1888, to 67,585, and the Democratic from 61,349 to 55,073, they increased their poll from 3,121 to 3,781, or a trifle more than one-fifth. This gain, it must be kept in mind, was made in a State where the Republican party was openly committed to the maintenance of prohibition. In almost every other State the Republicans have this year abandoned the Prohibitionists, so that this party may reasonably hope to increase its vote far more elsewhere than in Maine. In Iowa the Prohibitionists are greatly encouraged over the accession of ex-Attorney-General Baker, a lifelong Republican, and he says that he is receiving many letters from other old Republicans who approve his course and promise to keep him company. Hitherto the Prohibition party has not amounted to much in Iowa, casting only 1,362 and 962 votes in the last two gubernatorial elections, but this was because the Republicans in each of those campaigns were pledged to the maintenance of the prohibitory law. Now that they refuse longer to endorse the system, it seems reasonable to expect that they must lose heavily.

The decision of the Connecticut Supreme Court in the contested-election matter, which has been dragging along in that State for nearly two years, furnishes fresh evidence that our highest judicial bodies are not exempt from the influence of partisan political considerations. The Court divided on partisan grounds, all the Republican judges taking one side and all the Democratic judges the other, as the Supreme Court of the United States did in the electoral controversy of 1877. We have had an illustration of the same tendency in this State recently in the decision by one department of our General Term that the Apportionment Act of the last Legislature was unconstitutional, and the decision by another department of the same court that it was constitutional. The Connecticut decision seems to be even more partisan than the Republican contestants expected, for it goes to greater extremes than they have been going in their claims. The result ought to be useful in showing the people of the State the folly of adhering to the requirement of a majority over all for the election of a State officer. A plurality is all that is required to give the electoral vote of the State to a Presidential candidate, and it ought to be sufficient to give an election to a State candidate. Mr. Morris, the Democratic candidate in the last election, who received a plurality then, is again the candidate this year, and has announced his purpose to make his canvass on the plurality issue. The majority requirement is in Connecticut, as it is in Rhode Island, a Republican device for keeping the control of the State in Republican hands by making it possible for the Legislature to choose for Governor and other officers candidates whom the voters of the State have declined to elect.

We hope there is some wise purpose concealed in the plan of running a third municipal ticket this month, because there is no such purpose visible on the surface. If anybody sees a chance of success for such a movement, he ought to explain in detail the basis of his hopes. The better the candidate put up, too, the worse it would be for the city, because it would further familiarize the New York public with the helplessness of the respectable element in the voting population. It is not well to make respectability a laughing-stock too often. A great deal of missionary work needs to be done, in our estimation, and a great change needs to take place both in the public mind and in the press, before we can hope to see any real improvement in the city government. As far as appears,

the present municipal government is about what the majority of the voters now desire, and, we were going to add, deserve. The election of 1890 made that point clear. It is common justice to add that Tammany has since then done rather better than was necessary. The improved pavement and the clean streets are more than the citizens had any right to expect. To let Mrs. Kinnicutt and her committee clean the streets was a pure act of grace. It has long been foreseen that no movement against Tammany would have any success this year unless Tammany broke with the party on the Presidential nomination, and this it has taken good care not to do. There is nothing novel in the situation. Tammany is the product of a certain condition of the public mind, and until there is some sign of a great change in this condition, naming third tickets against it is like making a sick man take violent exercise.

The "cholera scare" has, we are glad to say, now entered on the humorous stage with us. It has just reached Central America, where, of course, the people being in a lower state of civilization, it is somewhat worse than it was here. Accordingly, Nicaragua and some other States have "closed their ports on account of the feared invasion of the cholera." It is very diverting to find some of our papers denouncing this as "a needless embargo," and as "vexatious action taken through unreasoning fear of the cholera." The *Tribune's* despatches from Washington say that "in official circles this action of the Central American authorities is regarded as an unwarrantable exercise of authority," but we are pleased to hear that the Department of State "is not disposed to act arrogantly towards our Southern neighbor in the matter, but is rather disposed to adopt methods based on persuasion and reason to secure its object." "Here's richness," as Mr. Squeers observed. We thought the true doctrine was that the people who had the "cholera scare" were a law unto themselves; that persuading them or reasoning with them was an impertinence, and that they were at liberty to resort to any measures of protection for themselves, however desperate, cruel, or selfish, and that the only thing the people who scared them had a right to expect in case they killed them, was prompt cremation; and that their complaints were the growls of "kickers." The very best thing the State Department can do with these scared Central Americans is to send them Jenkins to carry on their quarantine. He is just the man for the place; but do not let us have any violence.

Bishop Potter made a neat and valuable addition to our cholera literature when he said at the close of his charge to the Convention on Thursday, apropos of special prayers against pestilence, "that such prayers are only an act of presumption unless along with them there goes that use of every approved method for the preservation of life and health which is the dictate of sound reason." He might have added that furious quarantine is not a proper supplement of such prayers. The history of quarantines shows that no pestilence has ever been kept out by them; but they have furnished in too many cases an excuse to semi-barbarous peoples for neglecting their drains, and their water supply, and their streets and alleys, and for failing to wash their filthy bodies and change their filthy clothing, all of which are "the approved methods for the preservation of life and health." Nobody who has not tried them—we speak under the correction of theologians—need flatter himself that praying against pestilence will do him any good.

The arrest of all the members of the Advisory Board of the Carnegie Mills strikers on the charge of high treason to the State of Pennsylvania is a novel and extremely interesting development. The warrant of arrest is issued by the Chief Justice of the Supreme Court, and the basis of it is information afforded by a detective that the members of the Advisory Board are guilty of violating their duty and allegiance as citizens by moving and inciting insurrection and rebellion against the commonwealth. The maximum penalty for this offence is imprisonment for twelve years. The strikers claim that the arrest is simply a new move on the part of Mr. Carnegie's manager, Mr. Frick, to break down the strike and get the men back; his hope being that, by getting the members of the Advisory Board lodged in jail pending trial, he may be able to induce their followers to return to work. Whatever Mr. Frick's motive, the movement is a very interesting one, and we trust that the cases will be pushed to a trial in order that the courts may pass on the question involved. If the acts committed by the strikers at Homestead did not constitute insurrection and rebellion against the peace and welfare of the State, it would be difficult to say what would.

The new Sunday laws in Germany went partly into effect on July 1, and do not appear to be giving satisfaction. Their intention was to reduce the hours of labor on Sunday to a minimum and to secure a larger church attendance of working-people. They provided that in no case should Sunday work extend beyond five hours, while from ten to twelve in the morning and after two o'clock in the afternoon there should be no work whatever. In actual operation the effect seems to be to keep those workingmen who used to do a half-day's work on Sunday in their shops until two o'clock, instead of merely until noon as before, while they spend the time from ten to twelve not in church, but in beer-gardens and cabarets, till the embargoed hours pass and they can finish their work and go home. The church authorities in Berlin are already admitting that the laws have not increased the number of Sunday worshippers, though they have the number of Sunday tipplers.

Mr. Morley has come out with a letter indicating the way in which he intends to deal with the case of the "evicted tenants." He proposes to appoint a commission to inquire into the matter. This will doubtless keep the tenants quiet for the present, or at all events till Parliament meets, and give the Ministry at least breathing time. The figures he gives about the cost of extra police assistance at the evictions are very curious. The annual cost alone of this assistance is $225,000, or, during five years of Tory administration, $1,225,000—probably more than the total rental of all the estates on which the evictions occurred; and this does not include the legal expenses. One estate, probably the Clanricarde, has cost the country $65,000 since 1881 for assistance given to the landlord in rows with his tenants. If it be the Clanricarde estate, every newspaper in both England and Ireland was all the while denouncing the landlord for his inhumanity and injustice while he was living snugly in London and snapping his fingers at them and abusing Gladstone.

Renan's death is that of a man who had survived a good part of his own fame. The renown which the audacious heresies of his 'Life of Jesus' brought him thirty years ago was more expansive and penetrating than any he could win by mere learning, varied as his was, or style, charming as his came invariably to be. But the world, even the religious world, long since got over being shocked by the 'Vie de Jésus,' having to do with much more serious problems relating to primitive Christianity; and as soon as Renan's name ceased to be that of the *scandalum magnum* of his time, his peculiar fame began to decline. Nor can it be denied that his purely historical work has fallen under some discredit, when compared with the severer methods of his later contemporaries. One need but compare his Hibbert Lectures with Pfleiderer's to see the difference between his rhetorical treatment of antiquity and the German's patient reconstruction of the past. Moreover, the philosophical and dramatic and reminiscential writings of Renan's later years revealed an almost sensual element in his character that will not enhance his fame. What he will chiefly be remembered for is his long life of devotion to serious research, his boldness in attacking the religious prejudice, most of which he outlived, and the demonstration which he once more gave the world of the possibilities of the French language as an instrument of precision and beauty.

THE GREATEST POLITICAL NECESSITY.

MORE than a year ago, in discussing the address printed in July, 1891, by the Philadelphia Independents, touching Quay's record as a politician, we took the liberty of controverting their assertion that "the fundamental fallacy" of the Quay theory of politics was "that public offices are spoils, the lawful property of the politicians who capture them, and by whom they are dispensed in their turn to their underlings as prizes of war." We said then:

"There is, however, another fallacy which lies lower still, to which the roots of Quayism run down, and from which it draws a large part of its sap and vitality. To mention it in Pennsylvania is, however, to discredit one's authority on all subjects as effectively as the authority of a philosopher would have been discredited in the Middle Ages by a denial of the existence of witches. But the truth must be spoken, nevertheless, even if here and there, and now and then, it produces a little nausea. This particular truth, too, is not so much an economic as a political truth. It affirms nothing as to the value of a tariff in building up industries or accumulating wealth. There is nothing in it inconsistent with the Pennsylvania industrial gospel. What it affirms is simply that you cannot, in a country of universal suffrage, have pure politics as long as prices are raised and lowered by legislation at every session of the Legislature. This system would eventually corrupt a community of angels. As long as the business man looks to Congress to provide a good market for his goods he will inevitably invest money in the high-tariff party, just as he would invest in a mill or in a coal mine, and he will give the money to the man who, he thinks, will put it where 'it will do most good.' That man will always be a Quay, and nothing but a Quay. The Quay will have under him a swarm of Delamaters, Wanamakers, Bardsleys, and Marshes to do his bidding, and blow his trumpet, and defend his methods. Politics, in short, will, under such conditions, inevitably become 'business' in the very lowest sense of that term. The party having won the Government by promising to enable everybody who gave money for the canvass to make a handsome profit on what they gave, the underlings who gave not money but work will claim the salaries of the public offices as *their* reward, and they will get them. They will not listen to the 'trust' doctrine from people who openly acknowledge that they themselves are in politics mainly and solely to increase their own incomes. And gradually the whole machinery of government will come to be looked on simply as the machinery of a mill is looked on, as investment of capital to be returned with interest, profit, and something for superintendence and wear and tear. Everything will be considered marketable and divisible among the stockholders—treasury funds, offices, contracts, pensions, subsidies; and the work of the Quays will be mainly the work of deciding who got in on 'the ground floor' and who on upper stories."

There is nothing, we affirm, which it now in this canvass behooves patriotic men to bear in mind so much as this. Nobody is more impressed than we are with the evil economic effects of the high tariff. Nobody sees more clearly than we do the importance of a sound currency, wholly delivered from party politics. But no thoughtful person can shut his eyes to the fact that nations might be both great and free and long-lived under a high tariff. More than this, nearly every great nation of modern times has experienced and has survived some sort of currency folly or absurdity. Currency madness always runs a certain short course, very like that of an individual spendthrift. The day of reckoning comes at last in the shape of a crisis in which everybody who thought himself rich suddenly finds himself poor, in which credit perishes, and the poor are thrown out of employment, and industry seems to go to rack and ruin. But such crises soon pass over, and the community which has gone through one of them goes to work again, fortified by its bitter experience, to repair its broken fortunes. Such experiences do not affect *character*. In fact, they often strengthen and purify it.

The greatest danger in American politics to-day, therefore, is not the tariff as an economic agency, nor the currency as "a craze"; the greatest danger is the venality in politics which the tariff steadily promotes, and by which the present Administration obtained power and is trying to keep it. One hears with astonishment every now and then upright and serious men console themselves with the reflection that President Harrison will, if reëlected, veto a free-coinage bill, and that the Hon. Whitelaw Reid, in case of President Harrison's death, would do the same thing. They forget that President Harrison's election was secured, undoubtedly with his knowledge, and certainly without his disapproval, by the purchase of votes, on an immense scale, through the instrumentality of a man of notoriously bad character, who made no secret of his methods, and that a seat in the Cabinet was given to one of Quay's agents as a reward for his activity in raising money for purposes of corruption. They forget, too, that venality is for a democracy a mortal disease. It bears about the same relation to a poor system of taxation and a shifting standard of value that malignant typhus bears to typhoid fever or measles. The deaths from it are about ninety per cent. of the cases. As soon as offices and legislation are put up for sale, and the money is used to open a market for votes, the *débâcle* in a popular government has begun.

We do not deny that there has always been, and that there probably always will be, more or less bribery at elections. The total abolition of the practice will never come until there is some great change in human nature. Every nation governed by universal suffrage will have to struggle against it, and be on its guard against it, just as every man, however sound his constitution, has to struggle and guard against disease. But this is an overwhelming reason why we should not only not tolerate any system of taxation which puts a premium on corruption, but inflict condign punishment on any highly placed man who has used corruption for his political advancement. President Harrison is such a man. He is the first American President who has obtained his office by open venality, just as Quay is the first Chairman of the National Committee of a great party who has figured as an open and successful distributor of a corruption fund, and Wanamaker the first American who has been honored with a seat in the Cabinet for raising the money which constituted the fund. The public has long been reprobating the practice of rewarding "work" with offices, but we are, in the case of the present Administration, asked to condone the bestowal of the offices for cash.

It will be observed, too, that there is no sign as yet in the present canvass of any repentance over the great scandal of 1888. The only sign of atonement to the public conscience is the withdrawal of Quay from the Chairmanship of the National Committee and from the supervision of the Republican canvass in this city. In the latter business, however, a more obscure rascal has been substituted for him in the person of "Dave" Martin, of the nature of whose skill and activity both the President and Mr. Wanamaker, and we fear also the Hon. Whitelaw Reid, are well aware. The only explanation they offer of "Dave's" presence in this city is that he is a free man, and can go where he pleases, which is exactly the plea offered by burglars in defence of loitering about premises in a suspicious manner. Honest men give a clearer account of their movements when their intentions are called in question.

If the tide of corruption which the tariff has set going, and which is now sweeping away the political virtue of the voters even in the remotest country districts, continues to grow in volume, we must not throw the whole blame on the manufacturers and others who make money out of the tariff. In resisting any change in it they are, in their eyes, defending their property, and in defending property the best men are apt to become unscrupulous. Property, although the source of many virtues, is also at times a serious obscurer of the moral vision. To the manufacturer, the free-trader or tariff-reformer often has the cut of a burglar or footpad, and he uses against him without hesitation any weapon that comes to hand, including wholesale bribery. The Norwich manufacturer who said he would "beat Wells if he had to mortgage his mill," simply meant that he would not let his money go without a fight. The real culprits at this great crisis are the men who sell the offices and the legislation of the nation to these men to enable them to levy toll on the community, and those who vote for President Harrison at this election will not only stamp this system with their approval, but reward its very worst offenders.

A "STABLE" PROTECTIVE TARIFF IMPOSSIBLE.

THE resolutions adopted at the Republican mass-meeting in this city on Wednesday week are in line with the main argument of the party in this campaign in reiterating the cry of the lotus-eaters, "Let us alone." They recite that "the business of the country has adjusted itself" to the McKinley tariff, and that now "no patriotic American who is not blinded by partisan prejudice

can wish to imperil" the general prosperity by voting for any further tariff changes. The implication is, that the Republican party is perfectly satisfied with the McKinley Bill, and will insist upon continuing it unchanged for many years. But all this is in the face of the tariff history of the past thirty years, is in conflict with the actual facts of the situation, and is contradicted by the unavoidable nature and effects of any protective tariff.

So far from having a record for having "let the tariff alone," the Republican party is the one that has caused all the disturbing and violent shocks to business wrought by successive tariff changes from the Morrill tariff down. It has done this under the constant pressure of the beneficiaries of the tariff within its own ranks. From the nature of the case it is bound to satisfy these beneficiaries, and from *their* nature it is not able to do so. They demand the impossible. They would have law permanently alter the general conditions of business. No law can do this. After a temporary upheaval, things fall back into the old courses again, and then the horse-leech demand for new laws to set nature at defiance recurs. The Corning Iron Works at Albany, in which $1,000,000 had been invested all told, were lately sold for $35,000. Protection had striven for years to get interest on $1,000,000 out of property worth only $35,000. Nature was too much for it. Pittsburgh and Birmingham made a mockery of the laws designed to give money to Albany. But is it possible to conceive of the Albany iron-masters as ever willing to "let the tariff alone" as long as it did not make good to them their natural disadvantage in the production of iron?

Moreover, it is perfectly evident that there is a growing demand already forcing itself upon the Republicans for a serious revision of the McKinley Bill, and that it is a demand with which they will be bound to comply if successful in the election. The Ohio Wool-Growers' Association is one of the most powerful instruments known in this country for the making and unmaking of tariffs, and it is now in the field demanding increased protection, and threatening to vote against any Congressman who will not pledge himself in its favor. McKinley himself is on record with the opinion that the duty on binding-twine is inadequate, and is openly pledged to the Cordage Trust to increase that duty whenever he finds himself able to do so. The recent decision of the courts putting all kinds of goat's hair on the dutiable list involves an immense derangement of important manufacturing interests, and they are already giving notice that Congress must come to their rescue with a revision of the tariff. In the face of these facts it is the sheerest pretence for the Republican party to pose as the champion of "stability" in tariff laws. Nothing is more certain than that their now much dreaded "disturbance of the tariff" will be one of the first things they will set their hands to if they control the next Congress.

In addition to all this, the infernal activity and ingenuity of the foreigner are already finding innumerable joints in the McKinley armor. The past few weeks have witnessed enormous and unprecedented importations of manufactured goods from Europe. The Chemnitz and Bradford mills are reported to be very busily at work on large American orders. This is due in part to the exhaustion at last of the large stocks of goods imported in the early part of 1890 in anticipation of McKinley's masterpiece, and the consequent brisker demand. But it is also partly due to the fact that the foreign manufacturers, having had two years to think the thing over, have devised a great many ways of getting around the tariff. Elaborate as are the tariff classifications, they could not forestall all the new combinations of material and finish and markings that were possible, and the result is that by slight changes in these particulars the malignant foreigner is again able to afflict our unhappy land with a great abundance, at low prices, of the things we want. Surely this cannot be allowed to go on. Unless the Republican party is to prove false to itself, it is bound to correct this monstrous evil. It would doubtless like to be "stable," but it must be consistent and keep on in the holy work of spreading hunger and want in European factory towns.

The truth is, that it is not within the wit of man to make a "stable" protective tariff. Senator Aldrich, in the current *Forum*, defends the McKinley Bill by asserting that it was made necessary by the great changes in methods of manufacturing and in cost of production which had taken place since the last tariff. But are these changes to come to an end in the present year of grace? Are new machines and improved processes no more to be invented? On Mr. Aldrich's own theory, a fresh revision of the tariff will be imperative within the next Presidential term. Protection has to run a race with the progress of invention and the mechanic arts, and it can never hope to keep up. A new application of force, a revolutionizing discovery in a chemical laboratory, undoes at a stroke the work of the wisest and most far-sighted protective legislation, and Sisyphus has to start rolling his stone up the hill again.

To make a protective tariff that might really hope to be stable, what would be needed, in the first place, would be a McKinley endowed with omniscience and the spirit of prophecy, able to grasp all the details of all industries and to forecast the whole future of civilization, and so to make sure provision that his fellow-countrymen should never be contaminated by the sight of anything foreign. Then the nature of the foreign manufacturer would have to be radically changed. His diabolical desire to furnish the world with cheap goods, which he now shows no intention whatever of abandoning, would have to give way to the habit of marking up his products to the top notch and being perfectly content to make and sell nothing. Finally, the nature of Americans would have to be as radically changed. They would have to be made to like being swindled, to crave paying the highest prices possible for everything, and to enjoy being taxed for the benefit of a small class. With these few simple conditions met, a stable protective tariff would be possible; without them it is the dream of a fevered brain, and in indulging in it the Republican leaders are deceiving both themselves and the people.

CONGRESSMAN HARTER ON STATE BANKS.

It was probably as much at Congressman Harter's suggestion as any one's that the proposal to repeal the tax on State banks was put into the Democratic platform. This lends especial importance to his exposition of what it is intended to accomplish. Such an exposition he gave in a paper read before the American Bankers' Association at San Francisco on September 8, and it will have to be reckoned with by all those who wish to discuss the question honestly. Mr. Harter is the last man in the world to be accused of desiring an unsafe currency. To him more than to any other man, except Mr. Cleveland, is due the defeat of the Free-Coinage Bill in the House last March, and his record has been one of intelligent and undeviating opposition to all kinds of fiat money and unsound financial measures. That any plan he favors must at least be intended to secure a perfectly safe and uniform currency, will be admitted by all but blind partisans; that it would actually secure it, must be considered as highly probable by any one who studies his propositions in detail.

The starting-point of the whole discussion is the necessity of doing something. The volume of our national bank-notes is steadily diminishing and is destined to complete extinction. Some form of safe paper currency must be devised to take their place. This is admitted by Senator Sherman. In his speech in Mr. Harter's district last Friday, he took it for granted that "the national banks will have to retire their circulation when the bonds of the United States are paid off," and also that the people of the country "are not willing to delay the payment of the public debt merely to enable the banks to issue circulating notes." But he went on, in perfect keeping with his reputation as the public man whose financial knowledge is the best, but whose practice is the worst, to advocate nothing more nor less than a return to fiat money and unlimited greenbacks. The very financial madness that he fought from 1873 to 1879, when the Democrats were taking it up, he now takes up himself when the Democrats are fighting it. What else is meant by his advocacy of "money

issued directly by the United States, promising to pay coin, and resting upon the honor, wealth, and resources of 65,000,000 people"? If such a plan would not be an invitation to the most reckless inflation and unsettling of values, then all that experience has taught us, all that Senator Sherman has taught us, is given the lie to.

Contrast this return to discarded financial folly with the conservative plan detailed by Mr. Harter. He begins with a method for securing an indefinite extension of a national-bank currency. This is a vital part of the whole plan, since the continuance of national bank-notes side by side with the issues of State banks would, as he shows, automatically regulate and insure the exchangeability of the latter with gold. This extension of a national paper currency Mr. Harter would effect by allowing other than national bonds to be deposited with the Comptroller of the Currency to secure the circulation. How carefully he would guard the character and value of such bonds may be seen from the following terms of the bill he has drawn:

"(1.) The principal and interest of all such bonds shall, in expressed terms, be payable in gold coin of the United States.

"(2.) All such bonds must have been continuously listed upon some regular stock exchange, located in a city in the United States having a population of not less than 500,000, for at least five years.

"(3.) No bond shall be accepted upon which payment of interest has at any time been in default, or which at any time within three years prior to the date of its offer for acceptance has sold publicly upon any stock exchange where it was listed for less than 105 cents on the dollar of its face value.

"(4.) No bond shall be accepted if the total tax levy of the city issuing it exceeds two per centum per annum.

"(5.) No railroad bond, not regularly secured by mortgage upon the road-bed and track, shall be accepted.

"(6.) No association shall be permitted to have more than twenty per centum of its bonds on deposit of the issue of any one railroad corporation or city.

"(7.) Whenever any class of bonds on deposit has been publicly sold below par for a period of thirty days upon any stock exchange where listed, the Comptroller shall require a bond to be substituted which will in all respects meet the requirements of this act.

"(8.) Whenever any railroad corporation which was paying dividends upon its stock when its bonds were accepted by the Comptroller ceases to pay dividends, the substitution of other and proper bonds shall be required."

With such provision for the continuance of national bank-notes, and with our present gold and silver currency, Congressman Harter argues that the repeal of the 10 per cent. tax on State bank-notes and the issuing of such notes will be attended with perfect safety. The reason is that they can never secure or retain circulation if they are so much as open to the suspicion of inferior quality or deficient value. He shows this with absolute clearness. These State notes are not, and cannot be made, legal tender. To get into circulation beside notes that are legal tender and equal in value to gold, they must be fully as good. If they were not immediately and continuously exchangeable on demand with national bank-notes or gold, nobody would touch one of them. Their security under the State laws that might be enacted to permit their issue would have to be as good as that of national notes, or they could never get out of the bank vaults. As Mr. Harter says, this proposition "is self-evident to any mind familiar with the theory and practice of banking"; and he backs up his opinion by saying that not only has it now the unhesitating support of all those bankers who have really studied the matter, but it also meets the unqualified approval of the *Financial Chronicle* and of the New York *Journal of Commerce*. These cautious and conservative authorities are, according to the distressed Republicans, favoring a "wild-cat" and "red-dog" currency!

Mr. Harter takes up and answers the various objections to his plan, as they have been made in the public prints and in his correspondence with bankers and financiers. The "stump-tail" currency objection he meets as shown above. A State bank-note "would have to be as good and subject to as prompt and perfect redemption as a national bank-note to circulate at all." It is also objected that notes not current in one State would find their way to another. "Practically this would never happen, for a note to have any local circulation whatever would have to be promptly redeemable at home," and, without a local circulation, could never get a distant one. The danger of counterfeiting is also brought forward as an objection. But this is no greater than exists now with national notes, and could be met, as in their case, by using the best quality of engraving. Finally, it is alleged that the circulation would be exposed to "the vagaries of State legislation controlled by over forty different sets of lawmakers, many of them ignorant and goaded to reckless and loose legislation by an impatient local demand for more money." But the correction of such evils would be automatic. What Mr. Harter has to say on this point is of great force:

"You must remember constantly that none of these notes would be a legal tender in any State, and their sole chance for securing credit and circulation would be through actual merit. Let us suppose a case. Say that Mississippi should pass a law authorizing banks to issue money inadequately secured. It could not even get a circulation in the town in which it was issued, for it would be constantly returned to the bank for redemption. It follows surely that it would not circulate or be accepted anywhere else. Such a law, when passed in these days of the telegraph, of daily and weekly papers, and of general and widely diffused financial information and intelligence, would be condemned and every note issued under it would be refused. It is true that a generation ago, when we had little gold and less silver, no government legal-tender notes and no national bank-notes; when railroads were very few and extremely far between; when express offices were almost unknown, telegraph facilities practically unused, country roads far worse even than now, it was possible to secure an uncertain and limited circulation for inferior paper money issued by local banks; but such a thing would be utterly impossible now, as it would cost the banks to keep such money out at least one hundred dollars where it would make them one dollar of profit. It is no more to be dreaded than the return to the flint, the seamstress's needle, the grain-cradle, the canal-boat, the stage coach, or the wagon-freighters of the past."

TWO ENGLISH MYSTERIES.

THE political situation in England is to-day probably the most puzzling in the history of the country, and one in which hardly any one's prognostications are of much value. Whoever attempts to analyze it with a view to prophecy soon finds that all the clues or solvents on which he has hitherto relied utterly fail him. For example, Gladstone is the central figure on the stage, and the anxious observer finds that he is detested by the middle and upper classes with an extraordinary approach to unanimity. In polite society in England to-day, courtesy almost requires the assumption, if you are unknown, that you are anti-Gladstonian. In fact, it has become the fashion, in the strict sense of the term, to denounce Gladstone; and fashion now governs, or at all events influences, a far larger circle of the well-to-do people than it used to do. People denounce Gladstone, just as they put on mourning when the court does, to show that they move in good society and share its joys and sorrows.

The state of things in this respect strongly resembles that which prevailed in English society during the earlier years of our civil war. It was "the thing" in 1861–1864 to sympathize with the South, and believe all the stories of Lincoln's coarseness and Northern brutality; and Americans who were met in good houses were presumed, as a bit of common politeness, to be Southerners. The Northern armies were the objects of nearly as much social horror as the Irish Home-Rulers. The *Times* in 1863 had an article wondering how gentlemen like the Orleans princes could remain in contact with such boors as Northern officers. In matters of this sort the English struggle to rise in the social scale has immense influence in determining the opinions of those who begin to see, either for themselves or their children, the possibility of "arriving," as the French say.

It seems at first sight as if this fashionable hatred of Gladstone would furnish the philosophical observer with the key to the situation of which he was in search. "If I can get these people," he will say to himself, "to tell me why they hate Gladstone, it will make everything plain; I shall know what is coming." But he speedily finds that he is now no better off than ever. When one asks an anti-Gladstonian for specifications, they are rarely to be had, or, if produced, are not explanatory. If one fastens on the theory that Gladstone is odious because he is the leader of the democratic movement, one is soon thrown out by finding that the two most democratic measures of the last half century, the measures most likely to work in the near future a total change in the governing class in England—the extension of the suffrage and the establishment of the County Councils—were passed by the Tories. If he concludes that it is because of Gladstone's interference with the obligation of contracts in Ireland,

he finds that the most serious and flagrant case of such interference was allowing leaseholders to come in and have their rents also judicially fixed—something on which Mr. Gladstone had not ventured; his legislation was confined to tenants at will. If he concludes that it is because Gladstone is trying to give Ireland home rule, he is foiled by finding that the fashion of detesting him came in before 1885. The commonest excuse for it is that he has frequently in his speeches changed his ground on a variety of public questions; but all English statesmen who have been long in public life have done the same thing. There has been no such *volte-face* in Gladstone's career as Peel's on the Corn Laws in 1847.

The most plausible explanation is, that Gladstone is not so much the author of disagreeable things as that he is associated in the upper and middle-class mind with a very slow but very palpable change in the relation of classes in England, because he preaches about it and openly approves of it, whereas the Tories denounce it and ridicule it while steadily promoting it. That change consists mainly in the self-assertion of the working classes, and it embitters the middle class, who come into immediate contact with it, more than it does the aristocracy. For the middle class, who were the bone and sinew of the first uprising against Tory government in 1882, got all they wanted in the Reform Bill and the subsequent reforms in taxation and administration. Since the triumph of free trade and the emancipation of the boroughs, they have been becoming more and more conservative, and Gladstone is now the old reprobate who will not let things alone.

The second inscrutable, or nearly inscrutable, mystery of British politics is the Irish question. No one can assist at a debate in the House of Commons without being extremely puzzled by the frantic desire of the English people to keep the Irish representatives there. What purpose is served by their presence nobody, from simply listening to the discussion about Ireland, could possibly make out. Not only are they not allowed to frame Irish legislation, but their advice about it is not taken, and one of the most serious charges brought against Mr. Gladstone is that he consults them on Irish matters. In addition to this, hardly any one speaks on the Conservative side on any polemical subject without insulting them. The extent to which this is done, unconsciously in most instances, is a very curious feature of the debates, and so is the patient way in which the Irish submit to it. Every or nearly every Tory speaker either sneers at their poverty as revealed by their receiving pay from their constituents, or at their bad manners as exhibited in the House, and treats their love of crime and association with criminals as facts of common knowledge. This has lasted so long now that few Englishmen notice it, unless their attention is called to it. Yet the character of the Irish members is said, by those who know them, to be very good, and their ability in debate and in committee-work much above the average of the rest of the House; but this makes no difference.

Their principal business is, however, impeding legislation not bearing on the question of home rule, and, in spite of the closure, their success in this is very great, and must be great, unless they are made the object of special restrictions, which is, of course, impossible. As matters stand, they give an air of farce to representative government, and yet any proposal to take them away from Westminster fills most Englishmen with horror. The excitement into which an Englishman is thrown by the suggestion that there should be no Irish members in Parliament would at first suggest to a foreigner that he was passionately attached to them, and considered their presence a condition of national safety; but this is speedily dissipated, for in the next breath he describes them as the scum of creation, and assures you that if they had a Parliament of their own, their favorite occupations would be robbery and murder.

The dislike of Ireland as a country is manifested in the same anomalous way. All allusions to it are of the most melancholy and contemptuous character, but any proposal to let it go lets loose a flood of patriotic feeling, as if English associations with it were of the tenderest and most endearing kind. As a matter of fact it is held by 40,000 men as against a foreign enemy, just as it would be in time of war, and is avoided by the English court as if it were a pest-house, and it is impossible to get from Englishmen any description of its value to the Empire. The usual last resource is to describe it as a place in which in time of war a foreign enemy could get a footing if the natives owned it; but how the foreign enemy would get there unless England lost the command of the sea, and why the enemy in that case would stay in Ireland instead of coming to England, where he would enjoy himself far more, is never explained.

INNOVATIONS AT THE UNIVERSITY OF CHICAGO.

In a recent examination of the circulars of the new University of Chicago, we called attention to some interesting departures from the traditions of the American college. In some of its innovations, it is true, Chicago has taken hints from recent educational experiments at other colleges, but even in these cases it has modified what it has borrowed, so that the general effect of its programme is decidedly original.

A good example of this modified imitation is found in the organization of the Chicago faculties. During the last few years Columbia has given an independent organization to the faculties charged with senior and graduate work, separating them from the old college faculty. At Chicago we find that separate faculties have been formed for "academic" and "university" instruction. At both institutions the distinction corresponds approximately to that drawn in Germany between gymnasium and university, and the faculty or faculties charged with the more advanced instruction represent roughly the German faculty of philosophy. But there is more than one interesting difference between the Columbia and the Chicago plan. At Columbia the line is drawn between the junior and senior years; at Chicago between the sophomore and junior years. At Chicago the duties of the German faculty of philosophy are discharged by a single "faculty of arts, literature, and science"; at Columbia this work is divided between three faculties—a faculty of political science, a faculty of "pure" natural science, and a narrower faculty of philosophy. A similar differentiation of the older faculty of philosophy is beginning to appear in Germany. At Columbia, finally, the senior may study not only under any of the three faculties just mentioned, but also under the faculties of law, medicine, and applied science; *i.e.*, he may begin his professional work before completing his college course, and this work is counted as a part of the requirements for the baccalaureate degree. At Chicago none of these professional schools is yet established, but there is a divinity school, and it does not appear from the Calendar that juniors or seniors are to be permitted to take courses in that school. At the same time, the courses offered by the Faculty of Arts, Literature, and Science include much that is ordinarily taught in our theological seminaries, and it seems probable that the college student who takes courses in comparative religion, church history, the Semitic languages and literature, and New Testament Greek, will require less time subsequently to complete his divinity course.

Among the professional schools which Chicago hopes to establish, we find not only schools of law, medicine, fine arts, and engineering, but also a "school of pedagogy." There are precedents for the institution of such a school, but we are nevertheless of the opinion that it is unnecessary. In no scheme for training teachers is the intending pedagogue taught simply how to teach; he is taught things to teach as well. But the things he is to teach are best taught him in the regular university courses. Give such a student free access to the courses in philosophy, philology, literature, history, political science, mathematics, and natural science, and all that he can ask from the university in addition is instruction in the history and theory of teaching. For this purpose proper courses in pedagogics are sufficient; a special professional school is not required.

As regards professional degrees we can only applaud the intention of the University to abolish all honorary degrees, and to provide, ultimately, for the attainment of the degrees of D.D. and LL.D. in course. This is a logical result of the transformation of the Ph.D. from an honorary to a regular degree—a transformation accomplished within the last twenty years by the Eastern universities. It is justified by educational precedent and the practice of foreign universities. Chicago is right, again, in declaring that every candidate for the doctor's degree in law or divinity shall be held to pursue a part of his studies under the direction of the Faculty of Arts and Letters. Our professional schools are so purely professional—in fact, so technical—that the highest university degrees should not be awarded to their graduates unless these have broadened and humanized their education with more liberal studies.

Turning our attention again to the "academic" and "university colleges," *i. e.*, to the college and graduate school, we are at first glance startled by the number and range of the courses offered. It may be said, however, without intending to undervalue the really rich curriculum, that the goods are cleverly displayed. The division of the year into terms of only six weeks each greatly multiplies the number of courses. Further, a very large number are only projected, no instructors having as yet been secured to conduct them. This policy of first announcing courses and then looking for persons qualified to give them may be proper in the earlier and disciplinary years of the college curriculum, but we think it wrong in principle in the "university" years. There is no way to build up a true university except to form the faculties of original investigators in every field of knowledge, and leave each professor free to teach what he knows best in the way that is most natural to him. That is what "academic freedom" means as regards the teacher.

There are lacunæ, and some serious ones, in the list of courses offered; but the University does itself injustice in declaring that the work of the "Department of Political Science" will not begin this year. In connection with this announcement, reference is made to a dozen courses in historical and comparative politics and constitutional and international law (all of which are grouped under history), but no reference is made to the numerous courses in political economy and social science. On careful examination of the entire list of lectures, we find no important branch of political science neglected except administrative law. The question suggests itself, whether at Chicago administration is regarded as the only political science, or whether the University has discovered or is searching for a new political science.

We are very sorry to see figuring in the announcements the delusive proffer of a course in journalism. We do not say that a course in English may not be so shaped as to be of especial value to an embryo journalist; but the announcement of such a course leads some students to expect more than can be given them in the lecture-room. The proffer in question is particularly objectionable because, in the space of six weeks, the class is not only to study and practise "the art of journalism," but also "periodical literature, literary editorship, and book-making."

The most peculiar feature of the Chicago plan is that the University is to be kept running all the year through, including the summer months. The calendar year is divided into four quarters of twelve weeks each, beginning respectively on the first days of October, January, April, and July; and at the end of each quarter there is to be a recess of one week. Each quarter consists of two terms of six weeks. No student is to be held to an attendance of more than three quarters, or six terms, in each year, so that the normal academic year is no longer than at other colleges. Each student is to begin his academic year whenever he is ready, and to take his quarter's vacation whenever it suits his convenience. He may even take his two terms of vacation in different quarters.

The opportunity of entering the University at the beginning of any quarter will obviously be of advantage to many students. Secondary instruction is very imperfectly organized in our country, and our fitting-schools send their students to college with very diverse equipments. Under the customary American plan, a student who is imperfectly prepared for the freshman class is either admitted with conditions or compelled to wait a full year. In the former case he has to make up his deficiencies while pursuing the regular course—which means that he has too much to do. But if, as often happens, his deficiencies can be made good in four or five months, and he is obliged to delay his entrance for a full year, he has too little to do. Not only is his time wasted, but the habit of serious work may be impaired. Under the Chicago plan, both evils are avoided.

Under the ordinary American system, again, a student who is overfitted for the freshman class and inadequately prepared for the sophomore class, is confronted with a similar alternative. He either enters as a sophomore with conditions, and has to do too much, or he enters the freshman class and does too little. Under the Chicago plan each student who enters the college receives credit for what he has done before entrance, and is held to do only what he has not done. As there is no regular time for graduation, any more than for entrance, the student who has anticipated any considerable portion of the college curriculum will complete it so much sooner. If, for example, he has anticipated one quarter's work, he will complete his baccalaureate course in eleven quarters instead of twelve. This seems fairer than the Harvard plan, by which such a student is indeed admitted to advanced standing and given advanced studies, but, unless he has anticipated a full year's work, is held subsequently for the same length of time as the students who have barely satisfied the entrance requirements.

All these advantages, however, might be substantially attained without a summer quarter. This innovation, as far as we can see, will be serviceable to but two classes of students, viz., the very poor and the very ambitious. Those students who have to "work their way" through college, and who can best earn the funds they need by teaching country schools in winter, will be able, under the Chicago arrangement of terms, to teach through the winter and study through the summer. In the older colleges provision has always been made for this most deserving class, either by a winter vacation of some six weeks or by leave to study *in absentia*. The former solution, of which the Chicago plan is only a further development, has gradually been discarded in our Eastern colleges. The winter vacation has grown steadily shorter and the summer vacation longer. The latter solution seems to be possible under the Chicago rules; for in the "General Regulations," section 10, provision is made for non-resident study. The summer quarter, therefore, does not seem necessary to meet the wants of this class of students.

The only others who will be likely to use the privilege of summer attendance are those who desire to shorten their college course by crowding twelve quarters of study into three years. That the University intends to make this possible is shown in the section on admission to advanced standing, where it is pointed out that the student who has anticipated one-fourth of the required course may obtain his degree in two years and three months, by working four quarters in the year. In the "General Regulations," section 17, it is declared that "a student will not be permitted to study in the University four consecutive quarters without a physician's certificate that he may do the work of the fourth quarter without injury to his health."

We think it a grave question whether the policy here indicated is a wise one. We do not think that students ought to be encouraged to crowd a four years' course into three years. We do not think that many young men will be able to do this without injury; and Chicago, which is a coeducational institution, encourages young women to do it. The requirement of a medical certificate is a confession, on the part of the University authorities, that such an attempt is fraught with danger. But the safeguard of a "physician's" (*i.e.*, any physician's) certificate is quite inadequate. In the same section (17) we find mention of a "University physician" and of a "director of the department of physical education," and we were a little puzzled, at first, to understand why the approval of one or both of these authorities should not be required. But upon further examination of the Calendar, we discover that there is no University physician, and that the director of physical education is a Yale athlete, who holds no medical degree. There is, however, a female tutor in this department, who is M.D. of the University of Buffalo. Considering that the danger of overwork is greatest in the case of the female students, who are notoriously more ambitious than the young men and less able to stand the strain of a college course, it seems only right that Dr. Alice Bertha Foster should be consulted. Some competent medical authority should certainly be designated for whose decision in so grave a matter the University could be held responsible. The present arrangement is better adapted to shield the University than to protect the students.

The proposed summer quarter has another side. If there are students, there must be teachers; and it appears from the Calendar that a considerable number of instructors will be held in Chicago through the hottest months of the year. It is apparently to be a serious thing, this summer quarter: "the courses of instruction," the Calendar says, "will in general be so arranged that a student may enter a college or school at the beginning of any quarter." The University is not to play at summer schooling; it is to be run under full pressure. What that pressure is, we have pointed out in our preceding notice. The most important courses of the "academic colleges" are crowded into single terms of six weeks, by devoting ten hours a week to a single subject. Throughout the University, courses of less than five hours are exceptional. It is a system of "cram quizzes," and every college man will appreciate the strain upon students and instructors. These long courses in short terms, the attempt to keep the University under full steam through the moist heat of a Chicago summer, the encouragement given to the student to compress four years' work into three years—the whole scheme breathes that nervous, restless haste which is one of the most deplorable features of American life; and when our universities come to forget that "school" means leisure, and that high-thinking cannot be hurried, one of the last safeguards against the national vice of over-pressure will be lost.

RESTORATIONS IN VENICE.

VENICE, September 1, 1892.

FROM time to time the restorations going on (or neglected) at Venice have called out from various foreign sources remonstrances sometimes just and needed, and at times exaggerated and requiring a defence or explanation. But the critics, unaware of the antagonisms developed among those responsible for the care and restoration of the monuments and

the internal difficulties which the restorers have had to contend with beyond the technical ones, have never done entire justice to them. There have always been two schools of restorers in Venice—one for preservation and the other for renovation; and the rancor of their antagonism has been carried to a point only short of physical collision. The renovators, whose ideal of restoration was the removal of all marks of time, had always with them, as in every Italian city, the municipal authorities, and, since the organization of the Provincial Council for the preservation of ancient monuments, have formed the majority of that body. The arbiter of all disputes is the Ministry of Public Instruction, which presides over the interests of archæology and art, as well as literature. In the beginning the renovators had it all their own way, at Florence as well as at Venice; and the great outbreak of indignation in England about fifteen years ago had a large basis of justification and did an immense deal of good, but would have done more had the denunciations taken account of the fight that some of the Italians were making against the crudities then perpetrated.

The restoration of the Fondaco dei Turchi, the noblest of all the early palaces of Venice, had been effected by the municipality through its architect, Berchet, and resulted in simple reconstruction, with the difference between the original and the restored buildings that all the splendid columns of the original, brought from the East and (after the manner of the Venice of that time) simply introduced in their original condition and patina, and the bits of early sculpture worked in as decoration, either borrowed from earlier buildings or made *ad hoc*, were entirely recut, and the former reduced to the uniform standard and symmetry of modern design and construction—the latter so as to remove every trace of the original art. This made the Fondaco no longer an ancient building, but a modern and grossly inaccurate copy of the old, with not a single element of antiquity remaining; but it was to the intense satisfaction of the municipality, which conferred a pension on the architect in token of its content. To all people of taste the palace is utterly ruined. The Church of St. Mark had its own architect, who had been in charge during the greater part of the Austrian dominion, Cav. Meduna, a man who died past ninety years of age, and was succeeded by his younger brother. Both had been trained under the Austrian authority, which, whatever it may have deserved of detestation politically, showed a reverence and tenderness for the antiquities of Venice that its Italian local authorities have never had. They carried out the restorations on the church, if not with the feeling for the picturesque which the English critics demanded, at least with the respect for everything old that the stability of the building permitted, and the north façade remains as evidence of Austrian good taste. The younger Meduna retained his position after Venice became Italian, and at the time of the English protests I was in Venice and wrote in his defence, in the main, drawing on myself a great deal of English indignation. I am free, therefore, to say that the architectural authority now responsible for the condition of the church has much less than the Medunas' reverence for it, and his new restorations of the pavement, painfully in discord with the original work, and his introduction of the electric light for the illumination of the interior (!), show what we must expect from his superintendence of the church in the future.

Fortunately, at the same time that the great controversy broke out, the restorations of the Duomo at Florence were going on, on the system of Berchet, by washing the marble incrustation of the church with acids to remove the patina and then recutting the sculptured surfaces. This was the municipal ideal, at Florence as at Venice; but there the English outcry was in time to attract the attention of the Ministry of Public Instruction, which immediately ordered the suspension of the renovation, and the whole subject came up for examination, with the result that all similar attempts throughout the kingdom were forbidden. In Venice, however, the war of the sects went on, and the apple of discord was the Ducal Palace. The direction here belonged entirely to the Ministry, and there was no chance for the municipality to renovate after the manner of the Fondaco; but there was a strong competition between the two schools for the execution of the work. Happily the plans of the chief of the school of preservation, the architect Forcellini, involved an expense so slight in comparison with that of the rival project of substantial reconstruction, that it was awarded the preference; for the external indications of decay were so marked that it seemed to superficial observers that the building must come down. The practical execution of the plans of Forcellini was placed in the hands of a capomaestro of the Ministry of Public Works, a worthy descendant of the builders of Orvieto, Siena, Pisa, etc. (for the profession of architect as distinguished from the builder did not then exist, and Niccolo Pisano, Arnolfo, and their colleagues were simply the head-foremen of the masons and builders). Forcellini died some years ago, without seeing the realization of his plans, and the control of the works devolved on the capomaestro, Vendrasco, who had to meet a redoubled energy of attack from the united forces of the Chapter of St. Mark's, the Provincial Council, and the body of architects, who reclaimed for an architect the control of the work. The Provincial Council is clerical, as is naturally the Chapter and its architect, and the advent of the Ministry of Rudini, strongly clerical, or of the old Right, strengthened the hands of the clerical element in the Council. Berchet, the renovator of the Fondaco dei Turchi, was made President of it, his acceptation being conditional on the dismissal of Vendrasco, which, after a protracted contest between the opposing influences, was finally decided upon.

Nothing can give a better idea of the character of certain tendencies of official Italy than the career of this Provincial Council. Its existence, like that of all its kind, is due to the passion for official position; for the efficiency and competence of its members have generally nothing to do with their appointment, which becomes a question of partisan or personal influence. The fitness of its constituents for their position may be judged from the selection of the restorer of the Fondaco for its president. The manner in which it performs its duty of supervision of the preservation of monuments may be inferred from the following facts lately observed, and which have been in my knowledge for several years. Peremptory orders have issued from the Ministry for the removing of all combustible matter, and everything foreign to the building itself, from the Ducal Palace, but the Institute of Venice still occupies, with its mass of books, documents, and papers of all kinds, the principal rooms along the Piazzetta side; and while the Council replies to all remonstrances that it cannot find a fitting place for the library, it has let as a café the Zecca, which was, in every sense of the term, admirably adapted for the purpose, but as such offered no speculation. *En passant*, I may add that it was due to the persistent denunciation of English and American residents that the families living in the palace, and the carpenter's shop in one of its principal rooms, were removed. The rooms underneath the galleries containing the great collection of Venetian art at the Accademia, are occupied as a winter school of design, with heating arrangement of a primitive kind, for the comfort of the models and pupils, with lights, etc., etc., as requisite. They are, besides, stored with pictures for which no place on the walls can be made, canvases not worth hanging, etc.; and a chance spark or a defective flue may destroy the entire collection in an hour. The great Titian in S. Salvatore, with its proud inscription, "Titianus fecit," is spattered all over its lower part with the wax of the altar candles; the superb Bellini at Murano was, when I saw it, as it has been for years, exposed to the full blaze of the sun at certain hours of the day, and two of the finest Tintorets still in the churches I found in the same state. The finest Lorenzo Lotto in Venice, and perhaps the best there is, is in a dark chapel in S. Bartolomeo, where it cannot be seen under any circumstances, and where the only compensation for its neglected state is that the cleaners who have ruined some of the best pictures in the Accademia cannot get at it. The roof of S. Pietro di Castello, the original cathedral church of Venice, is a complete wreck and does not keep out the weather. The late Ministry issued an order of the most imperative character, that no pictures in the churches were to be kept under curtains in order that the custodians might make the exhibition of them a pretext for asking fees, and that no custodian should be allowed to accept fees; but the Council has taken no step to procure obedience to the order in a single case.

The letting of the Zecca for a café is a most luminous illustration of the efficiency of the Council. Three arches of the façade which were built up by the Republic, under circumstances of historical interest, and have remained closed ever since, were an obstacle to its utilization as café, and the reopening of them was opposed by all the lovers of old Venice as an offence against history, apart from the degradation of the building for the proposed use. The fight was hot over it, the municipal authorities regarding the rent to be received as the principal consideration, while Vendrasco, our capomaestro, took part in the discussion, and published a pamphlet opposing the decision of the Council which approved the letting. This settled the question of his dismissal from the works on the palace, which, though demanded by the Council, and thereupon taken into favorable consideration by the Ministry, had never been carried into effect, on account of the numerous remonstrances the measure had called out. The insubordination shown by the employee of the Government in publicly protesting against the decision of the superior authority provoked the order for his dismissal, and he was formally dismissed; but the immediate pressure from influential quarters on the new Ministry, with the influence of the new Prefect, Basile, an intelligent lover of old Venice—perhaps, also, a review of all the facts by the new Minister Martini—reversed the decision, and the old man was reinstated in his former position.

Italians are very sensitive to foreign criticisms of their way of treating their artistic treasures, and at times very voluble in their

abuse of a critic who ventures to say that they do not appreciate them; but the conduct of the Provincial Council for the Venetian provinces, the most important in Italy, is an undeniable proof of the insufficiency of the machinery of the Government and the utter incompetence of the local authorities to protect them. We have the Fondaco dei Turchi utterly ruined, the Zecca let as a café, the finest collection of Venetian art in the world in danger of conflagration, to say nothing of the destruction by restoration, and by only less destructive neglect, of some of the finest pictures in Venice. All over the kingdom we have ancient churches, most important in the history of art, allowed to be transformed by the Church authorities into the most vulgar modern structures; the Duomo of Florence about to be reduced to the state of a building of the nineteenth century—an end only stopped by a timely article in the *Cornhill Magazine* (which called out the most intense indignation of the Florentines), as the worst of the intended desecrations in Venice were prevented by the outcry of the English correspondents when they had not called out an alarm from any Italian authority. We have an awakening of the royal authorities, due mainly to the foreign protests, and yet the Italian journals will go on abusing the foreigner for his impertinent meddling with Italian archæological questions.

The late Minister of Public Instruction, Prof. Villari, had the highest interest in these questions, and did his best to promote the artistic interests of the country; but his efforts were continually thwarted by the indifference of the public and the Legislature, and the conflict of authorities, local and central, which made an entanglement of red tape such as no one not an experienced bureaucrat and politician, neither of which he was, could struggle against. Italians may like it or not, they may prevent remedies being taken, but they cannot prevent the art-loving traveller from criticising ever so savagely their neglect of works which belong to the history of the world's art as well as to Italy. And I will do the Italian Ministry the justice to say that I have never known a case of its attention being called in the most private manner, even, to an injury being done to any monument, without the notice receiving instant attention. Nothing could be more liberal and cordial than was the action of Prof. Villari in all cases where the interests of art were concerned; but he was not long enough in office to learn to see through all the intrigues which involved even the peaceful department of Public Instruction. I hope it will be found that his successor will have no less liberality in his views.

W. J. S.

MARCEAU.

PARIS, September 16, 1892.

THE extraordinary and well-deserved success of the Memoirs of Gen. Marbot has given a great impetus to the publication of military memoirs. Most of them are hardly readable, as they are purely technical. Attention has been turned to the military characters of the great Revolution. Whatever may be said about this great social event and its consequences, it cannot be denied that the civil representatives of the Revolution are generally very repulsive; it is difficult to feel any enthusiasm for such men as Danton, Robespierre, Saint-Just, Hébert, even for Mirabeau. Republican writers find more sympathetic characters in such men as Kléber, Kellermann, Marceau. M. Noël Parfait, a Republican deputy of Eure-et-Loir, has just published a volume on Marceau. This young general, who died at the age of twenty-seven, is one of the poetical figures of the Revolution. It is now the fashion to place portraits at the beginning of all historical works, and when I saw the fine and youthful head of Marceau, in his hussar uniform, with his slight moustache tracing a thin curve on his upper lip, his shako, with a long plume, slightly inclined on his head, his long, flowing hair, his loose black cravat, leaving full liberty to the movements of the neck, his breast covered with *brandebourgs* (the portrait is by Sergent), I was seduced, and stopped and bought the volume. I do not regret it, for I have taken more pleasure in the book than in Zola's sad 'Débâcle.'

Marceau, if the ancients spoke the truth, was beloved by the gods, as he died very young. He was born at Chartres on the 1st of March, 1769, the first-born of a second marriage of his father, Marceau-Desgraviers, who had a small office in the bailiwick of Chartres. His mother did not nurse him, but put him out in a neighboring village; he was brought up among peasants. Marceau left a short journal of his youth. He exhibited very early a great taste for military life, and, as his parents would not give the money necessary to make him an officer, he enlisted as a private, on the 2d of December, 1784, at the age of fifteen. This engagement was annulled, but as soon as he attained the required age, on the 1st of March, 1785, he entered the regiment of Savoie-Carignan (infantry), commanded by the Comte de Sérent. He went to Metz, where his regiment was in garrison. He regretted at first having left his parents, though he had never received any kindness from their hands; he felt discouraged and disgusted when he perceived that no advancement was possible except for noblemen. The Revolution soon gave him the means of advancement. He was in Paris at the time of the taking of the Bastille, and shared in the storming of the old fortress; his name, on account of his coöperation in the revolutionary movement, was struck off the list of his regiment. He became acquainted with Pétion and Brissot, and was presented by them to Lafayette, who took him as a supernumerary aide-de-camp. He remained five months with Lafayette, and wrote by his orders "Instructions for the National Guard."

Marceau received his appointment as lieutenant in the Thirty-fourth Infantry and at the same moment was elected commander of a battalion of volunteers in his department. He left for Reims with this battalion, and instructed his soldiers for five months. He was next sent to Montmédy, and appointed lieutenant-colonel. The situation of the army of the Ardennes was critical. Lafayette had fled across the frontier and become a prisoner of the Austrians; on the 23d of August, Longwy surrendered, and the Duke of Brunswick marched on Verdun. Marceau had been called in haste to Verdun, which had Beaurepaire for its commander; the unfortunate Beaurepaire shot himself, and Marceau, as the youngest officer of the garrison, was obliged to carry to the King of Prussia the letter which announced the capitulation of the place. After the surrender of Verdun, Marceau, with the men who had not deserted, joined the army and reorganized his battalion. Dillon took him for his aide-de-camp, and Marceau had a brilliant part in the battle of Valmy, which saved France from an invasion.

The moral effect of this victory was immense. Dumouriez, with Kellermann and Dillon, had inflicted a crushing defeat on 86,000 Prussians. After the battle Dillon and Marceau went to Paris. Dillon was hostile to the Government; Marceau left him and entered the cavalry, as captain in the cuirassiers of the Germanic Legion, which was composed chiefly of German deserters. The soldiers wrote petitions to the Chamber against their chiefs, and, for a month, Marceau was imprisoned. He was acquitted and immediately replaced in the army, and sent to La Vendée. He shared with his cuirassiers in the battle of Saumur, and saved the life of Citizen Bourbotte, a "representative of the people" who was with the republican army. The Germanic Legion was disbanded and Marceau was sent to Niort under Biron. He did not remain long with him, as Biron lost his command soon afterwards and was recalled by the Convention. "They recall me," said the General to his aide-de-camp; "it is the beginning. Well! I will go on to the end!" The end was the scaffold.

The French garrison of Mayence, which had made an heroic defence, could not, by the terms of the capitulation, serve any more against the enemy during the rest of the campaign. The Convention sent it to Brittany, and Marceau thus became a companion and friend of Gen. Kléber. The "Mayençais," as they were at first called, fell into the ambuscades of the Vendeans, as they did not understand the new style of warfare initiated by the Bretons. Kléber was not long in repairing their first defeats; he was appointed commander-in-chief of the Army of the West, and Marceau general-of-brigade. It would take too long to give the painful details of the war in La Vendée. Kléber had to fight not only against the Bretons, but against the deputies of the Convention, who were crossing his plans all the time, and against the patriots, like Rossignol, who knew nothing about war and who had nevertheless received commands. He as well as Marceau was constantly denounced to the Convention. After the battle of Le Mans, a young lady fled after the defeat of the Royalists and was fortunate enough to meet Marceau in the midst of his staff. He saved her and sent her to his headquarters. Mlle. des Mesliers accompanied the republican army to Laval, and Marceau left her there in the house of one of her aunts. She was unfortunately discovered by the Revolutionary authorities, and was thrown into prison. She appeared before the Revolutionary Tribunal with seven other Vendean women, and they were all, without distinction of age, executed on the guillotine—"seeing," said the judgment, "that it is proved that the accused were all among the brigands of La Vendée." Marceau had fallen ill and was obliged to leave the army. He spent some time at Chartres, where he became engaged to Mlle. de Châteaugiron (the Châteaugirons momentarily called themselves Leprêtre). One day Mme. Leprêtre de Châteaugiron, the mother, her daughter Agathe, Emisa, the sister of Marceau, and Marceau himself were together, when the executioner of Rennes asked to say a word to the general; he had a little package to give him. Marceau at first refused to see him, but after a moment allowed the executioner to come in, and received from his hands a little box which contained a small gold watch which Angélique des Mesliers had left him. "Poor girl!" said Marceau, in tears; "I had promised her that she should live."

Marceau, after a visit made in Paris to the Committee of Public Safety—a visit which became an ovation as soon as his name was known—rejoined the army of the Ardennes and found himself again with his friend

Kléber. At Fleurus he commanded the right wing of the army; he took several places in Belgium, participated in many combats, and finally took Coblentz. His chivalrous courage had made him the idol of the army. The whole of the left bank of the Rhine was now in the hands of the French, from Wesel to Bâle. Marceau showed the greatest activity at Coblentz. He was isolated, and had only ten thousand men; he built an entrenched camp for Coblentz, and besieged the citadel of Ehrenbreitstein on the right bank of the Rhine. He was obliged to raise the siege when the French army fell back on the Rhine and crossed the bridge at Neuwied. The army of Sambre-et-Meuse was retreating, and, in this retreat, Marceau had to fight with one division against twenty-six thousand men.

In the operations of the retreat, Marceau was in constant danger. One day, when he was ascending a hill with two soldiers and an officer to examine a position, an Austrian hussar was seen on the road, who tried to draw the attention of the French. A Tyrolean jäger was concealed in a bush on the road from Höchstenbach to Vallerod. These jägers were good shots, and generally fired at the gilt uniforms and epaulets. Marceau was struck by a bullet, and felt at once that he was mortally wounded; he was carried on guns covered with cloaks to the village of Vallerod. The ball had entered the right arm and lodged under the ribs. As Marceau could no longer follow the army, Gen. Jourdan, the commander-in-chief, left him with the Austrians, with two officers, two surgeons, and two soldiers. The Austrians showed much sympathy for Marceau, and treated him with the greatest kindness. He became delirious, spoke constantly of battles, of his mother, of the young woman to whom he was engaged. The Archduke Charles came in person to see him, but found him dead, knelt and prayed before the death-bed, and ordered that the body should be conducted to the French lines with all military honors. The scene of this removal was an imposing one; it has been reproduced several times by French painters. The funeral took place on the 24th of September, and was a sort of apotheosis. The body was carried with great pomp to Petersberg, and the guns of the two armies were fired on both sides of the Rhine in honor of the young hero.

There was a second funeral after the first, by the desire of Kléber. Marceau's remains were cremated and a pyramid of stone was placed over them. On the marble urn which contained the ashes was inscribed this device: "Hic cineres, ubique nomen." Lord Byron, on passing before the tomb, composed verses which will do more for the memory of Marceau than all the biographies.

Correspondence.

CITY GOVERNMENT.

To the Editor of The Nation:

Sir: The interesting letter of Mr. Rowe from Berlin tempts me to recur to this fruitful subject. Having read Mr. Shaw's essays and a good deal of similar literature, I am led to the conclusion that we have very little to gain from foreign methods of city government, probably owing to differences of social condition, and that we shall have to work out the problem for ourselves.

I have had from the start an utter disbelief in the London County Council. The attempt to govern a large city by means of a numerous elected body, precisely in principle like our City Councils or Boards of Aldermen, without any executive head or authority of any kind, and working by means of committees, must either end in total failure—of which signs are not wanting—or else, for some reason, the population of London offers very different material to govern from that of New York or Boston. The "Magistrat" of Berlin, reported by Mr. Rowe as a sort of committee evolved from a large council by second election, may work well there, but imagine such a committee elected for six or twelve years by the Board of Aldermen to govern New York! The reign of Tammany would appear a blessing in comparison. We have no "King of Prussia" to keep them in order, and I think there are few Americans, especially among those who have visited Berlin, who would not prefer to bear the ills we have rather than look to any such remedy as that. So of Paris. We have not and cannot have anything like the "Prefect of the Seine."

What is the fundamental principle upon which our city as well as all our governments rest? It is, in theory at least, that they shall be carried on in accordance with the wish of the majority of the people. I say in theory, because we neutralize it from the start by basing elections upon plurality, which of itself is fatal to the hope of good government. We then proceed to diffuse power and responsibility so that the majority of the voters cannot understand how the Government is carried on—who deserves praise and who blame—or how to apply their efforts so as to obtain good results. And so, in spite of the kicking and shaking administered to them with about as much logic as would be implied in beating a steam-engine, they grow more and more indifferent and apathetic, and leave politics to the small minority who do understand the subject and how to apply their efforts so as to produce results beneficial to themselves. The simplification of the machinery is the prime necessity of our politics as much as in any operation of mechanics.

I should like to quote in italics the whole of the last three paragraphs of Mr. Rowe's letter, but can only express my unqualified commendation. They are doubly valuable as coming from one who has the much-vaunted government of Berlin before his eyes. One point, however, it seems worth while to reinforce, and that is where he shows that our city governments are no different in principle from the State and national, the one being no more a business corporation than the others. The same voters, as far as they go, elect a mayor and a city council, a governor and a legislature, a president and congress, and the failure of results and the causes of that failure are throughout the same. The real difference is in the fact that the State and Federal governments are carried on under constitutions supposed to be established by the people, while city government is under a charter granted by the State. The superiority of foreign cities, such as it is and so far as I can make out, depends less upon their local organization than upon the fact that there is more or less a strong Government over them, backed by the habits and traditions of centuries. The lesson we need to learn, therefore, is the necessity of strengthening the State, not by resorting to either monarchy or aristocracy, but by making its Government really responsive to the wishes of the mass of the people instead of abandoning it to the schemes of wire-pulling politicians and the lobby. G. B.

Boston, September 30, 1892.

THE SECRET BALLOT IN MARYLAND.

To the Editor of The Nation:

Sir: While reading your recent editorial on "Party Value of a Secret Ballot," I was forcibly reminded of an incident occurring at the polls here during our last Congressional election, when we elected our Democratic candidate in the Sixth District of Maryland, which was then supposed to be the Gibraltar of Republicanism in this State. I had just deposited my secret ballot, and lingered a few moments in conversation with the inspectors of election, when a venerable looking colored man came from the stall adjoining the one I had occupied while marking my ticket; he held his hat in his hand, and, after depositing his ballot, made a most courteous bow to those present, saying: "Good day, gentlemen. I thank God I have lived to see the day that I cast my first respectable vote without interference from any man!"

In connection with the secret ballot in Maryland it seems an interesting coincidence that our successful candidate for Congress, Gen. W. McM. McKaig, was the original introducer of the secret-ballot system in our Legislature. He was then our State Senator. He was also the first beneficiary of this act, as he was elected Mayor of the city of Cumberland at the first election held under the new system in this State. J. P. G.

Cumberland, Md., September 26, 1892.

THE NAMING OF AMERICA.

To the Editor of The Nation:

Sir: It is to be regretted that so interesting and timely an article, and one destined to so wide a reading as Mr. Mason's "The Baptismal Font of America," in the October *Harper's*, should be marred by an unhappy misprint or blunder in its most critical passage, the translation of Waldseemüller's suggestion of the name. The original reads:

"Nunc vero et hae partes sunt latius lustratae et alia quarta pars per Americum Vesputium (ut in sequentibus audietur) inventa est quam non video cur quis jure vetet ab Americo inventore sagacis ingenii viro Amerigen, quasi Americi terram, sive Americam dicendam, cum et Europa et Asia a mulieribus sua sortita sint nomina."

The important part of this passage Mr. Mason translates:

"I do not see why we may justly refuse to name it America, namely, the land of Americus or America, after its discoverer Americus, a man of sagacious mind, since both Europe and Asia derived their names from women."

The correct rendering is: "I do not see why any one may justly forbid it to be named Amerige, that is, Americ's Land, from Americus the discoverer, a man of sagacious mind, or America, since both Europe and Asia chanced to receive names of women."

The important point, which does not appear in the first version, is that Waldseemüller suggested *two* names for the New World. The first, Amerige, is made up from the Greek word *ge* and a genitive form of the Latin name Americus with the last part cut off for euphony. This piece of pedantry came naturally enough to the man who, in accordance with the fashion of the time, devised the Græco-Latin compound Hylacomylus as an equivalent of his own name. The thought, however, that Europe and Asia received names from women leads him to make the much happier suggestion of the feminine of Americus.

That Waldseemüller suggested *two* names,

and that we might possibly be living in *Amerige* to-day had his fellow-geographers all had the same weakness for classical compounds, is not even hinted at in most of the books. As Mr. Mason has given a photographic copy of the original text, it is perhaps superfluous to call attention to two mistakes in transcription, viz., *haec* for *hae*, and *fortita* for *sortita*. EDWARD G. BOURNE.

ADELBERT COLLEGE, CLEVELAND,
September 25, 1892.

THE BOSTON PUBLIC LIBRARY.

TO THE EDITOR OF THE NATION:

SIR: The hopes of one student were mightily raised when Mr. Samuel A. B. Abbott averred that there was "*not a particle* of foundation" for the statement that the Boston Public Library "no longer grants to persons actually engaged in authorship the privilege of drawing books, though non-residents." Certainly I knew there were several particles of foundation, at least, for the statement, but I inferred that the Trustees were not aware of such facts, and were determined they should not exist. I therefore ventured to address the President of the Board, saying this, and asking, for the reason that I am writing a course of lectures for the Lowell Institute, on the History of Science, that I be allowed to borrow Gilbert's treatise, 'De Magnete.' I offered, at the same time, if desired, to deposit $50 as security for the book, which usually fetches about $35 in the market. My letter was returned to me by Mr. Abbott unanswered. I wonder how the kingdoms of this world appear when viewed from that awful pinnacle, the Presidency of the Board of Trustees of the Public Library of the City of Boston. What funny little creatures ordinary men must seem! Such a situation would be quite enough to render many a poor gentleman so dizzy that he would not know whether he was telling the truth or not. C. S. PEIRCE.

Notes.

MR. WHITTIER'S literary executor, Mr. Samuel T. Pickard, who has been charged with the preparation of the poet's Life, desires the loan of any autograph letters that may be serviceable to that end. Mr. Pickard's address is No. 44 Exchange Street, Portland, Me.

Additional announcements by Houghton, Mifflin & Co. are, 'An American Missionary in Japan,' by Dr. Gordon; 'Children's Rights,' by Mrs. Wiggin; 'Zachary Phips,' an historical novel by E. L. Bynner; and a holiday edition of Longfellow's 'Evangeline,' with Darley's illustrations reduced.

Mr. Edward Eggleston, Elizabeth Eggleston Seelye, and Allegra Eggleston will collaborate in a series of popular historical works, called "Delights of History," beginning with 'The Story of Columbus.' D. Appleton & Co. will be the publishers.

Ginn & Co. publish directly 'The Place of the Story in Early Education, and Other Essays,' by Sara E. Wiltse, with an introductory note by President G. Stanley Hall.

We have referred more than once to the effect of the new copyright legislation in making the publication of plays again profitable. Mr. W. S. Gilbert had already printed the most of his plays, and Mr. Bronson Howard had put two or three of his into print. Mr. Pinero is now engaged in publishing regularly all his more successful plays. It is this state of affairs, perhaps, which has helped to bring about the discussion now raging in London as to the reason why the British novelists do not write for the theatre. Some of them do, notably Mr. Robert Buchanan and Mr. Hall Caine. Now it is announced that there will shortly be published a volume containing three plays written by Mr. Robert Louis Stevenson in collaboration with Mr. W. E. Henley. One of these plays, "Deacon Brodie," has been acted in New York and elsewhere in America. Another, "Beau Austin," has had a few experimental performances in London. The third, "Admiral Guinea," has not as yet been produced anywhere. None of them is of recent writing; indeed, all three of them were privately printed at least six or seven years ago.

The revived interest in the South Sea marked by recent English fiction and by the republication of Mr. Stoddard's 'South Sea Idylls' is fanned afresh by the U. S. Book Co.'s reprint of Herman Melville's works, beginning with 'Typee' and its sequel 'Omoo.' Mr. Arthur Stedman prefixes to the first-named narrative a biographical sketch of the author, whose portrait also accompanies the same volume.

We have already noticed that portion of the "*Gentleman's Magazine* Library" (Houghton, Mifflin & Co.) which relates to English Topography. This series is compiled by George L. Gomme, and the second volume, recently issued, covers the notes relating to the counties of Cambridge, Cheshire, Cornwall, and Cumberland. Its 328 pages, however, do not contain anything very interesting; the only article of any literary merit being that on Morwenstow in Cornwall, written by its vicar, the late brilliant and eccentric poet, R. S. Hawker. As a supplement to a good gazetteer of England, these volumes have a certain value, though the contributions to the old *Gentleman's Magazine* were of course fragmentary and incomplete. The old engravings were the most valuable part, and these are omitted in the reprint. We should have preferred the illustrations without the text, if either was to be dropped.

The twelfth edition of Hoblyn's 'Dictionary of Terms Used in Medicine and the Collateral Sciences' (London: Whittaker; New York: Macmillan) is chiefly, as the editor, Dr. Price, advertises in the preface, changed by way of additions, and among these he specifies the newer words and phrases relating to bacteriology (though we observe that *microbe* is not introduced), and the indication of the period in which celebrated physicians lived. Public opinion, it appears, has not sanctioned the reformatory attempt to substitute *k* for *c* as the equivalent of the Greek *k*, so the *kako-*, *kephal-*, and *kerato-* of the tenth edition have been restored to their place among the *c*'s. The Greek of the Dictionary, by the way, is not to be judged for its accuracy by the unfortunate κήλμ (for κήλη) which still disfigures the preface to the tenth edition, here repeated.

Although since the foundation of the Grolier Club in New York there are fewer writers who refer to the famous collector as though he were a binder—a blunder made by the London *Daily Telegraph* more than once—yet the facts of Grolier's life are little known. The standard book on the subject is M. Leroux de Lincy's 'Recherches,' published in Paris twenty-six years ago. Mr. W. L. Andrews has now prepared a brief biography, 'Jean Grolier de Servier, Viscount d'Aguisy. Some Account of his Life and of his famous Library.' This is a pleasantly but carelessly written booklet, of interest chiefly from its illustrations, some of them in colors, reproducing the Grolier bindings now in New York. These plates, prepared by Mr. Bierstadt's artotype process, are excellent, but it is to be regretted that they represent almost the same bindings as were admirably reproduced in the *Century*, two or three years ago, to illustrate an account of the Grolier Club. The typography of Mr. Andrews's little book is such as we expect from the DeVinne Press.

Prof. Charles Letourneau contributes to the Contemporary Science Series (London: Walter Scott; New York: Scribners) a treatise entitled 'Property: Its Origin and Development.' He begins with an account of property among animals, and, following the institution down through savage and barbarous times, leaves it at the end of the feudal system. While he has shown great industry in collecting all sorts of information, much of which is not without interest, his work is wholly uncritical. The tales of all travellers are listened to by him with the credulity of an Herodotus, and it makes little difference whether they concern the institution of property or not. The whole of Plutarch's account of the legislation of Lycurgus is accepted as if it were the testimony of an eye-witness. Of course much that is cited by Prof. Letourneau is from trustworthy informants, but the book is not of a kind to be admitted into any really scientific series.

T. Y. Crowell & Co. publish a little volume, entitled 'Equitable Taxation,' which is made up of seven essays by different authors. The appearance of such a book indicates that the subject is attracting the attention of students, but we find nothing in these essays that shows any originality of thought; and they are too slight to contain many of the lessons of experience.

Of somewhat more importance is a book entitled 'Who Pays Your Taxes?' compiled by Mr. Bolton Hall, issued by the authority of the New York Tax Reform Association, and published by Putnams in their "Questions of the Day" series. Its chief interest lies in the fact that it shows the existence of an aggressive movement to abolish taxation of personal property and concentrate it upon real estate.

'English Social Reformers' is the title of a work by H. de B. Gibbins (London: Methuen & Co.) which reviews the life and deeds of a number of men who have sought to improve the condition of their fellows. The selection ranges from 'Piers the Plowman' to Carlyle and Ruskin. Its spirit may be judged from the statement that Lord Shaftesbury incurred "opprobrium, contempt, and misrepresentation from interested people like the late John Bright."

Social questions have aroused such intensity of feeling in England of late years that it is difficult for a foreigner to obtain information as to matters of fact that is not distorted by the prejudices of the informant. 'The Rural Exodus,' however, by P. Anderson Graham (London: Methuen & Co.), is an impartial discussion of the circumstances of the agricultural laborer in England, and, as it is based upon the personal observation of the author, continued through many years in most of the English shires, it is a really valuable contribution to our knowledge of a problem—the movement of population from the country to the towns—which is not less perplexing in the New World than in the Old.

The return of the cholera has brought down from the booksellers' shelves two works, both written in 1885 and both especially designed for professional readers. One, 'A Treatise on

Asiatic Cholera' (William Wood & Co.), edited and prepared by Dr. E. C. Wendt and others, is practically an encyclopædia of the history and, as far as known, of the cause, course, treatment, and prevention of the disease. It is too voluminous to assist in an emergency, and too professional, except in the historical division, to interest the inquisitive layman; but it well represents the state of knowledge seven years ago, and the student who masters it will have an easy task to acquire the small gain made since.

The other, 'A Treatise on Epidemic Cholera,' by Prof. A. B. Palmer, M.D., etc. (Ann Arbor, Michigan: *Register* Publishing House), goes over similar ground, but with the exclusion of much matter. The section on treatment, which is the vital one in both, is eminently wise and practical, and is based on an extensive personal experience which was manifestly guided by cool thought and energetic action. By virtue of what he has seen and done, this writer breathes into the subject a life that is unattainable by those whose descriptions come from the library and not from the bedside. The novice will find marked out a judicious course for all the sudden phases of this frightful and swift disease. The practitioner who has treated cholera will study with pleasure and advantage the career of so intelligent an observer under similar conditions.

The State Historical Society of Wisconsin has just published the twelfth octavo of its collections. This volume of five hundred pages opens with a memoir of Dr. Draper, who died a year ago after a long life dedicated to building up the Society, and who made it sole heir of his fortune. More than a hundred pages are filled with papers relating to the early Northwest, gleaned from Canadian archives. Papers of two early Indian agents, and a remarkable roster of employees in the service of the American Fur Company, are also here preserved. A specially noteworthy article is the journal of a commissioner sent by the Secretary of War as recently as 1830 into Wisconsin "to provide a country and a home there for 2,240 New York Indians among Menomonees and Winnebagoes." This was two years before the first land-sale in Chicago, and while it was still thought that the region beyond the lakes was too far off for agricultural settlement. Among other monographs are the story of the Black Hawk War, by Mr. Thwaites, Dr. Draper's successor; "Early Schools in Green Bay," the oldest town in the State; "How Wisconsin Came by its Large German Element"—a percentage larger than in any other State; and "The Planting of the Swiss Colony at New Glarus," by one of the first comers in 1845. The rise, progress, and influence of this unique establishment were set forth in the *Nation* as long ago as No. 944. There is also an article by a veteran missionary among the Chippewas, explaining the significance of geographical names in and near Wisconsin derived from the Chippewa dialect.

A. Lovell & Co. have begun bi-monthly publication of a series of "American History Leaflets, Colonial and Constitutional," edited by Profs. A. B. Hart and Edward Channing of Harvard. Four of these consist of the letter of Columbus to Santangel announcing his discovery, with an extract from his journal; the Ostend Manifesto of 1854; extracts from the sagas describing the voyages to Vinland; and extracts from official declarations of the United States embodying the Monroe Doctrine. These valuable little tracts, for which the editors bespeak suggestions as to subjects, are sold at five or ten cents each, or can be had by the year for thirty cents.

Mr. Roland Trimen, F.R.S., Curator of the South African Museum at Cape Town, makes his report to the Trustees for 1891, from which it appears that his time, together with that of the Assistant Curator, Mr. L. Péringuey, has been largely occupied with researches in South African entomology, which it is hoped will soon be published. Numerous and varied specimens have been acquired by the museum during the year, but insect pests are the source of much difficulty in the permanent preservation of the skins of the larger animals, of which the museum possesses a goodly representation. The unfortunate loss by theft of a number of valuable diamonds and nuggets is recorded. The museum is soon to receive an important acquisition, no less than a plaster cast of the skeleton of the great extinct reptile *Pariasaurus baini*, from the South African Karoo, discovered by Prof. H. G. Seeley, and now in the British Museum, whose Trustees have forwarded the cast to the exhibition now in progress at Kimberley, South Africa, on the conclusion of which the model is to be removed to Cape Town. The old museum building adjoining the Parliament House has long furnished quarters wholly unsuitable for its important collections, but the extension of the premises has hitherto been delayed by the unfavorable condition of the revenue, together with the prospect that the new museum might form part of the projected University Buildings. A further effort, however, is making to erect an independent institution at an early date.

In a recent number of the London *Times* a page is given to a facsimile reproduction of a leaf of the newly discovered papyrus of the Septuagint shown at the Oriental Congress held in that city. The whole manuscript consists of sixteen leaves, written on both sides, each about 10 inches by 7 inches, and is bound in a book form "in a primitive but very careful manner." It contains the greater part of Zechariah and parts of Malachi, the text differing somewhat from that used by the translators of our English Bible. Its age can only be conjectured, though the uncial characters in which it is written and the absence of divisions between the words indicate an antiquity as great as, if not greater than, that of the oldest manuscripts of the New Testament—that is, as early as the fourth century. Prof. Hechler of Vienna, in concluding his description of the papyrus, urged upon the British Government its "pressing duty" to institute an organized and scientific search for papyri in Egypt. "It was impossible to forecast what surprises might be in store for us, or what treasures might be placed at the disposal of modern scholarship."

Mr. F. Gutekunst, Philadelphia, issues three fine panel portraits, half life-size—one of the late George William Curtis and two front views of James Russell Lowell, between which there is considerable choice, though each is desirable as a memorandum. The series to which they belong is a notable one, as our readers are well aware.

—Mr. Paul Leicester Ford has just edited a convenient little volume containing those writings of Columbus which illustrate his discoveries (C. L. Webster & Co.). He makes use of English versions heretofore published, but he has not always selected the best, and new translations would have been an improvement in some cases. The editor's introduction is a curious specimen of hero-worship, through thick and thin. He acknowledges the truth of all the charges which have been brought against the Admiral for incontinency, desertion of wife, treachery, deceit, cruelty, oppression, craziness, and all else, but argues that any delineation of the personal character of a man of the fifteenth century which uncovers these qualities is a projection backward of the nineteenth, and is therefore "not critical." It seems to weigh nothing with him that the intellectual and moral mentors of all ages, civilized and even barbaric, have denounced these traits as unworthy of countenance. He seems to be unaware that there are no so severe defamers of the personal character of Columbus as those accusers of the Admiral, in respect to one and all of these characteristics, who should have been born, to suit Mr. Ford's views, in the nineteenth century, but who happened to see the light as contemporaries of the man they contemned.

—The latest fruit of the present revival of interest in the mysterious foundling of Nuremberg is Max Schütte's 'Kaspar Hauser: Das Rätsel ist nicht gelöst' (Hagen: Risel). The pamphlet is a reply to Baron von Artin's recently noticed brochure. As regards the enigma in question, Herr Schütte confesses at the outset that he has no solution to offer, and doubts whether it ever will be cleared up. He is inclined to regard Kaspar Hauser as a swindler, admits that he must have been a long time in close confinement, and assumes that he was a common jail-bird, forgetting that on this supposition there ought not to have been the slightest difficulty in ascertaining why and where he had been imprisoned. The most important proof adduced by Von Artin, namely, the letter of Grand-Duke Ludwig to Von Berstett, is passed over very lightly. Its genuineness is questioned on the ground that such documents have often been forged and people deceived thereby. Even if genuine, our author thinks it does not necessarily refer to Kaspar Hauser, but may have been called forth by "eine Attake auf ein Weib"; for "old Ludwig was a great sinner" and led a scandalous life. The Grand-Duke, although an inveterate libertine, is not known to have had any liaison in Nuremberg, nor is it customary for a sovereign, however shameless, to write to a minister of state beseeching him to see to it that the peace of the realm is not disturbed simply because he has failed in an intrigue with a woman. On the whole, Herr Schütte's arguments are so weak, and his interpretations of the facts so unsatisfactory, that they tend to confirm in the minds of his readers the theory which he endeavors to refute.

—Still another of the European universities has announced its decision that in the opportunity for university education and university degrees there shall be, as in religion, "neither male nor female." This time it is the University of Glasgow that speaks. During the past summer the Universities Commissioners have empowered the courts of the several Universities of Scotland to admit women to graduation in such faculty or faculties as each court may think fit, and to provide for the education of candidates either in mixed classes of men and women or in separate classes. Almost immediately after this ordinance was issued, an offer was made by the Council of Queen Margaret College to hand over to the University of Glasgow the government, the endowments present and prospective, and the buildings of the College—"the endowments and buildings to be reserved for the exclusive education of women, and the College to be-

come incorporated with the University as its department for women." The College, which, by the acceptance of this offer, has become an integral part of the University of Glasgow, began its existence in 1877 as an association for the higher education of women. In 1883, with the help and encouragement of some of the University professors who had been active in teaching and organizing, the Association incorporated itself as a college. In 1884, large and handsome buildings, about ten minutes' walk from the University, were bought for the College by Mrs. Elder. These buildings have, with the consent of the generous donor, now passed into the control of the Court and Senate of the University, and Queen Margaret College has, at a single step, passed over the ambiguous stage of "affiliation" into the unequivocal dignity of corporate membership.

—Dr. and Mrs. William Huggins of London have contributed to the Proceedings of the Royal Society during recent months a series of papers on that remarkable new star which the astronomers call Nova Aurigæ. This star's striking increase in magnitude of late renders it worthy of special note, and the spectroscopic observations and deductions will not be found of less interest. Throughout February and early March the star's light fluctuated continually, declining very slowly the while from easy naked-eye visibility at the 4½ magnitude down to the 6th magnitude, when the eye could just detect it. In the second week in March, the strange vibrations of light-intensity probably due to commotions attendant upon the cause of this stellar outburst, calmed down; and the star fell rapidly and regularly to the 11th magnitude, March 24, and then again down to the 14½ magnitude April 1, when a telescope of large dimension would have been required in order to see it at all. In this condition of inactivity it remained until August, when there was a sudden outburst which is reported to have carried it back to the 9th magnitude. Altogether, the fluctuations of its brightness have been apparently lawless, and the complex character of its spectrum has given rise to much discussion.

—We have no knowledge of the distance of Nova Aurigæ, but the assumption is not an improbable one that its distance was of the same order of greatness as that of the Nova of 1876, for which Sir Robert Ball failed to detect any parallax whatever. In this case the light emission so suddenly set up, certainly within two days and possibly within a few hours, was probably much greater than that of our sun; yet within fifty days after it had been discovered, at the end of January, its light had fallen to about one-three-hundredth part, and in some three months to nearly the one-ten-thousandth part. As long as the Nova's spectrum was observable, the chief lines remained without material alteration of relative brightness. Under what conditions could we suppose the sun to cool down sufficiently for its light to decrease to a similar extent in so short a time, and without the oncoming of material changes in its spectrum? It seems scarcely conceivable that such phenomena can be due to the conversion of gravitational energy (*e.g.*, from collision with bodies already possessed of considerable motion) into light and heat. The hypothesis of prodigious tidal disturbances caused by a near approach without collision, on the other hand, appears to explain the facts so well that Dr. Huggins is disposed to abandon the view advanced by Dr. Miller and himself, in the case of the Nova of 1866, that possibly chemical actions between the erupted gases and the outer atmosphere of the star may have contributed to its sudden and transient splendor—a view not at all impossible, but rendered less probable by the advance of our knowledge of the light-changes of stars.

—An official report has been published in the Pekin *Gazette* of the investigation ordered by the Chinese Government in respect to the anti-foreign literature which was the chief incitement to the recent massacres. This consisted of leaflets, pamphlets, placards, ballads, and pictures, many of them horribly indecent, which were circulated by millions in the interior of the empire. Their authorship was traced to one Chou Han, a high official in the Province of Hunan, and it was to secure his punishment that the investigation was made at the urgent demand of the foreign representatives in Pekin. The report is singularly characteristic of the Chinese. It alleges that Chou Han was not the writer of the placards, but that his name was used as that of a person in high position, in order to attract more attention; furthermore, that he is a madman, who has "spiritualistic fancies, being a great believer in divination by the planchette," and that he has disappeared, It is proposed, nevertheless, that, although innocent of the charge, he should be temporarily cashiered and kept at home under surveillance for enabling his name to be used for bad purposes through his conduct. The punishment of two booksellers, by a flogging of eighty blows and three months' wooden collars, is recommended, as well as that a strict search should be instituted for the real authors of the placards. The main purpose of the report, which at the end affirms the freedom of any to become Christians, is apparently to shield Chou Han and to defeat the foreign ministers. In regard to the accusations made in these publications against Europeans of murder and mutilation, Dr. Macgowan, long a resident in the country, has published a statement to show that from the point of view of Chinese medicine they are far from preposterous. He refers to a Materia Medica, "the only authoritative work of the kind in the Chinese language, which gives 37 anthropophagous remedies of native medicine." Among other things, "human muscles are supposed to be a good medicament in consumption, and cases are constantly recorded of children who mutilate themselves to administer their flesh to sick parents." It is essential in all these cases that the recipient should be kept in profound ignorance of the nature of the potion administered, and in no case is the mutilation to be performed for an inferior, "as by a husband for a wife, or a parent for a child." This method of treating diseases is apparently on the increase, far more than is indicated by the occasional imperial decrees authorizing honorary portals to be erected in honor of men, and particularly of women, for these flesh offerings, as only the higher classes can obtain such a distinction.

RECENT NOVELS.

A Spoil of Office: A Story of the Modern West. By Hamlin Garland. Boston: Arena Publishing Co.

A Little Norsk, or Ol' Pap's Flaxen. By Hamlin Garland. D. Appleton & Co.

Silhouettes of American Life. By Rebecca Harding Davis. Charles Scribner's Sons.

The Naulahka: A Story of West and East. By Rudyard Kipling and Wolcott Balestier. Macmillan & Co.

The Average Woman. By Wolcott Balestier. With a preface by Henry James. U. S. Book Co.

The Wrecker. By R. L. Stevenson and Lloyd Osbourne. Charles Scribner's Sons.

Beggars All. By L. Dougall. Longmans, Green & Co.

Capt'n Davy's Honeymoon: A Manx Yarn. By Hall Caine. D. Appleton & Co.

THE flavor of the soil which Mr. Garland unquestionably succeeds in giving to his stories of Western life is so palpably due to the bludgeon-like quality of his realism that what little charm might be got from the commonplace histories of his Bradley Talcotts and Bert Gearhearts is entirely lost. Neither his story of 'A Little Norsk,' which, under the name of its sub-title, 'Ol' Pap's Flaxen,' has lately ended as a serial in the *Century*, nor 'A Spoil of Office,' is deeply interesting. There is a directness about the telling, however, and an evidence in them that they are true to the facts as the author has seen them, which makes them readable. But being true to facts is not, necessarily, being true to nature. Facts do not make art, nor do they make literature; and if the novelist—who, in telling a story which is a fiction, acknowledges to a certain extent this truism—insists upon furnishing that story with but a setting of bare facts, he must not be disappointed if even their completeness and accuracy fail to entitle his work to be called literature. One notices, too, a certain carelessness in Mr. Garland's workmanship which might lead one to distrust the accuracy of his observations without shaking one's faith in his honesty. And, on the whole, if a book does not show genius, perhaps honesty is the next best thing.

Mrs. Davis has gathered, under the suggestive title, 'Silhouettes of American Life,' a baker's dozen of short stories—sketches rather—which, in spite of their lightness, their briefness both of matter and interest, are worth the reading. The great poets, as Lowell says, have found man more interesting than nature; have considered nature as no more than the necessary scenery, artistically harmful if too pompous or obtrusive, before which man acts his tragi-comedy of life. And so, as extremes meet, the average reader usually finds his liking following in similar lines. Long and labored descriptions bore him, or, more often, merely serve as an opportunity for indulging in the art of skipping. Mrs. Davis is always ready to place her mountains and her woods in due prominence, and is evidently a lover of the out-door world; but it is the human interest, after all, which is first with her and which gives the best value to her work. It helps to make the tales natural as well; for in a short story which has a genuine bit of human interest to start with, there is no need for striving after effects, either scenic or dramatic. "A Wayside Episode" is perhaps the poorest, because the most artificial, of the collection. The situation seems impossible, and that is enough to spoil it, even had the incidents actually happened. Among the rest, where there is such an even range of excellence, it would be hard to pick.

After a somewhat lengthy preamble, the key-note of 'The Naulahka' is struck sharply, in the sentence—"So, leaving strife and desolation behind him, rode out into the desert of Rajputana Nicholas Tarvin of Topaz, Colorado." Imagination instantly prefigures the intended contrast of newness and freedom with age and acquiescent servitude, and warms to the coming combat between the West and East—Nich-

olas Tarvin against all India. But very soon it becomes clear that there is something wrong with 'The Naulahka,' that its fine promise is not being sustained, and that both faith and hope are to be severely tried in following Tarvin's quest for the necklace worth an exceptionally good king's ransom, supposed to be lying about in the Province of Gokral Seetarum, Rajputana, India. Chapter after chapter of dull talk and incidents irrelevant to the chief situation tempts the hasty judgment that Mr. Kipling has written himself and India out, and that the time has come for him to rest awhile on his laurels. It is natural that he should have to shoulder the onus of failure, for his collaborator was unknown to the public, and, besides, died before the completion of the book. Yet, confronted by the inferiority of 'The Naulahka' to his previously published work, it would be unfair not to take for granted a heavy handicap either in the effort to collaborate, from the beginning, in the loss of Mr. Balestier, or both.

Mr. Kipling's vivid, hit-or-miss style flashes out only at rare intervals in a short dialogue or phrase; it is never sustained through a long scene or description. His amusing, cocksure dicta are noticeably scarce, and, in the untidy "make-up," there is no hint that his natural method is almost rudely direct. Mr. Balestier was probably responsible for Tarvin in the beginning, when that strange mortal shows that he possesses in excess the initiative force attributed to him. His development may have been left on Mr. Kipling's hands and proved too much for him. Certain it is that, after reaching the city of Rhatore, Tarvin does nothing beyond seizing flagrantly favorable opportunities, either to find the necklace or to win his sweetheart away from devotion to the oppressed women of India. He wastes his time in dancing before the King, who is consumed with mirth beholding his antics, and whose translators confess themselves baffled by Tarvin Sahib's phrases. Well they may be, for his talk has generally the air of a compilation from a dictionary of American slang which has been arranged and explained by an Englishman. His manners make a wild caricature of the free-and-easy ways of the West, and, for the figure of a romantic adventurer, he has no qualification except physical courage.

The probable future of Kate, with her mania for morality, after she has intrusted herself to such a conscienceless monkey, is a dark subject for speculation. Kate's experiments in civilizing India form the moral of the tale. Mr. Kipling of course could not permit anything but defeat to come to a slip of a girl arraying her frail enthusiasms against "thousands of years of tradition and training and habits of life." Nevertheless, girls in their generous, ignorant youth will probably continue to wage unequal war against the devil, and may at last cause him some discomfort in even so inaccessible a fastness as an Eastern harem.

Mr. Balestier's three short stories of Western American life, published under the title, 'The Average Woman,' show greater ability and promise than anything in 'The Naulahka' that may be with probability attributed to him. Each incident is well chosen to display some of the apparent irrelevancies and queer contradictions of human character, and the interest is closely confined to one issue. It is doubtful whether the women justify the pretension implied by the title to a profound and exhaustive study of that sex which, if it may include such a savage bully as "Reffey," can be called the "gentler" one only by a painful deference to convention. A clever young man easily makes the mistake of supposing that he could have given Solomon points about women, and Mr. Balestier seems to have been slightly in thrall to that delusion. Berna, the heroine of "Captain, My Captain!" and the lady who, in "A Common Story," confides the sting and sorrow of unrequited love, are typical of classes of women whose intelligence is not dazzling; but "Reffey" is that flashy, noisy creature, spectacular and infinitely vicious, whom theatrical people have in mind when they talk about a strong creation. Mr. James's prefatory essay is only a tribute to friendship. His sincere admiration and affection for Mr. Balestier are not expressed with his customary literary fluency and grace, but he makes us feel all the more, perhaps, that the world is the poorer through the loss of his friend.

It is an excellent rule for a novel-writer to sustain the facts bearing on his case, no matter what the cost in repression of great ideas. A rigid observance of the rule will not make his novel more like the whole of any life, most of whose incidents are totally irrelevant to the main facts, but it will make more satisfactory and agreeable reading, besides what we call, perhaps for want of a more definite phrase, a better work of art. As there are occasional people born with such a store of vitality that they continue to live exultantly, almost for ever, in insolent defiance of every rule laid down by the wise for the preservation of health, so there are, though even more rarely, people born with such an astounding literary gift that they can afford to fling to the winds the best of rules and every conceivable theory of art. Of these *were* Sir Walter and Victor Hugo and Thackeray, and of these (*pace*, idolaters of the splendid past!) *is* the author of 'The Wrecker.' 'The Wrecker,' it is true, owns two authors, but, however valuable Mr. Osbourne's collaboration may have been, the long yarn as it is spun in print is Mr. Stevenson's. It is a curious fact, and not specially comforting to Mr. Kipling, that the very same faults which irritate and exasperate the reader of 'The Naulahka' appear in aggravated form in 'The Wrecker,' where their effect is to inspire deep and lasting joy. The first shift of the scene, from the Marquesas to the "Muskegon Commercial Academy," rudely shocks the sense for literary propriety; but, at this point, the office of literary critic is promptly vacated by a person of feelings and given over to Dryasdust, with his *flair* for faulty articulation. We pass from Muskegon to the Latin Quarter in Paris, back to San Francisco by way of Uncle Adam's respectable household in Edinburgh, and have recovered from the agitating auction of the *Flying Scud* before we reflect that we have been invited to read the tale of a wrecker, and have only now, after two hundred pages, got fairly on his trail.

The extraordinary bidding for the wreck on Midway Island is the first hint that we are approaching the knot of the story, and, when the wreckers have inspected their purchase, driven hard over a coral reef and stuck head down in the sand, we perceive that the knot is a very tight one. Leisurely and rambling is the process of untying, dooming to hopeless confusion the mind that insists on placing the hero of each startling adventure and attaching him definitely to the *Nora Creina*, or the *Flying Scud*, or the *Currency Lass*. The author's skill in investing whatever he chooses to tell with absorbing interest is more noticeable in the last half of the book even than in the first, for the consciousness that there is a mystery of abysmal depths naturally rouses an intolerance of digressions. Here the only digression which is not diverting is the account of the journey undertaken by Dodd and the shyster, Bellairs, to find Carthew, the man who could tell all if he would. A great many men of widely different nature and character appear in the story (there is no woman worth mentioning), and this Bellairs is the only unreal one among them. Pinkerton shows exaggeration and a superficial acquaintance with the model, yet he is, on the whole, impressively real. But Bellairs is a tiresome wretch, no more like any one you might happen to meet than are Uriah Heep and similarly objectionable persons. Dodd could have found Carthew quite easily without Bellairs, and he was of no sort of use in forcing Carthew's hand. Carthew parts with his secret perhaps a trifle too readily, but the temptation to tell his wonderful tale once in a while must have been irresistible. In his climax he positively revels in carnage and drenches all hands with gore. But supposing that mercy had been shown to the crew of the *Flying Scud*, and that even Brown had not "gone the same way," what would have become of Carthew and the rest of the mild-mannered castaways? In such a desperate strait there was only one way out—the way which the author foresaw when he contrived the situation. There is no doubt that, for a person of uniformly gentle sentiment, Mr. Stevenson takes a strange delight in a fight to the death, and that he would not experience a qualm at the sight of the whole Pacific turned red with human blood.

The author of 'Beggars All' has done three rather difficult things well: she has so deeply considered and clearly expressed one character that his highly improbable crime loses most of its improbability and all of its sensationalism; she has shown how a group of perfectly commonplace women may be charming in every relation of life; and she has proved that broad views about life are not incompatible with rigid religious orthodoxy. Hubert Kent's history illustrates some of the worst results of modern philanthropy, applied to the upbringing of nobody's children. It is not a condemnation of philanthropic effort, but a shrewd and instructed criticism, pointing out that nobody's child, even as somebody's, may have an individuality, and that better results might be obtained through some slight recognition of that possibility by those in authority in orphan asylums and other receptacles for superfluous children. Kent's intelligence raised him socially above his wretched beginnings, but his scant native morality was reduced or distorted by the system of the Croom Orphanage, out of which he issued with only one idea, a cynical belief in his right to get a share of power and luxury in the quickest and easiest way. The means he adopted make the story; and though the author carefully avoids comment on his arguments in his own favor, she can never be taken to believe them sound or exculpatory. Her feeling and judgment are expressed through the women who become closely involved in Kent's life, and are therefore the great sufferers from his crimes. Through the women, too, her religious faith is developed, and her position maintained that we are beggars all for human love and still more for God's help and mercy. The author's method and style are remarkably good and distinctly modern. Though she has been hitherto unknown, at least in America, she has the practised touch. Her unadorned, strong phrases reflect a clear intelligence and

a thorough appreciation of what is now demanded of those who would make themselves felt in literature.

Mr. Hall Caine's story, 'Capt'n Davy's Honeymoon,' echoes a favorite device of the Elizabethan and Restoration comedy. A silly quarrel between man and wife is adjusted by the intervention of a friend of each working in collusion. In the old dramas, not excluding Shakspere's, there is something artificial and mechanical about this stratagem which jars on modern sense for reality. It is a wholly objectionable situation in comedy unhallowed by age and the tradition of respect. Mr. Caine's use of it results in a particularly uninteresting and wooden performance. To believe in the story for a moment, you have also to believe that Capt'n Davy and his wife were utter idiots, and then ensues indignation at being supposed willing to occupy yourself with their idiocy. Everybody knows that there are Manx cats—grotesque and abnormal pussies, but still pussies. Perhaps Capt'n Davy is a real Manx man—few are in a position absolutely to deny it, with proof; but all who read the story of his honeymoon may perceive that he is a departure from the normal type, and that his points of difference make him no less absurd an animal than is his compatriot cat. What has become of Mr. Caine's literary discretion? Has he lost it in his wanderings among the pictorial heathen, or is he really unconscious of anything ridiculous in filling the mouth of a more or less drunken Manx sailor with the poetic phrase of the flowery-tongued East?

HARRISSE'S DISCOVERY OF NORTH AMERICA.—II.

The Discovery of North America, etc. By Henry Harrisse. London: H. Stevens & Son. 1892.

We come now to Vespucius and the disputed voyage of 1497, in which Mr. Fiske has revived interest by the energetic way in which he has reënforced the Varnhagen theory of its authenticity, and his disdainful references to the opponents of that belief. He has depended largely upon what Harrisse had done in his earlier work on the Cortereals in relation to the Cantino map to substantiate the earlier efforts of Varnhagen. Harrisse at that time acknowledged that we must look to the voyage of 1497 as the source in large part of the delineation of the coast which corresponds to Florida in that early map which has become closely associated with Harrisse's name, though he was not the first to make it known. "The evidence set forth in connection with the Cantino map," says Mr. Fiske in his preface, "is especially significant." But Harrisse, in the present work, has quite as significantly, in vulgar parlance, "gone back on him"; for he devotes a special chapter to show why we need not resort to the Vespucian voyage to find a source for the Cantino Florida. It may be remarked, in passing, that Mr. Markham has within a month claimed that this coast is not Florida at all, except in the minds of those "who are not used to the examination of maps," but that it is merely some American coast which the maker of the map borrowed inexpertly from the cards of the Cortereals, as showing some part of their discoveries. In his list of voyages Harrisse mentions the Vespucian one of 1497, but doubts its authenticity, and while he is evidently inclined to avoid explicit denial, he leaves the matter, in his biographical sketch of Vespucius, just as many others have left it, a chronological puzzle. This is the dilemma as Harrisse puts it: Vespucius returned in October, 1498, as the Italian text of his letter avers, or in October, 1499, as the Latin text says. Harrisse accepts the latter date, for not very evident reasons. If 1499 was the year, Vespucius could not have started on a second voyage in the previous May, as he says he did. Moreover, good testimony says that Vespucius started on a voyage with Ojeda in the summer of 1499, so that he could hardly have done this and have got home from his first voyage in the following October. So the puzzle stands in Harrisse's figuring. Humboldt saw the difficulty, and preferred to think the dates were wrong rather than impugn Vespucius's integrity.

We now need to take up a few points of the controversy in detail. As respects the alibi which Navarrete, Muñoz, Humboldt, and very recently Markham claim to make out for Vespucius, and the evidence for which is discarded by Varnhagen and Fiske, Harrisse says that a careful search of the records in the Casa de Contratacion fails to establish it, for there is no trace of the Florentine navigator in the Spanish archives between January, 1496, and May, 1499; so that on present evidence, if Harrisse's search is not at fault, no alibi can be made out against the voyage. To account for the Floridian coast in the Cantino map, the judgment of Harrisse, revised since he published his 'Cortereals,' allows evidence enough to warrant the belief that numerous explorers had already been along this coast. Some of them were under the authority which Ferdinand and Isabella began to give on April 10, 1495, in defiance of Columbus's exclusive privileges; others were under patents granted by Henry VII. of England to English and Portuguese adventurers; and still others were the Normans and Bretons, who are reported as early as 1500 bringing home dyewood and monkeys from the American tropics, and of whom DeGonneville speaks in 1505 as mariners of Dieppe and St. Malo who "for some years past" have been in the habit of going to these regions. Therefore Harrisse's present decision is that these voyages are independent sources, which might have inspired the Cantino Florida without help from Vespucius. Again, Vespucius says he kept in sight of land all the way. If he did and his data were used in the Cantino map, why do we have gaps in the coast line of the Gulf of Mexico? It is only in the Stobnicza and Waldseemüller maps that we find such a continuity, and not in the Cantino nor in the Canerio map—to which Harrisse now introduces us, as being of but a little later date than the Cantino. It may be added that the Ruysch map and the Schöner globes have the same lack of continuity. Harrisse is of the opinion that Vespucius must have seen and approved the Cantino map, showing this break where he professed to know there was none. Further, there is no indisputable evidence that the northern coast of the Gulf of Mexico was coursed by any one before the Spaniards followed it in 1519.

Mr. Fiske makes a great deal of a rather curious typo-topographical discrepancy instanced first by Varnhagen, to which he constantly reverts, to show that so small a cause was at the bottom in large part of the discredit which has been heaped upon this voyage. The Italian text of Vespucius's letter gives "Lariab" as the place of his observations on the western coast of the Gulf of Mexico. The Latin text printed at St. Dié by the geographer of that cosmographical centre gives "Parias." Here is apparently bad proof-reading somewhere, either in one text or the other, and Mr. Fiske assumes it to be in the Latin text, because that was the text better known, and could more widely influence opinion by making it appear that Vespucius claimed to have been in the Gulf of Paria (Parias) in 1497, when everybody knew that Columbus had first visited those waters in 1498. Mr. Fiske prefers to account thus for the opprobrium under which Vespucius rests with most critics, rather than to strengthen the Varnhagen theory by ascribing the bad proof-reading to the Italian text—a mongrel Italian rendering, that had no critical editing. It is known that Columbus endeavored to prevent his way of reaching the Gulf of Paria from being known; but the track he had marked on a map sent back to Spain was disclosed by unfriendly authority to Ojeda. There is no evidence, however, that it was generally known, and the contemporary writers and cartographers were so much at a loss about the position of Paria that a school of learned students attached it to just that place where Vespucius claims to have been, and which there is quite as good reason for believing he called "Parias" as that he called it "Lariab." The similarity of the names, Parias and Paria, would easily have further misled the map-makers if they desired to locate the visit of Columbus in 1498. Even such a calumniator of Vespucius as Mr. Fiske would deem Herrera to be, seems to have perpetuated the error at a later day, when he says that before 1505 many voyagers had coursed the continent lying "towards the north" from Labrador to Paria. The fact is, that this Parias region on the Gulf of Mexico was recognized by certain cartographers for some time afterwards. We find it in the Hauslab gores of 1513-15, in the Schöner globes of 1515 and 1520; and it is noteworthy that in elucidation of his globe, wherein Parias is made a part of the northern continent, Schöner says in his 'Luculentissima Descriptio' that Parias is "a large *special* portion of the earth in that fourth part of the world." We find it again in the same region in the Nordenskiöld gores of 1517-18; in the Apianus map of 1520; in the Ptolemy of 1522; and in the MS. map of Glareanus in the University library at Munich which Harrisse assigns to 1528. It is also on the northern continent in the same way in several maps of an original portolano of that century which is in the Carter-Brown library in Providence.

We must here indulge in a little counter hypothesis to offset Mr. Fiske's assumption that the printed Italian text preceded the St.-Dié text, for his arguments do not wholly satisfy us against the opinion of Major and others, and his further belief that the printed Italian text was the one used by Giocondo in Paris in making the French version from which the St.-Dié translator prepared the Latin text of 1507. Waldseemüller does not tell us that the Italian text used was the printed one, and there is not the slightest evidence to show that it was. On the whole, it seems probable, in view of all the circumstances and the family acquaintance of Giocondo with Vespucius, that this Italian architect in Paris had instead a manuscript copy of Vespucius's letter, and in that event there is no evidence that he had the word "Lariab" before him at all. This is a point which we find, as we are writing it, that Mr. Markham has also made. Lariab is an unknown name. Harrisse, in the present volume, gives a copious list of all the geographical names which he has found in the early narratives and maps, and he encounters the name of Lariab nowhere else.

It may be added that Markham, the President of the Hakluyt Society and a geographer of high reputation, has just (September,

1892) reëxamined the problem, and unreservedly places himself among those whom Mr. Fiske calls the critics of "mingled dulness and flippancy," who reject the Varnhagen theory. Mr. Markham probably too confidently accepts the alibi theory; but to sustain his denial of the voyage, he says the courses and distances given by Vespucius would have taken him to British Columbia—an error too great to be accounted for by a false reckoning, which is honest. Further he contends, as others have done, that the close counterparting of Ojeda's voyage of 1499 in the Vespucian details is very suspicious. Varnhagen failed to account for this and Fiske ignores it, as he does other proofs against the voyage.

There is one point more. Las Casas has asserted, Herrera and others following, that Pinzon and Solis in 1506 discovered the Honduras coast, prompted to the act by the results of Columbus's fourth voyage. There being no mention besides his own that Vespucius made this 1497 voyage, supporters of it are forced to find some expedition of that year in which he might have sailed in a subordinate capacity. Such a voyage Varnhagen has found in this alleged voyage of 1506, but as the date is in the way, they carry it back to 1497, by connecting it with the second rather than with the fourth voyage of Columbus. Harrisse says there is no evidence of any such voyage, either in 1497 or in 1506, and makes the rather rash assertion that *all* historians have followed Las Casas in assigning it to 1506. He does find proof, however, that it took place in 1508-9, and that the track was eastward from Honduras, instead of westward, citing Navarrete and Ferdinand Columbus in the 'Historie,' which citation gives rather more credit to this last book than Harrisse has been heretofore inclined to bestow upon it. Markham has recently undertaken to show that the Pinzon voyage was really in 1506, as one of his arguments to confront the Varnhagen claim that it took place in 1497.

There is no one of his averments upon which Harrisse lays more stress than upon the very early conception that some continental land had been found which was not Asia. The question is how long a belief in the neighboring coast being Asia lasted when, in the conception of navigators and map-makers, its lines began to be disentangled from the shores of Asia which Marco Polo had described. As was natural, some geographers went ahead of demonstration and some held back. It seems pretty evident that in La Cosa (1500) and in Ruysch (1508) the newly discovered lands were insular or uncertain appendages of Asia. Between 1501 and 1503 the cartographical idea began to develop that there was a chance of the new regions of continental proportions being independent of Asia, but with more or less uncertainty attached, as shown in cut-offs by the edge of the map or in overlying latitudinal scales. We can trace this growth through numerous maps like the Cantino, Canerio, Sylvanus, Waldseemüller, Boulenger or Tross gores, Reisch, the Ptolemy of 1522, Maiolo, and (even beyond the reaction initiated by Franciscus Monarchus) in Bordone and others. Emancipated from this uncertainty and with much bolder drafting of a new continent, we find a series of maps, beginning ten years later and exemplified in the Stobnicza (1512) map, and supported later in the Portuguese chart of the Pacific (1513), the Lenox globe, the alleged Da Vinci map, the Nordenskiöld gores, the Hauslab globe, the globes of Schöner and the Archipelago of Coppo (1528). We might come down farther. This is about the variety of view and corresponding data that circumspect historians have long recognized. With such conditions no critical student of these earlier days can dare to say with confidence that at any time there had been a general belief one way or the other. Nevertheless, Varnhagen contends that in 1497 Vespucius believed he had found a new continent—a belief in which Fiske does not follow him, for he represents that nobody so late as 1504, and after the Cantino and Canerio (first described in the bulletin of the Geographical Society at Lyons in 1890) maps had been made, believed that any continent had been found but Asia. Henry Stevens claimed that what passes for a new continent in the Cantino map (1502) was but a "bogus Cuba," and that the rudimentary Gulf of Mexico, as others see it in the Ptolemy map of 1513, was the Gulf of Ganges.

But Harrisse would go back even of the Cantino map for the first indication of a belief in a new continent distinct from Asia. He cites the authority given, July 20, 1500, to Mendoza to go west with four ships to discover islands and *continent*, and he is even inclined to think that La Cosa did not intend to recall the Asiatic coast by the continental land west and northwest of the West Indies. He contends that the natural geographical instinct of the time imagined the new land to have a coast which went in a rude way parallel to that of Asia, just as we find later that South America towards the pole is given an apex because Africa had one. He also says that the Spanish Government by 1501 had adopted some such notions, and thinks they prevailed in official circles in Portugal and England. We cannot allow that Harrisse's demonstration satisfies us in assigning so early a date to the birth of the continental idea. Nor can we accept his belief that Columbus in his last voyage knew that he was not on the coast of Asia, simply because he was in search of a strait, for it does not necessarily follow because he had not found all that Marco Polo pictured of Asia, that there might not be contiguous parts of that continent which barred his way to Cathay.

We had hoped that Harrisse would have found something more imposing than the insignificant little map of Franciscus Monarchus to form a cardinal point in the reaction which set in about 1526 to make North America and Asia one and the same, for as early as 1514 there were indications of it in the Portuguese portolano of that year, which bears Mahometan flags on the Atlantic Coast, and in the map of Ayllon's explorations about the Carolina shore in 1520, which depicts a Chinaman and elephants on the Atlantic watershed. Franciscus says he was induced to adopt this Asiatic view by the reports of Cortes's first expedition. Before we saw the facsimile of the Franciscus map here given by Harrisse, we had depended on the modern sketch of it given by Lelewel, for the little 'De Orbis Situ' which contains the map is very rare. There is good reason for believing, as Harrisse points out, that the lost globe of Schöner dated 1523 (in which he departed from the configuration so familiar in his globes of 1515 and 1520) had given just such a blending of Asia and America as Franciscus portrayed three years later, for Harrisse somewhat gloatingly discards, as Nordenskiöld has done, the gores which Henry Stevens and C. H. Coote have put forth as that missing globe. It is curious that Schöner's reasons for the reaction are quite different from those acknowledged by Franciscus, for he says that it was the results of Magellan's voyage which induced him to revise his opinions. It is further striking that one of our informants about that Magellanic voyage, Maximilianus Transylvanus, drew just the opposite conclusions, as Franciscus lets us know.

Schöner's globe of 1533, which reënforces his new views, is given in the present work in facsimile, as well as two other globes which we have not seen depicted before; and both support Schöner's new theory. One is the De Bure, or *Globe doré*, of about 1528, preserved in the Bibliothèque Nationale at Paris, which is apparently of German origin; and the other is a wooden globe in the same collection, found about ten or eleven years ago in Italy and supposed to have been made in 1535. The Finæus maps of 1531 and 1536 are perhaps the best known of this group of maps, which consists of a large number of examples coming down quite to the beginning of the seventeenth century; but after Mercator's time the notion began to fade. Students have only recently been placed under obligations to a Berlin society which has caused the great Mercator map of 1569 to be reproduced of the original size. This is only another instance of the way in which American scholars have of late years been put more nearly on a par for facilities in these studies with European students. The great Ribero map of the Propaganda (1529) has recently been made accessible. Harrisse has given us an admirable full-size reproduction of the Cantino map. Photography has placed the great Cabot mappemonde in ten of our principal American libraries. We are expecting to receive before long from Madrid an undiminished reproduction of the great oxhide map of La Cosa, which the present writer saw in 1853 at a Paris sale, when it was knocked down to an agent of the Queen of Spain.

We need not say anything of the atlases of Kohl, Kunstmann, Santarem, Jomard, and Nordenskiöld, which are indispensable in these cartographical studies, or of the various reproductions of a smaller size, which have frequently been made in this country and in Europe, several of which besides those already mentioned will be found in the work under review. Such is the great map at Turin and the polar-projected map of Juan Vespucius. Another new map here given is one illustrating the march of De Soto through our Southern States, and it will very likely go a good way in solving the problem which Dr. Scaife of the Johns Hopkins University has lately been discussing, as to whether the Rio del Spiritu Santo of the early maps was really our Mississippi. The American student owes much to the good work which Dr. Kohl did in making that collection of copies of the older maps which is now preserved at Washington, though, from the general advance in these studies and the increase of published reproductions, the collection has lost something of its value. In original maps of the earlier period our libraries are very deficient. We do not know of a single one of importance, and the portolano of about 1550—very likely by Baptista Agnese, or of his school—which was acquired in 1885 by the Carter-Brown Library at Providence, is the only atlas of the kind in this country which has come to our knowledge.

One more point and we have finished, having said but a small part of what the present book deserves. When the Mercator map of 1541 was first reproduced by the Royal Library at Brussels, it was thought to be unique, but five copies are now known. It has given rise to the opinion, which has been widely accepted, that it was the first map in which the name America, so long applied to the Southern

Continent, was made to cover also the North American regions. Harrisse now brings to notice a wooden globe, with manuscript delineations, which was brought from Venice to the great library at Paris in 1879, and which from the calligraphy he places in the first quarter of the sixteenth century. This test, in view of the archaic tendencies of some scribes, is not always trustworthy; but the interesting fact is that this globe bears the word America on the Northern as well as on the Southern Continents, and may thus be a still earlier instance of such a comprehensive application. The fact, however, remains, that the published globe of Mercator, in 1541, earliest influenced popular opinion in making America to mean the entire New World, instead of a part of it.

DARWIN EXPOUNDED BY ROMANES.

Darwin and After Darwin. I. The Darwinian Theory. By George John Romanes. Chicago: The *Open Court* Publishing Co. 1892.

THERE was probably no one better fitted than Mr. Romanes to undertake a popular work such as this upon the Darwinian and post-Darwinian periods in the history of the evolution theory. The volume before us is mainly devoted to Natural Selection. The later period will be treated in a second volume covering the modern problems of Heredity, the controversy raised by Weismann's brilliant essays, and the discussion of the recent revival of the views of Lamarck by the American and English "Neo-Lamarckians." In these ten chapters upon the earlier period, closing with 1882, the year of Darwin's death, the author sustains his well-established reputation as a philosophical biologist; and although there is comparatively little controversial matter to be handled, he is in the main both fair and clear. The book shows these qualities in the author's attitude towards theism, in his very decided opposition to those who would make Darwin's "natural selection" the sole factor in organic evolution, and especially, throughout all the earlier chapters, in the temperate and convincing manner in which a running contrast is maintained between the inadequacy of the "special-creation hypothesis" and the adequacy of the "evolution hypothesis" in rendering organic creation intelligible and purposeful. He clearly establishes the new teleology.

A discussion of the truth of the evolution theory now appears somewhat superfluous, but it belongs very properly to a work upon the Darwinian period, and the author has wisely thought it best not to ignore certain classes in France and Germany, and a surprisingly large number in some sections of this country, who are still unconverted. (The work is already being translated into French and German.) In the earlier chapters he therefore carefully restates all the familiar proofs of evolution from classification, comparative anatomy, embryology, palæontology, and the distribution of animals and plants. Many recent discoveries unknown to Darwin are also brought forward. One charm of this part of the book is the wealth of original illustration, the author rightly claiming in the preface that figures are often more convincing than language. These are particularly novel in the section upon man, where numerous woodcuts illustrate the very amusing vestiges of arboreal habits in the feet and hands of infants—showing that every nursery may become a centre of scientific research. The section upon "Artificial Selection" is also cleverly illustrated with the remarkable extremes of type produced by breeding and domestication. In palæontology the choice is not quite as good, and we notice as a minor error that Scott's deer-skull series (fig. 88) is credited to Heilprin. All this historical section is in fact admirably done, and cannot fail to be attractive and valuable "as a merely educational exposition of Darwinian teaching." We trust it will carry the general reader into the more serious pages of volume ii.

The general reader, however, above all others, is entitled to a full exposition of Darwin's most mature opinions, and not merely of his "selection theory." We cannot find that at any point Mr. Romanes clearly brings out the great revolution in Darwin's ideas unfolded in his 'Animals and Plants under Domestication' (1875). The gist of chapter 24, vol. ii., of this work is that evolution has been by Natural Selection, *aided in an important manner by the inherited effects of use and disuse.* This committed Darwin to the very Lamarckian theory which had been wholly rejected by him in 1858. Moreover, the author (p. 255) appears to share the inability, which seems to be constitutional among English writers, to distinguish between the relative merits of Buffon, Erasmus Darwin, and Lamarck, as to the introduction of the theory which now bears the name of Lamarck. Upon strict laws of priority, the credit belongs not to the elder Darwin, as the author intimates, but to Buffon, as recently shown by M. Lanessan in the *Revue Scientifique.* The facts are, that Buffon largely originated these Lamarckian ideas, but he recanted or "hedged" as an evolutionist under ecclesiastical pressure. Erasmus Darwin later expanded the ideas of this distinguished zoölogist in a suggestive but very tentative manner. Lamarck formulated them into a definite theory of the causes of evolution, and boldly combated the special-creationists through a long period of social and scientific ostracism, ending in his death. With the others, the theory was a matter of passing speculation, with him it was a profound conviction; his name, therefore, should stand.

The four closing chapters of the book include a very clear account of the nature and limits of the powers of natural and sexual selection, and a reconsideration of the older and newer criticisms. Here the author takes the position, which has exposed him to much assault in England, that, after his prolonged studies, he is *par excellence* the interpreter of Darwin's actual views, and that others who have made the subject less of a direct study have misunderstood and misstated the great naturalist. There is much truth in this; one recalls some of Lankester's letters in *Nature* as cases in point. On p. 276 he expands the perfectly legitimate distinction that natural selection is primarily a theory of the origin of adaptations, and thus, secondarily, explains the origin of the species which present them. He considers selection as having passed the theoretic stage; hereafter it is to be ranked as one of the natural causes of evolution. This opinion is supported by a complete résumé of all the strongest arguments for the survival of the fittest adaptations, and we are brought up to date with the recent researches of Poulton and others upon protective and warning colors and mimicry.

The important question as to the nature and origin of the useful or useless variations which Nature is believed to select or reject, was left open by Darwin and is not elucidated by Romanes. He rightly says that these variations were expressly regarded as promiscuous in the original selection theory. He admits (p. 336, foot-note) the mere possibility that a definite direction may be given to variation by the inheritance of the effects of use and disuse, and therefore abandons the later ideas of Darwin which we have quoted above, although he is not ready to follow Weismann in his absolute rejection of the Lamarckian principle of use inheritance. The reviewer, in common with many others in this country, does not share the author's doubts as to the lack of evidence for definite variation along the main path of evolution, or, to quote his words, "that what we see in nature is the net outcome of the development of all the happy chances; . . . and if we had a similar record of all the other variations, it would be seen that possibly not one such prophecy in a thousand is destined to be fulfilled." Nor is it true that the Duke of Argyll's much ridiculed doctrine of "prophetic germs" is effectually disposed of by evidence, even if it falls under the force of Mr. Romanes's logic. It is a serious defect in this work, considered as a guide to the uninitiated, that the author adheres so broadly to the fortuitous variation idea, in the face of the abundant evidence from palæontology. In the hard parts of animals, at least, nature is extremely economical in the matter of variation, and we look in vain for the purely conjectural nine hundred and ninety-nine alternatives which extreme selectionists like Wallace and Weismann suppose to be discarded for the happy one. In the second volume we are promised a fuller discussion of the problem of definite vs. indefinite variation, and of the evidence for a large class of definite or purposeful variations which stimulate our search for some factors, Lamarckian or otherwise, to account for them.

One word upon the author's theistic position. In speaking of the change exerted by the discovery of evolution upon human thought, he says: "Nevertheless, in my opinion, it is a change of a non-theistic as distinguished from an a-theistic kind. It has rendered impossible the appearance in literature of any future Paley, Bell, or Chalmers; but it has done nothing in the way of negativing that belief in a Supreme Being which it was the object of these authors to substantiate." Lack of space prevents fuller quotation from the forcible pages of the closing chapter, which reflects the present period of harmony between religion and science. Altogether, the merits of this work far outweigh its defects; it is the best modern handbook of evolution.

Familiar Studies in Homer. By Agnes M. Clerke. Longmans, Green & Co.

THIS admirable book undertakes to do, in much less space and with the advantage of the knowledge gained by the excavations at Hissarlik, Mycenæ, Egypt, and Asia Minor, what Buchholz attempted as pioneer some thirty years ago, in the 'Homerische Realien.' Some of the chapters of the 'Familiar Studies' have appeared before as magazine articles in *Macmillan's Magazine*, *Nature*, and the *Quarterly Review*, and have there proved attractive to the general public. The book is a good example of mastery of the results of a vast amount of special research not made by the author, but thoroughly familiar to and skilfully handled by her; and we are reminded afresh, as we peruse her interesting pages, what a wonderful quantity of detail and minute information great Homer carries easily along in the strong stream of his verse. Strange that the greatest of poets should be such a storehouse of facts and information for the archæologist!

We were much interested by a remark in Miss Clerke's preface which we believe to be as true as it is valuable. She says that her chief object is to promote a "non-erudite study" of Homer. "Greek enough," she says, "to read 'Iliad' and 'Odyssey' in the original can be learned with comparative ease." This last statement is entirely true. It ought to be the case in these days with all intelligent pupils who have studied Greek three years, that they can read Homer with considerable ease, and have read enough of both 'Iliad' and 'Odyssey' to be keenly interested in Miss Clerke's book. In such an achievement lies an ample justification for the study of Greek.

We shall most readily give an idea of the book by subjoining the titles of several of the chapters. Under the title, "Homer as a Poet and a Problem," the author declares for the eleventh century B. C. as the date when the 'Iliad' took form, and she is inclined to name Thessaly as the birthplace of the 'Iliad,' and Peloponnesus the birthplace of the 'Odyssey.' There was no Asiatic Greece, she thinks, at that date, in condition to produce a Homer. In summing up the results of a century of study of the Homeric question, Miss Clerke aptly says that "instinctive appreciation has got the better of verbal criticism." The truth could hardly be better stated. The chapter on "Homeric Astronomy" deals too much in technical detail to be summarized here; but the chapters on the "Dog" and the "Horse" in Homer are models of vivacity, of industry, and of research. Miss Clerke well brings out the strange double character or opposing traits which readily make the dog an object of contempt or of tender love. She weaves into a flowing narrative, into which she succeeds in introducing many of the finest passages of the 'Iliad' and 'Odyssey,' the extracts from either poem in which the dog and the horse are mentioned, and throughout her book the quotations gain in interest because so well chosen from a variety of translators. Derby, Way, Worsley, and Miss Clerke herself are the translators most often quoted. We are inclined to agree with Miss Clerke that the different feeling with which the dog is regarded in the 'Iliad' and 'Odyssey' of itself suffices to establish diverse authorship for the two poems. Here is the summing up of the chapter on the "Horse": "The makers of the 'Iliad,' whether few or many, were at least unanimous in their fervid admiration for the horse. The verses glow with a kind of rapture of enjoyment that describe his strength, beauty, and swiftness, his eager spirit and fine nervous organization, his docility to trusted guidance, his intelligent participation in human contentions and pursuits."

Under the head of "Homeric Zoölogy," Homer's "sane and rational" way of regarding animals, compared with the extravagances common in other prehistoric literature, is noted. His intense sympathy with brute nature is based upon the appreciation of real, not upon the ascription of imaginary, qualities. No poet, before or since, ever displayed in this field such a wealth of acute and accurate observation. The correctness of his descriptions is the more wonderful because the various animals had not their character fixed in literature. The chapter on "Flowers and Trees" is brief because Homer did not associate sentiment with flowers. Poppies, hyacinths, crocuses, violets are the flowers of Homer, with mention by implication, in compound words, of the rose and the lily. An interesting topic is "Homeric Meals." The Homeric appetite was strong and simple. Roast meat, bread, and wine were the staple of the heroes' diet. Sheep, goats, and swine came next in order to roasted beef, and fish were eaten only from constraint of hunger. Barley, the "marrow of men," made up the bulk of food on board the ship, and was probably eaten boiled with water as porridge. Wheat was ground into flour in little hand-mills, and the loaves or cakes were probably baked on heated stones. Grapes and olives are the only fruits which figure in the 'Iliad.' Three meals a day were the full Homeric number, though the breakfast was often eaten as one meal with the dinner. When taken separately, it consisted of a piece of bread soaked in wine. The chief meal of the day was the supper, when labor was done.

We have thus indicated the character of the 'Familiar Studies.' It will be evident how valuable a companion to the study of Greek History, as well as to the thorough knowledge of the Homeric poems, the book will prove. In fact, we know of no other book in English which fills its place, and we recommend it warmly to the attention and use of all classical teachers as well as of all students of the Homeric life.

The Speech of Monkeys. By R. L. Garner. Charles L. Webster & Co. 1892. 8vo, pp. 217.

As an entertaining account of experiences of an enthusiast in attempts at learning from monkeys whether they have a language, this volume may be somewhat successful. As a scientific record of original discoveries, it has little value. The author has been before the public for some time, has talked and written a great deal on his subject, and has secured a large amount of advertising from the press, all of which has led to expectation of important additions to science. What he offers is full of disappointment. That the lower animals are able to communicate with one another in various ways is well known; an extensive literature awaits the student who attacks the subject systematically. Portions of the languages of lower vertebrates will be recalled by most of us. A familiar instance is that of domestic fowls, which have a number of sounds the imports of which are easily recognized. They have a cry of warning for the hawk, a cackle of satisfaction after the egg is laid, another of indignation at being disturbed, or a third in dread of something not seen distinctly; a song of happiness, a challenge, a protest at being handled, a squawk of fright when caught, a call to partake of food, a request for more, a cluck to call the brood together, a doleful cry when lost, and the love notes of the sexes. Most vertebrates have sounds that answer similar purposes, the range or variety being in accord with the necessities of their lives. Because of greater similarity of structure it has been supposed that in the language of monkeys there might be a nearer approach to that of man than in lower mammals. Recent inventions for recording and reproducing sounds have furnished the means of comparisons, and important discoveries are, no doubt, not far off.

Judging from what Mr. Garner has published, he might have done more had he studied the hens. He speaks of words but means sounds, since he says the language of monkeys is purely one of sounds, and that they talk with one another on a limited number of subjects with very few words. Such as he records are scattered among the pages. A certain monkey has an alarm sound, written "e-c-g-k," and another a sound of warning when not afraid, written "c-h-i." A word first translated milk, then food, and said to be used in a still wider sense, is found also to mean water, and still later drink in its broad sense, and possibly thirst. This word the author writes "wh-oc-w," and thinks it to mean food in general. In his opinion it is likewise a salutation or peace-making term—food, as he puts it, being the central thought of every monkey's life; and further, when used imperatively, it appears to mean give. He says he at first believed the word for food or hunger was used for apple, carrot, bread, and banana, but the phonograph showed slight variations, and he now thinks these may indicate the different kinds of food the monkey had in mind. It might be suggested here that they may indicate differences in the amount of filling undergone by the monkey. The word for weather he has not yet settled; that for love is only in the sense of ardent friendship. His discoveries culminate in the word "no," which is accompanied by shaking the head, though the sign is at times attended by a chuckling sound and at others by a soft whimpering sound. "The fact that this sign is common to both man and simian I regard as more than a mere coincidence, and I believe that in this sign I have found the psycho-physical basis of expression." If to the foregoing questionable words we add a chuckle to express pleasure, a good-natured growl, as a critic described it, for laughter, "ngu-u-w" of the Rhesus, and "wuh-uh-uh" of the Mangaby, both meaning food, and "ch-eu-ye," a word for drink, we shall complete the vocabulary given.

The exhibit is very unsatisfactory. The author gives considerable notice of what he proposes to do, does a great deal of talking around his subject, and makes an excessive use of the great *I*, but gives little or no evidence of accomplishing anything. The most vivid impression left by his book is, that he has ventured upon something entirely too deep for him.

A History of Peru. By Clements R. Markham. [Latin-American Republics Series.] Chicago: Charles H. Sergel & Co. 1892. 8vo, pp. xviii, 556. Maps and illustrations.

A SERIES of histories of the Latin-American Republics at the present time is a commendable enterprise. While the intense interest in our Southern neighbors, which for a time was epidemic, has somewhat subsided, it has by no means disappeared. Transient enthusiasm has but given place to a more earnest, more sober inquiry into the life and conditions of South and Central America; and the man of letters, the historian, the archæologist, find here a rich and almost virgin field. But to realize fully the harvest it is necessary to untangle a maze of political changes as bewildering as the struggles of mediæval Europe. Hence a series of histories written now, although we cannot expect them to be wholly trustworthy until the archives of the Southern capitals have been ransacked, will serve a useful purpose by plotting in some manner the course which the stream of events has taken. In the present work there are not a few errors which we must condone, and yet, taken altogether, it is a most creditable performance. There is probably no English-speaking person in the world better fitted to handle this subject than Mr. Markham, and he brings to the task not only personal acquaintance with the country, large information, and broad scholarship, but a warm sympathy for Peru and the Peruvians. Not alone the circumstances of a tumultuous po-

litical career, but the heart of the nation stands revealed as well, interpreting a history which otherwise would be often unintelligible. The rise and fall of the Inca Empire is briefly and clearly told. The character of Pizarro and his followers is justly depicted, omitting the usual cant about demons and devils. We see their weakness, their cruelty, but also their better qualities, and can understand the motives of expediency that led to many acts which in the light of subsequent events appear to have been such wretched wrongs.

The progress of Peruvian history has been divided into epochs, which renders it peculiarly easy to follow. After the conquest and the strife between Pizarro and Almagro, we have the period of attempted reconstruction under the "New Laws" which Las Casas fondly hoped would introduce a wiser and more humane government. Then comes the period of colonization based upon commercial interests, which continued during a large part of the epoch of the Viceroys, from 1555 to 1821. The rebellion of Tupac Amaru is given its full moral value, which was important, coming as it did on the eve of the revolution which overthrew the power of Spain. The two wars for independence, under Gen. San Martin and Gen. Bolivar, respectively, are treated in considerable detail, and then comes the succession of republican presidents and the disastrous war with Chili. Recent events, including the famous "Grace contract," which wiped out the national debt of nearly £52,000,000, and other transactions as late as 1891, bring the work down to date. There are additional chapters, full of interest, upon the people, the literature, and the wealth of Peru. An appendix contains some statistics of Peruvian trade and a translation of the Constitution of Peru.

One valuable feature of the book is the brief biographical sketch and characterization of each of the prominent personages entering into the narrative. These are usually satisfactory, although in the case of Gen. Bolivar the author has joined hands with the iconoclasts. Bolivar is still too enigmatical a character to be denounced as nothing more than an ambitious adventurer. Like Cæsar, he was a gay youth, a brave general, a consummate tactician; and, like him, he held a firm rein upon government while declining kingly honors. From what we know of him now he seems a bundle of paradoxes, and until some one has searched the true man out of the dusty piles of documents in Carácas, Bogotá, and other South American cities, we cannot pretend to estimate him fairly.

The inset map of Peru, Ecuador, and Bolivia which accompanies the book is discreditable to the publishers. To point out its errors would be tedious; they glare forth from every section of it. If the publishers could not have done better on their own account, they might at least have availed themselves of the excellent and wonderfully correct map of Stieler. There is no excuse for such careless cartography in these days.

Portraits d'Écrivains. Par René Doumic. Paris: P. Delaplane. 12mo, pp. 330.

M. DOUMIC has performed the difficult task of saying something new and attractive on a hackneyed theme; something worth reading in regard to a few of the most prominent novelists and dramatists of the Second Empire. If he expended his talent on a systematic study of contemporary French literature, he could produce a valuable and interesting critical work. His style is epigrammatic, but not in the forced and mechanical manner which characterizes so much of current French criticism. He possesses another quality which is none too frequent among his compatriots—moral dignity; not the sham morality meant for the gallery, but something genuine and sincere. It is this quality which lends weight to his judgment of writers who, while depicting vice in its most alluring colors, are all the while protesting their devotion to virtue. But while partaking strongly of an ethical element, his criticism is none the less based, in the main, on literary canons, and very sound ones.

His first three essays are on Dumas the younger, Émile Augier, and Victorien Sardou. The contemporary drama, he says, is embodied in Dumas. All the progress it has made is due to him, and it is due to him that it has not progressed further. His great gift is a marvellous faculty of observation, which enables him to pierce through appearances to the reality that underlies them; but the naked reality is not a thing of beauty, and he soon discovers that the method of direct observation does not suffice. Hence he throws himself upon science—on physiology, chemistry, and the like. But science without the scientific spirit, observes M. Doumic, is mere fooling. Along with his pseudo-scientific curiosity, Dumas has a trait of quasi-religious mysticism, which constitutes his stock-in-trade as a social reformer. He considers that the dramatic author has a charge of souls and must not fear to pose as moralist and lawgiver. He aims to establish what he calls "the useful drama." This theory of art M. Doumic pronounces no less false and much more gross than the theory of art for the sake of art. Whatever is only useful is thrown aside after it has subserved its uses; on the other hand, the great works of art which the drama of all times and of all countries has handed down to us probably never served any use at all. Social questions are never solved by the dramatist; it is only when they have reached maturity that they appear on the stage. The means at the disposal of the dramatic author are not available for social reform. Another telling remark of M. Doumic is that the language in which Dumas couches his preachings is not fit to be addressed to those who could still derive any benefit from them. It must not be supposed, however, that M. Doumic does not do full justice to the literary power and dramatic skill of Dumas. He gives him credit for having banished from the stage the puppets of Scribe, while recognizing Scribe's technical perfection, regarded from the artisan's point of view.

In Émile Augier, M. Doumic recognizes the chief agent of the transformation by which the modern comedy of manners succeeded the comedy of character, which had been brought to perfection and exhausted by Molière. Although the plays of Augier proceed from those of Dumas, they differ from them as widely as could be imagined. While Dumas, as already shown, subordinates his drama to his moral prepossessions, Augier has no theories to enforce, and makes no attempt to use the stage as a pulpit. If in his plays vice is chastised and virtue is rewarded, that is only a concession to the public taste and to the prejudices of the official censor of plays. His happy dénouements are manifestly out of joint with the body of the plays. M. Doumic sums up by saying that Augier did for the stage what Balzac did for the novel, and that when Dumas spoke of combining Scribe with Balzac, he described the works of Augier rather than his own.

Concerning Sardou, M. Doumic has very little to say that is good. Sardou's characters, we are told, are perfect abstractions; he never stops at the line where a portrait becomes a caricature. If his characters were consistent caricatures, we might accept them for what they are; but we have no sooner become familiar with their traits than they flop over and act in a way quite the reverse of what we had a right to expect. The action of his plays is as factitious as it is puerile. At any moment a single word would suffice to explain everything and to resolve the intrigue; if none of the characters pronounce the word, it is only because the author is on hand to stop them. Sardou took Scribe for his master, and excels in the theatrical sleight-of-hand of which a perfect example is found in his "Pattes de Mouche," where a piece of paper passed from one person to another fills three acts without wearying the audience. Sardou's chief defect, according to our critic, is that his plays are a mixture of comedy, drama, and vaudeville. First he gives us two acts in gay and lively colors, then two more in which everything is changed to pathos and terror, anguish and tears; the fifth act explains it all—everything is all right, everything is for the best in the best of worlds. And there is no necessary logical connection between these various discordant parts.

Four of M. Doumic's essays are effective reviews of as many novelists. The first is Feuillet, whom Jules de Goncourt dubbed "a family Musset," and who, by common consent, is considered the novelist laureate of aristocratic society. Many writers have attempted to describe the manners of the *haute volée;* according to M. Doumic, Feuillet is the only one who has succeeded, and has even succeeded in the more difficult problem of going beneath the surface and depicting the inmost soul of his characters. The society he undertakes to describe is in the peculiar situation of being, to all appearance, attached to a religion the spirit of which has ceased to influence it, and allegiance to which prevents it from receiving other beliefs which might perform the functions that the old faith has ceased to fulfil. The dead remnants of the old ideal block the way which might lead to a new one. Feuillet wrote during the long space of more than forty years, and a comparison of his later with his earlier works reveals a deterioration not only of morals, but even of manners—a disintegration of society.

M. Doumic is very severe in his judgment of Edmond and Jules de Goncourt, which he closes by saying that their work has been a most persevering, most conscientious, and most laborious effort to empty literature of its contents. He is, if possible, even more severe in his criticism of Zola, whom he makes the subject of a careful and suggestive study, although he considers him already a matter of yesterday. Not the least salient trait of Zola, he says, is his vulgarity, or rather the commonness of his nature. Whenever he speaks in his own person, it is in the tone of the flattest triviality. He lacks the most elementary tact. His obstinacy and his narrowness of mind have given him a prodigious self-confidence and an imperturbable assurance. He has but little taste and but a moderate respect for literature. He has never known it, and has never felt the need of knowing it. He is devoid, to the last degree, of all critical sense; he is incapable of following an abstract idea; his style is that in which a mason would speak of architecture or a house-painter would explain the theory of complementary colors. His habits of observation are very superficial;

he is very proud because, having to write about miners, he has been down in a mine, and again because, having to write about railroads, he took a trip on a locomotive. Even so, he is often satisfied to describe things at second hand. In describing his characters he contents himself with seizing the most apparent trait; of what lies behind he knows nothing. The only beings he succeeds in depicting are the most primitive, whose intellectual life is *nil*. Hence his incapacity to picture the higher classes of society. His analysis does not rise above the intellectual level of a roofer. His world is not the real one, but a continual deformation of reality; such a world as would be that of Balzac seen with the eyes of Victor Hugo. For, according to all appearances, he is by birth and by education one of the Romantics. Like them, he has a taste for the marvellous and is fond of personifying inanimate nature. Life and the world he beholds through a magnifying hallucination, and what he mistakes for reality is only a sort of perpetual nightmare.

M. Doumic gives up his longest chapter to warm and unstinted praise of Alphonse Daudet. We shall not follow him, as we have already gone too far, and he is not quite as entertaining when he approves as when he condemns. Considerations of space have forced us to string together his observations in such a way as to make them appear much balder than they do in his pages, where they are supported and enforced by an abundance of citations and illustrations, to which we refer the reader in the confident expectation that he will recognize in M. Doumic a brilliant and competent literary critic.

MIXTURE SMOKING TOBACCO.

THE CHOLERA SCARE is over. If the public could be brought to realize the safety from the attacks of this disease that there is in Homœopathy the scare would never occur again. From official reports, covering over a million cases, we learn that the death-rate of the "regular," or Allopathic practice in this disease has been (and from present reports is) 54.8 per cent. of the cases treated. The same reports show that the death-rate in cholera under Homœopathic treatment was 8.5 per cent. Under the proper Homœopathic prophylactic treatment, the danger of contracting the disease is almost nil. We publish a little book, SAFETY IN CHOLERA TIMES (50 cents, by mail 54 cents), that gives the treatment of the disease and the preventive treatment. It is worth the money in the peace of mind it affords. BOERICKE & TAFEL, Homœopathic Publishers and Pharmacists, 1011 Arch Street, Philadelphia, Pa.

BRYCE'S 'American Commonwealth,' Nuttall's 'Dictionary,' Foote's 'Plain Home Talk,' Beeton's 'Cook Book,' Darwin's 'Works.' Voltaire. PRATT, 155 6th Ave., N. Y.

A NEW BOOK BY MRS. BURNETT.

Giovanni and the Other.

Children Who Have Made Stories

HANDSOMELY BOUND, WITH 9 FULL-PAGE ILLUSTRATIONS BY REGINALD B. BIRCH. UNIFORM WITH 'LITTLE LORD FAUNTLEROY.' Square 8vo, $1.50.

An autobiographic interest attaches to the twelve stories in this book, as they relate to Mrs. Burnett's sons and to other little people whom she has known. They have the same magic charm which distinguished "Little Lord Fauntleroy," and disclose the beauty of child life with Mrs. Burnett's characteristic sympathy, pathos, and humor. Mr. Birch's illustrations portray the little heroes and heroines with charming grace.

Common Sense in the Household.

A Manual of Practical Housewifery. By MARION HARLAND. *Majority Edition, new and revised.* 12mo, $1.50.

For twenty-one years Marion Harland's book, of which in that period more than 150,000 copies have been sold, has been a standard guide in household matters. In this new *Majority Edition* the author has embodied numerous additions and improvements which her later experience has suggested.

Poems.

By Mrs. JULIA C. R. DORR. With Portrait. *Complete Edition.* 12mo, $2.50.

"Mrs. Dorr's poems are distinguished by simplicity, sincerity of expression, and gracefulness, and by a tenderness and a sentiment that come from the heart."—*Hartford Courant.*

German Lessons. By CHARLES HARRIS, Oberlin College.

This book is intended to give such knowledge of forms as will adequately prepare the student to read ordinary German. It is expected to lead up to the advanced grammar on the one hand and to the study of prose composition on the other. As soon as possible the pupil is brought face to face with the language itself. 178 pages. Cloth, 60 cents. Liberal terms for introduction.

D. C. HEATH & CO., Publishers, Boston, New York, and Chicago.

The Nation.

NEW YORK, THURSDAY, OCTOBER 13, 1892.

The Week.

THE recent State election in Georgia is the last of the preliminary contests which precede the Presidential election. Twenty years ago there were "October elections" in Pennsylvania, Ohio, Indiana, and Iowa, which engaged the attention of the whole country a month before the Presidential contest was fought out, and the "moral effect" of which was regarded as of the greatest importance by both parties. In each State these October elections became ultimately so demoralizing and discreditable that, one by one, they abandoned the system; Pennsylvania instituting the reform in 1873, Indiana following in 1881, Iowa (and West Virginia also) in 1884, and Ohio in 1885. The only States that still cling to the system of a separate State election a few weeks before the Presidential election are Vermont and Maine in the North, both of which vote in September; and, in the South, Alabama in August, Arkansas in September, Florida and Georgia in October. The result of the Georgia election has been awaited with much interest, as first the Farmers' Alliance, and later the People's party, have been exceptionally strong in that State. Moreover, under the advice of the Republican National Committee, the Republicans in Georgia were instructed to cast their solid vote for the People's party, so that all the conditions seemed favorable for a good showing by the opposition to the Democracy. But the result is an overwhelming Democratic majority on the largest vote cast in Georgia in any election for a score of years. This result shows that there is no longer the slightest question about the South's being solid for Cleveland in November. In Florida on Tuesday week the People's party had also met defeat, and the Arkansas election in September was equally one-sided. Alabama is the only Southern State where there has seemed the slightest chance of an opposition victory in November, and the Georgia result cannot fail to help Democratic chances in the neighboring State greatly.

The address which the Massachusetts Independents have put forth in advocacy of Cleveland's election is a notable document in many ways, and especially so for the manner in which it sets forth the offences and shortcomings of President Harrison in the matter of civil-service reform. The list of journalists whom the President has appointed to office has passed out of the public memory somewhat. The Massachusetts address quotes the words of Daniel Webster on such an abuse of patronage, but there is a nearer and higher authority than Daniel Webster in the person of one of the chief beneficiaries, the Republican candidate for the Vice-Presidency, the late Minister to France. When he, as editor of the *Tribune*, was advocating the election of Horace Greeley to the Presidency because of the maladministration of President Grant, Mr. Whitelaw Reid said, on July 3, 1872, in speaking of Grant's use of patronage:

> "In time the poor relations were all provided for; even the President's father had a post-office; and then patronage took a new form. Heretofore it had been sheer nepotism; now the renomination came near, and it changed to political corruption. Compacts were made with Senators and local politicians to control the Convention. *The country press was literally bought with public offices.* . . . Grant has shown how the prostitution of great power to base uses can lower the whole tone of political society."

That reads almost as if it were written about President Harrison. If he did not give his father a post-office, he gave his own brother a Federal marshalship, his father-in-law another Federal office, his son's father-in-law a $5,000 Federal office in Utah, and to several other family relatives lucrative public positions. He did not stop with buying the country press, but "literally bought" the leading newspapers of the country, including the organ of Whitelaw Reid.

Congressman Harter of Ohio is making a great effort to accomplish what has hitherto failed in several instances, viz., the drawing of the "Napoleon of Protection," Mr. McKinley, into a joint debate. Mr. Harter has been put by the Republican Legislature of Ohio into a gerrymandered district with a nominal Republican majority of nearly 2,000. He is making a thorough canvass of it, arguing, with his well-known clearness and courage, tariff and currency questions. In spite of their majority in the district, the Republicans are so uneasy about it that they are sending McKinley, Sherman, and Foraker into it to counteract the effect of Mr. Harter's speeches, and are paying more attention to it than to any other district in the State. One would think that here was a field which McKinley would hail with joy as the most desirable ground possible for a joint debate. He would be among friends, and his great intellectual forces would have a chance to play in the presence of the highest appreciation. Yet he is as shy as usual about accepting Mr. Harter's challenge, and the Republican campaign managers are as shy as he is. What a queer position for a Napoleon to be in!

Senator Sherman spoke at Cooper Union on Monday, and his speech related chiefly to the question of bank-notes and the Democratic platform, which calls for a repeal of the 10 per cent. tax on the notes of State banks. It has been hard work, trying to pump interest into this question, although several eminent statesmen, including President Harrison, have tried their hands at it. What Senator Sherman says on the subject calls for notice on account of its ingenuity rather than of its soundness. Mr. Sherman is noted for saying very wise things in Congress on financial questions and very foolish things on the stump. He said, during the last session of Congress (June 1, 1892), that "the people of this country—whether rightly or wrongly is not for me to say—are not in favor of the longer continuance of the national banking system beyond that period which will enable them to wind up as banks of circulation when the payment of the public interest-bearing bonds is made." Then he continued:

> "Mr. President, I am therefore in favor of regarding the popular will as being practically expressed *that we shall not continue this banking system longer than the existence of the bonds that are outstanding.* The people are not willing to take as security for the notes they hold any less security than the Government of the United States of America, whether that be in the form of bonds or in the declaration of the Government to maintain the notes."

Here are two propositions. One is, that the people have decreed the end of the national bank-note system within a certain time not very distant. The other is, that Mr. Sherman himself is in favor of acquiescing in that decision. But the whole drift of his speech on Monday was that that system ought to continue, and that he (Mr. Sherman) could show how it might be continued even after the national bonds are paid off and retired.

Mr. Edward Atkinson, in a letter to the Boston *Herald*, points out that a repeal of the tax on State bank-notes does not of itself imply any diminution of the existing national bank-notes, or of the greenbacks, or of the coin certificates. This proper reminder fits in very well with Mr. Sherman's suggestion that the national bank-note system may be continued by substituting other security, "which will be beyond all danger of failure," in place of the national bonds. If such security can be found, why may it not be made a condition of the repeal of the 10 per cent. tax that all State bank-notes shall be secured in the same way as the new national bank-notes? Assuming that the 10 per cent. tax is itself constitutional (and it has been so adjudged by the Supreme Court), any lesser requirement may be annexed to the privilege of issuing such notes. Any State bank may issue circulating notes now by paying the tax. Congress may lower the tax or repeal it altogether and substitute other conditions for the privilege. We are not in favor of an unconditional repeal of that tax, and we have not heard from or heard of anybody who is in favor of it.

The country has become so habituated to official decisions from the Interior Department, bearing on the subject of pensions, which read like campaign documents, that there was little surprise on Saturday when there was published another such decision, in the shape of a letter from Assistant Secretary Bussey to the Commissioner of Pensions. This ruling overthrew the previous practice in regard to disabilities which developed after the close of the war, and admitted such disabilities as a valid ground for an increase of pensions. It also allowed such increase to be granted upon lay testimony, regardless of a failure to show by record or medical testimony that they were incurred in the service, and in spite of the fact that they were not alleged in the original application for a pension. It was introduced by two or three "heads," one of which reads: "The arbitrary rule of the Cleveland Administration in adjudicating increase claims based upon alleged 'new' disabilities overruled by the Harrison Administration in the interest of meritorious applicants"; and the body of the decision was as flagrant in its partisanship as this introduction. In short, it was nothing more nor less than a Republican campaign document issued by one of the executive departments.

It appears that even Secretary Noble has some glimmering sense of the impropriety of the performance, and since the publication of the ruling a desperate attempt has been made to disavow responsibility for it. This has been carried so far as the dismissal of the subordinate who prepared the text of the decision, although he declares that he wrote it at the direction of the Assistant Secretary of the Interior, read it over to him, and received his approval of it. There is no reason to doubt the story of this subordinate, because what he did was only in line with what his superiors have been doing all along. There has been hardly any attempt to conceal the fact that the Pension Bureau has been a part of the Republican Machine ever since Harrison came in, and Republican organs throughout the country are printing tables to show how extravagant the Administration has been in its allowances of pensions. It is all a part of the policy which aims at winning votes by the offer of special benefits, and the clerk who has lost his place for his zeal ought at least to be provided for by the Republican National Committee.

Simultaneously with the announcement that Quay is expected to take an active part in the Republican campaign, comes the verdict of the jury at Meadville, convicting of embezzlement George W. Delamater, whom Quay made the Republican candidate for Governor of Pennsylvania two years ago. It will be remembered that a month after his defeat in the election his banking-house suspended, and it soon appeared that he had been for some time receiving deposits and making away with the money. He was arraigned under a law which makes such conduct a crime punishable by a term in the penitentiary, and, although there will be the usual attempts to get him off, it seems likely that he will receive his deserts. Yet, if he had received 17,000 more votes than were actually cast for him two years ago, this embezzler would have been the Governor of the State, and the State funds would undoubtedly have been used to rescue him from his financial troubles. In other words, Delamater was running not only for the executive mansion, but away from the penitentiary, and, but for the independence of some thousands of voters, the man who ought to wear the garb of a criminal would have been the chief executive of the State. The whole story of Quayism in politics is told in this career.

Pennsylvania is having great trouble now with its new ballot law, and loud complaints are heard concerning the size and clumsiness of the ballots which must be provided. All persons disposed to charge the Australian system with these annoyances should bear in mind that Pennsylvania's law was repudiated by ballot-reform advocates at the time of its adoption. It is not a ballot-reform law in the proper sense of the term, but a Quay Republican law. When the Quay Republicans found that they must yield to public sentiment in the matter, they took the measure which the friends of ballot reform had drawn, and filled it with all the tricks and devices which they could concoct, in the hope of destroying its character and making it so impracticable that it would bring the reform into disfavor. If it proves in practice to be a defective and more or less ineffective measure, they, and not ballot-reformers, must be held accountable for it.

Mr. Charles J. Harrah, President of the Midvale, Pa., Steel Company, has publicly declared for the doctrine of free raw materials, and has received an awful lecture in consequence from the Philadelphia *Manufacturer*. Being scarcely exposed to the usual setting down as a mere "doctrinaire" who knows nothing whatever about the "actual facts," Mr. Harrah is classed with those manufacturers who are "so selfish and greedy as to desire to profit by the injury of their fellow-men," in contrast, we suppose, to those protectionist manufacturers who are well known to pay out all their profits in wages and gifts to the poor—after deducting, of course, their contributions to the Republican campaign fund. Mr. Harrah's conduct is also accounted for on the ground of the enjoyment he derives from "the publicity which comes from the expression of eccentric opinions in the newspapers." This would seem to show that he had mistaken his calling and ought to turn editor at once. On the staff of the *Manufacturer*, for instance, we venture to say that he could find opportunity to express more eccentric opinions in each Presidential campaign than he could in a dozen years as President of a manufacturing company. But he is also fatally mistaken, he is told, in not being able "to understand that overthrow of a part of the protective system must involve the overthrow of the whole system." This is the old "howling-wilderness" and "grass in-the-streets" argument for protection. If the wool-growers of Ohio are not given what they believe to be their proper share of the plunder, they will make Providence an heap and Woonsocket a desolation. If the Lake Superior iron-miners are not allowed to shut out foreign ores, they will shut up every rolling-mill in Pennsylvania. Only on these terms of compact between dividers of the spoil can the great and beneficent system of protection exist.

Both the outgoing and the incoming Governors of Vermont address the Legislature at the opening of its session, and there has been much curiosity as to what they would say regarding the Australian ballot system. Gov. Page, who was just surrendering his office, sustains the law most heartily. Among other things, he says: "He serves his party best who serves his country best; and the broad-minded citizen, even though he be ever so strong a partisan, will welcome any system that compels political parties to bring forward their best, knowing that, if they do otherwise, a discriminating voter will place his seal of condemnation upon its unpatriotic action." He says that he "shall ever take pride in the fact that during my administration Vermont placed herself squarely abreast with that better element in American politics which is to-day everywhere demanding a freer, purer ballot, North and South." He administers a severe rebuke to those politicians who, under the lead of the Chairman of the Republican State Committee, have been calling for the repeal of the law. On the other hand, the new Governor, Mr. Fuller, manifests no such enthusiasm in behalf of the reform as his predecessor, but this is perhaps not strange, considering that, under the secret ballot, he received a majority nearly 10,000 less than was given the Republican candidate for Governor four years ago. Ex-Gov. Page may not have meant to give Gov. Fuller a hit, but nothing could be more pat than his commendation of the new system as one "that compels political parties to bring forward their best," since it is notorious that Fuller was much short of the best candidate that the Republicans could have presented. The new Governor thinks that "there can be no question that this law has operated to defeat the will of many voters," and he hardly conceals the fact that he would be pleased to get rid of the system, although he contents himself with suggesting "further legislation to perfect

and carry out this reform." While the party managers would be glad to repeal the law, the people generally are so well pleased with the new system that there is happily no danger of its abolition.

On landing in this country last week Minister Egan spoke of the high regard in which he was held by the Americans resident in Chili, and instanced as a proof of it the banquet which they tendered him in Santiago on the eve of his departure. This hardly tallies with the account of the affair telegraphed at the time, or with an article about it published in the Valparaiso *Heraldo* of August 30. That paper gives a complete list of the twenty-seven persons present at the dinner, and has some very unpleasant things to say of several citizens who figure on it. It also states that the banquet was paid for by Egan and two men who have enormous claims pending against Chili, pointing out that the invitations laid special emphasis upon the fact that the meal would be altogether gratis. It adds that of those Americans in Valparaiso who were invited, the only one to go was the agent of the New York house of Flint & Co., the head of which made himself famous by prematurely revealing Blaine's friendship with Balmaceda and the $30,000,000 of nitrates. We do not vouch for the truth of all these assertions, but simply cite them as falling in with many other bits of evidence going to show that Egan's popularity with the American colony in Chili is not so great as he would be glad to have the public believe. It will be remembered, for example, that he was not invited to the patriotic meeting held by that colony on July 4, and one would have supposed that his tremendous patriotism, to say nothing of his official position, would naturally have given him the first place in such a gathering.

Some recent events in France show how baseless is the claim that there is something distinctively "American" in protectionism. At a congress of Socialists held at Roubaix, to which the Socialists of Belgium were invited, all sang in chorus:

"Les peuples sont pour nous des frères,"

and the doctrine of "international solidarity" was enthusiastically advocated. No more contests of nationalities were to take place, but the common people of all lands were to unite in a war against the "bourgeoisie." Scarcely had the echoes of those songs and speeches died away when a violent outbreak occurred among the miners of the Pas-de-Calais on account of the employment of some Belgian workmen. The doctrines of the "International" were forgotten, and the Belgian "brothers" were denounced as foreign pauper laborers come to take the bread from the mouths of Frenchmen, and the windows of their lodging-houses were broken. Their immediate discharge was demanded by their French comrades, and the assurances of the mining companies that wages were not to be lowered, and that the foreigners were employed simply for lack of other laborers, were received with shouts of "Down with the Belgians!" It was declared that the mines were the property of the French nation and should be worked only by Frenchmen. The places of the Belgians belonged to Frenchmen who had been discharged for their political activity or because they had taken part in strikes, and the companies were informed that these men must be reëmployed and the Belgians dismissed, or a strike would be ordered. On the other side of the frontier the news of this disturbance had a damaging effect upon "solidarity," some of the Belgian miners there parading with a red flag bearing the inscription, "Death to the French!" and pillaging the house of a woman reported to be of that nationality.

These events have a sufficient resemblance to some recent occurrences in our own country to make it apparent that the same leaven was at work in both cases. By an interesting but not properly surprising coincidence, they have suggested to a French journal, the *Temps*, the same moral which was here drawn from the Homestead trouble. It observes that much has been said of national industry, of national production, of national interests, and that the most egoistic and interested calculations have masked themselves under the cover of the most ardent patriotism. Is there, then, anything remarkable, it inquires, in the attitude of the miners who protest against competition upon the ground of nationality? The manufacturers have obtained laws which impose protective duties upon foreign goods, but the laborers have no laws that protect their wages, and in the case of these miners they simply enforced a protection that the law had neglected to provide. Their patriotism may have been irregular in its manifestation, but, measured from the protectionist standpoint, it was genuine. If the Belgian miners were in need and were willing to work for low wages, all the more reason for excluding them. If there was a scarcity of laborers, that would have led to a rise of wages, and the importation of foreign laborers would counteract this tendency, and should therefore be prohibited. The argument is unanswerable from the protectionist standpoint, and, with things going as they are in France, it would not be surprising if the trade-unions should insist upon embodying it in legislation.

The question who is to succeed Tennyson as Laureate will probably be the main interest of intellectual England during the next few weeks. There is, unhappily, no heir apparent to the illustrious poet, nobody whose title to his place is clear. In quality of verse Swinburne undoubtedly stands at the head of the list, and Mr. Gladstone is in a measure committed to this view of him; but his personality is unpleasing and he has made poetry a furious political partisan. Part, and no small part, of Tennyson's equipment for the place he held in the national affection and admiration was the purity of his life. He was essentially a gentleman in the highest and best sense of the term. It will be hard for the Queen to accept and for Mr. Gladstone to propose anybody for the laureateship of whom this cannot be said. Sir Edwin Arnold's claims do not seem to be even considered by anybody, although Major Pond, when he came to this country last fall, put forth an amusing tale of his succession to the laureateship having been settled, and of his having had to get a special permit both from the Queen and from Lord Salisbury to come to this country, the Laureate *in posse* not being allowed to absent himself from England when the Laureate *in esse* was old or infirm, lest the kingdom should be left even for a day face to face with the horrors of a vacancy. Even if this were true, we fear his memorial verses on Tennyson in his *Daily Telegraph* would settle Sir Edwin's fate, for they are enough to make the great poet turn in his grave and exasperate his family.

The Baring liquidation drags its slow length along, and the chances of the guarantors escaping without having to make good a final deficiency grow less. With every partial realization on the securities held, the water oozes out of what is left. Thus, in the six months from February 29 to August 31 the liabilities were reduced from £7,017,666 to £5,113,613, but in the same period the value of the assets declined from £10,338,757 to £8,319,261, or $200,000 more than did the liabilities. This shows how every fresh attempt to market the depreciated bonds only sends them down lower in price. At the meeting of the Bank of England in the middle of September the opinion was general that it would not be possible to complete the liquidation within the next twelve months, as originally planned, and that it would be necessary to form some new kind of trust to nurse the Baring securities along. The immense losses to English investors who were caught in the South American crash are enough of themselves to account for a good part of the financial distress under which England has been laboring. There is a suggestion here for our Republican philanthropists who preach the new doctrine that our highest happiness is to be found in causing all the misery possible in other countries. If we were but to repudiate all our national and railroad bonds held abroad, we could bring about a wretchedness beside which all that McKinley has caused would not figure at all in the rejoicings of good Americans.

MORE ABOUT MONEY IN ELECTIONS.

MR. WAYNE MACVEAGH has joined the band of eminent seceders from the Republican party which contains Judge Gresham and others. The things he cannot stand any longer are the Force Bill, the McKinley Bill, the corruption practised and necessary to defend the high tariff, the huge Government purchases of useless silver, the extravagant pension system, and the vast importations of degraded Europeans to supply labor for the protected industries. All these things, of course, have concomitants equally objectionable, for the enumeration of which we must refer our readers to the letter itself. It is not long, but it is lucid and very closely packed. We think, however, it might all be summed up by saying that Mr. MacVeagh objects to the conversion of the Government into a commercial enterprise for the benefit of a small body of private individuals. When this fact is made plain, all the rest follows, almost as a matter of course. The Republican party has opened a shop such as the mediæval monarchs used to keep when they sold monopolies, places, and titles for cash down. It has gone on for years advertising the sale of trade privileges, and the number of its customers has steadily increased, and the price of its wares has steadily risen, and it has steadily extended its field of operations. Like the railroads, too, it has had to open new branches, in order to secure business which some rival might take away from it.

There is little doubt that in the beginning it intended to confine itself strictly to trade with manufacturers engaged in competition with the wicked foreigner, and that it entered into large and lucrative contracts with this class. But it soon found that it was impossible to fulfil these contracts under a protective policy pure and simple. To live up to its engagements, it had to have at every election an increasing number of votes, not only because the population was increasing, but because the voters, on finding out that the elections were a business transaction with money in them, became more and more exacting, and in fact began to demand that they should be "let in." They would perhaps have continued to "vote as they shot," or vote against "outrages" on the negro, very much longer had they thought that the managers were living on the same elevated plane of sentiment. But as soon as they discovered that these gentlemen were in business, they naturally began to demand their share of the profits.

Out of this demand have grown the huge purchases of silver and the huge pensions and the reckless bribery of voters. This is, of course, a process which must come to an end through sheer exhaustion of resources some time, but it takes a long while to exhaust a rich nation. The case of the Republican party is very like that of Tammany in Tweed's day, and, indeed, like all cases of conspiracy against somebody else's money. Tweed might have lasted years longer had he only had to rob for himself, for Sweeny, Hall, and Connolly. The city could have stood him and them possibly for his whole lifetime. But he had to divide with an ever-enlarging circle of confederates, and the scale of his operations had therefore to be increased correspondingly, until further thieving was impossible, and the end came. So it is with the Republican party. The manufacturers ask for more tariff every year, and more tariff cannot be supplied without more votes, and more votes cannot be had without more money, and more money cannot be spent without discovery, or without making demands on the manufacturers which more than exhaust the profits of the tariff.

To get an idea of the difficulties of the situation for the party just now, one has only to compare it with that of 1888. Wanamaker raised, it is said, and he has himself virtually admitted it, $400,000 for Quay in that year. He tried to get as much out of the Pacific railroads in the last fortnight of the canvass, but failed. But Wanamaker was not known then, except as a pious shopkeeper in Philadelphia, and he could, when making his political collections, have got board, lodging, and a certificate of "Christian character" in the office of nearly every religious newspaper in the country. But fancy Wanamaker starting out on a similar errand now, and trying to put a religious complexion on his activities. Why, every dog in the country would howl as he drew near the tills. Take also Quay's case. How many people knew Quay in 1888, except as an adroit political manager? How many knew anything about his methods? How easy it was for party newspapers, without being ridiculous, to say, as one paper said, "Hail, Quay! hero of a hard-fought, brilliantly won field—the right man in the right place." What boy of twelve is there in the country who does not know all about him now? The fact that he is only too well known has, in truth, been recognized by him and his confederates in the frankest way by his withdrawal from the Chairmanship of the National Committee. In the present campaign it is impossible to turn his skill to full account. The case of Dudley is somewhat similar. This man was able to direct the purchase of votes in Indiana from an office in New York in 1888; now he is relegated wholly to some sort of "private business." His usefulness to the party is at an end. Moreover, votes have gone up in price. The very careful and trustworthy observer who has been travelling in the interior of this State for the *Evening Post*, reports that votes which could be had for "the defence of American industry" for five dollars in 1888 are now held firm at twenty dollars apiece.

All this shows that the "Republican Business Men" are—we do not say at the end of their resources, but struggling with increasing difficulties of all sorts. Even if the money comes in as well as it did—and we learn on excellent authority that the contrary is the truth—much more money is needed, and the most skilful collectors and dispensers are either in hiding or living in retirement. The coming election will in fact be something in the nature of a police raid on a gambling-house. If it succeeds, a most nefarious industry will be broken up—we trust, for ever. If it fails, the process of national demoralization will continue until a century or two will be needed to effect a cure.

CONCERNING THE HON. DAVID MARTIN.

THE *Tribune* has at last concluded that it is necessary to give some account of the work which Mr. "Dave" Martin is doing for the Republican National Committee in this city. According to this, he has during the last two weeks been "collecting the large mass of information which he possesses of *prospective* Democratic rascality in New York city, and in organizing a department for the detection and punishment of naturalization, registration, and voting frauds." Some of this information he has communicated to the *Tribune*, giving the addresses of a considerable number of lodging-houses, "and dance and lewd houses," which he foresees that the Tammany people are going to fill with "colonists" before the election. Now, there is no doubt that Mr. Martin is eminently fitted for such detective work, because he has himself been a practitioner of the arts which the *Tribune* says he is now engaged in exposing. In 1872 it was proved that he was the head of a band of repeaters in Philadelphia and was engaged in the plot which the *Tribune*, on the 9th of October in that year, thus described:

"Philadelphia is flooded with New York ruffians, who have gone over there with the purpose of outvoting the people of that city by means of their abominable machinery. The notorious 'The' Allen, crony of O'Brien and particular friend of Mr. Roscoe Conkling, is among the leaders of these scamps; and 'Whitey Bob,' 'Blacksmith Dan,' and other well-known bullies and election thieves are hand-and-glove with Hartranft's penitentiary gang in Philadelphia. This scandalous plot against suffrage is conducted by Grant officials."

Mr. Martin was a member of this "penitentiary gang," and therefore knows exactly how all forms of election frauds are carried out. But the place where he could be useful as a detective is Philadelphia, where he is perfectly familiar with the whole criminal class, knows their haunts, their modes of perpetrating frauds and of evading justice, and probably has got in black and white the exact amount of accommodation which can be obtained on a pinch in all the low lodging and dance-houses in that city. With the New York cheats, bullies, receivers, colonizers, and with their lairs and "boozing kens," he can have but a very slight acquaintance, if any. The Republican Committee here must be able to lay their hands on a hundred men in New York, each of whom would be worth ten Martins in detecting and exposing prospective Tammany frauds. If, when Inspector Byrnes

was bent on frustrating some great conspiracy against order or property in this city he were to import a few local criminals from Cincinnati or Chicago to superintend the work, he would expose himself to ridicule if not to removal for admitted incompetency; so that we must pronounce the *Tribune's* explanation of Mr. Martin's presence among us as ludicrously inadequate, though of course it may pass muster with many of its rural readers. It is certainly much better than total silence.

In fact, in these days of the railroad, the telegraph, the printing-press, and the public school, all attempts to explain a notorious rascal's absence from home by saying that he is travelling about for the detection and prevention of fraud, must necessarily prove a failure. The inquiring, pyrrhonic spirit of the age is fatal to presumptions of this nature. In no country have they less chance of success than in this. Say what you will, the great body of the American people *will* believe that when Mr. Martin travels, he travels in the pursuit of his ordinary avocations; that when he reaches "a distant city," as the novelists say, he goes promptly to work at the arts by which, amid the scenes of his childhood, he rose to fame and fortune.

This view will be strengthened, too, the *Tribune* must remember, by the fact that at every Presidential election of late years so much of the work done by the Republican National Committee is of a "secret" and "confidential" nature. For instance, when Mr. Wanamaker gave the $400,000 to Quay, he "did not insist on knowing" what Quay did with the money. "He did not want to know," and yet he must have known, or had strong reason to believe, at that very time, that Quay had robbed the State Treasury of $260,000. So again, when Vice-President Arthur was eulogizing Dorsey for "carrying Indiana" in 1880, he refused "to go into the minute secrets of the campaign because he saw the reporters present." So, also, Dudley's circular in 1888, prescribing the mode in which the "floaters" were to be brought to the polls "in blocks of five," was of course "private." And this year Mr. Hackett, the Chairman of the New York Committee, in calling for "particular service for the Republican cause," marks his circular "Confidential," and points out that the service will call for "the exercise of caution and the ability to keep a secret," although the service consists in simply sending "the name of a Democrat whom you believe can be induced to vote the Republican ticket this fall."

Now, the work of inducing people to vote the Republican ticket by argumentative persuasion cannot be considered secret or confidential work. Persuaders by argument, in fact, seek for their work all the publicity possible. Nor is the name of a man who can probably be induced to change his political opinion by argument, a thing only to be whispered into a hole in a tree, or only revealed under the seal of confession. In fact, the only possible reason for throwing the veil of secrecy over such a transaction is the disreputable character of the "inducement." That is to say, the reason why the service Mr. Hackett asks for is "confidential" is, that it consists in finding out in each locality who the "floaters" are, and letting the Committee know to whom the money to bribe them is to be sent. For the superintendence of this particular service for the Republican party there is no better person than Mr. Martin. To believe that he has been brought on here for any service of a different character, is to disregard all the rules of probability which govern men in the ordinary conduct of life. Of the art of discovering persons who have not fully made up their minds which ticket to vote, Mr. Martin is a master excelled only by Quay. If Quay comes on here, as it is now said he is likely to do, it will show simply that Martin needs help—not that some other kind of work than his needs to be done. That he and Quay wander about the country in search of jobs of reform is a theory which would extract a smile from most Americans, even in the very article of death.

CHIEF-JUSTICE PAXSON'S CHARGE.

THE charge which Chief-Justice Paxson of the Pennsylvania Supreme Court delivered on Monday to the Grand Jury in the Court of Oyer and Terminer at Pittsburgh in regard to the Homestead cases will attract the attention of the whole country. It is an extraordinary event for the presiding judge of the highest tribunal in the State to appear in a county court, but the Constitution of Pennsylvania makes the justices of the Supreme Court justices ex-officio of the Court of Oyer and Terminer of every county, and Judge Paxson was entirely right in considering the present occasion grave enough to justify the exercise of this right.

The Chief Justice began by reviewing the familiar facts connected with the disturbances of last summer—that there was a disagreement as to wages, concerning only a small portion of the Carnegie Company's employees, and those receiving the highest pay; that, as a mutually satisfactory agreement could not be reached, the company closed its works and discharged its men; that it then proposed to operate its works by the employment of other men, not members of the Amalgamated Association; that the latter thereupon organized an "Advisory Committee," which proceeded to take charge of the affairs of Homestead, and ordered the mechanics, laborers, and other employees of the works, amounting to about 3,000, whose wages were not affected by the proposed change, and who had entered into a new agreement with the company upon the terms of their old contracts, to refuse to work until the Amalgamated Association should be recognized and its terms agreed to; that it allowed no persons to enter the mills, nor even any strangers to enter the town, without its consent; and that it formed a military organization, establishing a girdle of pickets by which the works and the town were guarded like a military encampment; that all discussion of the wage question was positively prohibited; that a force sent by the Sheriff of the county was driven off with threats; and, finally, that the brutal assault of July 6 was made upon the force of Pinkertons which had been sent to protect the property of the company.

The Chief Justice lays down the fundamental principles which govern the relation of employer and employee most clearly and forcibly. This relation, he says, "is one of contract merely. Neither party has a right to coerce the other into the making of a contract to which the mind does not assent. The employer cannot compel his employee to work a day longer than he sees fit, nor than his contract calls for, nor for a wage that is unsatisfactory to him. It follows that the employee cannot compel his employer to give him work or to enter into a contract of hire; much less can he dictate the terms of employment." It follows that, when the Homestead negotiations came to an end, the contract relations ceased, and the men had no further claim upon the company than has a domestic servant upon a private employer after leaving his service. "Nor does it make any difference that a large number were discharged at one time; their aggregate rights rise no higher than their rights as individuals."

These fundamental principles are thus applied to the Homestead case:

"When the company shut down its works and discharged its men, it was acting strictly in the line of the law; it could not compel the men to work, nor the men compel the company to employ them; no arrangement could be made in such regard except in the nature of a contract agreed upon by the parties. Upon this subject their rights were mutual. The company had the undoubted right to protect its property; for this purpose it could lawfully employ as many men as it saw proper, and arm them if necessary. It was an act of unlawful violence to prevent their landing upon the property of the company. That unlawful violence amounted at least to riot upon the part of all concerned in it; if life was taken in pursuance of a purpose to resist the landing of the men by violence, the offence was murder, and perhaps treason. The rights of the men were, to refuse to work unless their terms were acceded to, and to persuade others to join them in such refusal; but the law will sustain them no further. The moment they attempted to control the works and to prevent, by violence or threats of violence, other laborers from going to work there, they placed themselves outside the pale of the law. It cannot be tolerated for a moment that one laborer shall say to another laborer: 'You shall not work for this man for that wage without my consent,' and then enforce such command by brutal violence upon his person; and what will not be permitted to one man to do will not be permitted to an organization of men."

It is the assertion of the doctrine that the conduct of the men constituted treason which renders the Chief Justice's charge most notable. This offence is defined by an act of the Pennsylvania Legislature passed in 1860, which provides that, "if

any person, owing allegiance to the Commonwealth of Pennsylvania, shall levy war against the same or shall adhere to the enemies thereof, giving them aid or comfort within the State or elsewhere, or shall be thereon convicted in open court, on testimony of two witnesses of the same overt act of treason whereof he shall stand indicted, such person shall, on conviction, be adjudged guilty of treason against the Commonwealth, and be sentenced to pay a fine not exceeding $2,000 and undergo an imprisonment by separate and solitary confinement, at labor, not exceeding twelve years." There has never been any prosecution under this act, so that there are no precedents. Judge Paxson draws a distinction between "a mere mob, collected upon the impulse of the moment, without any definite object beyond the gratification of its sudden passions," and a case "when a large number of men arm and organize themselves by divisions and companies, appoint officers, and engage in a common purpose to defy the law, to resist its officers, and to deprive any portion of their fellow-citizens of the rights to which they are entitled under the Constitution and laws." In the first case, he says, the mob does not commit treason, although it destroys property and attacks human life, but the action taken by the organized body of men "is a levying of war against the State, and the offence is treason." He proceeds to define the offence more at length as follows:

"Much more so when the functions of the State Government are usurped in a particular locality, the process of the Commonwealth and the lawful acts of its officers resisted, and unlawful arrests made at the dictation of a body of men who have assumed the functions of a government in that locality; and if it is a state of war when a business plant has to be surrounded by the army of the State for weeks to protect it from unlawful violence at the hands of men formerly employed in it. Where a body of men have organized for a treasonable purpose, every step which any one of them takes in part execution of their common purpose is an overt act of treason in levying war. Every member of such associated government, whether it be an advisory committee, or by whatever name it is called, who has participated in such usurpation, who has joined in a common purpose of resistance to the law and a denial of the rights of other citizens, has committed treason against the State. While the definition of this offence is the designing or overturning of the Government of the State, such intention need not extend to every portion of its territory. It is sufficient if it be an overturning of it in a particular locality, and such intent may be inferred from the acts committed. If they be such that the authority of the State is overturned in a particular locality, and a usurped authority substituted in its place, the parties committing it must be presumed to have intended to do what they had actually done."

The effect of this charge must be to revive and stimulate the discussion of the questions involved in the Homestead troubles, and of the methods which should be adopted to prevent their recurrence. Undoubtedly, the doctrine laid down by the Chief Justice will surprise most people, so commonly is the word treason identified with the idea of plotting with foreign enemies of the State. Whether or not Judge Paxson's definition be finally accepted as the law of the land, it is a great service to have the underlying issues thus forced to ultimate decision.

TENNYSON.

TENNYSON made his first public appearance as a poet in 1827 in a volume of 228 pages, published jointly with his brother Charles. How much was Alfred's we do not know, as there is no formal indication, and the manner of the poems gives no sign. There is nothing in them of the later quality of either brother. For poems written from fifteen to eighteen they are not discreditable, but there is nothing in them to suggest a coming fame. Byron's 'Hours of Idleness' was much more prophetic. The reader is told in the preface that he will find many imitations. These are mainly of Byron, but they are very faint. Nothing was preserved by Tennyson from this volume, even when he made the follies of his youth the vices of his manhood "by an after-approbation." He went up to Cambridge chastened in spirit by the failure of his anonymous venture to make a ripple on the public mind, and glad, no doubt, that he had withheld his name. He did not withhold it from his next publication, his prize poem of 1829, "Timbuctoo." It is interesting that we have Arthur Hallam's poem on the same unpromising subject, and that Thackeray's first publication was a burlesque upon it. In 1830, while still an undergraduate, Tennyson published 'Poems, Chiefly Lyrical,' a volume of 154 pages, with very little on each separate page.

It was high time for a new poet to appear. Keats, Shelley, and Byron had gone over to the majority in swift succession. Southey, after having launched a whole fleet of epics, was discovering that prose was his vocation. Wordsworth had twenty years more to live, but little more to say. 'Poems, Chiefly Lyrical' had at least the merit of difference from all the recent verse. It was hailed by the *Westminster* with cordial praise; but Christopher North, then editor of *Blackwood*, was determined that the young poet should not be spoiled by finding himself called a new Elizabethan. One poem in the book he called "drivel," another "more dismal drivel," and a third "more dismal drivel even than that." Tennyson answered in a poem in which the refrains "musty Christopher" and "crusty Christopher" were prominent: he would forgive his blame, but not his praise. But North's praise was for the best and his blame was not without effect. Of the "Deserted House" he said, "Every word tells, and the short whole is most pathetic in its completeness—let us say perfection—like some old Scottish air sung by a maiden at her wheel or by a shepherd in the wilderness." By far the most interesting review of the little book, however, was by Arthur Hallam, whose poems would have been included in the volume with Tennyson's had not his father made demur. It hailed Tennyson as a splendid rebel against Wordsworth and his school, a successor of Hunt and Keats and Shelley, and especially of Keats—preëminently the poet of sensation. This shows how imperfectly the volume of 1830 foreshadowed the full-grown Tennyson, in whom the reflective element, which Hallam deprecated in Wordsworth, was more conspicuous than the sensuous; and, strange to say, Tennyson's great reflective poem is a lament for the young friend who praised him for his lack of that which is his own and Tennyson's best pledge of immortality.

But the volume of 1830 was for the most part an embodiment of Tennyson's delight in sensuous things and in metrical experiments. Poe's extravagant praise of Tennyson was probably based upon these last, which, in common with much of his own verse, confused the limits of poetry and music and subordinated sense to sound. Many, but not too many, of the poems in this volume failed to appear in subsequent collections. Some of them still hold their own among the poet's second best. The richness of the sensuous coloring, the passionate delight in finding beauteous words for images of beauteous things—a delight which is perhaps Tennyson's most characteristic trait—reached its acme in "Recollections of the Arabian Nights."

In 1833 Tennyson published a second volume, including nothing that was in the first, and marking an advance on that which was so striking that it won for him, as it deserved, the reversal of many judgments unfavorable to his talents. In the first volume there was not a touch of modern interest, except possibly in the piece called "A Character"; there was no human sympathy; the sensation and emotion did not inhere in any definite personality or carry with them any tale of love or sorrow. Least of all was there any touch of homely vigor. In the volume of 1833 there was a happy difference in these particulars, while there was less capriciousness of form and far less of tinsel glitter and mere prettiness in the detail. "The Lady of Shalott" was the first note preluding the Arthurian symphony that was yet to swell. The full scope of Tennyson's genius was not revealed in this volume, but it made clear that there was much more in him than exquisiteness of lyric form or daintiness of sensuous representation. Of these poems generally, as of the lotus-eaters' land to which one of them conducts our swooning fancy, it might well be said in Tennyson's own words:

"There is sweet music here that softer falls
Than petals from blown roses on the grass,
Or night-dews on still waters between walls
Of shadowy granite, in a gleaming pass;
Music that gentlier on the spirit lies
Than tired eyelids upon tired eyes;
Music that brings sweet sleep down from the blissful skies."

But there was more than this. There was the splendid diction and the forcible dramatic impersonation of the "Dream of Fair Women." The revolt of Tennyson from Wordsworth's theory of poetic diction is nowhere more conspicuous than here, unless it be in later corrections of the same poem, one of which substitutes "the bright death" at Iphigeneia's throat for "the sharp knife." This was a very characteristic change.

From 1833 to 1842 Tennyson was a busy author, as was proved by the event; but in this interval no volume issued from his hand. In 1842 appeared an entirely new volume, 'English Idylls and Other Poems,' and a complete edition of his poems in two volumes. Of these the second was identical with the volume of new poems; the first was made up from the volumes of 1830 and 1833. All of the latter had been kept, but with many changes, both subtractions and additions, and about half the former. In the second volume we have very nearly the perfect Tennyson, all of his energy and beauty and nearly all the fulness of his range. Had we only this volume, Tennyson's rank as a poet would be hardly less exalted than it is in virtue of his life's complete performance. Something in every kind he had before essayed was here, and better done. Something was here of nearly everything he afterwards essayed. Here as an artist he touched the height of his attainment.

Much was to come, but nothing better as poetic art, and nothing different, except "The Northern Farmer," the most homely, realistic, and dramatic of his poems, the dramas "Queen Mary," "Harold," and "Becket," and some others of a lighter cast, and—surely a very great exception, if it was really different from "The Two Voices"—'In Memoriam.' But to claim for Tennyson's volume of 1842 a manifestation so nearly perfect of his poetic genius is not by any means to be ungrateful for the additions that he made to that before his death. There is no part of the 'Idylls of the King' that is more beautiful than the "Morte d'Arthur," which daringly initiated the volume of 1842; daringly, because what better wine could follow after that? Yet better wine there was to follow. But the perfection of the "Morte d'Arthur" does not make the tender beauty of "Elaine," nor the witchery of "Vivien," nor the great nobility and pathos of "Guinevere," of less account; and for what we have in spiritual suggestion and embodiment of the profoundest sentiment of the poet's time in 'In Memoriam' there are many who would gladly give up all the rest that Tennyson achieved. Another very sensible and valuable addition to the sum of 1842 is in the songs that afterwards appeared; the group occurring in 'The Princess,' as interludes and in the body of the piece, touching the highest mark. The poems that have done most to make Tennyson widely popular—a people's poet he has hardly been even with these to show—are such idylls as "Dora" and "The Gardener's Daughter," poems with a story in them, and dealing mainly with the perplexities and sorrows and catastrophes that are never far removed from the most ordinary lives. Nothing of Tennyson's is more thoroughly his own than these idylls. In Wordsworth and in Crabbe there were attempts to deal with similar situations, but the manner was entirely different. If there was more of truth, there was less of charm. In Tennyson's idylls much may be sad, but all is beautiful. Allied with these in spirit, but lyrical in form, were the poems "Lady Clare," "The Lord of Burleigh," and "The Talking Oak," even more popular than the others, because they sang themselves into the common heart. In the same volume were three dramatic poems, two of them dramatic lyrics of great force and beauty, "St. Agnes" and "Sir Galahad." But "St. Simeon Stylites" is a poem made of sterner stuff. It may be doubted whether Browning could have created a St. Simeon with so little of himself in it as there is of Tennyson in Tennyson's Saint. The superficial humility and essential arrogance of the ascetic temper no one could express more perfectly.

Tennyson's volumes of 1830 and 1833 had contained nominal songs, but they did not sing, and they could not be sung. In the volume of 1842 appeared the first of many that sing, although unsung, but which have naturally invited the composer's skill, and so have had much wider currency than they might otherwise have had. But the cap-sheaf of beauty and of power in the new volume was the "Ulysses." When we said that there was better in the volume even than the "Morte d'Arthur," we had this in mind. When Wordsworth died in 1850, and the question of his successor came up, Sir Robert Peel was consulted, but he had never read anything of Tennyson. The "Ulysses" was urged on his attention, and he had no doubt that Tennyson would answer for the post. Thackeray's daughter, Mrs. Ritchie, tells the story, which is doubtful, but which ought to be true whether it is or not.

In the interval between his volume of 1842 and his laureateship, Tennyson had published two important works: in 1847 'The Princess,' and in 1850 'In Memoriam.' 'The Princess' was indeed "A Medley" as it was called—a medley of mediæval situation and modern thought, of pleasant humor and of serious purpose. There was much difference of opinion about it, as subsequently about 'Maud' and the second 'Locksley Hall.' But it was as a pamphlet against "woman's rights," which it was never meant to be, and not as a poem, among the lovers of good poetry, that it failed to satisfy. It did but make the "woman's rights" agitation an excuse for a semi-humorous, wholly earnest poem of ideal womanhood. As it went on, the serious purpose grew and had at length exclusive sway. It was one of many contributions from the poet to the nobilities and sanctities of wedded life. The true relationship of man and woman has never found more grand and beautiful expression than in the closing part. Strangely enough, the songs which serve as interludes between the different parts were absent from the first edition, but we have Tennyson's assurance, in a published letter, that they were not an afterthought, and that the child of the songs is the hero of the whole performance.

'In Memoriam' appeared anonymously in 1850, but the disguise was very shortly dropped. The poem throws little light on the development of Tennyson's genius, because it was not written after 'The Princess,' but, piece after piece, all the way along from Hallam's death in 1833. It is a journal of the poet's sorrow during the interval between that date and 1850. It becomes less individual, more universal, as the years go by. The poet's private sorrow opens out into a hundred aspects of the pain and mystery, the wonder and the joy, of human life. The progress of the poem is from doubt to faith. It closes to the sound of marriage-bells. Its earlier parts, relating to the death and burial of the poet's friend, were written shortly after his death. They are distinctly inferior to the later parts that take a broader sweep. These reveal him as profoundly agitated by the deepest scientific and religious questions of his time, but holding fast his faith in God and man. The essentially poetical character of the concepts of modern science has not been so clearly conceived by any other poet, and he expressed them in the language of poetry without violation of their truth. 'In Memoriam' is a factor that must be reckoned with in the religious life of the Victorian times. It has brought strength and peace to thousands. It has winged the thought of many earnest preachers to its mark.

As the official poet of the realm, Tennyson's first poem was upon the death of Wellington. Hardly could it have been better if it had not been official. His laureate work was seldom of his best, or even moderately good. Only certain dedications to the Queen are of his proper height. 'Maud' was published in 1855, and Tennyson's own dissatisfaction with it, proved by his remorseless revision, has been widely shared. The garden song in it was its best justification. It was always difficult for Tennyson to depict a violent passion otherwise than as hysterical. In 1859 appeared the 'Idylls of the King'—"Enid," "Vivien," "Elaine," and "Guinevere." The number was afterwards increased, but the additions are not generally equal to the original set. "The Passing of Arthur" is certainly at the poet's best, but that is an expansion of the "Morte d'Arthur," and the wise reader will prefer the shorter poem in its original setting. No afterthought can make an epic poem, and it is a matter for regret that Tennyson chose at length to offer the Idylls as an Arthurian Epic. They have not that cohesion and that cumulative force which is rightfully expected of an epic. As an interpretation of the spirit of the Arthurian legend as we find it in Sir Thomas Malory, they cannot be pronounced a great success. Mr. Arnold's "Tristram and Iseult" is nearer to the mark. But they abound in noble passages, and the "Guinevere" rises at length to a height of tragic feeling that has seldom been surpassed.

We can do no more than mention in their order the principal publications of Tennyson after the 'Idylls of the King.' 'Enoch Arden' appeared in 1864, the 'Holy Grail' in 1869, 'Songs of the Wrens' in 1870, 'Gareth and Lynette' in 1872, the dramas "Queen Mary" and "Harold" in 1875 and 1876, and "Becket" in 1884, of which the first in time was first in power; the 'Lover's Tale' in 1879, and about the same time 'Ballads and Poems'; in 1881 and 1882 three minor dramas, "The Cup," "The Falcon," and "The Promise of May"; in 1886 'Locksley Hall Sixty Years After'; in 1889 'Demeter, and Other Poems'; in 1892 "The Foresters." With the poems naming the successive books there were frequently poems of greater value than the more ambitious in whose train they followed, "Lucretius" and "Tithonus" for example. "Queen Mary" and "Becket" were put upon the stage, as also the three minor dramas, but without much success. Tennyson's lack of humor was conspicuous in his clowns in "Becket." Less "excellent fooling" it would be hard to find. "Locksley Hall Sixty Years After" brought about his ears a clashing storm of rival sympathies. Mr. Gladstone met its pessimistic plaint with a clear showing of the gains of sixty years. But Tennyson's poem was not unworthy of his fame. It contains a vision of the future as encouraging as anything in the earlier "Locksley Hall" and in perfect keeping with the even tenor of his life, not "noises of a current narrowing," but "the music of a deep."

In Tennyson the poet was exhaustive of the man to a remarkable degree. He existed for the general public only as a poet. He stood at the opposite extreme from Byron's engrossing personality. The man behind the poet was a mystery—an inviolable shade which vulgar curiosity essayed to grasp in vain. His aloofness was of a kind that makes Emerson seem in comparison the most sociable of men. In his youth he had great capacity for friendship within narrow bounds. At Cambridge he was one of Whewell's men, and among these he found his early friends—Arthur Hallam chief; Fitzgerald, the translator of Omar Khayyám, the "Old Fitz" of one of the most beautiful poems of his later life; Milnes, Trench, Maurice, Spedding, and "the lost light of those dawn-golden times," the Rev. W. H. Brookfield, to whom, with his wife, Thackeray wrote those delightful letters that were published in 1887. With Thackeray and Carlyle he had friendliest relations further on, and with Gladstone all along from the time when Hallam was their common friend. He was dining with Thackeray when his little girl asked him why he didn't write books like 'Nicholas Nickleby.' Oxford gave him the degree of D.C.L. in 1865, and his own Cambridge Trinity made haste to do the same. In 1869 he was made an honorary fellow of Trinity, and his bust was placed in

the College library. In December, 1883, he was made Baron Tennyson of Aldworth, Sussex, and Freshwater, Isle of Wight.

There was never a more purely literary life, and never a literary life confined more closely to a single line of work. Many poets have written a good deal of prose, at least with their left hand. Tennyson confined himself to poetry with a tenacity and exclusiveness strangely matched by the opposing genius of his time. He was devoted to ideal excellence. He was not easily satisfied with his own performance, but ever returned upon it with a critic's eye and a courageous hand. No other poet has made so many changes in his published works. By this sign he was preëminently the artist among poets. The spontaneous conception was wrought out with infinite patience. Every cadence, every word was challenged and assayed. The result was a unique external beauty and perfection, while of high imagination and delightful fancy, soaring thoughts and earnest purpose, there was never any lack in the full tide of his career. The penalty of Tennyson's seclusion was at length a mind distrustful of all present tendencies of thought and action. When Gladstone, ever in the thickest of the fight, grew from a straight-laced Tory into a hopeful Liberal, his friend changed from a hopeful Liberal into the representative aristocrat and Tory of his time. There was nothing in his work corresponding to the blows which Whittier and Lowell struck for freedom in America. He was lotus-eating all the time that Ebenezer Elliott was making Corn Law rhymes. But he never lent his art to any baseness or impurity. He was ever the poet of all those renunciations and fidelities which are the safeguards of domestic peace and love, of that obedience to law which is essential to political progress, of the joy of widening knowledge and of deepening faith. Yet his most characteristic service was not in virtue of these things. It was in virtue of his lifelong passion of admiration for all beautiful things, and his creation of a body of verse which, marvellous in its range of matter and of form, and full of music, warmth, and color, has given to us many hours of stainless joy.

THE PARIS EXHIBITION OF EARLY AMERICAN MAPS.

PARIS, September 13, 1892.

WHEN the Duke de Mandas was appointed ambassador of Spain to Paris, one of his first cares, after he had taken possession of his post, was to select a committee in furtherance of the project originated by him of an exhibition to celebrate the fourth centennial of the discovery of America. Administrators of the great public institutions—the Foreign Office, Navy Department, War Office, National Archives and Library—able to assist the project, were called upon to search zealously for desirable material. The exhibition contemplated by the Duke was to be held at Madrid. The fact that it was to be outside of France caused difficulties. A special law would have to be passed to authorize the loan of such manuscripts, documents, or objects, the property of public institutions, if these objects were to be taken out of France. No later than 1889, at the Universal Exposition, the exhibits contributed by the Government could not have left their places of keeping without such a law. So, with this obstacle in view, which did not seem easy to overcome, preparations progressed without much spirit, and perhaps the project would have had to be abandoned had it not been taken up in another form. M. Gabriel Marcel, librarian of the geographical department at the National Library, suggested that the centennial might be celebrated in Paris, and that a proper search among the riches of the French archives would produce an exhibition of maps pertaining to the discovery of America quite equal to the occasion. This idea was received with enthusiasm. It did more than gratify national pride; it drew a thorn out of the side of the Committee. The Ambassador of Spain could be told that if France declined the loan of the pieces needed for the projected exposition at Madrid, it was because there was to be a like exposition in Paris—a better answer than to keep on objecting that there were no precedents for making such loans abroad. It may be added that the excuse was accepted in its true spirit. On the opening of the exposition at the National Library, July 13, the Ambassador of Spain was not present, nor has he visited it at all.

This very interesting exhibition cannot be said to have been opened at a favorable time of year. By mid-July, Paris is well-nigh emptied. In particular that portion of the public which makes it a point to be absent when the "fête nationale" comes round, was missing. It was fully two months later than first intended, for it was announced to be ready by May; but no one who followed the preliminaries can wonder at the delay. The colossal researches in dusty portfolios; the endless sorting to reach a final choice; and, above all, the extensive correspondence between the different institutions concerned in order to settle matters, sufficiently account for the want of punctuality. As may be supposed, the Navy Department's share in the exhibition far exceeds all others. Three private collections also have contributed to the success of the exhibition, viz., those belonging to Prof. Hamy of the Institute, President of the Committee; to M. H. Harrisse, and M. H. Duhamel. Two hundred and eighty-nine numbers make up the catalogue, or as many headings, we should say more rightly; for often under one heading a whole series, a whole collection, figures by itself. The order of the exhibits in the catalogue freely disregards chronology, and the same thing is true of the disposition of the maps and atlases on the walls and tables of the exhibition rooms. As in a collection of pictures, the maps are arranged so as to produce as harmonious an effect as possible. As a sign of *ralliement* for the amateur visitor, who might feel at first a little perplexed by the display of the most ancient documents, dates or approximate epochs of the maps have been affixed to the titles; but what better guidance could he desire than that of the amiable librarian who so readily offers himself as cicerone in doing the honors, scattering anecdotes and bits of information not included in the programme?

It is instructive to begin with a glance at a rare piece belonging to the National Library (No. 43 of the catalogue). This is a portolano representing Europe, part of Asia and Africa, and certain fabulous lands. It is almost filled with allegorical figures. In the north seas we see a boat chasing a whale. The legend is: "Mecia de Viladestes me fecit in anno 1413." This portolano is in striking contrast with the maps contemporary with the discovery of America, viz., (1) the map of Juan de la Cosa, pilot of Columbus (1500), now in Madrid; (2) the map of Alberto Cantino (end of 1501) in Ferrara; (3) an anonymous Portuguese map (1502), belonging to Prof. Hamy; (4) the map of Nicholas Canerio (end of 1502), belonging to the Navy Department; (5) a portolano dated 1504 at Munich. Of these five maps only two originals figure at the exhibition—those loaned by Prof. Hamy and the Navy Department. Facsimiles represent the remaining three. With regard to the map of Juan de la Cosa, now in the Navy Department at Madrid, and once the property of Baron Walkenaer, as well known to geographers as to the admirers of Mme. de Sévigné, M. Marcel is doubtful of its authenticity. His reasons are that it has too many Spanish words misspelt to be the work of an educated Spaniard; then, the islands of the West Indies are too well represented, and differ too much from what is seen on other maps of the same period.

The map of Nicholas Canerio (No. 9) was not made in Italy. Canerio came, from Genoa, but at that time a number of Italian scientists were employed in Seville and in Lisbon. The influence of both these centres is so apparent on Canerio's map that it goes by the name of the Hispano-Portuguese portolano. The West Indies are very correctly described on it; so are the discoveries of Vespucius and of Columbus, which not only are rich in nomenclature, but are joined together by a straight line of coasts—which juncture may be regarded as an ingenious piece of initiative on the part of a wise cartographer. These details go far to prove that he must have had knowledge of the original map of which Alberto Cantino sent a copy to the Duke of Este; also, that he must have been guided by the revelations of some clandestine explorer. No official voyage took place in 1502, but we can admit as plausible that a handful of navigators, incited by Columbus's example and encouraged by the privileges granted him and the benefits they hoped to derive, undertook to do as much as the official explorer of Spain. A curious feature of Cantino's map is the representation on it of Mexico and the land of Florida under the Spanish flag.

The Portuguese portolano exhibited by Prof. Hamy (No. 34) was bought by him in England of a navigator named King. On it, as on the preceding map, the West Indies are very correctly outlined. So are the coasts reconnoitred by Columbus and Ojeda, and those seen by Vespucius, but *separated*. This map is particularly interesting by reason of the position given to the Portuguese discoveries, so as to place them within the line of demarcation fixed by Pope Alexander VI. This line is positively indicated on the Cantino map in blue, and divides it in two. Indeed, it may be remarked generally of Portuguese maps of that time that Cortereälis, Labrador, and Greenland are always much too close to Europe—no involuntary error, but a ruse to bring the regions explored by Portugal within the zone reserved to that country in accordance with the limits prescribed by Alexander VI. In short, any map that bends the coasts of North America eastward in a deceptive circle, may be looked upon as inspired by a Portuguese document.

All these early maps relative to the discovery of the New World are manuscripts. The first engraved map representing America appeared in the edition of Ptolemy published by Ruysch in 1508. This does not differ greatly from its forerunners. Then comes the map of Ptolemy dated 1513, and a wooden globe of the same period called the green globe (No. 23), which has been described at length by M. Marcel in the *Bulletin de Géographie Historique et Descriptive*—and rightly, for it is one of the most precious pieces in the Department of

Cartography. On this globe the Panama Canal would seem to exist. The eastern coasts of America, from Carolina to the mouth of the La Plata, are indicated, but in a very rudimentary way; and this is especially true of the Gulf of Mexico. The chief interest of the globe consists in the fact that the name of America is inscribed on it four times. This globe was brought from Italy by Count Riant, and is very likely the work of Schöner.

The progress of the history of the discovery of America may be followed on three other globes of almost equal interest. (1) *Le globe doré* (No. 42), dated 1527, written wholly in Latin and entitled "Nova et integra universi orbs [*sic*] descriptio," is curious as showing America and Asia as one continent, still in accordance with the ideas of Columbus on his first landing. In Peru there are no signs of the expedition of Pizarro, while the itinerary of Magellan is very closely indicated. Doubtless the geographer who made this globe was inspired by Verrazzano's expedition in 1525. (2) *Le globe de bois* (No. 33 *bis*), of uncouth workmanship, was also brought from Italy by Count Riant; its date, between 1532 and 1535, may be conjectured from the fact that in Peru is found the name of St. Michael, the town founded by Pizarro to celebrate his victory over the natives in 1531. (3) *Le globe de cuivre* (No. 46), dating from the later part of the sixteenth century, comes from the library of the Abbé Lémy, who died Vicar-General of Paris. This globe is of admirable workmanship, the engraving being due to an inhabitant of Rouen, as the title bears witness: "Nova et integra universi orbis descriptio, Rhotomagi." America and Asia are two distinct continents on this globe. A Latin inscription placed on the straits which later were to bear the name of Bering, explains why the author made that division, and how he had been guided in his work by more recent and more reliable documents. The expedition of Frobisher to the polar seas is registered on this globe.

Numerous are the maps, dating from the sixteenth century, of Portuguese, Spanish, Dutch, and French origin, wherewith to follow the study of that epoch. We will mention but three of these as curiosities. A Portuguese portolano (No. 1 of the catalogue), signed Gasp. Viegas, is dated 1534, the year in which Jacques Cartier sailed for the first time to New France. This map gives Newfoundland and the coast of Brazil down to the mouth of the La Plata. A planisphere of 1550 (No. 19) indicates the coast of America from Labrador southward beyond the Amazon River. It is the work of D. Guttierez, the younger, the same who, as cosmographer-major of Spain, was deprived of his title and imprisoned because he had infringed the jealous law by which his Government forbade officials to draw or sell maps, globes, or nautical instruments to private parties. A French portolano by Guillaume Le Testu (No. 26) is a fine map of equatorial projection, dated 1556, whose beauty of execution cannot be described. Artistic design is characteristic of the French school of hydrography. In the works of that galaxy, the Duponts of Dieppe, J. Guérard, G. Levasseur, P. Descellers, Nicholas Desliens, P. Devaulx of Havre, the eye is forcibly struck by the artistic quality, united with scientific precision, which seems to have found its last word in an atlas by that same Guillaume Le Testu (No. 181) loaned by the War Office. Seventy maps, many of them bearing the arms of Admiral de Coligny, to whom the atlas was dedicated, make of this scientific work a marvel of art. It is dated April 5, 1555.

If we pass to the next century, there is a loan from the Navy Department (No. 131), a very large map of North and South America, extending from Cayenne to Hudson's Bay, worthy to be kept under glass. The title is decorated with allegorical designs painted in gouache by a hand that doubtless painted fans for queens. It is anonymous and without date; however, it is regarded as anterior to 1682, because the Mississippi River (then the Colbert River) stops at its junction with the Ohio. The first discoveries on that river by the Cavelier de La Salle are marked. So, very distinctly, are those of Père Marquette and of Joliet. This map is specially valuable to the French inasmuch as the great Western lakes bear the names first given them. Thus, Lake Superior is called: *Lac de Tracy, dit de Condé;* Lake "Michiganong" has as sub-title *Grand Lac des Illinois, dit Dauphin;* Lake Huron, *dit d'Orléans;* Lake Erie, *dit de Conty;* and Lake Ontario figures as *Lac de Frontenac*, the name of the then Governor of New France.

The exhibition is rich in documents pertaining to the United States; and in presence of the display of such maps due to French explorers or travellers, one feels willing to admit that if Spain can claim the chief rôle in the discovery of America, few countries in subsequent years did more than France in the progressive reconnoitring of that vast continent. The first map on which Chicago is mentioned is by a Frenchman, Jean-Baptiste Louis Franquelin, who calls Chicago *Fort Checagou.* This map (No. 161, dated 1688) is very extensive; it gives the lands of Canada, Louisiana, Florida, Virginia, New Sweden, New York, New England, Acadia, Newfoundland. No. 284 begins a long series of maps on the course of the Mississippi, dating from 1699 through the first quarter of the eighteenth century. Subsequently, Nos. 47 and 92 show us maps of the course of the Mississippi that served the expedition of Gen. Callot—large, important maps, including views of Pittsburg, Natchez, Baton-Rouge in 1796, also sketches of the rapids on the Ohio and portraits of Indians by the pencil of an eighteenth-century artist. Of a still later epoch is a splendid map (No. 39) of the mouth of the Mississippi in 1804, which was brought to France by M. Laussat, colonial prefect of Louisiana. Then, at epochs more or less distant from us, there are the plans of Philadelphia, of Albany, of Boston, in 1697 (No. 35), by J. B. L. Franquelin, who calls the capital of Massachusetts *Baston;* of New Orleans in 1720 (No. 85), by M. de Beauviliers, showing just three cabins; and of the same city twenty years later, already an American city laid out in squares. But the first map of New York (No. 277) is not by a Frenchman: "Manatus, drawn on the spot by Joan Vingboous in 1639, for the Dutch East India Company," reads the heading. In a corner are inscribed the names of the Battery and Fort Amsterdam, of the three windmills, and of the forty-five first Dutch settlers who occupied the forty-five houses which were the nucleus of the future New York. It would give me pleasure to jot down these names had not M. Harrisse, the owner of the document, reserved this information for a work in preparation.

In the maps relating to the French colonies the colonial history of that country is found complete. It is enough to enumerate the collections pertaining to San Domingo, Guiana, Cayenne, especially this last colony, from the morrow of its settlement to the second half of the eighteenth century. These maps are often so comprehensive that the names of planters and the numbers of their negroes, the nomenclature of agriculture, the population of the Indian tribes—warriors, women, and children—are registered. Certainly not the least curious of these is the map of Cayenne (No. 105), decorated with the view of the island in 1667 designed by Israel Silvestre, and (to prove that the process of colonization has always been the same) a flowery advertisement, vaunting the delicious climate and fertility of Cayenne, and offering besides to emigrants a free passage and provisions until able to repay the authors of that pretty *réclame*. About Canada there is still more: the aspect of the old settlements revives under our eyes. And while speaking of Canada, I must record another of M. Harrisse's treasures (No. 188), a handsome map on parchment, unpublished and autographic, dated 1608. Champlain's own hand has traced on that parchment the coasts, ports, isles, and seas of New France.

The next number to this (No. 188 *bis*) is the jewel of the exhibition. It is a MS. volume dated 1502 and emblazoned on the first page with the arms of Christopher Columbus. In this volume have been transcribed by two notaries copies of all the privileges, all the nominations, all the cessions and other acts passed in behalf of Columbus by the Catholic kings. Papers are perishable, he bethought him, and a triple copy of that cartularium was made. One is lost, one is in Genoa, and this one, property of the archives of the Foreign Office in France, is the most complete. We are pleased to think that Columbus loved to refer to these pages in the hour of his adversity, and with that thought we look upon this book as more than an historical document—as a very relic of the great navigator himself.

Le Cocq de Lautreppe.

LAMARTINE AND MADAME CHARLES.

Paris, September 28, 1892.

All great poets have had an inspirer—Dante, Tasso, Shakspere, Racine. Lamartine had Elvire; it was in memory of Elvire that he wrote his finest Meditation, "The Lake." But did Elvire really exist, or was she merely a creature of the imagination? And if she existed, had she any of the characters of Beatrice, of Laura? Was there but one Elvire, or were there many Elvires? This question has recently been treated with new details and inedited documents by M. Anatole France, the literary critic of the *Temps*, a delicate writer himself, who has written, besides a number of critical articles, several novels which are not at all in the realistic vein of the day. M. France has, if I may say so, a Lamartinian soul—that is to say, he has a touch of grace and gravity and elevation which have become rather rare, and his study on Elvire shows that he, at least, has not forgotten the author of the "Poetic Meditations," who, with Musset and Victor Hugo, formed the great poetical trinity of our time.

M. Anatole France found in the rich cabinet of autographs of M. Étienne Charavay a certain number of letters by Mme. Charles, wife of a scientist famous in his time. He tells us, what we knew already, that Mme. Charles was Lamartine's Elvire, and he gives us many interesting details concerning the enthusiastic young woman who inspired Lamartine with an eloquent passion. Lamartine gives a part of the story of Mme. Charles in his "Raphael." He relates that Julie, a Creole brought to France from San Domingo at the age of six years, an orphan, was educated at the National School of Saint Denis, where she was visited by an old

man who, when she reached the age of seventeen and was on the point of entering the world, having no relations or friends, offered her his home, and proposed to her, "in the eyes of the world and only for the world, the name, the hand, the attachment of an old man, who, under the name of a husband, would only be her father." M. France gives no more details; he could not even ascertain where she was born. She was Mlle. de Desherettes. She still had her father, and was living with him at Lagrange, near Tours, when she married. Lamartine killed the father in his novel, and perhaps he did well, as he seems to have been an old drunkard, caring only for horses and guns. Her first suitor was M. Charles, who was fifty-two years of age, a man of most agreeable manners, who had already attained a great reputation. He had studied science, especially electricity, and given lectures before Franklin and Volta. He made curious experiments on thunder-storms, and substituted for the first balloons invented by Montgolfier, which were filled merely with hot air, balloons full of hydrogen. He made several ascensions in these balloons, and his name had attained an immense popularity. You will find it even on many old plates sold in the villages, representing coarsely the first ascensions of balloons. Louis XVI. was much interested in balloons and gave Charles a pension out of his private purse.

His marriage with Julie de Desherettes was celebrated at the beginning of August, 1804. In a letter written to his friend Morel de Vindé, on July 23, 1804, Charles announces his return to Paris: "Surely Julie is worth all the trouble which possession of her has cost me; there is hardly a novel which contains more curious and interesting incidents and characters than have been found in this succession of family pictures. . . . Western [Squire Western of 'Tom Jones'] is nothing compared to my father-in-law. Julie's uncle is an excellent man, who reminds one of Allworthy. Without him, his extreme kindness and his obliging care, the poor child would have died long ago." Julie remained all her life an invalid, and, as M. Anatole France says, "she did well for her glory to live at a time when consumption was charming in a woman." Julie was very fortunate in passing from the hands of a brutal and irrational father into those of the most considerate of men.

Morel de Vindé was a writer. In 1789 he was a counsellor in the Parlement of Paris. He had espoused the principles of the Revolution, and was a constitutional monarchist. He retired to the country during the Terror, and succeeded in being forgotten. "What have you been doing?" some one inquired of Sieyès after the Terror. "I have lived." Morel de Vindé lived also. He bought a fine house after the Revolution at the Celle Saint-Cloud. He and his wife saw much of M. and Mme. Charles. This lady seems to have been one of the patronizing kind who are never tired of promoting the interests of their friends. She forced, so to speak, Morel de Vindé into the Institute; he was appointed, partly by her efforts, to the Section of Agriculture in the Academy of the Moral and Political Sciences, which has always been a sort of *caput mortuum* of the Institute. Charles about that time became ill; he suffered much from the stone, but with philosophy and courage. He had now an apartment in the buildings of the Institute, where he and his wife held a salon and received very good company. Their most intimate friend was Mounier, whom the Emperor Napoleon had found an *auditeur* at the Council of State, and had made during the Prussian campaign an *intendant* in the Duchy of Weimar, afterwards an administrator in Silesia. In 1808 Mounier was attached to his Cabinet as translator from foreign newspapers. He followed Napoleon in his campaigns, was made a baron, and received many favors—among the rest a great domain in Pomerania. Mounier was quickly reconciled to the Bourbons, and remained intendant of the royal palaces. Mme. Charles was a constant visitor at the hôtel in the Place Vendôme where the Mouniers lived.

She had always been delicate, but became quite ill in 1816, and the doctors ordered her to go to Aix. The journey was a long one at that time, and her husband could not accompany her. If she did not find health at Aix, says M. France, she found immortality, for there she met with Lamartine, a young man of twenty-six, very handsome and eloquent, full of imagination and of genius. Lamartine had palpitations of the heart, or thought he had. Mme. Charles's beauty made at once a great impression on him. He had always lived the life of a country gentleman, and had a sort of innocence; he was prepared for love, for a great passion. He wrote to his friend Virieu some time before he saw Mme. Charles: "I feel my heart as full of sad and delicious sentiments as during the first fever of my youth. I don't know what vague and sublime and infinite thoughts pass through my head every moment. . . . If, for my misfortune, I should find one of those women whom I once saw in my dreams, I would love her as much as man ever loved." This woman had now come, a vague apparition, with her poetic air, and, let us also say, with intelligence and heart enough to captivate a man—with something more than physical charms; a complete woman, but, alas! one who could not be much more to him than a dream, for her days were already numbered. Shall we examine with a critical eye into the real nature of the relations between Mme. Charles and Lamartine? I confess that I prefer not to do so, and I find it rather indiscreet in M. France, since the mystery has never been resolved, to try so hard to discover the exact significance of such words as "délices sublimes," "extases sublimes," which he encounters in "Le Lac" as it was printed, and in the manuscript of it kept by the niece of M. de Lamartine. The poet's language is not precise; do not let us be too precise ourselves.

Are the letters of Julie to Lamartine still in existence, or have they been burned? The question is discussed at length by M. France, but somewhat uselessly. Such letters, if they still exist, are not likely, if we understand Mme. Charles aright, to let us know very exactly what M. France wishes to know. I imagine that they are full of the most passionate affection, of the most enthusiastic admiration and interest; but I can hardly imagine that they could give us the key of the mystery. And, after all, why should we care to lift the veil? Why should we not be content with reading the beautiful poems inspired by Mme. Charles—"Le Lac," "L'Immortalité," "Le Temple," "Le Crucifix"? Whoever inspired such verses received more from the man who wrote them than anything she could give him. The letters of Mme. Charles make the impression of a very nervous, impressionable, excitable person, but her language is always what we call *châtié*, or very correct.

On her return to Paris, Mme. Charles recommended Lamartine to Baron Mounier. When the great poet came to Paris, she presented him to all her friends, and among others to M. Reyneval, as Lamartine was anxious to enter on a diplomatic career. He returned, after a short stay in Paris, to Moulins, and then to Mâcon. Mme. Charles grew worse; she spent the summer of 1817 in the woods of Viroflay, near Versailles. We have a few of the letters which she wrote from that charming retreat, then very deserted, to her friend Mounier; they are full of the expressions of an almost morbid friendship. She felt herself going. "Life is long, very long," she said. It is long for those who suffer. She spent two or three hours a day in her garden, all alone, thinking surely of young Lamartine, of her poet, of the man who had crossed her life a moment and left behind him a luminous trace. Her last letter to Mounier was written on the 15th of September, 1817. Lamartine began "The Lake" the day before; he knew that she was lost, and wrote as if she were already dead. He finished his celebrated ode on the 23d of September. Julie died only at the end of December. M. de Virieu took the crucifix which had been placed on her death-bed and sent it to Lamartine. When he received the fatal news, Lamartine wandered three days and three nights in the woods; then he went to work again, and worked at a tragedy of Saul.

Charles survived his wife by five months, and was buried on the 9th of April in the Cemetery of Père Lachaise. His tomb is there still; as for Julie, she was buried in the cemetery of Saint John, near the Hôtel de Ville—a cemetery which no longer exists, as the Rue de Rivoli was built through it. Her mortal remains are lost, but her name will live as long as the name of Lamartine.

Correspondence.

THE UNIVERSITY OF CHICAGO.

To the Editor of The Nation:

Sir: Your discriminating editorial on the University of Chicago contains some statements which unfortunately are based on a misunderstanding of the purposes of this institution, and I beg the courtesy of space to make some explanations.

(1.) In speaking of the "group system," it is stated that "to obtain the degree of A. B. the student must devote . . . at least one-third of his junior and senior years to mathematics, languages, and the political and social sciences." This means, however, that he must take one-third of his work in the departments of Philosophy, Political Economy, Political Science, History, Social Science, Semitic Languages, Sanskrit, Greek, Latin, Romance Languages, German, English, Biblical Literature, and Mathematics; while he may take two-thirds of his work in the remaining departments of Astronomy, Physics, Chemistry, Biology, and Geology. In short, it is no practical limitation to free choice.

(2.) Nor is it correct to say that "each student is held to attend fifteen hours of class-room work per week"; for, at the discretion of the instructor, some of the fifteen hours credited to the student may not be class-room work.

(3.) The reason for the concentration upon a few subjects at one time is admirably stated in your words: "This is an interesting reaction against the scattering system now in vogue. In many of our colleges the time of the student is frittered away in one-hour and two-hour courses, and his attention distracted

by the pursuit of half-a-dozen different subjects at once." But you think the reaction has been carried too far when students are "crammed" with eight or ten hours a week of some subject. In truth, this arrangement is not so novel as it seems, for in any institution providing many electives this is even now adopted. A student at Harvard, for example, can take nine hours per week (or three full courses) throughout the year in Political Economy. Here, the student who takes two of our "minors," or a major, is doing essentially the same thing. Moreover, any major of six weeks is followed by a second examination twelve weeks later, with exercises once a week throughout this period. So that intensity of impression may go with duration of impression, as urged by you.

(4.) The plan of work is also misunderstood in all you have said in the paragraph which urges the impossibility of expecting fifteen hours a week from university students of work which is really not different from that in the German "seminaria." The mistake is in thinking this work is all to be done in the classroom and not in the library. And it is hardly credible that men of scholarship will have seminaries which are like "sophomore debating societies" in this University any more than in the institutions which they have just left.

(5.) A complete misunderstanding also exists in that part of your editorial in which you explain that a student is not permitted "to determine for himself on what lines he will do his chief work, *i. e.*, that he should make his own major." Nothing whatever in the Calendar, or in the University system as known to me, prevents a student from taking, at his pleasure, any subject as a major when studying for his degree. The mistake may have arisen from not knowing that the terms "major" and "minor" are used (much as are "full-course" and "half-course" at Harvard) merely as the amount of credit to be counted by a student towards the total work demanded for a degree. These terms do not signify that the kind of work done in a "minor" is less important than that done in a "major."

(6.) Nor do we "crudely measure the student's work by hours of attendance in the class-room." Although, by way of illustration, my own Seminary in Political Economy is announced as a credit of four hours a week, it is quite within my discretion to give to a student whose work deserves it a credit of eight hours a week.

It is natural that misunderstanding should arise from the introduction of new terms; and for this reason I venture to ask you to allow me to make the above explanations. The sure test of the standards set up by the University of Chicago is to be found in its administration of the requirements for admission. Out of the numerous applicants only 100 were admitted to the freshman class, and of the more numerous applications of special students only sixty were admitted, while the graduate students number more than those of any other group, or, on the day of opening, October 1, about 130. Those admitted to advanced standing from other institutions numbered 85. These figures, however, do not indicate all that may yet be expected in the next few days.

Yours truly, J. Laurence Laughlin.

University of Chicago,
Chicago, October 1, 1892.

[Prof. Laughlin has quite missed the point of some of our remarks. We did not criticise the Chicago requirements for the bachelor's degree as a "practical limitation [of] free choice"; we praised them because every course open to the student, including that which leads to the B.S., contains all the essential elements of a liberal education. Our only criticism touched the differentiation of the baccalaureate degrees.

We criticised the five and ten-hour courses in the "academic colleges," not because fifteen hours a week is too much class-room work for freshmen and sophomores, but because these students, in our opinion, are not mature enough to concentrate their energies, with permanent advantage, upon only two subjects at a time. Prof. Laughlin's comparison of a ten-hour course in a single *subject* at Chicago with a combination of three three-hour courses in a single *department* at Harvard is not quite fair. Political economy, for example, includes a great variety of subjects, and it is hardly likely that at Harvard any three courses in political economy could be taken simultaneously that would not differ widely in matter and treatment. If the contrary is the case, we make bold to disapprove *pro tanto* of Harvard.

Touching the question of "duration of impression" left by a ten-hour course despatched in six weeks, it is, again, not quite fair of Prof. Laughlin to cite the requirement of a second examination twelve weeks later, and refrain from citing the provision which immediately follows that requirement, viz.: "But the student whose term grade has been sufficiently high . . . may, if he desire, substitute for the second examination new material in the same department of study equal in amount to one-quarter of that included in the work of the term." That is, the students who have "crammed" most successfully for six weeks, and who distrust the duration of the impression, may avoid the test upon which Prof. Laughlin insists by more cramming.

To the ten-hour courses in the higher years we took exception on other grounds. We said that it was a mistake to carry into the "university" years the system of measuring performance by hours of class-room attendance. This, Prof. Laughlin says, is not done. The regulations, indeed, are identical for under-classmen, upper-classmen, and graduates; they say that a student must elect two majors and two minors in each quarter, or, in other words, courses representing twelve to fifteen hours a week; but these, we learn, are merely "credit" hours. The student may attend the class-room but four hours and receive a credit of eight hours. This is interesting news; but it does not affect our contention that this method of measurement, when applied to university work, and particularly to that of the graduate students, is a crude method. The candidates for the master's degree, instead of designating from quarter to quarter what "credits" they propose to pursue, ought to indicate in what subjects they propose to achieve mastery; and the only question should be, not one of hours or credits, but of actual achievement.

We said, again, that attendance on lectures and "seminaria" for twelve or fifteen hours a week was too much to ask of an advanced student. We are glad to see that Prof. Laughlin agrees with us, and proposes to reduce the hours by the credit system. We pointed out that a seminarium holding sessions for eight or ten hours a week was an absurdity. We said that *if* the students were encouraged or permitted to "discuss" through anything like that number of hours, the seminarium would degenerate into a sophomoric debating club. We did not say that the Chicago professors would be likely to tolerate such a result: we expressly indicated our belief that they would not. We predicted that they would do most of the talking themselves, and that these courses would become lecture-courses. As such we held that they were still too long.

We are glad, we repeat, that Prof. Laughlin not only agrees with us, but has discovered a remedy for these evils. The credit system, liberally employed, will undoubtedly correct them; and if this system shall become general at Chicago, as we hope it will, our objections to the long courses will have received from the University itself the most flattering of endorsements. But something should be said about it in the Calendar. Other colleges that employ the credit system are in the habit of indicating it. If a two-hour course is to count for four, they say so in print. The Chicago Calendar says nothing of the sort, and Prof. Laughlin cannot blame us for reckoning by the Calendar. —Ed. Nation.]

"VERY PLEASED."

To the Editor of The Nation:

Sir: "M. C. L.," dating from your city, remarks, with strict fidelity to facts, in to-day's issue of *Notes and Queries*, that the collocation which heads this letter "seems to be a common English locution; but it is not used here, except by those who take it from English people."

With regard to *very satisfied* and *very pleased*, the late Mr. George P. Marsh, reporting his experience in the last generation, says that "we not unfrequently hear such expressions," and that "the inclination, in this country, is to enlarge" the category to which they belong. If, however, Mr. Marsh had explored more diligently, he would have merely recorded such a discriminating judgment as that of "M. C. L." The "inclination" which he asserts is not indicated by the literature of America a whit more than by the literature of England, if, indeed, as much. See, for the words quoted, *Lectures on the English Language* (1860), p. 658.

Here in Great Britain, almost as a rule, whoever is revolted by any given form of speech is pretty sure to assume, or else to be easily persuaded, that the discredit of originating it attaches to our countrymen. Not at all unexpectedly, then, they have been saddled with the paternity of *very pleased*.

Informed that this phrase should be held in contempt, Professor F. Maximilian Müller, conciliatively Anglicizing, has classed it among linguistic depravations for which we are responsible. In the third edition of his *Lectures on the Science of Language*, p. 29, he enounces, with the confidence of a person retailing a scientific axiom: "In fact, 'very pleased' and 'very delighted' are Americanisms which may be heard even in this country." But this was destined to emendation; and, according to the fourth edition of the same *Lectures*, p. 40, *very pleased* and *very delighted* are simply "expressions which may be heard in many drawing-rooms." What farther discoveries Professor Müller may have made respecting the expressions, it must be left to others to ascertain.

We read, again, in a highly instructive recent work:

"The adverb *very* . . . is the singular and undivided property of the Adjective, e. g., 'very tall, very wise, very good'; but it will not go with a Verb. And this is the rationale of that rule which is laid down about the qualification of Participles, viz., that 'very' is not to be joined with a Participle. We do sometimes hear 'very pleased'; but 'much pleased' is more correct. Still further removed from good usage is 'very obliged,' 'very disappointed.'" Rev. Prof. John Earle, *English Prose*, etc. (1890), p. 53.

Yet not all adjectives, that is to say, none in the comparative degree, may be qualified by *very*—*very better* being no more English than *pretty better*, which I have heard in Scotland; while, as to superlatives, it is inadmissible to introduce them with *a very*, *all very*, *any very*, etc. Moreover, in numerous cases we are not debarred from putting *very* before an active participle employed adjectivally, as when we say *very accommodating*, *very alarming*, *very amusing*, and the like. Thus much only in passing, and to supply what Professor Earle would not dispute.

Since "M. C. L.," like many who have preceded him, inquires whether English usage sanctions, as in *very pleased*, the prefixing of *very* to a perfect participle constructed predicatively, the ensuing quotations, as furnishing materials for a reply, are here relevant:

"At first he did come to my Lord *very displeased* and sullen." Samuel Pepys (1662), *Diary*, etc. (ed. Rev. Mynors Bright, 1875–79), vol. i., p. 474.

"Athenæus's Account is *very circumstantiated* on this Head." *Common Sense* (1737), vol. i., p. 232 (ed. 1738).

"When I received your letter, I was *very concerned* to hear the death of your friend Mr. Reynolds, which I consider as a piece of affliction common to us both." Sir William Jones (1760), in Lord Teignmouth's *Life*, etc. (ed. 1806), p. 22.

"I thank God my mind is *very composed*." Miss Elizabeth Carter (1778), *Letters to Miss Talbot*, etc. (ed. 1809), vol. iv., p. 197.

"In the mean time I am very feeble and *very dejected*." Dr. Johnson (1784), in Boswell's *Life*.

"I am *very composed*, and think," etc. William Cowper (1784), *Works* (ed. 1835–37), vol. v., p. 116.

"He was *very composed*, and desired me," etc. Mrs. Burton, *Laura* (1797), vol. i., p. 257.

"He had been *very exposed* to weather, sleeping out of doors," etc. Robert Southey (1815), *Letters* (1856), vol. ii., p. 421.

"She was *very vexed* to find," etc. "They were *very frightened*." Sir G. W. Dasent, *Popular Tales from the Norse* (1859), pp. 199, 499.

"Thorkel was *very vexed* at the deed." *Id.*, *Gisli the Outlaw* (1866), p. 12.

"We get *very wearied* of the persistent identification of the Church, throughout the dark ages, with fraud, and imposture, and sinister self-seeking," etc. Mr. John Morley, *Voltaire* (1872), p. 306.

"The trolls were *very put out*." Sir G. W. Dasent, *Tales from the Fjeld* (1874), p. 213.

For coming reference, quotations are subjoined in which passive participial adjectives are qualified by *very*:

"*Very reformed critics*." Rev. Myles Davies, *Athenæ Britannicæ*, vol. i., p. 191 (1715).

"Homer . . . has delivered to us some *very concealed* and valuable *information* in these two admirable poems." Thomas Taylor, *Pausanias* (1794), vol. iii., p. 300.

"The Church is a *very altered and deteriorated profession*." Rev. Sydney Smith (1837), *Works* (ed. 1850), p. 639.

"A *very frequented coffee-house*." Earl of Carlisle, *Diary*, etc. (1854), p. 332.

"Certainly [it shows itself] after a *very concealed manner*; so concealed that no man has been able to find it." Thomas De Quincey (1857), *Works* (ed. 1863), vol. vi., Preface, p. xvi.

Add, from the stores of every-day parlance, the combinations instanced below:

A *very accomplished musician*, and so, with the qualificative *very*, *affected style*, *animated scene*, *broken voice*, *celebrated poet*, *complicated machine*, *concentrated form*, *confused story*, *constrained manners*, *crowded house*, *curtailed account*, *depressed mood*, *devoted son*, *dignified bearing*, *dissipated fellow*, *distinguished theologian*, *distracted look*, *disturbed state*, *enlightened understanding*, *exaggerated estimate*, *exalted birth*, *exhausted condition*, *experienced physician*, *forced interpretation*, *guarded language*, *heated discussion*, *hidden meaning*, *isolated situation*, *labored argument*, *learned scholar*, *lengthened detail*, *limited number*, *noted person*, *perplexed narration*, *reduced income*, *retired spot*, *satisfied look*, *studied civility*, *tired brain*.

Gibbon, the historian, wrote, in 1762:

"His excessive praises . . . of a certain living critic and divine disgust the sensible reader as much as the contempt affected for the same person by many who are *very unqualified to pass* a judgment upon him." *Miscellaneous Works* (ed. 1814), vol. iv., p. 113.

Hardly more tolerable than *very unshaken by temptation* is *very unqualified to pass*; *very unqualified*, in whatever construction, striking one like a false note. At the same time, a considerable number of passive participial adjectives of the negative class may idiomatically follow *very*. Such are, with others, *unaffected*, *uncivilized*, *unconcerned*, *unconstrained*, *uncultivated*, *undecided*, *undeserved*, *undignified*, *undisguised*, *unexpected*, *unguarded*, *unlearned*, *unlimited*, *unmeasured*, *unpolished*, *unprincipled*, *unsettled*, *unsophisticated*.

The established currency—whence, as a consequence, the legitimacy—of phrases, uncomplemented or complemented, like "I saw he was *very pleased*," "We shall be *very pleased to come*," "They are *very pleased with your attention*," by no means invariably coincides with the idiomaticalness of the perfect participles which they embody, allocated adjectivally. No conclusion can be drawn from the permissibility of "a *very pleased expression*": convention alone is here determinant. "A *very displeased look*," "a *very dejected mien*," and "a *very exposed situation*" are, unquestionably, good English; and yet Pepys, Dr. Johnson, and Southey, as cited above, offer violations of usage quite as flagrant as those which have been instanced from *Common Sense*, Sir William Jones, Sir G. W. Dasent, and Mr. John Morley.

Very displeased, as has been seen, was used as long ago as 1662; but of *very pleased* the earliest occurrence that I have chanced on dates back only a century. Nor, up to our own day, however common in the colloquial dialect, has it been often ventured in any literature but that of a light character. A few selected quotations for it are subjoined:

"Betty . . . looked *very pleased* at several passages, particularly when you talked about your infant." William Roberts (1792), *Looker-on* (1794), vol. i., p. 179.

"I am *very pleased* indeed." Cardinal Newman (1841), *Letters* (1891), vol. ii., p. 280.

"I should be *very pleased* to do so." Mrs. George Grote (1862), quoted in the *Saturday Review*, vol. xiv., p. 602.

"A boy who has been *very pleased*, if the squire," etc. *Saturday Review*, vol. xv., p. 297 (1863).

"He was *very pleased* with the reception you gave him." "I am *very pleased* to have heard what you have to say." Mr. John Morley, *Rousseau* (1873), vol. ii., p. 95, and p. 153, note 1.

The *Looker-on* puts *very pleased* into the mouth of Belinda Daub, one of "us dashing women"; and the locution has been, all along, in the main a femininism. Yet there seems to be no doubt that its popularity, despite the avoidance of it by many persons of fastidious taste, is on the increase. Such being the case, its promotion, by and by, to the rank of unexceptionable English may be accounted a possibility, if not a probability. F. H.

MARLESFORD, ENGLAND, Sept. 3, 1892.

P. S. With regard to three expressions spoken of in the body of this letter, namely, Sir William Jones's *very concerned*, Gibbon's *very unqualified*, and the Rev. Sydney Smith's *very altered*, I may add that, though adduced, in a recent dictionary, and alone there adduced, as analogous to *very pleased*, they were previously quoted in my *Modern English* (1873), with specifications of their sources.

As could be evidenced, at least a dozen makers of books and others, by the way they have handled little philological nuggets of my unearthing, have practically made light of the good old maxim *suum cuique*. Some odd day they may find themselves pilloried in an index. And here, to illustrate the low commercial view of plagiarism, I will relate an incident.

In a work of mine, not often consulted, there is an excursus which, it some years ago occurred to me, a gentleman now dead, Col. F. Cunningham, who was then preparing a new edition of Ben Jonson, was, in all likelihood, unacquainted with. Accordingly, I dropped him a line about it. Curious to see it in detail, he applied to a bookseller for the work in question, telling him for what purpose it was required. The tradesman, on sending it, sent also a note, of which I made a memorandum. All but in its very words, Mr. H. was quite unknown to the literary world; so that it would be perfectly safe to utilize, as if original, his interesting and valuable discovery. The note was passed on to me by its recipient, with such comments on it as a sense of honor could not but dictate. The fact which Col. Cunningham learned, in consequence of my writing to him, was, that I had reproduced, in *Modern English*, twenty-four verses by Ben Jonson, addressed to James Mabbe, which had escaped all the dramatist's editors.

Notes.

A TIMELY publication is the collection of 'State Papers and Speeches on the Tariff,' edited by Prof. F. W. Taussig and to be published by Harvard University through Henry Holt & Co. (and certain other houses). The five documents from Hamilton, Gallatin, R. J. Walker, Clay, and Webster give the pro and con of the protective controversy. The

volume is designed for collateral reading in colleges.

Among forthcoming issues by the Scribners are 'Under the Evening Lamp,' essays by Richard Henry Stoddard; 'Letters to a Young Housekeeper,' by Mrs. Bayard Taylor; 'The Children of the Poor,' by Jacob A. Riis; 'The Great Streets of the World,' by many writers, with illustrations; 'American Illustrators,' by F. Hopkinson Smith, with colored plates on Japan paper, and other illustrations, in a numbered edition; 'American Humor,' by J. Barr, in the "International Humor Series"; 'Life and Letters of Washington Allston,' by Jared B. Flagg, with copies of his illustrations; John Addington Symonds's 'Life of Michael Angelo,' in two volumes, with fifty illustrations; 'French Art,' contemporary, by W. C. Brownell; 'Blackfoot Lodge Tales,' by George B. Grinnell; 'Afloat and Ashore on the Mediterranean,' by Lee Meriwether; A. Weismann's 'Germ-Plasm: A Theory of Heredity'; and 'Songs about Life, Love, and Death,' by the late Anne Reeve Aldrich.

Macmillan & Co. have in press 'Social Life in England from the Restoration to the Revolution,' by William C. Sydney; 'Round London, Down East, and Up West,' by Montagu Williams; 'The Reminiscences of Charles Santley,' the famous baritone; 'Edward Burne-Jones: A Record and Review,' by Malcolm Bell, with specimens of this artist's work; 'An Old Woman's Outing [in England],' by Miss Yonge; and 'The Theory of Wages and its Application to the Eight-Hours Question,' by Herbert M. Thompson.

A new classical mythology, 'The Gods of Olympus,' by Katherine A. Raleigh, will shortly be published by Cassell.

A holiday edition of the Poems of Helen Jackson is announced by Roberts Bros.

'The Real and the Ideal in Literature,' essays and poems by Frank P. Stearns, will be brought out by the J. G. Cupples Co., Boston.

Ginn & Co. will have ready this month 'Progressive Pamphlets for Learning to Read Latin,' by Prof. J. B. Greenough of Harvard.

Thomas Whittaker promises a new and complete edition of Père Lacordaire's conferences at Notre Dame de Paris.

The Baker & Taylor Co. have in press 'Interlinear Short-hand,' by F. S. Humphrey, and 'Greeley on Lincoln,' edited by Joel Benton, who brought to light the notable judgment of the President by the editor of the *Tribune*. This address will be supplemented by many letters from Mr. Greeley to Mr. Dana and to a lady friend.

Coincident with the appearance here of Thoreau's notes on 'Autumn,' announcement is made in England of the immediate publication of a posthumous volume of essays by Richard Jefferies, who has been rashly termed the "English Thoreau." This volume is to be called 'The Toilers of the Fields,' and will consist mainly of essays dealing with the agricultural laborer, although it will also include a story hitherto unpublished. It will have the imprint of the Longmans.

We had overrun our reckoning in the case of Roberts Brothers' smaller edition of Jane Austen's Novels. Two volumes, 'Persuasion' and 'Northanger Abbey,' testify to the pretty series not having been exhausted when we last wrote about it.

Mr. Parkman's 'Oregon Trail,' still fresh in its third decade, demands a new edition for the sake of an alliance between the text and the pencil of Mr. Frederic Remington, an artist with quite other aptitudes for portraying the aboriginal and other inhabitants of the Far West than those possessed by Darley when illustrating Cooper's "Leatherstocking Tales." As Mr. Remington's drawings are well known to the reading public, not much need be said about the present illustrations. Being reproduced by process, they are the cause of the shiny paper which is so trying to the eyes when used for letterpress. The leather cover, with its stamped Indian symbolism, is as appropriate as it is rich. We should have asked one other boon—a map showing the "Oregon trail" in its relation to the now peopled wilderness. In his preface to the edition of 1872, Mr. Parkman could speak of his great history of France in America as only half accomplished. Now that it is all behind him, he may feel like reprinting it in detail, with the embellishment of contemporary maps and portraiture, and photographs of the permanent landscape. Such an edition could not fail to be highly prized.

A handsome little volume of reprints from the *Century Magazine*'s "Topics of the Time" bears the title of 'Cheap-Money Experiments in Past and Present Times.' This exposition embraces, besides our own country, England and France and Argentina. Special chapters are devoted to the dismal experience of Rhode Island, Michigan, Alabama, and Mississippi. The instruction and warning thus conveyed can be thought needless in no section of the Union.

The Putnams add two timely volumes to their series of economic publications. Under the title, 'Taxation and Work,' Edward Atkinson collects papers of his on the tariff and on currency. They give ample scope to his powers of investigation and comparison and statement, and contain many hard sayings for those who are responsible for our present economic and financial policy. In a homelier vein, and perhaps all the better fitted thereby for popular reading, is Mr. Daniel Strange's 'The Farmer's Tariff Manual, by a Farmer.' It is filled with economic science fused into common sense, and, with its vigorous grip on reality, should have much weight with the special audience it addresses.

The author of the very useless 'Curiosities of Christian History prior to the Reformation,' Mr. Croake James (London: Methuen & Co.), says of it: "I have left out all the miracles—most of the wordy war of doctrines—most of the atrocities of persecutors and inquisitors." In fact, miracles would average about one to a page; for the other omissions we thank him, and can only regret that he did not carry his self-command to the point of omitting all the rest of his book. A more silly hodge-podge of undigested old-wives' tales it would be difficult to imagine.

The 'Lehrbuch der Kirchengeschichte' of the late Prof. Wilhelm Moeller of Kiel forms one in the series of theological *Lehrbücher* now appearing from the press of Mohr in Freiburg. It finds itself in such company as Harnack's 'History of Doctrines' and De Saussaye's 'History of Religion,' and is thoroughly worthy of it. There is no other book equally useful to the student in gaining a view of the development of church history as a part of the general course of human progress. Its translation into English, 'History of the Christian Church A.D. 1-600' (Macmillan), is to be heartily welcomed, especially as it has been made with scrupulous regard to the intention of the author. If there be a fault, it is that here and there Mr. Rutherfurd's adherence to the original produces a certain clumsiness of style that may prevent due appreciation of the book by a public which demands readableness even in a text-book.

'Die französische Politik Papst Leos IX.,' by Wilhelm Bröcking (Stuttgart: Göschen), is a very neat presentation of the relations between the Curia and the French kingdom on the eve of the great conflict of the Investiture. Its purpose is to show that Leo IX., one of the cleverest politicians that ever filled the papal chair, was fully aware of the conditions in France which made his claims possible, and was prevented from enforcing them thoroughly only by the pressure of other affairs. The boldness of his action in France was warranted only by his intimate alliance with the Emperor; and yet this very aggressive policy could not fail, if carried out as it was later by Hildebrand, to set the Emperor as well as every other temporal prince most distinctly against the papal interest.

Two more of Mr. W. M. Griswold's 'Descriptive Lists of Novels and Tales' have been issued by the compiler in Cambridge, Mass. 'Life in France' has been succeeded by 'Life in Germany' and 'Life in Italy.' So this useful work of guidance to wise selection proceeds from country to country and from continent to continent. Judging from bulk alone, the countries just named have been quantitatively exploited for the English reader in the order of mention.

There is nothing in the letterpress of the second number of the Boston "quarter-yearly review of the liberal arts called the *Knight-Errant*" that will repay much attention, but the most may be bestowed on the editor's "Some Thoughts upon Beauty in Typography, suggested by the work of Mr. William Morris at the Kelmscott Press." Mr. Morris, it is well known, has exercised his decorative talent in the direction of typography, and is turning out volumes from his press of which the type, the initial letters, the borders, etc., are his own invention. The experiment is an interesting one, and Mr. Morris is in his element in rehabilitating the past, though he has seldom had such good grounds for the attempted revival. As it is, he is in danger of fantastical, not to say fanatical, imitation; and we should apply either epithet to his 'Nature of Gothic' and 'Defence of Guinevere,' of which the *Knight-Errant* gives sample pages. They are not readable. Mr. Morris will have done enough if he endows us with strong and virile fonts of type. We notice that a serious derangement of the types on p. 50 is to be atoned for to subscribers at the end of the volume by a substituted page; but let the proof-reader not overlook another misprint in the third line of the second extract from Paul Verlaine on the same p. 50.

A correspondent writes: "I felt the lack of only one thing in your otherwise complete and very satisfactory notice of the *Pagan Review*. A word might have been said of the emphatic way in which these younger writers have dissociated themselves from the now discredited Realistic school. They even appear to look with some scorn on science and observation, and what is merely trivial and ordinary in Nature, reserving themselves for what is ominous in her, or even supernatural. An illustration of what I mean may be seen in Mr. Fanshawe's mystical drama, on page 7, where he says: 'The thin crescent moon slowly rises.' Obviously, the scene is laid in other worlds than ours."

We spoke not long ago of an old print (time of the Fronde) reproduced in the Paris folk-lore journal, *Mélusine*, showing the "four estates," namely, the priest, the soldier, the peasant, and the judge. In his issue for September-October, M. Gaidoz is able to show, in a very interesting manner, the evolution of this idea, still in broadside form, down to the present day—much, he observes, as must

have taken place in the Middle Ages. One example was engraved at Chartres in the early part of the present century (First Empire); a second, a colored placard, originated in Épinal under the Second Empire, with appropriate changes in the costumes, and with self-asserting verses under each figure. M. Gaidoz remarks that the workingman in our modern industrial sense had not yet ousted the agricultural laborer from his fourth estate. He anticipates the time when the *ouvrier*, who now preferably styles himself a *travailleur* because he doesn't want to work (*travailler*) any more than he can help, and who perverts the sense of the word strike (*grève*) from 'a peaceful cessation from toil' into 'a violent assault on toiling workingmen,' or what used to be known as 'brigandage,' will appear in these broadsides as the fifth estate, dynamite cartridge in hand, with the legend "I'll blow you all up," answering to the priest's "I pray for you all," the peasant's "I nourish you all," the soldier's "I defend you all," and the judge's "I eat you all."

Miss Hensman's "Dante Map" (London: David Nutt) is not the familiarly intricate chart of the depths of the Inferno and the heights of Purgatory and Paradise, but a folding map of Italy, mounted on linen, on which are marked only the places that are mentioned or alluded to in Dante's various writings and those supposed to have been visited by him—the latter a somewhat too generous list. A separate section map is added for the Gubbio and Casentino districts. The letterpress consists of an alphabetical list of the places designated, about 300 in number, with references to the corresponding passages in Dante's works, and a list of the places outside of Italy, about 200, to which Dante also refers. In spite of its elaborate ornament, the map is serviceable and interesting. It does little, however, toward what is a real desideratum and might easily be accomplished by reprint or compilation—a good historical map of Northern and Central Italy at the beginning of the fourteenth century, with such accompanying text as would make clear the confusing topography of the regions in which were carried on the Guelph and Ghibelline feuds, so disastrous for Dante's happiness and so important for the understanding of the life contemporary with him.

—The highest praise must be given to the mechanical and artistic get-up of the first number of the *Harvard Graduates' Magazine* (Boston, 6 Beacon St.). No magazine of like form now published in this country equals it in elegance. The rubricated cover is a great success; the variety of type, the proportions of the page, have equally well been studied. A strong pencilled portrait of the late Dr. Henry I. Bowditch serves as frontispiece; and this warm-hearted physician, who had mastered "the humanities" if ever Harvard graduate did, has his useful life sketched in full sympathy by Dr. Charles Follen Folsom. The leading articles manifest the somewhat impromptu nature of the enterprise, for which purveying had to be done in the college vacation. Whether or not we have a deliberate precedent in the printing of Prof. W. J. Tucker's Phi Beta Kappa oration of June 30, there can be no doubt that the editors were glad to have this material to their hand. President Eliot tells of a very important undertaking of the Harvard Faculty to examine, on demand, the quality of the instruction at preparatory schools, for the private behoof of principals and trustees, and with no engagement to admit their graduates on certificate. We feel the very pulse of the machine when we come to such elaborate reviews as that of the University during the past five years, by W. C. Lane, and that of the academic year 1891-92 by F. Bolles—a model performance. But also we have condensed reports of the meetings of various associations at Commencement time and of Commencement itself; a review of the year's athletics (there is a paper, by F. W. Thayer, on "Harvard's Loss of Athletic Prestige"); an account of the constitution and doings of Harvard Clubs all over the country; a budget of class news, of university notes, literary notes, and obituaries. Every point seems covered, though already the matter pressing for admission exceeds the space, and the friends of the magazine can congratulate themselves on the eminent capacity of its conductors. A better first number has seldom been seen. The magazine will be published quarterly at a low subscription price. A wide circulation is assured, and so is the moral and material advantage which must accrue from this authoritative yet unofficial and untrammelled medium of communication for all Harvard men.

—The leading article in the *Atlantic* for October is a discussion of the character and career of Mr. Tilden, by Mr. James C. Carter. Mr. Carter confines himself to a eulogy of Tilden as a reformer, and an analysis of the character of his mind and the nature of his aims. The choice he made in respect to his duty at the opening of the civil war, though not justified by the event, may be explained by the political forecast he then made; the ability he displayed in dealing with questions of administration involved necessarily, perhaps, limitations of power in respect to larger moral questions such as were at issue during the struggle; and Mr. Carter succeeds in showing the political sagacity, the logical penetration and persistency, and the capacity to rise above party considerations and to rely upon the fundamental grounds of right government, which were conspicuously displayed in his career in this State. The serious articles in the remainder of the number are Prof. Shaler's plea for better roads, attention to which he thinks has been determined by the bicycle, an invention which he classes with the telegraph and the railway as an influential element in the intercommunication of society; and a paper by Mary A. Jordan on women's colleges, in which the development of female education from the old-fashioned seminary, where the first lesson was in the rules of the institution, to the present highly organized colleges at Northampton and elsewhere, is traced, and the nature of the special problems arising in the education of bodies of young women together is examined. Some strong verses by Clinton Scollard should be mentioned.

—*Harper's* observes the Columbian celebration by an elaborate article on "The Baptismal Font of America," in which the most interesting illustration is a copy of the page of "Cosmographiæ Introductio," in which the name America is first mentioned. A paper on Columbus by Prof. Dr. S. Ruge, with a copy of the map used by him on his first voyage, is also noticeable among the many articles on the great discoverer now appearing. Theodore Child contributes a characteristic paper, pleasantly illustrated, on the banks of the Seine, and Mr. Laurence Hutton continues his "Collection of Death-Masks," in the illustrations to which will be found several interesting examples of what we can only describe as the skulls of illustrious men. It is melancholy to find the Easy Chair empty; we have been so long accustomed to the kindly and graceful words which were spoken there that it is hopeless to expect that any other hand than that to which we are used should satisfy us, and one closes the magazine with the feeling that the loss which it has sustained in the death of Mr. Curtis is irreparable, and that with him the pleasant afterglow of Addison, Steele, and Irving, so long continued in our western sky, now fades out.

—The most important article in the *Century*, perhaps, and certainly the one which should attract most attention, is Prof. Jeremiah W. Jenks's discussion of the use of money in practical politics. The facts which he spreads upon the page are not new, but they are apprehended in a vague way by the public as something that is said rather than as something capable of definite knowledge and statement; he gives specific illustrations of the objects and methods of corruption by the use of money in elections; he shows plainly enough that both parties are equally implicated, and he argues that the politicians on either side resort to such means of influencing results from a feeling of necessity in social conditions, rather than by choice. The only remedies he suggests are such as are embodied in the electoral laws of England, by which corruption there was practically put an end to at a single stroke. He points out that the immediacy of the result in England was mainly due to the searching minuteness of the provisions of the law, and he warns us not only that the objection made to such laws on the score of their intricacy and the near way in which they effect personal action, is the readiest resource of those attached to present methods, but also that concessions to this objection would be most fatal to the efficiency of such proposed legislation. The present time is most proper to call attention to such abuses, and the frank confession which Prof. Jenks makes of our faults in this respect should be an incentive to good citizens to reinforce the efforts now making toward reform. Columbus and the World's Fair continue to be important topics, and the account given of the Paris Commune, by Mr. Archibald Forbes, is a very vivid picture.

—*Scribner's* contains two papers of unusual interest. Mr. Paul Ford's extracts from the diaries of Thomas Jefferson, illustrating the homely and unheroic side of his life as a practical man concerned with accounts, make a very entertaining and instructive contribution not only to our knowledge of the man, but to our apprehension of the times. There is much in the paper that would bear quotation, but the extracts which show the income of Jefferson and his care for small expenditures, are the more striking, and the destruction of the tradition of the great heat of the day on which the Declaration was adopted, though a minor matter, affords an excellent illustration of the doubt that should go even with records of so-called historical facts. Jefferson, whose scientific tastes are abundantly shown in this paper, recorded the temperature of the day as follows: "July 4, six A. M., 68 degrees; nine A. M., 72¼; one P. M., 76; nine P. M., 73½." The second paper is Mr. Andrew Lang's summary of the present state of the Homeric Question, in which he argues for the personality of Homer from a literary standpoint, shows that it was quite possible that Homer set down his compositions in writing, and in general endeavors on the one hand to cut away the grounds of doubt out of which the Homeric question originally grew, and on the other

hand the explanations by which the needs of these supposed circumstances are met. Mr. Bunner writes on the Columbian Exposition; Mr. Brownell continues his papers on French Art; Mr. Pete writes a monograph on the education of the deaf and dumb; and Mr. Spearman contributes, in the series on "The Poor in Great Cities," a description of a school for street Arabs which affords another encouraging illustration of the present chief movement of philanthropy.

—The doubt thrown upon the La Cosa map by our Paris correspondent on a preceding page is a new instance of modern historical scepticism. M. Marcel's argument, if he ever gives it at length, may be more convincing than this report of his views. La Cosa was *not* "an educated Spaniard." There is good reason to believe he was a Basque, though born on the Iberian side of the Fyrenees, and if so he was really a foreigner in Spain. The second argument amounts to nothing as it is put. The Portuguese portolano of 1520, which Prof. Hamy owns, is more than once referred to by Harrisse, in his recent book, and there ought to be a facsimile of it made. If the "green globe" is really so early as 1513, it will dispute the claim of the so-called Da Vinci gores to be the earliest known in which the word "America" is written by human band. The "globe doré," if correctly dated, is the earliest instance, after Franciscus Monarchus of the year before, in the revival of the notion that North America and Asia were one. It would be interesting to have the proofs that Verrazzano's experiences had inspired this globe. Does it contain the "Sea of Verrazzano"? The charts of Viegas, Guttierez, Le Testu, and others are not a revelation; they are all well known in reproductions. The description of the map from the Navy Department (No. 131) is not sufficient to indicate its identity with known maps, as might have been done had our correspondent told us that it was identical or not with any in the published lists of Harrisse and Marcel. Franquelin's map of 1688 was not the earliest by that cartographer to show the name of Chicago in some form. An earlier map of his, dated 1684, shows it. This was formerly in the Archives of the Marine in Paris, but has disappeared of late years. Parkman fortunately had a tracing of it made some years ago, and this is now in the Parkman collection of maps in Harvard College Library. The Paris Committee would have done well if they had solicited a copy of it. Franquelin's Boston map of 1697 is only one of several in the Archives of the Marine, made at a time when the French were contemplating an attack on that New England town. A copy of this of 1697 was made some years ago for Parkman, and is reproduced in the 'Memorial History of Boston.' An earlier one of 1693 has been traced for the Boston Public Library and a facsimile published. We are inclined to think the 1639 map of New York has not been described before. It is to be hoped that Harrisse in due time will publish his Champlain map of 1608, for it antedates Lescarbot's by a year and cannot but be of importance. The first distinct details which we have had, heretofore, of the St. Lawrence region have been found in Lescarbot. Our correspondent is in error in supposing that but three copies of the Columbus volume of 1502 were made. There were four, if not five. Two copies were sent by Columbus to Oderigo, one of which is now in the Ministry of Foreign Affairs at Paris, and is the one mentioned above; the other is preserved in the palace of the Municipality at Genoa. A third copy, which Columbus sent to Hispaniola, has disappeared. The fourth was destined for Father Gorricio, the friend of Columbus, and is now lost, unless it be the copy picked up by Edward Everett in Florence in 1818, and now in the possession of Dr. William Everett. This last, if not the same as the one intended for Gorricio, makes a fifth copy.

—To-morrow is the date set for the first performance of the second season of the Independent Theatre Society of London. Whether this society will succeed in bringing about the regeneration of which Mr. William Archer has lately declared the modern English drama to be in such sore need, yet remains to be proved. Its objects, however, are conducive to the higher interests alike of the stage-manager and of the play-writer. Though single in purpose, they are threefold in character. As set forth by the founder, Mr. J. T. Grein, in his report of the society's first season, they are, first, the production of original, unconventional, and literary plays of an artistic rather than commercial value; second, the testing of such plays and the facilitating thereby of their incorporation in the répertoire of the regular theatres; and last, the giving to aspiring actors and actresses a hearing in parts in all respects suited to them. A careful and impartial perusal of all MSS. submitted is also promised. Besides the arrangement by Mr. William Foll of Webster's "Duchess of Malfi," with which the Independent Theatre will begin its second season, two new and original plays are definitely announced to follow. One is by Messrs. Walter Besant and Walter Pollock, who have voluntarily come to the support of the society. The other will be from the pen of Mr. George Moore, who has accepted a challenge to write a play towards the production of which by the Independent Theatre Mr. George R. Sims will contribute £100. If the funds of the society (partially derived from subscriptions, which range from two and a half pounds to half a pound for a single seat for the season) will admit, other plays for the coming winter and spring will be selected from "The Wild Duck," by Ibsen, translated by William Archer; "Bertha Malm," by Oscar Wykander; "Thora," by Alphild Agrell, authoress of "Karin"; "Honor," by W. G. von Nouhuys; "The Father," by August Strindberg; and a new play by the author of "Die Ehre." The character of the audiences of last season sufficed to prove that at least a portion of literary London was interested in the ambitious venture of the new society.

SULLY'S HUMAN MIND.

The Human Mind: A Text Book of Psychology. By James Sully, M.A., LL.D. 2 vols. D. Appleton & Co. 1892. Pp. 501, 393.

THE human mind seems to be receiving its full share of attention from the hands of our generation. Hardly are Messrs. Baldwin's and James's two-volume works out of the press when Prof. Sully's comes upon their heels, and we are told that the end is not yet. It is to be hoped that the demand may not flag before the supply does. Prof. Sully enjoys now the distinction of being the only Englishman of this generation upon whom the mantle of Bain and Spencer may be said to have fallen. These leaders of mental science in England still live and write, but their psychologies belong to their earlier years, and (though still indispensable to the professional student) may fairly be called superannuated so far as the demands of the general reader go. Prof. Sully, on the other hand, though less original than either of these authors, is more receptive and open, and has given us, in this his latest work, the fruit of a lifetime of conscientious study, in which every discussion is brought down to the latest dates. Though in this the range of reading displayed is admirable, the bibliographic references are distinguished for their serviceable character, and never lapse into pedantry. The book is no mere enlargement of the author's well-known 'Outlines of Psychology,' but an independent treatise, and still leaves the 'Outlines' to perform their useful function as of old.

The first volume, after eighty pages of preliminary generalities, treats of sensation, attention, and the various intellectual functions, such as discrimination, perception, memory, imagination, reasoning, etc. The second deals with the feelings, emotions, instincts, and volitions. The whole subject-matter is thus covered in a pretty even way, though one is immediately struck by the subordinate importance which the various experiments made of late years in the physiological laboratories have for the author's mind. He knows them, and refers to them abundantly, but he rarely describes or discusses them in detail; and he gives us not even a single one of those "agreeable woodcuts" to which Lotze somewhat ironically alludes as the indispensable adornments of contemporary psychologizing. This inadequacy on the physiological side is probably not wholly voluntary, for Dr. Sully evidently takes most kindly and naturally to introspective work. His book may indeed fairly be regarded as the very last word of introspection at the present day; and one's judgment of the definitive value of introspection (considered as a mere analysis on the descriptive plane of *what goes on* in the mind, as distinguished from an attempt to get at the *causes* of what goes on) may well be determined by the impression which the reading of it leaves.

The psychology proper of the treatise begins with the subject of Attention. In thus giving the most prominent place to what appears as the spontaneous element in our mental life, Prof. Sully is in agreement with Messrs. Ward and James and in striking contrast with the traditional British school. This chapter is perhaps the very best of all, and might indeed be called classical. The author shows clearly the muscular strain which all attention involves, but admits that it also involves subexcitement of sensory processes. He delicately and completely describes all its relations and variations; shows how on the one hand it arises in feeling (in the shape of interest), and on the other contains the germ of all conation; and is finally both "analytic" and "synthetic" in regard to objects, some of which our attention decomposes, while it groups many others into a single whole. The author, following this course of ideas, next treats of discrimination, assimilation, and association, or, as he calls them, of Differentiation and Integration. And here, it seems to us, he falls from his best to his worst. The previous chapter sharply and clearly assigned on the one hand the physiological conditions with which attention coexists, and described on the other hand its function as regards the mind's object—as when, for instance, the thing attended to grows more intense, clearly limited, and better remembered thereafter. But by the baleful words differentiation and integration, one never knows whether physiological condition, cognitive function, or mental process itself be meant. What but mystification can result in the mind of the student who is told to apply

the idea of the segmentation of the ovum to the mind and think of the emergence of distinctness in consciousness as "differentiation"—differentiation at first not clearly conscious, but gradually developing into a true discrimination of objects from each other in various definite respects? Or what real insight of any kind does one gain from regarding consciousness of similarity as a "higher form" of "what may be defined provisionally and roughly as the process by which like sensations or other psychical contents 'attract' one another and tend to combine or coalesce"—such coalescence being namable as "Assimilation," and "all assimilation being thus a mode of uniting or integrating"?

All through the book we find the words "integration" and "synthesis" harped upon in this obscure way, as if they stood for something definite and explanatory. We cannot but think that Prof. Sully's singular receptiveness of mind has here led him astray, and that in his desire to include in his book all that is good and true anywhere, he has thought that duty to the Spencerians on the one hand and to the neo-Kantians on the other obliged him to pay homage to their favorite words. Such words, like differentiation, are but vague descriptive epithets for the mind's *function* of learning to know the objective world both more *en masse* and more in detail as life goes on. They reveal absolutely nothing as to the processes, whether neural or psychical, by which the improved knowledge comes about. Some talk of the processes Dr. Sully indeed gives, but it is, as it were, swamped in the other vagueness.

The chapter on Perception deals with the cognition of space and body, and is thorough enough to fill seventy pages. In "space" one may well be lost; and Dr. Sully, who has no fighting doctrine of his own to carry through, has studied the various discrepant authors to such a degree that simplicity is gone from him for ever. The subject is like a yard full of snow—cross it once, and the tracks are plain, but cross it back and forth often enough in different directions, and there is no making anything out. Dr. Sully, we should say, has crossed it a little too often. The strong point of his account is the minute way in which he describes the successive stages in the growth of space-perception, tactual and visual, in the individual. This bit of imaginative introspection has never been so completely written out, and our author may claim to have well rounded out the task which Spencer and Bain began. But still, a description of the order in which we come to know what is in a thing is hardly an explanation of the act of knowing itself. Such an explanation Kant, Wundt, and Spencer profess after a fashion to give; Brown, Bain, and Mill profess to give one so far as the knowing takes place through the eyes; while others, like Stumpf and Hering, deny that we can explain at all our knowledge of such essential elements of extension as its greater or less bigness, and the directions and lengths of lines within it. These, they say, are simple data of sensation. Our author admits a primitive consciousness in which "there would be something answering to extensity or spread, . . . though whether this primordial extensity when it began to be apprehended would carry with it any spatial consciousness in the form of a sense of amplitude or volume, is a disputed point, and one which, it may be safely predicted, will never be definitely resolved." Ten pages later he says that such a vague primordial voluminousness "assumes a psychological impossibility, viz., a consciousness of abstract space or room without any rudimentary discrimination of particular parts or regions, directions and distances. . . . Whatever the precise nature of the primitive 'massiveness,' it seems reasonable to conclude that it requires the *incorporation of motor ideas* before it become spatial as we understand the term. . . . It is certain that, by the play of association, motor elements become *integratively interwoven* with the primitive experience." These words are almost all that Prof. Sully has to say on the general theory of the matter; but it must be added that, in his account of perception of space by the eye, he brings out with admirable clearness the fact that by the "real" magnitudes, directions, distances, etc., of things, we mean nothing but the movements which we should have to make in dealing with them.

Of the sections on Memory, Association, Imagination, Conception, Judgment, Reasoning, Self-Consciousness, and Belief, we can say hardly anything in our brief space. The basis of much that they contain resides in the author's doctrine, already mentioned, of "assimilation," which is that every object that recurs revives its own image from out of the past, and coalesces more or less completely with it, giving rise to mere recognition when the coalescence is complete, and to articulate recollection when it is not so. "Association by contiguity" is preceded by this preliminary step of assimilation of the present "idea" with the image of its own past self, just as in Prof. Höffding's and other authors' accounts. In association by similarity the revival is of an image similar to, but not identical with, that of the present object; and of this process, Dr. Sully says, "the sole assignable ground is the functional activity of assimilation itself. . . . We may speak of 'the attraction of similars.' . . . The attractive force resides in the fact of similarity" (pp. 330-2). By successive assimilations a cumulative effect is produced, a superposition of similar ideas, out of which generic images result (p. 414). These are not true concepts yet, since they lack that mental separation and demarcation of their several perceptual constituents which yields common or general qualities to the mind's grasp, and this analysis and abstraction are processes of more active and reflective thought. In all this we cannot say that our author has been original; and it may well be doubted whether, in his treatment of similarity as a "force" whose functional activity is the prime cause of the laws of revival, he is on a healthy track. To the present critic the Hartleyan doctrine of mere brain-habit seems much more full of promise as a dynamic speculation. Sully, of course, admits the existence of association by mere habit between the images revived by similarity and whatever ideas they suggest, but of its causes as facts of a cerebral order he has but little to say (p. 192).

The account of pleasure and pain which begins the second volume is one of the best parts of the book, being both clear and full. The chapters on the emotions are also very good, while the hundred and fifty pages that give the natural history of volition form by far the most delicately analytic description ever written of that important function of human life. Prof. Sully frankly admits "active consciousness" as an irreducible element, allying himself in this to Wundt, Külpe, and others. We have it in all conation, desire, aversion, attention, and reflective thought. Its physical condition would seem to be muscular contraction (p. 173), though Prof. Sully seems a little hesitant on this point, since he admits a consciousness of central innervation as possible (p. 174), and at the same time speaks of intellectual activity as if that might yield a feeling distinct from that of its muscular accompaniments (p. 178). In his description of the rise of voluntary from involuntary movement Dr. Sully, on the whole, treads in Bain's steps, though he makes certain concessions to the less hedonistic school. There are definite instinctive impulses, he admits, which precede accidental experiences of pleasure; but they are fewer in number than is sometimes maintained, as, for instance, by James, whose list is called "almost grotesque." Pleasure or pain, once felt, gives rise to desire; and desire, involving representation of an end, is the germ of will. But desire is only for the pleasantness or relief from pain which the object desired may bring. Excellent accounts follow of deliberation, decision with effort, and the sense of freedom, in which Prof. Sully of course takes deterministic ground. The last section contains a number of rather brief discussions of such matters as individual character, genius, dreams, insanity, etc., and the work concludes with forty pages of appendix on various theoretic points.

The total impression it leaves is that for learning and power of introspective description the author is unsurpassed, but that his rare open-mindedness and lack of aggressive quality give him a vacillating tone, where several opinions are in the field, that must often prove bewildering to the student. His formulas too often try to satisfy all the theories at once. Moreover, to the present critic so much detail of introspection seems often but a wearisome over-elaboration of things already obvious. The first-comer who imagines something pleasant and then desires and gets it, knows already as much of the essence of volition as Prof. Sully's account can give him. What we should all like to know would be the *forces* concerned. Is the desire itself one of them, or does all the dynamism belong to the mere organic machine blindly working? Into such questions Prof. Sully does not go; and yet if psychology is ever to become scientific, as other sciences are scientific, it must mainly concern itself with causes. The causal relations between the body and the mind form its central problem; and the physiologists and pathologists who are burrowing, however crudely, in that direction, seem to us on the whole to be on a path of greater ultimate promise than the more classical one of describing results, upon which Prof. Sully so skilfully keeps his feet.

JAPANESE ECONOMICS.

Japans Volkswirthschaft und Staatshaushalt. Von Karl Rathgen. Leipzig: Duncker & Humblot.

JAPANESE economics and finance, while they have engaged the best talent of the native Japanese, have not thus far awakened much interest in foreign students. A few incomplete studies in the Proceedings of the Asiatic Societies are all we have of value in this department outside of newspaper records. The financial and economic portions of Rein's works are meagre and antiquated. Dr. Mayet, the veteran worker, and Dr. Fesca, while they have made admirable special researches, have given us no general description or historical account of the development of Japan. Dr. Rathgen, therefore, had a comparatively unexplored field of investigation, or at least a field not thus far systematically surveyed.

The author, as financial adviser to one of the Tokugawa nobles, had exceptional opportuni-

ties for the study of his subject, and he has evidently taken special pains to turn them to account. The volume is the result of eight years of careful research in the most minute as well as the most general matters of economic interest. In many cases he has unravelled complex and mysterious transactions which were bewildering even to contemporaries. For Japan during the last thirty years has been a country of quick transitions, of a bureaucratic and somewhat oligarchic government, often forced to shifts and evasions that were designed to conceal the true nature of certain transactions; and it is hardly to be wondered at that the student, after pursuing his problem for some time, gives it up in despair. The present volume is most satisfactory in this respect. Every matter of historical importance is traced with a clear and unerring instinct through all its mazes and changes to its final end. For this quality of distinctness and completeness the author deserves no common praise.

Dr. Rathgen's work is divided into three parts. The first book is taken up with a résumé of the history of the State from the earliest times to the present. Considering the great deficiency either of good histories or of critical materials, the author has given a most excellent account of the development of the Japanese system of government. The most attractive portion of the book naturally deals with the transition period from the feudal system to the centralized government of to-day. In America all is transition; it is difficult to fasten on any period that has definite characteristics for any length of time. We are always looking forward to a new condition of things, and a state of expectancy can hardly be considered a base line for comparison. In Japan, civilization under the Tokugawa régime, though not unmodified by internal forces, had reached a stage of comparative stability. Hence, the revolution of 1868 implied not only a break with the past, but a great change of direction, which is leading the country farther and farther from its old moorings. Briefly speaking, the people of old Japan, from the Daimio to the Eta, were in a condition of status—industrially, custom replaced competition; politically, clan feeling overruled patriotism. The feudal system displayed its weakness after Perry's expedition in 1854, and especially after the entrance of foreigners in 1860. The restoration of the Emperor to power in 1868, and the abolition of the clans (*han*) two years afterward, were followed by a complete political transformation of the Government, based mainly on the French system.

In the second book the author gives a general survey of the economic and industrial condition of the country, beginning with the distribution of population, and finishing with the difficult problems of wages and incomes. In this book there is much that is curious and interesting to the Western reader.

"In Japan are to be found only small holdings. A farm of five *cho* (twelve acres) is considered very large. As a rule the Japanese farmer is without hired labor and without cattle. The family alone cultivates the farm, which, however, is so small that a large share of the available labor can be devoted to other purposes besides farming, such as the production of silk, indigo, tobacco. The average holding for the whole of Japan (excluding the Hokkaido) for each agricultural family is 8.3 *tan* (about 2 acres), varying from a maximum of 17.6 *tan* in the prefecture of Aomori to a minimum of 5.3 *tan* in the prefecture of Wakayama."

A double crop, however, on much of the land enables the farmer by the most assiduous industry to eke out an existence. Another remarkable fact is, that out of a total area of 28,837,000 *cho* for Japan (excluding the Hokkaido and other islands) there are only 4,669,000 *cho* of cultivated land, or about 16 per cent. For the whole Empire the percentage shrinks to 12 per cent. Germany, on the contrary, has 43 per cent. of its area cultivated, and France 50 per cent. We may ascribe the smallness of this fraction in part to the mountainous character of Japan, but also in part to the extraordinary devotion of the people to rice cultivation. Much land that would delight the heart of an American farmer is left neglected and uncultivated in Japan.

The third book, treating of the finances and financial history of modern Japan, is on the whole the most interesting in the volume. Japan's financial history comprises in the space of twenty years nearly all the experiments that have been tried in Europe and America during the last two centuries. Depreciated paper money, speculation in gold, stock-jobbing, railroad, canal, and shipping crazes, wild and impracticable enterprises of every description, have followed each other in such quick succession that one is surprised that the country weathered the storms. But the backbone of Japan, like that of France, is the peasantry. Their plodding, patient activity counteracts a multitude of financial sins and has enabled the Government successfully to escape shipwreck. Even the peasantry, however, were tainted to a degree by some of the innovations, especially in the era of depreciated paper money in 1877-1884. The usual accompaniments of an over-issue were present. Times were flush, speculation was rife, every one was confident and enthusiastic; foreigners had furnished Japan with a mysterious key to the stores of wealth, and foreigners were consequently lionized. This was the heyday of Japanese prosperity. Farmers received high prices for their products and paid their taxes with ease. They fell into habits of luxury and of borrowing relatively large sums of money at usurious rates of interest. When the reverse came, as it always comes, the farmers could not find the means of payment, and many had to sell their lands and become jinrikisha-men or coolies in the large cities; others remained slowly and often hopelessly struggling with their debts.

When measures were finally undertaken to return to a specie standard, the difficulties encountered were far greater than the previous benefits received. The way of the transgressor is hard—afterwards; at first it is as easy as floating with the current of the stream. As usual, too, much of the evil was ascribed to the wicked speculator and his machinations in the stock-market. The Government ordered all speculation in gold stopped, but Japanese brokers have as much finesse as those of other nations.

"During the entire year 1883," says Dr. Rathgen, "there was war between the police and the brokers. The latter simply abandoned the Stock Exchange and speculated in secret on the curb. The business was carried on by pressure of hands inside of the large Japanese sleeves. Between Osaka and Kobe, speculators in gold managed to send quotations by optical signals from the mountain tops. All efforts of the police to stop speculation were fruitless, and every rumor was taken advantage of as before to produce violent fluctuations; and only when resumption was clearly in sight did the speculation in gold gradually cease."

Admirable as are the impersonal and expository parts of Dr. Rathgen's work, he indulges a few prejudices unbecoming a man of science. The chief of these is directed against Count Okuma, Minister of Finance during the trying period of the Satsuma Rebellion, and later, in 1889, the unsuccessful hero of Treaty Revision.

"Okuma," says Dr. Rathgen, "was versatile but superficial, clever but without solid training. . . . His chief qualities were temerity and levity; he ordinarily under-estimated actual difficulties, and never considered the consequences of his acts if he could but temporarily overcome present obstacles; a man of shifts and petty expedients, as untruthful as any one in the East, a politician but no statesman. Convinced of his genius for finance, he was pleased to hear himself called the 'Gladstone of the Orient.' He thoroughly understood how to put his best services in their brightest light and to lightly brush aside failures."

The guiding principle of Okuma, according to the author, was "Take the advantage of the moment. *Après nous le déluge.*"

These unsparing terms contradict the judgment of some of the soberest foreigners in Japan. Men who have worked with Okuma both in the Finance and Foreign Departments declare him to be a man singularly truthful and straightforward; more than this, he is said to be a man devoid in a great measure of that diplomatic evasion and indirectness so characteristic of Japanese officialism, and to some extent bred in the very bone of the Japanese. Those foreigners who have been longest and most intimately connected with the Count are most attached to him, and have not failed to testify to his qualities of courage, truthfulness, and directness. We must set it down to personal bias that Dr. Rathgen has thus denounced a man who has perhaps done more for modern Japan than has any other statesman except Count Ito. In that dim future when the history of the *Meiji* period is written, Okuma and Ito will doubtless be the "double star which the most powerful instruments will not entirely separate."

Imperial Federation. By George R. Parkin. Macmillan. 1892.

THIS is the best argument yet put forward in favor of the object to which the author has devoted years of thought and of travel throughout Greater Britain. He freely admits his indebtedness to Sir Charles Dilke and to others who have written on the same subject, and indeed the excellence of his work is due rather to its condensation and its lucidity than to any noteworthy originality of thought. From the English point of view there is enough to be said in favor of Imperial federation to warrant a numerous body of supporters in England. As Mr. Parkin points out, England is so dependent on other countries for the necessaries of life that, if a barrier were placed round the island, the pressure of want would be felt within six weeks. A large percentage of these necessary supplies is now drawn from the colonies, and the amount could be almost indefinitely increased if English capital, under the safeguard of some scheme of federation, were freely invested in the development of colonial production. But either England is not fully alive to the importance of this question of food supplies, or capital is rendered timid by doubt as to the political future of the colonies; so that, for example, the development of the Canadian Northwest, which is capable alone of meeting the larger part of the deficiency, proceeds in languid fashion. Again, the immense amount of English capital already invested in India, Australia, and Canada would seem to supply a sufficient reason for an enthusiastic acceptance on the part of England of the idea of federation; for if the colonies are allowed to drift away and become independ-

ent States, the safety of English investments might, under certain circumstances, be seriously impaired. Moreover, Mr. Parkin suggests a further advantage to the mother country in the creation of a grand council, composed of representatives from all parts of the Empire, and competent to deal with all Imperial questions, which could leave the local parliaments free to attend to the great mass of local legislation. Questions concerning the more distant parts of the Empire would thus be dealt with by those best fitted to decide them, and the result could hardly fail to be beneficial. From the selfish point of view, therefore, it might reasonably be expected that England would enthusiastically support the idea of Imperial federation; yet the very reverse is the case. Whether this is due to ignorance or to carelessness, or to an historical hesitation to urge upon colonies any course of action which seems to be unpopular, Mr. Parkin does not undertake to decide.

From the point of view of the colonies, however, the advantages of federation are not by any means so obvious. In the first place, federations are always difficult. It is easy to say that united Germany and united Italy are stronger and better governed than the strange collections of sovereignties which they succeeded; but the kingdoms of Germany and the states and cities of Italy were compact bodies, whereas the colonies of England are strung like a necklace round the globe and embrace every variety of climate, race, and religion. In these widely differing regions the feeling of the people towards federation seems to vary between indifference and decided hostility. In no one colony is there anything like enthusiasm on the subject, except on the part of a few individuals. Mr. Parkin very truly observes that "great countries with an assured future cannot always remain colonies"; but the alternative is not necessarily what he would like to see. The majority of the inhabitants of Australia, for instance, seem to have arrived at the conclusion that they will neither remain colonists nor will they accept the burdens and responsibilities of Imperial federation. They are eager to try self-government, and are confident that in case of trouble they can protect themselves quite as well as England can protect them. In Canada the position is somewhat different. Owing, perhaps, to comparative propinquity, there is much more sentimental loyalty to the British connection in Canada than in Australia; but there is certainly no enthusiasm for Imperial federation, and there is at least a feeling favorable to annexation to the United States, which finds occasional public expression, however small the number of those who share it.

Mr. Parkin insists that Canada is essential to the federal scheme. He is a Canadian himself, and he gives a chapter each to Canada, French Canada, and Mr. Goldwin Smith, on whom his animadversions are severe. His work is really an appeal *pro domo sua*, and a tract against annexation. This explains, on the one hand, his tolerance for the National Policy of protection, which has checked the gravitation of Canada towards its bigger neighbor; on the other, his exaggeration of the difference in political purity on this side of the border and on that. While superficial or prejudiced observers may regard the recent scandals in Quebec as an isolated case, those who are truly familar with Canadian politics are aware of a corruption that would challenge the admiration of a Dudley or a Quay. Had our spoilsmen, accordingly, a motive for promoting the annexation of Canada, they would have no cause to dread a preponderating accession of moral forces such as strive against them here. Mr. Parkin, finally, makes the most of the loyalty of the Canadian French, and of their repugnance to annexation for fear of being swallowed up in the great Anglo-Saxon Republic. He implies that he thinks their holding their own in Canada not a bad thing for the Dominion, and he is certain of the want of permanence of the French-Canadian colonization of New England.

Inherited loyalty; high rank in the world's total of tonnage afloat; a friendly transcontinental route for British troops to be used in Asiatic waters; a capacity to furnish the whole of England's need for grain and much of its meat supply—all these things are little likely to avail against natural affinities and tendencies such as exist between Canada and the United States. The sensible postal union of the two countries typifies that community of interest which the National Policy and the McKinley tariff work against as long as "manifest destiny" permits—and no longer. The constant migration at all points from the Dominion to the States tells the same story. Mr. Parkin's audience slips away from him while he addresses it. What motive could England have for multiplying artificial barriers to this spontaneous fellowship; or, supposing Imperial federation once accomplished on Mr. Parkin's lines, what could she do to prevent Canada from withdrawing from it in obedience to a higher power than loyalty? British statesmen of a non-jingo stripe may be trusted to prize Canada more as an integral part of a friendly United States—freed alike from the schoolboy traditions of hatred growing out of our wars, and from the cowardly protectionist tradition of industrial and commercial rivalry—than as the keystone in a dubious arch of semi-detached colonies.

The Elements of Statics and Dynamics. By S. L. Loney, M. A., Fellow of Sidney Sussex College, Cambridge, and Lecturer at the Royal Holloway College. Part I. Elements of Statics. Part II. Elements of Dynamics. Cambridge: University Press; New York: Macmillan.

THE elementary text-books in the various departments of mathematics which have been published in England during the last decade in continually increasing numbers, have all been characterized by a tendency which is constantly becoming more and more prominent. The number of "examples" and "exercises" is ever increasing. The student is called upon to read little and to work a great deal. The ability to solve problems is the final test of his proficiency. Mr. Loney's two little treatises are fair, though by no means extraordinary, specimens of this tendency. His small book on Statics contains 630 "examples"; his still smaller book on Dynamics contains 470; besides these there is a large number of examples worked out in detail to illustrate the meaning of the text, and to serve as models for the student in his assaults upon the unsolved 1,100. The first and most obvious inference from these facts would be that English writers and teachers had become impressed with the necessity of subordinating theory to practice. Deftness and readiness in the application of principles would seem to be considered of more importance than clear and exact notions in regard to the principles themselves. So far as the authors of text-books are concerned, this inference would be unjust. While there is a manifest effort to compress the text into the smallest compass, there is also an anxious striving to attain clearness and precision in the statement of principles. But felicitous illustrations and abundant "examples" are the matters on which the author chiefly relies for the success of his book.

Now, the prominence of this feature in recent text-books is not due to any particular change in the notions of teachers as to the best methods of instruction. They have not become suddenly conscious of the importance of the practical applications of knowledge. The real cause is political rather than pedagogical. When the English Government, forced by the pressure of public opinion, determined to pursue a new method of making appointments to the civil service, the plan adopted was, in its most essential feature, a matter of necessity, not of choice. Under the old system the character and ability of the applicant were matters of subordinate importance. The personal, political, and social "influence" of his backers was the potent factor. The mass of the people complained that the civil service was almost entirely confined to the kindred and the protégés of the nobility. Public opinion demanded that applicants from all classes should stand an equal chance and "the best man should win"; that point being granted, "competitive examinations" followed as a matter of course. The objections against them, however weighty, were all out of place unless accompanied by the proposal of some better system, and no one had any better system or, in fact, any other system at all to propose.

The method of competitive examinations having been decided upon, it necessarily followed that the examinations must be written, not oral. From an oral examination it was impossible to eliminate the suspicion of personal, political, and social influence. The ability to excel competitors in a written examination has thus become an indispensable requisite for the attainment of the great majority of positions in the civil service. The results of this system in the civil service of the Government have been so satisfactory that it has been reported in the public press that several of the great financial and commercial institutions of London are considering the propriety of adopting the same system in filling vacancies in their offices. All this necessarily has a great influence upon the methods of instruction in the English schools. The object of an old-fashioned "pass" examination was to ascertain whether the pupil would probably be able to "worry through" the next higher grade. Now the probability of his finding it necessary to enter the lists of a competitive examination is continually increasing, and there is a consequent increase in the severity of the "pass" examinations. For these reasons the prefaces of many recent text-books, and among them Mr. Loney's, contain lists of the examinations which the author of each has more particularly had in view in its composition, and, under each examination, a statement of those portions of the work which are indispensable to success and of those which may be safely omitted.

As the number of candidates who hope to be successful in a competitive examination for a position in the civil service increases, the examinations necessarily become more severe. This increasing severity has often been attributed to a desire on the part of the examiners to confine the competition to such candidates as, from the wealth and social position of their families and friends, have received a liberal education. But this increasing severity is a necessary result of the system itself. When

there are ten candidates for one position, all of whom in their physical and moral character are unexceptionable, the only way of deciding the matter is by increasing the severity of the examination until nine of them fall behind the tenth. In the department of mathematics a written examination for the most part is necessarily made up of theorems to be proved and problems to be solved, and hence many of the recent text-books call attention to the fact that a large number of their examples have been taken from papers used in actual civil-service examinations.

As the system of competitive examinations extends, the tendency of text-books to become more and more like collections of graded examples will also grow, and the question naturally presents itself, What will be the effect upon the progress of the science of mathematics? Most people would, perhaps, be inclined at first to infer that mathematics must become more and more of a trade and less and less of a science. Students will be more inclined to regard the text-book as a collection of rules verified by experience, and skill in the application of the rules as the matter of main importance. Philosophical generalization will become entirely subordinate to useful specialization. But even a superficial acquaintance with the history of mathematics will dissipate all fears on this head. Almost all the great discoveries in mathematics have originated in attempts to solve some particular problem. The surest road to the discovery of new truths in mathematics is skill in the application of truths already known. Of course a young man who intends to devote himself to some profession in which, as in astronomy or the various departments of engineering, the constant application of mathematics is indispensable, can hardly spend too much time in the solution of problems. But even he who intends to become a professional teacher of mathematics, and hopes some day to be able to contribute something to the advancement of the science, will never regret the time he spent in working out "examples."

In support of this opinion we are able to cite an authority which is almost conclusive. Mr. Ball, in his 'Short History of Mathematics,' has characterized Lagrange as "the greatest mathematician since the time of Newton." In another place he says of him: "Lagrange was above all a student of pure mathematics; he sought and obtained abstract results of great generality, and was content to leave the applications to others." Yet Lagrange himself, in a letter of advice to a young friend engaged in studying mathematics, urges him above all things to solve all the problems that his text-books contain. He says that he himself pursued this course in his younger days, and he attributes to it, in great part, his subsequent success. In fact, the solution of problems in large number seems to have the same effect upon the mind that the performance of the feats of the gymnasium has upon the body: in either case the immediate object in view is of very little importance, but the vigor, suppleness, and endurance thereby acquired are the best preparation for the accomplishment of really important work. On the whole, we think this increased attention to the application of general principles to particular cases will, in the end, be conducive to the progress of mathematical science in its higher and more abstract forms.

Any detailed criticism of Mr. Loney's little books would be out of place here. They have evidently been prepared with great care, and are perhaps as well adapted as any that can be obtained to accomplish the main purpose they have in view, viz., to prepare the student to pass an examination successfully.

Memorial History of New York City. Edited by James G. Wilson. Vol II. New York History Co.

THE second volume of General Wilson's History has much to commend it. It contains many interesting historical contributions, and is, besides, like the first volume, well printed and beautifully illustrated. Among the historical studies are specially to be noticed that entitled "William Cosby, and the Freedom of the Press," by Eugene Lawrence; the narrative of the part taken by New York in the Stamp Act troubles, as told by John Austin Stevens; and the chapter devoted to George Clinton and his contest with the Assembly, written by Dr. Gitterman. These are important and interesting historical events and are fully treated by these writers; but it is too much to say that special studies constitute a history, and thus far Gen. Wilson's work can be considered only a collection of such essays, of greater or less merit—only links and not a complete chain.

There are even greater faults of commission than of omission in the editorial work assumed by Gen. Wilson. A case in point is the intrusion of a list of burgomasters and mayors, from 1653 to the end of the seventeenth century, in the second volume, which is devoted entirely to the eighteenth century. This list is printed at the end of the *first* chapter (which is a study of the administration of the Earl of Bellomont, 1698-1701). Besides, the list ends at the beginning of the eighteenth century, and there the subject is dropped entirely, to be resumed again at the end of the fifth chapter, but with no mention of the mayors for the years from 1700 to 1720. At the end of the eighth chapter it is again continued, and concludes with John Cruger, who was mayor until 1734. No further reference is made to this subject, and the list is left unfinished at this point, though the second volume completes the history of the century. If these two volumes had constituted, as the title announces, a history of the city, such a list, except for reference, would have been useless; the mayor has always been the city's chief executive officer, and his name, term of office, and activities could not have been separated in a true history from the narrative of the city's growth and development, as is done in this work. If the list was furnished for reference only, then it should have been complete and continuous, and not fragmentary and scattered capriciously throughout the volume, as has been done by the editor.

The presswork, and particularly the character of the illustrations, cannot be too highly commended, but here again the editor fails to perform his duties. He reproduces everything, whether its interest is near or remote, and many of the illustrations that would be of rare interest appear without any explanation. For instance, there is to be found on page 83 an illustration of the Palace of Blenheim, reproduced only because "the present duchess is a native of New York"; and again, the ruined tower of Heidelberg (page 109) is apparently included only because "the thousands of Americans who have made pilgrimages to Heidelberg to look upon the picturesque ruins of the old castle, will hear with regret that, at the present writing, the Grand Duke of Baden is considering plans for its restoration." These are pretty and interesting views, and might properly be placed in a collection of historical pictures, but a history of New York gives no excuse for their appearance. There are already too many picture-books about old New York, and not enough histories.

Another case in point, of the reproduction of most interesting historical documents without any explanation, is a facsimile of a deed signed by Richard Nicolls in 1667. This document is of great historic interest, not only because Richard Nicolls was the first English Governor of New York, but because under him some of the old Dutch forms and customs continued to prevail, and many of the old Dutch officials were retained. The deed was evidently written by one of the old Dutch scribes, bearing on its face in the German form of the handwriting an interesting evidence of this transition. Not only does this document appear without any explanation, but it is to be found at the end of the first volume (page 583) in a list entitled "Bibliography of the New York Press in the Seventeenth Century," to which it has absolutely no relation.

A complete and carefully prepared index may, we suppose, be looked for on the completion of this work. At present the reader has to rely on his own efforts more than those of the editor to find in these volumes a history of New York.

A Footnote to History: Eight Years of Trouble in Samoa. By Robert Louis Stevenson. Charles Scribner's Sons. 1892. Pp. viii., 332, 8vo.

SEVERAL years ago, in a speech in the Senate, Mr. Sherman characterized the Samoan question as "the smallest controversy in which the United States could be or has ever been engaged." It is the pitiful story of the later stages of this controversy that Mr. Stevenson tells in this 'Footnote to History.' In the opening chapters the actors and the scene of the events are described in strong and picturesque language. There are, on the one hand, the childlike islanders; on the other, the representatives of the three most powerful nations of the civilized world. Of these the chief actor—and offender—is Germany; while, according to Mr. Stevenson, "the States have the cleanest hands," though "even theirs are not immaculate." The Samoans are contending for all that men hold dear—their liberty. The Germans bombard villages, destroy plantations, dethrone and exile kings, at the bidding and in the interests of a trading-firm. The islands, doubtless, would long ago have been annexed to the Empire but for the vigorous protests of the British and American consuls, backed by their home governments.

The narrative opens with the incidents which led to the deposition of the king, or head-chief, and his deportation to Europe on a German frigate in 1887. Upon this follows a series of trivial transactions which would be simply amusing from their very triviality, had they not at times been accompanied by bloodshed and the wanton destruction of property. The mere threat to kill some pigs, for instance, is magnified into an atrocity which finally assumed the dignity of an international question. The combined navies of the three Powers are called upon to punish recusant taxpayers. The story, in a word, as told by Mr. Stevenson, reads like the libretto of a comic opera; the naval captains even playing parts which vividly recall the exploits of the gallant commander of H. M. S. *Pinafore*. What heightens the humorous effect is the fact that the natives themselves, when most in earnest, still seem to be playing at war. Singular

enough, the lack of humor or the appreciation of it in the Germans has been a frequent source of trouble in their dealings with the natives and the other whites. "Their solemnity," says Mr. Stevenson, "is accompanied by a touchiness often beyond belief. Patriotism flies in arms about a hen; and if you comment upon the color of a Dutch umbrella, you have cast a stone against the German Emperor." A traveller, on complaining of the vermin which infested a certain vessel, was suddenly and sharply rebuked. "The ship of which he spoke, he was reminded, was a German ship!"

With the disastrous hurricane of 1889, of which a fine description is given, there is "an end of violence," unless the war has broken out afresh, as recent tidings from the islands seem to indicate, over the vexed question of unpaid taxes. "Carpet incidents" alone remain to be recorded, such as the reinstatement of the exiled king with his great rival as *maire de palais*, and the establishment of a court of justice and board of land commissioners, both composed of foreigners. Yet even in carrying out these peaceful measures the Germans how the same irritating inability to adapt themselves to native customs and habits of thought which has temporarily wrecked their colony in East Africa, and has already led to new complications in unfortunate Samoa. Mr. Stevenson believes that it is in the power of the German Emperor to put an end to these troubles, and closes his book with an earnest appeal to him to give to Mataafa "a fitting share of rule." Of this chief, the successful defender of the natives' liberties, and in all things but the name the true king of Samoa, an attractive picture is given. "He is of a tall and powerful person, sixty years of age, white-haired and with a white moustache; his eyes bright and quiet; his jaw perceptibly underhung, which gives him something of the expression of a benevolent mastiff; his manners dignified and a thought insinuating, with an air of a Catholic prelate." A devout Romanist, his later life has been marked by a purity almost inconceivable in a Polynesian. The pen portraits of the whites who have been prominent in the Samoan affairs are more indistinct, probably intentionally so; but few or none of them receive such hearty commendation as this semi-civilized savage.

A certain incoherency at times marks the book, due probably to the haste with which it was evidently written, and accordingly it is not always easy to keep the thread of the narrative. Nor is sufficient allowance made for the general reader's ignorance of Samoa and its recent history. Regarded as a whole, however, it is an earnest and, from its statement of facts, eloquent advocacy of the rights of the natives by one who has lived among them for three years and knows whereof he writes.

There are many very characteristic stories and incidents scattered through Mr. Stevenson's volume, with one of which we will close this notice. During the hurricane the Samoans, at the peril of their lives, rescued many seamen from the wrecked vessels, showing no difference between the Germans, with whom they were then at war, and the Americans. They displayed remarkable honesty, also, in the restitution of the immense amount of valuable property which was cast upon the beach. On both accounts "the Government of the United States showed themselves generous in reward." The German Consul paid three dollars a head for each of his countrymen saved. In one instance this was refused. "I have saved three Germans," said the rescuer. "I will make you a present of the three."

The Livery Companies of the City of London: their origin, character, development, and social and political importance. By W. Carew Hazlitt. With two colored plates and numerous illustrations. London: Swan Sonnenschein & Co.; New York: Macmillan & Co. 1892. 8vo, pp. xiv, 692.

THE most unsatisfactory part of this book is the long preface (pp. 1-60), which comprises an apotheosis of the Livery Companies and a rambling account of their general history. The author regards the existing companies as "promoters of almost every department of humanizing and elevating science." They have also formed "an immemorial link between commercial life and the aristocracy," because many noblemen in past times have sought membership in the gilds. For the preservation of these "old stones of London" he urges, moreover, the common English plea, *quieta non movere*, and the fact that the City of London, with its gild machinery, "is a most potential and unique factor in knitting together the classes, and in preserving from decay and oblivion the ancient hospitality of our Kings." He believes that the companies and the civic corporation "are infinitely more secure from molestation at this moment than they were ten years ago," and that a long future of prosperity is in store for them. We fear that the author's arguments will not convert many of Mr. Firth's followers.

The origin of gilds and the general history of the London companies are also considered in the preface, but only in a desultory and very unsatisfactory fashion. On page 13 we are informed that the germ of gilds was undoubtedly the old Anglo-Saxon principle of suretyship; but on page 16 their rise in England is ascribed to a foreign source, "to Continental influence and example, more particularly to the precedents set in the Low Countries and in Italy." It is difficult to understand how a writer can hold both these views; and neither of them is tenable according to the best authorities on the history of English gilds. Nor can we accept the opinion that the main ostensible justification of the sufferance or existence of the early London craft fraternities "was, not trade, but charity and alms" (p. 4). Mr. Hazlitt thinks that the feebleness of the Plantagenet Kings contributed greatly to the growth of gilds; but most scholars have rightly ascribed much influence to the strength, not to the weakness, of the Crown; it was the comparatively great power of royalty that prevented gilds and municipalities in mediæval England from assuming the dominant position or political importance which they attained on the Continent. It would thus be nearer the truth to say that the strength of English royalty contributed to the weakness of gilds, not *vice versa*.

We have also noticed some minor errors in the preface. The list of works relating to Continental gilds, on page 54, is inaccurate and incomplete. The great national collection of French chronicles and records, the 'Documents Inédits,' is cited as a work on gilds, written or edited by M. Delpit. The earliest mention of Billingsgate as a place of lading (p. 17) should be antedated about three centuries. The ordinance of 1416, enacting that no citizen should belong to more than one fraternity, was not a "new" regulation (p. 32); the same principle was enunciated in the Statute of 37 Edward III. The chief defect of the preface, however, is not the prevalence of errors (we have not discovered many), but its discursiveness and incompleteness. Notwithstanding its great length, it has almost nothing to say concerning the most interesting and instructive side of the history of the London companies, namely, their past relations to the civic corporation, and the process by which they became an integral part of the machinery of municipal government.

The preface is followed by a "General Introduction" (pp. 61-100), which is a digest of the first part of the elaborate Parliamentary returns made in 1884 by the Livery Companies Commission. Among other things, this introduction contains a general account of the present government, membership, and income of the companies. Mr. Hazlitt refers to these Parliamentary reports indifferently as those of 1880, 1882, and 1884 (pp. 39, 41, 57), which is confusing, to say the least.

In the body of his book the author gives an account of fifty-two defunct and seventy-five existing companies of London, based upon the above-mentioned Parliamentary papers and some other sources. The wide scope of the work permits him to present only the salient facts in the history of each company. He glides somewhat too rapidly over their origin and early development, and is inclined to lay too much emphasis upon references in old records to an existence "from a time whereof there is no memory." Hence he shrouds the inception of some of the leading companies in the mists of remote antiquity. He states, for example, that the Gild of Weavers existed before the Norman Conquest (p. 661), for which assertion there is no good ground. For "ministers," on page 662, read "craft" or "mistery" (the Latin is *ministerium*); for "quarterwages," on the same page, read "quarterages." On the whole, the body of the work is well written, well printed, and well illustrated. Though not the result of original research, it gives, in a compact form, a vast amount of information, not easily accessible, relating to the London Livery Companies.

THOMAS Y. CROWELL & CO.,

46 East 14th St., New York.
100 Purchase St., Boston.

EUROPEAN WINTER AND SUMMER Resort, University town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year. Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sleighs at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travelers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,

NO. 59 WALL STREET, NEW YORK.

BARGAINS IN BACK NUMBERS and volumes of *The Nation.* See A. S. CLARK'S (34 Park Row, N. Y. City) Catalogue No. 34, page 18.

NEW EDITION OF

The Poetry of Tennyson.

By HENRY VAN DYKE, D.D., with portrait of Tennyson. 12mo. $2.00.

"It richly merits this unusual compliment, standing, as it does, among the most exhaustive, scholarly, and affectionate studies that modern times can boast, of the work of a great poet."—*Boston Transcript.*

"So long as Tennyson's poetry is known and loved—and he is one of the poets of all time — this critical 'appreciation' of his poetry will survive. Dr. Van Dyke's criticism deserves to rank with the best critical work that has been done in America."—*The Christian Inquirer* (N. Y.).

"Without doubt this appreciative and discriminating study is the best general companion to the reading of Tennyson that exists."—*The Examiner* (N. Y.).

"As a statement of the essence of Tennyson's poetical art the book has no rival."—*Boston Beacon.*

"The chronology alone is worth more than the price of the book to every student and critical reader. It is far more complete than anything of the kind before attempted."—Prof. W. J. ROLFE.

"No truer and more sympathetic analysis has been made of our greatest living poet."—EDMUND C. STEDMAN.

"It leaves nothing to be desired."—THOMAS BAILEY ALDRICH.

GEORGE WILLIAM CURTIS.

Our picture is the latest and best portrait of him in existence, greatly admired by all who have seen it, and pronounced not only an excellent likeness, but also a work of art. Mr. C., in one of his letters, wrote: "My wife likes the one marked 1905B, more than any ever made of me, and that is the highest possible praise."

Imperial size, 14x17, $3.00; cabinet size, 50 cents.

F. GUTEKUNST, 712 Arch St., Phila.

F. W. CHRISTERN,

254 Fifth Ave., between 28th and 29th Sts., New York, Importer of Foreign Books. Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

The TRAVELERS' BUREAUS of the News Series (Herkimer, N. Y., office) will send trustworthy information about winter resorts.

H. WILLIAMS, 195 W. 10TH ST., N. Y., dealer in Magazines and other periodicals. Sets, volumes, or single numbers.

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

The Nation.

NEW YORK, THURSDAY, OCTOBER 20, 1892.

The Week.

PRESIDENT HARRISON'S Civil-Service Reform Commissioners have once more run up against President Harrison's Postmaster-General in their efforts to enforce the civil-service laws and regulations, and have, as has invariably been the case in all previous collisions of the kind, got the worst of the encounter. That is to say, they have left no doubt in anybody's mind about the merits of their side of the case; but as Mr. Wanamaker has the administering of the regulations of his department, and as he is able to count upon the entire support of the President in whatever course he may adopt, he is able to snap his fingers at the Commissioners without fear of consequences. The Michigan case was substantially the same as that revealed in Chairman Hackett's first confidential circular in New York State. It was an attempt by the Republican State Committee to make the post-offices of the State an adjunct to the Republican campaign machinery. The language used on both occasions was the same, and was strikingly like that employed in Wanamaker's own circulars put forth by him early in his career as a public man, when he was using his Cabinet position to promote his clothing business. The Civil-Service Commissioners called Mr. Wanamaker's attention to the attempt of the Michigan Republican Committee to do what Mr. Hackett is doing, saying that it was contrary to the postal regulations, and adding that nobody could be discharged for refusing the Committee's request. Mr. Wanamaker's reply is that he regrets that he is "powerless to prohibit persons from making requests of this kind." He is not able to issue an order to all postmasters directing them to refuse to comply with such requests, and assuring them of his protection in such refusal. His reply is nothing less than a notification to the Hacketts of the Republican party that they need fear no interference from the head of the Post-office Department.

The appearance of the Attorney-General of the United States as private counsel in a case before the Federal Supreme Court is an extraordinary event, but Mr. Miller's performance last week was only in keeping with all the circumstances of the suit in which he appeared. This was the attempt of the Michigan Republicans to set aside the law passed by the Democratic Legislature last year under which the Presidential electors next month are to be chosen by districts. From first to last this assault upon the law has been characterized by the most ridiculous features. It was started by ex-Congressman Cutcheon, who pronounced the bill "revolutionary in its character," and confessed an almost incredible ignorance of his country's history by saying that he was "not aware that any State since the foundation of this Government has ever departed from this rule, of choosing Presidential electors by the State at large," and that "never before, to my knowledge, has it been attempted to confer the power to appoint Presidential electors upon Congressional districts and vulgar fractions of a State."

The truth is, that at the very first Presidential election, in 1789, the State of Massachusetts adopted the district system, and that several other States chose electors by popular vote in the Congressional districts, exactly as is now proposed in Michigan, until well on in the present century. New York followed this practice as late as 1828, when twenty Jackson electors and sixteen for Adams were chosen, and Maryland did not abandon the system until 1832. It must be remembered that the district system was put into operation and maintained during the lifetime of the men who framed the Constitution; and the utter weakness of the present attack upon the Michigan statute was shown by this question, which Justice Gray addressed to the Attorney-General during the latter's argument:

> "Do you find, Mr. Miller, that while the district system of choosing electors prevailed in some States, it was challenged at any time as being beyond the power of the Legislature?"

Mr. Miller was constrained to admit that he never heard of such a thing, and with this admission the case against the Michigan law fell to the ground. It was inconceivable that the Supreme Court should annul a law which is not only in pursuance of the constitutional provision that each State shall appoint its electors "in such manner as the Legislature thereof may direct," but which follows a long line of early precedents established without any question on the part of a single framer of the Constitution. The Court has, in fact, promptly given a unanimous decision against the Attorney-General's view.

Mr. Blaine and Mr. Egan have been produced in the canvass at last, and their observations indicate clearly that the "Blaine Irishman" is intended to play a prominent part in it during the next two weeks. Mr. Blaine's address was short, and was, we believe, read from a manuscript to a crowd in front of the Hon. Whitelaw Reid's house in the country. He said simply a few words on the importance of the protective policy to both the manufacturing and agricultural interests of the country, and, in answer to the charge that the tariff was establishing a plutocratic government, showed that the Hon. Whitelaw Reid's list of millionaires printed in the *Tribune* contained only two or three who had made their money in manufactures. He then encouraged the Irish to vote against "British free trade," but said not a word to the colored men about the Democratic attempt uncovered by the Hon. Whitelaw Reid to nullify the fourteenth and fifteenth amendments. Mr. Blaine's remarks, in fact, had all the marks of failing strength, and it seems a great pity that his friends should have allowed him to be dragged out in this way. Mr. Egan simply defended briefly his course in Chili, saying that he had merely followed his instructions, which were, of course, admirable and highly American. The speech of the occasion was Mr. Chauncey Depew's, of which the *Tribune* says: "The audience were kept laughing during most of Mr. Depew's remarks." He eulogized the Hon. Whitelaw Reid amid roars of laughter, eulogized Mr. Egan amidst similar merriment, and made the sides of his hearers actually ache over his account of Major McKinley. It is in this way that he renders his party the immense service of preventing its absurdities from being revolting by making them ludicrous.

When Mr. Wayne MacVeagh, in a brief letter recently published, announced his intention to vote for Cleveland, a number of Republican politicians, including Chris Magee, Dave Martin, and the chiefs of the Manufacturers' Club, could n't imagine what his reasons were for such action, but were convinced that they were bad reasons. They allowed their curiosity to get the better of them to such an extent that Mr. MacVeagh felt called upon to state them at length and with particularity in a public speech on Saturday evening—a speech which has seldom been surpassed or equalled in the public debates of this country. The admirable logic of his argument is matched only by the high aim of his endeavor. The whole discourse has the ring of true patriotism, clear and unmistakable. Mr. MacVeagh is known to be no office seeker or popularity-hunter. It is some years since his voice has been heard on the stump. In fact, his friends have a right to complain that he has kept such conspicuous oratorical gifts in the background. But one of the results of such abstention is that when he does speak, he commands the widest and closest attention. Such attention his speech of Saturday will surely receive, and its effect upon the thinking and reasoning classes of the community must be very great. It is to be regretted that it was not delivered earlier, so that it might have had more extensive circulation as a campaign document.

Congressman Lodge figures in the list of "Harvard Men in Politics," of whom Mr. Theodore Roosevelt writes in the new *Harvard Graduates' Magazine*, and of whom he says that to be a member of that noble band "a man must have in him a strong and earnest sense of duty and the desire to accomplish good for the commonwealth, without regard to the effect upon himself." Mr. Lodge's speeches in this campaign show how he is striving to live up to this praise. In Lynn he made an attack upon Mr. Cleveland for having, while Governor of this State, vetoed some of the more dangerous and preposterous of the bills then enacted in the name of "Labor," and for killing, as President, the bill to turn the Bureau of Printing over to the Typographical Union. To endeavor thus to ingratiate himself with the Lynn operatives by playing the demagogue, proves how strong and earnest a sense of duty Mr. Lodge carries into politics. But the instance which showed conclusively his well-known lack of "regard to the effect upon himself" of his political utterances was his reference, in Springfield on October 11, to the article of Prof. Woolsey condemning the foreign policy of President Harrison, and which he ignorantly took to be a quotation from some work of President Woolsey's. Said Mr. Lodge, after quoting the passage cited in the address of the Massachusetts Independents: "If that does not mean, although carefully worded, to any fair-minded man who reads it, that President Woolsey uttered those words in criticism of President Harrison, then language contains no meaning." Then he went on triumphantly to show that President Woolsey died July 1, 1889, and therefore could not have been referring to the present Administration, and added with becoming indignation: "It is going beyond the limits of political warfare to use the words of the dead in such a way as to make them appear the condemnation and the criticism upon acts which occurred since death sealed their lips for ever." The best that can be said of this confusion of the two Woolseys is that it was a fearful blunder for a "scholar in politics" to make. The Independents have promptly pilloried him, and demanded that he withdraw his accusation of bad faith; it remains to be seen whether his lips will remain sealed for ever on this subject, as they have been upon his own Force Bill.

Thirty years ago a college professor who was a Democrat was a great rarity. Indeed, Prof. Shaler of Harvard recalls the time when he was the only man among all the professors and instructors at Harvard who usually voted the Democratic ticket, and the Republican preponderance was something like fifty to one. The disparity between the two parties at that period was about as marked at Yale as at Harvard. Now a large majority of the Yale faculty are going to vote the Democratic national ticket, while among the Harvard faculty the sentiment in favor of Cleveland is still more nearly unanimous. Nothing else so vividly illustrates the transformation which has come over the Republican party as these revolutions of sentiment among the instructors at our two oldest universities.

The *Herald*, which has certainly not been a supporter of Cleveland in this campaign, has been making a preliminary canvass of the votes in the State of New York by means of special correspondents detailed for the purpose. The reports have been almost uniformly of one kind, showing a steady and unmistakable Democratic gain or Republican loss. The results were summed up editorially by the *Herald* on Monday. Although there is a shortage of campaign enthusiasm on both sides, the lack is "far more marked on the Republican than on the Democratic side." In three banner Republican counties in the Genesee Valley, which gave Harrison 4,569 plurality in 1888, "the most enthusiastic Republican does not think that this year it will be over 3,850." Cattaraugus and Chautauqua Counties gave pluralities of 2,413 and 5,930 respectively. "This year the Republicans claim only 2,200 and 5,800 respectively, while the Democrats concede but 2,000 and 5,400." In Orleans County a shrinkage of 163 is expected by the Republicans, and about double that number by the Democrats. A similar tale comes from Monroe County. "In Rochester, where the German vote is heavy, the tide is running towards Cleveland." Otsego County gave Harrison 857 plurality. "If it goes so by 600 this time, the result will surprise thinking men of both parties." The *Herald* concludes its review by saying that, "in the quarters so far heard from, the Republican tide seems to be falling and the Democratic rising." Remarkable confirmation of the *Herald's* estimate (which coincides with the recent observations of a correspondent of the *Evening Post*) is furnished by a staff correspondent of the New York *Press*, who is likewise making a canvass of the interior of the State.

The fading away of the silver issue is one of the unmistakable signs of the times. Hardly anybody talks about it now, except those who are engaged in the production of the metal. The discussion of the State bank-note question has probably contributed something towards the weakening of silver politics, by showing those who think that there is a shortage of money that there are other ways of supplying it than by paying a superior kind of money out of the Treasury to buy the material for making an inferior kind. It stands to reason that that process cannot make *more* money, or not much more. It can only make a different kind. The silver notes have to be redeemed in gold, just as greenbacks and national bank-notes are, unless we are to slide off the gold basis altogether—a policy which nobody avowedly favors at the present time. As the silver cannot be sold in order to redeem the silver notes, what is the use of having it at all? Why not issue the notes (if more money is needed) without buying a lot of bullion that we can do nothing with, but must find storage-room for at considerable expense? Mr. Edward Atkinson has shown in a recent paper that there has been an increase of railway tonnage since 1882 of 340,000,000 tons per annum. He estimates the property moved by railway to be worth $20 per ton. If this is a correct estimate, the annual movement of property by railway is $6,800,000,000 greater than it was in 1882. In so far as this is represented by bank deposits and bank clearings it does not call for any considerable increase of money, but in fact much of this increase has taken place in regions where there are no banks, and here additional money is required for additional business. Are the people of these regions, he asks, to be deprived of, or forbidden to provide themselves with, a circulating medium secured in such a way as they consider safe?

Mr. Atkinson continues:

"The effect of the prohibitory tax upon State bank-notes is to deprive States of the opportunity to serve themselves. It is a merely partisan pretence to say that this is a movement to go back to the 'wildcat' currency of fifty years ago.

"There is need of the adjustment of our circulating medium to the present conditions of our internal commerce; the first and essentially necessary step towards that adjustment is the repeal of this tax on State bank-notes. Otherwise, no Congress will be able to resist the cry for more money, either in the form of legal-tender notes, greenbacks, silver dollars, or some other kind of currency, probably of unsafe quality.

"Is it not an utter absurdity to assume that in these days of quick and ready communication a State bank can force an unsound and unsecure bank-note, which is not a legal tender, upon the community?"

There is the question in a nutshell. Either give the States, under suitable restrictions, the right to provide themselves with a currency, or their representatives in Congress will keep giving us silver until the gold basis is upset and we are sent sprawling along with Mexico, India, and China.

It is interesting to observe how quickly the popular sentiment in favor of the secret-ballot system silences the politicians whenever they raise an outcry against it. No sooner did it appear that the Republican majority in Vermont had fallen off about 10,000 at the first election under the Australian Ballot Law, than the Chairman of the Republican State Committee came out in his newspaper with a demand that the Legislature should repeal the law as soon as it met, and Republican organs throughout the State printed reports that there would be a strong movement in that direction. But the Legislature has met

and been in session a fortnight, and while various amendments to the law have been proposed, not a single member has ventured to introduce a proposition for its repeal. It will undoubtedly be the same way in Maine. In that State the passage of the law had been bitterly opposed by Congressman Boutelle of the Bangor *Whig and Courier*, on the ground that it was a "dangerous scheme" for the Republican party, and when the first election under it cut down the party's majority by many thousands, he resumed his assaults upon the system; but it is already obvious that there is no chance of his succeeding.

The City Reform Club has completed the preparation of its seventh annual 'Record' of the doings of our city Senators and Assemblymen at Albany, and the book will be ready for distribution within a few days. It has been prepared with the same painstaking care which has characterized its predecessors, and, like them, gives a compact mass of clear and trustworthy information which every citizen who wishes to vote intelligently ought to be glad to obtain. It gives, in addition to a complete account of each legislator's conduct, an explanation of the course of bills in the Legislature, an account of the lobby and its methods, a synopsis of the principal bills acted upon at the last session, and maps showing the boundaries of both the old and the new Senate and Assembly districts of the city. It is impossible to praise too highly the patient perseverance of the members of the City Reform Club in compiling this 'Record' year after year, giving their time and ability to it without other reward than a consciousness of public duty well performed, and finding in the general public very slight recognition of their work. They circulated 20,000 copies last year, and propose to circulate 50,000 this year, the expense of the publication being defrayed entirely by voluntary contributions from persons impressed with the importance of the work. No charge is made for the book, which can be obtained by application to the City Reform Club, at No. 47 Cedar Street.

The biographies and legislative doings of our last delegation to Albany which the book gives, are not pleasant reading. They show that out of the twenty-four Assemblymen who represented the city, twenty were Tammany Democrats who made almost uniformly bad records, some of them irredeemably bad. Four of them were liquor-dealers, but these appear to be no more objectionable as legislators than Tammany men of other ocupations or of no occupations except politics. The only Tammany member who made what the Club's annotators are able to call a "fair record" was John Connelly of the old Nineteenth District. The three Republican members, Messrs. Conkling, Hoag, and Wells, all made very good records, but as they were in a hopeless minority, they were not able to be of much service to the city. Some of the most pernicious of last year's Tammany members have not been renominated this year, but others of them have. One of the worst—Philip Wissig of the old Eighth District—has been dropped by Tammany only to be taken up by the County Democracy; a performance by the latter organization which goes far to explain its inability to obtain public confidence in either its sincerity or its usefulness as an anti-Tammany influence.

The *Iron Age* publishes an article by a naval officer on the results of the French shipping bounty laws during the ten years for which statistics are now available. These bounties were of two kinds—one for navigation and the other for building ships. The navigation bounties were 29 cents per ton per 1,000 miles for over-sea voyages for new ships, the amount decreasing slightly as the ship wears out. There was no bounty for ships going to European ports. The whole amount paid out of the Treasury for this sort of bounty was $1,440,000 per annum. The result upon the whole registered merchant shipping of France, sail and steam, for the ten years has been an increase of fifty-two vessels and 24,715 tons. The writer of the article considers that the navigation bounties have been moderately successful, but he acknowledges that the ship-building bounty has been a failure. Of the 307,626 tons of iron or steel steamers built in France in ten years, 124,000 tons were for subsidized lines which are required by law to be built in the country, leaving 183,626 tons which were built under the bounty system in competition with English ship-yards. During the same period, 334,912 tons of steam-shipping were built in English yards for French ship-owners, notwithstanding the bounty of $12 per ton to the French builder. Of iron sailing-vessels, 22,000 tons were built in French yards, and 49,000 tons, or more than twice as much, built or purchased abroad, for French ship-owners. This is certainly a discouraging outlook for the advocates of bounties, but, in the true McKinley spirit, they come up and ask for more. The only reason for the failure, they say, is that the bounty was not large enough. So they have set a committee of the Deputies working over the subject and trying to redistribute the whole amount allowed for navigation and ship-building, so that some shall get a little more and some a little less of the taxpayers' earnings. But we predict that this plan will fall through, and that nobody will get any less, while some and probably all will get more; for was it not foretold by Merlin the Enchanter, in the time of Arthur and the Round Table, that Jacques Bonhomme would be easily cheated?

Early in the summer much discussion was had at a diocesan convention in England over the relation of the Church to the press, and the Archbishop of Canterbury himself, if we remember aright, advocated a wider utilization of the newspapers by the church authorities. It may be as a result that we have notice of the publication on October 1 of the *Illustrated Church News*. This is described as "a new church newspaper on popular lines." It is to be filled with "brief, vigorous articles, bright notes, pithy paragraphs"; is to contain "sketches of the clergy at work," "short stories," "amusing incidents," etc. All this looks ominous, and portends, we fear, not the elevation of journalism but the degradation of the other member of the partnership. It may be too late for a voice of friendly warning to reach the ear of the conductors of this "new departure," as it is advertised, in joining the "Church and the Press," but we can only tell them that, in this country at least, a paper described as theirs is would infallibly mean a new servant of the devil, not the Church. On the principle of not letting the devil have all the good music, it may be good policy not to let him have all the "bright notes" and "pithy paragraphs"; but he is a hard one to cheat in a bargain, and is very apt not only to keep the good things you want to get away from him, but to get away from you the good things you felt sure of keeping.

In the matter of thorough quarantine regulations Brazil holds the record. Her way is to fire upon incoming vessels and sink them outright. This surpasses the Colombian method of firing "a volley of bullets"; the aim being not to frighten away intruders, but to make them pay the just penalty of their temerity by sending solid shot through their hulls. On September 2 the English steamer *Chaucer* arrived off the port of Rio de Janeiro, and proceeded towards the Santa Cruz fort to exchange the customary signals. Fire was at once opened on her. After she was struck and in danger of foundering, the fort signalled to ask from what port she had sailed. This seems a little late, but everybody knows that there is nothing like taking the cholera in time. The captain of the steamer was then allowed to proceed to anchorage in the bay. We should think the artillerymen in the fort must have received a severe rebuke for having made such a mess of their work; at that short range the vessel should have been sunk at the first round. The next day a German steamer was fired on and got a shot through her rigging; this bad aim was excused when it was learned that she had five tons of dynamite on board. But these effective Brazilian measures make us blush for our own Quarantine. It is safe to say that the guns of Fort Hamilton could have sunk every "pest ship" that showed her nose in the Narrows.

PRESIDENTIAL CHANCES.

THE Presidential campaign enters upon its closing stages with a larger number of "doubtful" States to bother the political prophets than they have had in similar contests for many years. All authorities admit this, and all have reached that conclusion by studying the returns from the few State elections which have been held since the campaign began. The general effect of all these elections has been against Republican prospects in the nation, for they have shown that that party is weaker in the North than it has been in previous contests, and that it has made no headway in the South. The causes assigned by the Republicans themselves for the falling off in their party's strength in Vermont and Maine foreshadow similar losses in other Republican States in November, for the chief of them (the secret ballot and Republican apathy) will enter into the Presidential election in all of them. The Republicans must, therefore, confront in the election many more chances for defeat than they had reason to anticipate a few weeks ago, and many more such chances than will confront their opponents, whose prospects have been greatly improved by the demonstration that the solid South cannot be broken.

In order to see clearly what the chances on both sides are, let us divide the States, with their electoral votes, into the following groups :

SURELY DEMOCRATIC.

Alabama	11	Missouri	17
Arkansas	8	New Jersey	10
Delaware	3	North Carolina	11
Florida	4	South Carolina	9
Georgia	13	Tennessee	12
Kentucky	13	Texas	15
Louisiana	8	Virginia	12
Maryland	8	West Virginia	6
Michigan	4		
Mississippi	9	Total	173

SURELY REPUBLICAN.

California	9	Oregon	4
Colorado	4	Pennsylvania	32
Idaho	3	Rhode Island	4
Illinois	24	South Dakota	4
Kansas	10	Vermont	4
Maine	6	Washington	4
Michigan	10	Wyoming	3
Minnesota	9		
Nebraska	8	Total	161
Ohio	23		

DOUBTFUL.

Connecticut	6	New Hampshire	4
Indiana	15	New York	36
Iowa	13	North Dakota	3
Massachusetts	15	Wisconsin	12
Montana	3		
Nevada	3	Total	110

The full Electoral College comprises 444 votes, and 223 will be required to elect. It will be seen by the above classifications that the Democrats will need to gain 50 votes from the doubtful States to elect their candidates, and the Republicans will need to gain 62. We have placed all the Southern States in the Democratic list, and all of them are conceded to the Democrats with the exception of West Virginia, which is still claimed for the Republicans by some of their prophets, for the sole reason that "Steve" Elkins lives there and is devoting his personal energies, both as a political manipulator and as a Cabinet Minister, to the carrying of it for Harrison and Reid. This reason for considering it doubtful does not strike us as sufficient to justify its transfer from the Democratic column. We have left Illinois in the Republican column, though there are not wanting reasons for considering it a doubtful State this year. We have also left South Dakota and Washington in that column, though they are not by any means absolutely assured to Harrison. All the ten States which we have placed in the doubtful column are there for reasons which are in most cases too well known to require statement here. Montana is put there because it is believed to be as uncertain a State as Connecticut or Indiana; and Nevada and North Dakota are put there because it is wellnigh certain that both of them will be lost to the Republicans on the silver issue. In all probability both of them will cast their electoral votes for Gen. Weaver, the candidate of the People's party.

When we come to consider the combinations by which the Democrats can secure the fifty votes necessary to elect their candidates we find the following:

Sure Democratic States	173
New York	36
Indiana or Massachusetts	15
Total	224
Sure Democratic States	173
New York	36
Iowa	13
Montana	3
Total	225
Sure Democratic States	173
New York	36
Wisconsin	12
Connecticut	6
Total	227
Sure Democratic States	173
Indiana	15
Massachusetts	15
Wisconsin	12
Iowa	13
Total	228

All these combinations are made on a basis of only four Democratic electoral votes in Michigan, the number which the Republicans concede. The Democrats claim that they will get more than this—from five to seven. Giving them five, this combination could be made:

Sure Democratic States	174
Indiana	15
Iowa	13
Massachusetts	15
Connecticut	6
Total	223

On the Republican side the following combinations are possible:

Sure Republican States	161
New York	36
Massachusetts or Indiana	15
Wiscons n	12
Total	224
Sure Republican States	161
New York	36
Massachusetts or Indiana	15
Iowa	13
Total	225
Sure Republican States	161
New York	36
Massachusetts	15
Connecticut	6
New Hampshire	4
Montana	3
Total	225
Sure Republican States	161
Massachusetts	15
Indiana	15
Iowa	13
Wisconsin	12
Connecticut	6
Montana	3
Total	225
Sure Republican States	161
Massachusetts	15
Indiana	15
Iowa	13
Wisconsin	12
New Hampshire	4
Montana	3
Total	223

It will be observed that victory for either party will be comparatively easy with the thirty-six votes of New York, and more or less difficult without those votes. With them the Democrats are surer of winning than the Republicans, as our combinations show. In all the Republican combinations without New York, Indiana is an absolute necessity for success, together with Massachusetts, Iowa, and Wisconsin; yet Indiana is to day an almost certain Democratic State. The chances for the Democrats carrying it are excellent, as they are for their carrying New York. With these two States added to their column, the Democrats will have an easy victory, and if they lose both, they will have at least as many chances for success as their opponents. It is possible, of course, that the People's party may develop just enough strength in the new States to prevent either Cleveland or Harrison from getting a majority of the Electoral College, in which case the election will go to the House of Representatives and Cleveland will be chosen President.

A FAIR ELECTION IN NEW YORK.

WHATEVER else may be said of the decision of the Court of Appeals sustaining the constitutionality of the new Apportionment Act, it cannot be denied that it is in the interest of an honest and fair election contest in this State next November. If the court had refused to uphold the act, and had made it necessary thereby to hold the election under the old Apportionment Act, the Republican managers would have been furnished with precisely the thing they have been most anxious to obtain—that is, a basis for a "deal." The old act, which was passed in 1879, is confessedly a more unfair and partisan measure than the new act, but its partisan injustice is all in favor of the Republicans. Under its operation they have been able repeatedly to secure a majority in the Legislature though the Democrats have, in the same elections, carried the State by a large majority. If the Court of Appeals had upset the new act, and if the election in No-

vember were to be held under the act of 1879, the Republicans would have now by far the better prospects for securing control of the Assembly by a sufficient majority to overcome the Democratic majority of two in the Senate, and thus give them a majority on joint ballot and enable them to elect a United States Senator to succeed Mr. Hiscock.

This would be an ideal situation for a "deal," and the Republican attack upon the Apportionment Act was inspired by a hope of securing it. The Republican managers believed that if they were able to offer control of the Legislature and a United States Senatorship in return for votes for Harrison, they would have no difficulty in finding a market for their wares. Whether they were correct or not in this supposition is immaterial now; they cannot even attempt their bargain, since they have nothing to offer. The Democrats will be able to get control of the Assembly easily—there are no State Senators to be chosen this year—by a sufficient majority to give them the United States Senatorship, and they will not be tempted to sacrifice their national ticket in order to do so. The agreement of both political parties upon Judge Andrews, as a common candidate for Chief Judge of the Court of Appeals, is another step in the same direction. There will be no opportunity whatever for a "deal" on that office; and as there will be no other State candidate in the field, there will be no basis for a "deal" anywhere.

It is undoubtedly this aspect of the case which leads the Republicans to take such an unfavorable view of the Court of Appeals decision. They say it is a "humiliating" spectacle which a great court presents when it divides on party lines, and we quite agree with them; but the spectacle is not a new one, and in this instance there are extenuating circumstances which may be said fairly to mitigate the humiliation. We have only to contemplate the effects of a contrary decision to realize how much more partisan that would have been, and how much more serious would have been its results. As Judge Peckham points out in the majority opinion, the justice of the new apportionment has been questioned by only two of the sixty counties in the State, all others having acquiesced in it and arranged their districts in accordance with its demands. Then, too, if this act had been declared void in the very last days of the legal period for making nominations, the whole State would have been thrown into a condition of political chaos. It has been assumed that the election, in case of an adverse decision, would be held under the act of 1879, but this is by no means a certainty. As Judge Peckham's opinion says, the new act much more nearly approaches fairness and equality than its predecessors, and yet none of the latter has been brought before the courts. He goes on to say:

"Every county in the State but the two before us has acquiesced in the requirements of the act and apportioned its members among the towns and wards of the county or city, and done everything necessary to proceed to an election under its provisions. The greatest confusion and disorder would result from holding that this act is invalid. Whether any member of Assembly could actually be elected under any other law at this late day is quite problematical. The spectacle of a Legislature elected under an unconstitutional law, or part of the members elected under it and part under another, is one which ought not to be contemplated without the greatest anxiety by all honest citizens. When we come to the question of what law is in force in this State, if the law of 1892 is not, the situation becomes most alarming. The same reasoning which would set aside as void the act of 1892 would be still more powerful and cogent as showing the total invalidity of the act of 1879. This might relegate the people to the act of 1866, and thus we might have an attempt to have an election for members of Assembly under an act more than a quarter of a century old, and the Legislature representative of the people of that time. This would be a travesty on law and upon all ideas of equality, propriety, and justice."

As a matter of fact, the new apportionment, with the exception of the objections raised in two counties, is, as such acts go, an unusually fair division of the State, and is, as compared with the act which it supplants, a miracle of fairness. It ill becomes the Republicans, who had possession of the Legislature for years under the gerrymander of the old act, and who used their power in a perfectly shameless manner to deprive the Governor of his constitutional right of appointment, to make complaints of the new act and its effects. They have really had no right to the control of the Legislature for fully ten years. They have lost the power to control it longer at a very critical time for them; but as the loss is in the interest of a fair election in the State, they will find few sympathizers with them in their lamentations.

THE GOSPEL OF HATRED.

THERE is probably nothing in the present attitude of the Republican party which would more astonish the founders of the republic than the pride and satisfaction the leaders take in being hated by the civilized world outside of the United States. Mr. Depew's eulogy at Ophir Farm on Major McKinley showed that, in the orator's opinion, McKinley's eminence as a statesman was due principally to the fact that he was an object of greater detestation in England, France, Germany, and Italy than any other person in any one of these countries; or, in other words, that in the eyes of about 150,000,000 of the most civilized portion of the human race, the Major occupied the place hitherto reserved for the worst criminals—that is, pirates, wanton murderers, parricides, and train wreckers. This was said, too, by way of commending McKinley to the love and admiration of a large body of American (presumably) Christians, assembled at the house of the editor of the leading Republican newspaper, and for the purpose of inducing them to vote for a man so dominated by Christian principles that he has family prayer in the car when making long journeys by railroad.

The expectation of the founders of the American Commonwealth, and it is safe to say of most of their descendants until now, was that the new State would differ from the Old World in making the love and admiration, instead of the "dread and envy," of the foreigner the great aim of its foreign policy. Said Washington in the Farewell Address:

"Observe good faith and justice towards all nations; cultivate peace and harmony with all. Religion and morality enjoin this conduct, and can it be that good policy does not equally enjoin it? It will be worthy of a free and enlightened and at no distant period a great nation to give to mankind the magnanimous and too novel example of a people guided by an exalted justice and benevolence. Who can doubt that, in the course of time and things, the fruits of such a plan would richly repay any advantages which might be lost by a steady adherence to it?"

If this policy has not ever since been pursued by politicians, it has at all events been kept in mind as a standard or ideal by the great bulk of the American people. It has been taught in schools and colleges as essentially the American rule of conduct, to be striven after and lived up to in so far as the weaknesses of human nature will permit. It was reserved for the Republican party to make the foreigners' hatred of him in time of profound peace a sign of an American statesman's success and a guarantee of his value to his own countrymen. If Washington and Franklin had been told that in 1892 an American public man would present as a title to popular respect and confidence the fact that the civilized world put him in the category which jurists call "enemies of the human race," they would have driven the prophet from their presence as a foul libeller of the young nation.

The Republican doctors, however, are not content with alleging that the civilized world hates McKinley as a reason why we should love him. It might be that they hated him through misapprehension or misinformation about his character and exploits, and therefore did him wrong, so that we should be justified in liking him and standing by him as the victim of gross injustice. To guard against this view, our Republican Christians take pains to show that McKinley has deserved the hatred of foreigners—that is, that he has really inflicted on them injuries which have in all places and in all ages called forth the bitterest hostility of which unregenerate human nature is capable. The Republican newspapers, and particularly the *Tribune*, reproduce every day or two, with a sort of diabolical glee, accounts of the suffering which the McKinley Bill is producing among the working classes in England and on the Continent—not only of embarrassment among the capitalists, but of hunger and despair among the artisans. The Republican orators do the same thing. The comments by which these stories of human misery are accompanied indicate a kind of satisfaction which, as we said a few weeks ago, has hitherto been consider-

ed peculiar to devils in hell, and which civilized men, even in time of war, are usually ashamed to show touching the condition of non-combatant enemies.

Many of these stories are manufactured for campaign purposes. We do not believe that the damage the McKinley Bill has done in Europe is as great as its supporters say it is; nor do we believe Mr. Depew's story about the hatred expended on McKinley. It is ridiculous on its face. The value of these tales lies mainly in the indication they afford of the moral condition of the party which was once supposed to contain the greater part of the "virtue and intelligence of the country." They are appeals to what is lowest and basest in human nature, to a selfishness which would disgrace a brigand's cave and a shamelessness rarely found except among habitual criminals. For McKinley's greatness really rests on nothing but the misery he has caused, or can persuade people he has caused, to his fellow-men. His mental equipment is of the very slenderest; his knowledge of his own subject even is hardly discernible. He is neither eloquent nor magnetic nor well informed. If he has not made the children of poor Austrian pearl-button-makers cry with hunger, or made the Welsh tin-makers spend their savings or pawn their furniture, he is nothing but the name of a bill which half his own countrymen look on as wicked and silly.

The ferocity which these Republican doctrines are well calculated to infuse into all trade disputes, too, is well worthy of the attention of all serious and patriotic men. There is nothing to-day causing more uneasiness in the political and economical world than the disposition of the working classes to treat all competitors or rivals in business as enemies, whose lives may justifiably be threatened, and whose property may be lawfully destroyed. Every newspaper one opens contains accounts of murders or outrages, or arson or pillage, caused by the notion that anybody who offers a commodity at a lower price than yours, or who refuses to give you your price for your commodity, may be lawfully set upon and put in terror of his life. Nothing that occurs in our time seems to put our civilization in such peril as these disputes. How to extinguish this savage view of business relations is a problem now engaging the best attention of politicians and philanthropists all over the world. But consider for a moment the tremendous stimulus which must be given to this view by the appearance in America, of all countries on earth, of a party which solemnly holds up everybody who offers to undersell you in the market as a personal enemy, whose misery and ruin it is the highest duty of a Christian statesman to compass, and the wretchedness of whose home is a spectacle over which a Christian community may lawfully gloat.

BOS LOCUTUS EST.

THE Union League Club has prepared and published the profoundest paper on the tariff which has yet appeared in any quarter. It appeared in full in the *Tribune* of Friday. With a large part of it all but the utterly depraved will cordially agree. Nobody, for instance, but a man lost to shame and decency will deny that

"the most vital function of a government is the power to raise money for its support. A government's existence depends upon its possession of this power, and the exercise of the power must go on or the government will fail. Whatever difference of opinion there may be as to forms of government, all have this corner-stone in common. Political economists may differ as to the method of raising the money, but all agree as to the basis upon which the political structure we call a civil government must stand."

A government which could not raise money would certainly be in a bad way. The Union League certainly does not go too far in saying that a government which cannot raise money for its support "will fail." This is, as the report well remarks, the common "corner-stone" of all schools of political economy. But it is a truth which is often hidden away by sophists from the popular gaze. One of the greatest services which a wealthy and perspicacious body like the Union League renders to the country is the production and confirmation, at stated intervals, of these elementary truths of political science for popular inspection.

"Revenue-reformers are constantly talking about a protective tariff as if it were a tax for the benefit of a favored class." What is the explanation of this? Simply that they lie, "as they well know." How do we know that they lie? Simply by observing that "the impost is for the support of the Government, and to enable it to perform its functions without levying a like amount in some other form on the people." We wish the Committee had made this argument just a trifle clearer, because it was at one time used by the Dey of Algiers, who used to meet the complaints of his Christian captives by pointing out that he needed their property for the maintenance of his Government; and that what they considered "plunder" they would on more mature reflection perceive to be an "impost," paid, as all imposts ought to be paid, by the foreigner. The Christians always said there was a fallacy somewhere in this statement, but whenever they attempted to analyze it publicly, he cut off debate by applications to the soles of their feet.

We are extremely sorry to hear from the same source that "the phrase revenue tariff" is "the most elastic and inaccurate that ever crept into the political history of this country." The reason why it is "elastic and inaccurate" is "that it does not express a certain policy." "A revenue tariff may be a good protective tariff, or may be a very bad protective tariff, and yet produce the same result in furnishing money for the Government." But must we not make the same complaint of the term "protective tariff," for we see here that a "protective tariff" may be really a bad one, although furnishing money for the Government? So that when a Union League economist tells us that he is for a "protective tariff," he does not express a policy at all. He may be, for aught we know, for a tariff that is really a revenue tariff, and does not protect at all, or protects badly. To get at his true meaning we should have to question him, just as we have to question the revenue-tariff man.

"The Democrats," says the report, "have never yet agreed upon a definition of the phrase 'revenue tariff.'" But it does not furnish the orthodox definition of the term "protective tariff." Where is this to be found? Who has it? We solemnly declare, in the true and natural meaning of the words, that we do not know where to look for it. It is not to be found in this report, or in any tariff which has been enacted since the war, because each one has been declared, after trial, unsatisfactory and not truly protective by the protectionists themselves, and another substituted in its place.

We dare say there are Union Leaguers innocent enough to step forward at this point and say that the true definition of a protective tariff is a tariff that enables the domestic manufacturer to obtain higher prices than the foreigner for his goods in the home market; that, in short, a true protective tariff produces an artificial dearness, which dearness is a good thing both for the manufacturer and for the consumer. This was the view of President Harrison, Major McKinley, Mr. Cabot Lodge, ex-Speaker Reed, and other eminent protectionists in 1888 and 1890. A good protective tariff was a tariff which made things dear, and this the McKinley tariff was to do. We accepted this definition and sighted our artillery accordingly. We opened on dearness as a bad thing, the destruction of which has been the great end and aim of civilization from the invention of the bow and the boomerang down to our own day. We sought to show, in our humble way, that excessive dearness of commodities—that is, difficulty or impossibility of obtaining them—had at one time kept man in a state of savagery; that it was the growing cheapness of the good things of life which had made possible the appearance on earth of the modern civilized American or Englishman. Waxing warm in the discussion, we pointed out to the learned Lodge and the discursive McKinley, that their view that the more a man spent for his necessaries, the better off he was, and that the great aim of the patriot should be to make things costly to his countrymen, would necessitate not only a total revolution in our economical but in our moral ideas, for it would make extravagance a virtue and remove all discredit from debt.

But now we find our labor was in vain and that our guns were wrongly sighted.

For here come the Union League sages, who say:

"According to the theories of the free-traders and tariff-reformers, if the protective tariff is removed from industries that we can prosecute in this country, the cost of the article will be cheaper to the consumer. This is the whole burden of their argument. Experience shows that the theorists are wrong as to the effect of a protective tariff on prices to consumers. It may be put down as a general proposition, established by the experience of the last forty years, that whenever the foreign manufacturers have had our markets, the consumer has paid higher prices for his goods than he has paid after our domestic industries were established under a protective policy. Upon this point we may challenge the experience of the great body of the consumers throughout the land. Let them reflect in their own minds upon the prices formerly paid by them for various articles in every-day use, and the prices they now pay for the same articles, and they will be convinced. If there are any exceptions to this rule, they are so rare as not to abate from the force of the rule as a general proposition."

So a protective tariff is, after all, not a tariff that makes things dear, but a tariff which brings domestic prices down nearly to the foreign level, and makes it difficult for the manufacturer to pay those famous "higher wages." The man who could extract a "policy" from these conflicting definitions would be a far more dexterous person than the Union League economists pretend to be. There is probably nothing that would puzzle them so much to-day as to produce a theory of protection on which they could agree among themselves, or get the party to adopt. This probably accounts for their hostility to "theories," which they say "have always had to go down before the logic of facts," being apparently in that early stage of dunderheadism which considers "theory" a synonym for pure speculation, and does not know that all human plans and policy have to have a theory behind them, and that what mainly distinguishes a man from the animals is that he always acts on a theory. The protectionist manufacturer has, moreover, an exceedingly well-defined theory, and has unfortunately got it embodied in legislation, and "the logic of facts" does not make the slightest impression on it. That theory is, that if he can get Congress to keep up the price of his goods artificially, it will be a good thing for him certainly, and possibly not a bad thing for other people.

WORKINGMEN AND THE TARIFF.

"WHAT right," asked Senator Sherman in his Cooper Union speech, "has the Democratic party to speak in behalf of laboring men?" This is about the same thing as asking what right laboring men have to speak in their own behalf. As the Chairman of the Democratic Convention in Massachusetts said the other day, the Democratic party is largely made up of workingmen, and has always been guided by their counsels. This is an undoubted fact. It is probably well within the truth to say that two-thirds of the laboring men of the great industrial regions of this country are politically allied to the Democratic party. The recent awaking of that party to the need of fighting the abuses of the tariff has been due in good part to the perception that they weigh most injuriously upon the toilers of the land; and the latter have repeatedly shown by their votes in the last three years that they are more and more inclined to agree with this view.

Yet the Republican party has long been committed to the position that it knew better what was good for the workingman than he did himself. It may be something more than a coincidence that Hamilton's leaning towards a protective policy was associated with his profound distrust of the common people. At any rate the two things have since been often seen in suggestive union. President Harrison in one of his messages referred offensively, if unconsciously, to what "we" could not allow "our working people" to be subjected to. In short, the general Republican and protectionist attitude to-day, as regards the laboring classes, is one of assumed tutelage and guardianship over them. This attitude has been based upon certain suppositions which have at last been shown to be so false that workingmen can be no longer deceived by them.

The first false supposition is that protection is primarily for the benefit of the laboring men, or that employers can be depended upon to make a fair division with their workmen of their profits due to tariff taxes. Even Senator Sherman admits that there is a difficulty here. He says: "I know sometimes that in the distribution of the results of protection there is controversy between the employer and the employed. . . . I am not wise enough to see any way by which this could be settled. . . . If some wise statesman can devise a mode by which that distribution should be more fairly made, I would gladly hail him as one of the benefactors of our human race." With this may be put the view of the great expert in the theory and practice of protection, Prof. R. E. Thompson. He admits that trades-unions do more than protection to raise wages, but maintains that, if protection did not enrich manufacturers, it would not be possible for strikers to frighten them into yielding a part of their profits. As he puts it: "You cannot get blood out of a stone." So his advice to workingmen is to keep on voting money into the pockets of their employers, and then make as hard a fight as possible to compel the disgorging of a part of it. Nothing could more clearly mark the final break-down of the "benevolent" theory of protection, which assumes that if manufacturers are voted a large bonus, they will have a tender regard for their employees, and all will dwell together in Arcadian happiness.

Another unfounded assumption, which is more and more losing its power over workingmen, is, that it is possible for the great majority of them to be protected. They are coming to see that, even granting that what the Republicans say of the blessings of protection is all true, those blessings cannot in the nature of the case be extended to all of their class, and that to vote for the benefit of a favored few is unjust, even if those few be workingmen. The occupations of the people of this country, as classified in the census of 1880, fall under the following general groups: Professional and personal service, 4,074,238; trade and transportation, 1,810,256; agriculture, 7,670,493; manufacturing, mechanic arts, and mining, 3,837,112. Now, the slightest consideration suffices to show that in but one of these groups, amounting to only about 20 per cent. of the total, is it possible for a tariff on imports to have any effect in raising wages or salaries. And even in the manufacturing group, it has been estimated by Edward Atkinson, "it is difficult to set apart in a discriminating list over 1,000,000 whose product is such that one of like kind could be imported, even if there were no duty upon imports." The same careful writer takes up the case of Pennsylvania in detail, and shows that in that State "less than 12 per cent. of the people who did the work could, in 1880, be subjected in part to an import of a product of like kind." The question he asks is the one that is coming to be heard with frequency in the mouths of workingmen, "How can we protect the 88 per cent.?"

Finally, the increasing alienation of the labor vote from the Republican party is due to the breaking down of the assumption that, even in the small group for which alone it is possible to make a pretence of securing higher wages by protection, the tariff does what is claimed for it. Senator Carlisle showed from the results reached by the Senate Finance Committee that wages in non-protected industries had risen, while in protected industries they had fallen. Mr. Schoenhof has some carefully tested tables of comparative wages which prove that the difference between wages in this country and Europe is greater in trades not affected by protection than in those that are. For example, in the building trades the hourly wages paid in three different countries are, in cents, as follows:

	Germany.	England.	New York.
Bricklayers.....	8½	16	45
Stonemasons.....	8½	16 to 18	45
Carpenters	7½	16	30 to 35

No such enormous difference in wages, over both protected Germany and free-trade England, can be shown in any industry where protection has any influence. The inference is unavoidable that it is not protection which makes the difference in wages, and that, viewed purely from the workingman's standpoint, its only effect upon wages is to diminish their purchasing power.

ENGLISH AT HARVARD, AND ELSEWHERE.

THE size to which our college classes have grown, with a steady annual increase, is putting a severe strain upon the capacity to house, handle, and instruct

them. To one branch at least of instruction it is nothing less than formidable—we mean that of English. This is forcibly displayed in a report of the Committee on Composition and Rhetoric to the Board of Overseers of Harvard College, just made public. In what is called English A—a prescribed course for all freshmen—more than 6,000 compositions have to be criticised every half-year and returned for rewriting, while the number of separate exercises annually handed in to all the instructors of the English Department is estimated at 38,000. The themes in English A are "of the most elementary description," and the examination and correction of them in the most cursory manner not only exacts a prodigious amount of time, but produces a mental stupefaction which seriously interferes with the rate at which they can be despatched. No one accustomed to editing manuscript need be told that, under the most favorable conditions of penmanship, style, and matter, the drudgery is immense. At Harvard, as the Committee demonstrate, the unhappy instructors are confronted with immature thoughts set down in a crabbed and slovenly hand, miserably expressed and wretchedly spelled; and yet the average age of admission is nineteen.

In order to fix the responsibility of the preparatory schools for such a state of things, the Committee summoned each of last year's freshmen to write down in the class-room answers to these questions: What was the number and nature of written exercises at the school where he was fitted? What was the relative amount of time devoted there to English composition? Did the applicant pass the Harvard entrance examination in English? Some 450 confessions were thus obtained, and upon these the Committee report by a representative selection covering about forty institutions, the names of which are withheld, though in a few instances they may be guessed with certainty. A two-fold practice has been pursued: the answers are printed where it seems desirable, or else they are given in reduced facsimile; and the facsimiles speak volumes. Purposely, and not unfairly, these have been chosen by the Committee from among the worst specimens, for the aim is to show the deficiencies in preliminary instruction which the preparatory schools ought to be called upon to repair, with a view in the end to relieving the college of all elementary work in composition and rhetoric. The exhibit is enough to raise a blush on the cheek of every principal who reads the report—and the Board of Overseers will take care that none go unsupplied. But the public at large will never fathom the depths of the prevailing neglect of our mother tongue until a corresponding exhibit is made of the proficiency of the graduating class at Harvard; for then it will appear how little is and probably can be done in four years of the higher education to overcome the illiteracy which is brought to college.

The applicants of 1892 were no better equipped than their immediate predecessors. Nearly one-half of those examined in June last either passed unsatisfactorily or were conditioned. The Committee plainly recommend a still greater rigor of examination until the preparatory schools are forced to put English on its proper footing, even at the expense of a sudden check to the growth of the college and the addition of a year to the preparation of the first victims of the change of standard. Should this course be adopted, the schools will certainly respond, as they have heretofore done in divers particulars. It is, indeed, manifest that they have followed but too closely the indications of the college as to English, and have at most taught only so much as would insure passing, with no view to general culture. The Committee now bid them teach the vernacular—*i. e.*, the written English—"as an incident, and not as an end." They hold up as an example one school in which "the preparation of English was carried out in every other subject." "My translations from other languages," says a pupil, "were carefully criticised for their English; my geometry propositions I have rewritten many times on account of poor English." In the words of the Committee: "If, as a part of the necessary school discipline, the scholar were compelled to use his pen instead of his tongue for one or two hours a day, what skill in composition [we should say *expression*] would he not attain?"

This is the substance of the Committee's finding and recommendations. They do, indeed, perceive that the preparatory schools, in order to distribute the burden sought to be thrust upon them, must in turn cry out against the grammar school and the primary school. But the difficulty increases as we descend the scale of age, of text-books, and of qualified teachers; and if the Harvard movement really succeeds, it will prove the best form of "university extension" yet known. For this reason the report ought to make its way to every Normal School as well as to the academies. Nine-tenths of our public-school children never go beyond the grammar school, and it ought to be discreditable to graduate them at fifteen with no better command of their native language than is evidenced by these Harvard facsimiles of the work of men of nineteen; yet we must suppose them more badly off. It is this consideration which will most impress students of the report, and will, we hope, lead to a widespread discussion of the causes of the evil complained of, as well as of the proper remedies. When the Committee say, "It is little less than absurd to suggest that any human being who can be taught to talk, cannot likewise be taught to compose," we do not understand them to mean more than that writing can be made as correct as habitual speech. How large a part "compositions" will play in such a consummation, they wisely refrain from arguing. Some will be disposed to maintain that this exercise (according to the methods now in vogue) and the typical text-books of English grammar have been the chief obstacles to the delightful pursuit of the English language and literature by children of all ages.

Correspondence.

A HOUSE-TO-HOUSE PRIMARY.

To the Editor of The Nation:

Sir: The Democratic Committee of Louisville has taken a step further in the ballot-reform movement than has ever been attempted before in this country—so far as I am informed—on anything like a large scale. A house-to-house canvass, combined with an iron-clad system of secret voting, promises apparently the utmost fairness possible in a *primary* election. This experiment was tried on October 12 and 13. The suffrage was limited to those persons only who had voted in August, 1891, for John Young Brown, the present Democratic Governor. The scheme was arranged in somewhat of a hurry, and, consequently, there being hardly time to provide a system of transfers, those voters who had removed from their former precincts necessarily lost their votes, in almost every case. This was the only actual injustice committed, and will no doubt be remedied on the next trial.

The first attempt was certainly a great success, since it secured 8,350 votes out of a possible 13,000, and this number includes a far larger proportion of respectable citizens than can ever be persuaded to mix themselves with the dirt and corruption of the ordinary party primary. But there is one terrible difficulty in the successful working of the system, which will be understood after an explanation of the *modus operandi*. Each candidate for a nomination—in this case there were five candidates for two offices—is entitled to appoint a representative in each precinct, and to the committee formed of those who report as such are intrusted the ballot-box, ballots, etc., together with a list of voters. They set out together, and visit the *residences* of the voters on their list, and are required to faithfully hunt up each one if possible. When a person is found desirous of voting, his name is written on a stub, the ballot torn off, marked by him in private, placed by him in an envelope which is then clasped shut by one of the committee, the number on a projecting subsidiary stub is compared to that on the main stub and torn off, and the voter deposits the enveloped ballot in the box. It will be observed that the desideratum of fairness and secrecy is attained by the system, and bribery is absolutely prevented, if it is faithfully carried out. But there comes the rub. The recent election had the attraction of novelty, a number of good men were induced to take part in it, and the result was probably nearer a true expression of the people's will than could have been obtained in any other mode. However, while the convenience of the voter is raised almost to the rank of a luxury, on the other hand the labor imposed on the 120 representatives of each candidate is arduous in the extreme. Trudging back and forth, enduring abuse and ridicule, explaining the system for the intelligent citizen to the verge of hoarseness, from three to nine o'clock on two successive days—these are hardly the attractions to offer to gentlemen of ordinary patriotism (no party principle being in-

volved) unless in case of close personal friendship with the respective candidates. The opinion is therefore very general that the carrying of the ballot-boxes will fall into the hands of the bum and professional politician, and, in that event, the mind stops aghast at the endless possibilities of fraud. One need only consider the chance of one representative's selling out to the other, and the result of the election in that precinct would be a foregone conclusion. And so on to the end of the chapter.

However, *Nil desperandum*. I understand to be the motto of the ballot-reformers; perhaps experience will point out a remedy for this apparently formidable defect in the system.

A. L. D.

LOUISVILLE, October 15, 1892.

THE HEAT AND THE DECLARATION OF INDEPENDENCE.

TO THE EDITOR OF THE NATION:

SIR: Mr. Leicester Ford's extract from the Diary of Jefferson, showing the low range of the thermometer at Philadelphia, July 4, 1776, printed in the October *Scribner*, and quoted in No. 1424 of the *Nation*, undoubtedly disposes of the tradition referred to so far as relates to Independence Day; but the story given on page 191 of Jefferson's 'Life' by Parton—presumably Mr. Ford's "one of our popular history writers"—relates to "the final signing of the Declaration of Independence," which took place on the 2d of August—a day far more likely to be hot and infested with flies than the 4th of July. It is true that Parton refers the story to the 4th of July; but whatever else may be in dispute, there is no doubt—for all are agreed—that the final signature of the engrossed copy was on the 2d of August. Therefore, unless Mr. Ford can give us other "cool facts" for that day—and even if he can—the tradition will survive; for, in our unromantic early history, piquant personal anecdotes are rare and not readily given up by their readers.

C.

CHELSEA, MASS., October 15, 1892.

TINTORETTO'S ST. MARK.

TO THE EDITOR OF THE NATION:

SIR: Allow me to correct a statement in Mr. Stillman's recent article in the *Century* on Tintoretto. There is no such picture in Santa Maria dei Angeli at Murano as the "Finding of the Body of St. Mark," described by Mr. Stillman. That canvas, forming part of a series with the ones now in the Royal Palace at Venice, has been, ever since the days of the Napoleonic kingdom of Italy, in Milan. It is catalogued in the Brera under the number 233, and has been photographed by Marcozzi of Milan.

B. B.

VENICE, October 4, 1892.

Notes.

A MEMOIR of the late Professor of Modern History at Oxford, Mr. E. A. Freeman, is about to be taken in hand. Friends who may be willing to contribute letters, reminiscences, or other biographical materials, are invited to forward them as soon as possible to the Rev. Prebendary Stephens (Woolbeding Rectory, Midhurst, Sussex, England), who, at the request of Mr. Freeman's family, has undertaken to edit the work.

We understand that Dr. Elliott Coues's edition of Lewis and Clarke's Narrative will probably fill three stately octavos, a fourth being required for the maps and index.

J. B. Lippincott Co. have in press 'Persian Tales,' edited in two volumes by Justin H. McCarthy; and 'The History and the Theory of Money,' by Sidney Sherwood of the Wharton School of Finance and Economy.

D. Appleton & Co. have in preparation a fine illustrated edition of Émile Souvestre's 'An Attic Philosopher in Paris,' in English, the designs by Jean Claude; also, 'Three Centuries of English Love-Songs,' edited by Ralph Caine; a new edition of the late W. H. Herndon's 'Abraham Lincoln,' with an introduction by Horace White; 'Zachary Taylor,' by Maj.-Gen. O. O. Howard, in the "Great Commanders" series; 'North America, Vol. III., The United States,' by Élisée Reclus; 'Man and the Glacial Period,' by Prof. G. Frederick Wright; 'Appletons' Atlas of Modern Geography'; 'Moral Instruction of Children,' by Felix Adler; 'English Education in the Elementary and Secondary Schools,' by Isaac Sharpless; a translation of Rousseau's 'Émile,' by W. H. Payne; and 'Idle Days in Patagonia,' by C. H. Hudson, author of 'The Naturalist in La Plata.'

Houghton, Mifflin & Co. announce further 'The Nature and Elements of Poetry,' by Edmund C. Stedman; 'At the Beautiful Gate, and Other Songs of Faith,' by Lucy Larcom; and 'The Change of Attitude towards the Bible,' by Prof. Thayer.

Anson D. F. Randolph & Co. will publish immediately 'Missionary Landscapes in the Dark Continent,' by James Johnston.

From Macmillan's latest list we extract 'The Beauties of Nature, and the Wonders of the World We Live In,' by Sir John Lubbock, with illustrations; 'Life in Ancient Egypt,' from the German of Prof. Erman, by Mrs. Tirard; 'Sketches of Life and Character in Hungary,' by Margaret Fletcher; 'The English Town in the Fifteenth Century,' by Alice Stopford Green; 'The City State of Greek and Roman Antiquity,' by W. Warde Fowler; 'A Relic of the Past: Memorials of Sutton Place, Guilford,' by Frederic Harrison; 'The Inns of Court,' by W. J. Loftie, illustrated by Herbert Railton and others; 'Gothic Architecture,' edited from the French of E. Corroyer by Walter Armstrong, with 238 illustrations; 'Studies in Modern Music: Berlioz, Schumann and Wagner,' by W. H. Hadow; 'The Life of Cardinal Manning,' by E. S. Purcell; 'English Prose Writers,' in five volumes, by Henry Craik; and 'The Purgatory of Dante,' in verse, by C. L. Shadwell. The same firm will publish early in November Lord Tennyson's new volume of poems, uniform with their edition of his "Foresters." It is entitled 'The Death of Œnone, Akbar's Dream, and Other Poems,' and the contents, with one exception, are quite new, including the lines entitled "The Silent Voices," which the poet wrote and dedicated to his wife but a few days before his death, and which were sung at the funeral services in Westminster Abbey to music written by Lady Tennyson.

Elkin Mathews & John Lane, London, are about to issue six essays on 'The Art of Thomas Hardy,' by Lionel Johnson, with a bibliography by John Lane; 'Excursions in Criticism,' by William Watson; 'Stephania: a Tragedy,' by Michael Field; and 'Silhouettes,' poems by Arthur Symons.

'Mansfield Park' is the latest addition to the charming reprint of Jane Austen's novels edited by R. Brimley Johnson, and well illustrated by William C. Cooke (London: J. M. Dent & Co.; New York: Macmillan). It is in two of the little pale-green volumes.

The new edition of Miss Strickland's 'Lives of the Queens of England' which we receive from J. B. Lippincott Co. in eight handsomely bound volumes, is, we believe, the amplest yet manufactured on this side of the water. It is illustrated, somewhat sparingly, with portraits of the queens and with desirable photo-mechanical views of buildings and places. The letterpress is in fair print.

The same publishers have brought out in five volumes Lord Mahon's edition of the Earl of Chesterfield's Letters, with a strict chronological arrangement. The typography of this reprint is more open than that of the foregoing, and the binding more studied—white and gold backs with wine-colored sides. Both sets make an attractive bid for a place in "every gentleman's library."

A large folio volume, sumptuous to a degree which makes the term "popular edition" seem somewhat incongruous, describes 'The Life and Works of Jean Léon Gérôme' (Cassell). The author, Fanny Field Hering, is a devoted admirer of the great painter and sculptor, and had the advantage of a friendship with him which makes her work "authorized." Gérôme was indeed persuaded to supply a preface, which should by no means be skipped, as he modestly advises, for it is redolent of the man and of the artist, and passes a very sane judgment on the vagaries of contemporary French art. His American friend is absolutely uncritical, and for much of her eulogy, as for her descriptions of Gérôme's productions, she draws on the writings of others. She is so unsystematic an author that she consumes forty-five pages before arriving at the birth of her subject. From that time her progress is chronological; and she borrows freely from Lencir's journal of his tour with Gérôme in the East in 1867, and towards the last she cites a good many interesting letters to herself from the artist. Especially noteworthy here are his opinions about the nude in art and about our barbarian tariff on works of art. The least hackneyed of the numerous photogravures and "photo-etchings" is the profile view of the colored statue "Tanagra." The plates, by the way, are not carefully associated with the text, nor is there any index to the latter—a grave fault in a work well calculated for reference.

One of the first publications of the Goethe-Gesellschaft was a small volume of letters written by Goethe's mother to the Duchess Anna Amalia of Weimar. The edition was soon exhausted, and, as the Society decided to leave the further issue of the work to the book-trade, a new edition, containing also the letters of the Duchess to Frau Goethe, was prepared with interesting annotations by Dr. Karl Heinemann, and published by Seemann in Leipzig. It is a volume of 174 pages, and gives the complete correspondence of these two remarkable women. The illustrations consist of two portraits of Frau Goethe, of which the most striking is here engraved for the first time, from a chalk-drawing in the collection of the late Prof. Zarncke. We may add that Dr. Heinemann's 'Goethe's Mutter,' to which we called attention on its first appearance, has just been issued in a fourth edition, thoroughly revised and considerably enlarged, with a number of new illustrations.

After a long pause, Prof. Moritz Heyne of Göttingen puts forth another portion, the fourth, of his distinctive 'Deutsches Wörterbuch' (Leipzig: S. Hirzel; New York: Westermann). Its vocabulary extends from *Licht* to *Quittung*. Stress is laid upon the literary quotations, and, while it cannot be said that any period is neglected, among contemporaries one is particularly struck with the recurrence

of Freytag, Heyse, and Grillparzer, Bismarck and Moltke. The last two are quoted with extreme frequency; and in fact the very first and the very last rubric in this half-volume contain each an extract from Bismarck's speeches. Sometimes the great Chancellor's commonplaces are selected, as, under *Mönch*, merely the three words "Mönche und Nonnen" are given; but occasionally we have a characteristic phrase, like this under *Messe*: "Die Messe kann gelesen werden ohne Gemeinde," and so of Moltke, *e. g.*, under *Neckerei*: "Die Neckereien der franctireurs müssen durch blutige Repressalien erwidert werden." The vocabulary of this part is prefaced by a first enumeration of the sources, beginning with (1) literary monuments and (2) dictionaries, philological journals, etc.

To any one engaged in studying the rudiments of Sanskrit it is undoubtedly helpful to have mastered its more ordinary grammatical paradigms before grappling with the intricacies of the Devanâgarî alphabet. The matter which he has memorized cannot but avail to transform for him those intricacies into comparative simplicities; and his subsequent progress will certainly be more rapid than it would have been if he had set out with attacking strange symbols and strange words simultaneously. Looking to these facts, a welcome, from those whom it may concern, is due to the appearance of a manual entitled 'Useful Sanskrit Nouns and Verbs, in English Letters,' by Mr. Charles Johnston, of the Bengal Civil Service, recently published by Luzac & Co., London. There is, however, in this little book of thirty pages, more than is promised by its title; seeing that it includes under "nouns" substantives, adjectives, pronouns, and specimens of participles. At the end, moreover, is found a list of "a hundred useful roots," with their meanings, which it will prove serviceable to the beginner to learn by heart.

Rand, McNally & Co.'s 'Handy Guide to Chicago' is on a lower plane than Schick's and Flinn's. It has a folding sheet with maps of the city, on a smaller and a larger scale, backing each other. From Rufus Blanchard we have a large folding map of Chicago, with a convenient index to the streets, with approximate street numbers.

A modest little quarterly, *Employer and Employed*, begins its existence this month under the editorship of Mr. N. P. Gilman, Secretary of the Association for the Promotion of Profit-Sharing. It will be published by George H. Ellis, Boston, at 40 cents a year.

The first number of the *Art Student*, "an illustrated monthly for home art study," has reached our table. Its editor is Ernest Kauff, and place of publication, No. 40 East Twenty-third Street, in this city.

M. Octave Uzanne, who founded *Le Livre*, after editing it for ten years substituted for it, in 1890, a simpler publication called *Le Livre Moderne*, which survived two years, having been followed last January by a third periodical called *L'Art et l'Idée*, and devoted like the others to the art of the bookmaker, the illustrator, the printer, the engraver. The first six numbers are now obtainable in a single stout volume (Paris: Quantin; New York: F. W. Christern), clad in a cover made of an embossed paper, pretty enough in itself, but catching the light arbitrarily, so that the smaller type of the title is almost illegible. In the main, *L'Art et l'Idée* resembles M. Uzanne's earlier periodicals: it is fantastic rather than academic; the editor has the courage of his convictions and he has abundant belief in his own taste. Perhaps the new periodical gives more attention to art—the art of the designer—than did its predecessors. One plate reveals M. Carlos Schwabe as a French pre-Raphaelite, if such a personage is conceivable. One article is devoted to M. Félix Vallotin, a wood-engraver who seems to have gone back to the old block-books for his inspiration. Perhaps he is to be called a pre-Dürerite; certainly he is an interesting workman and his blocks have character and vigor. Another paper is devoted to a decorator of vases, M. Joseph Chéret, brother of the designer of pictorial posters. This essay is illustrated with reproductions of some of M. Chéret's most striking vases. The editor acknowledges the receipt of Mr. De Vinne's recent Specimen Book, and remarks that it could not be equalled by any Parisian printer.

Readers of Mr. Douglas Campbell's 'Puritan in Holland' should turn to Mr. S. S. Rider's (Providence) *Book Notes* for October 8, in which that work is criticised in so far as it touches the origin of Rhode Island institutions. Thus, Mr. Rider plausibly denies that Roger Williams "taught the [Dutch] language to Milton," the two having rather read to each other in tongues they were acquainted with; or again that he derived his doctrine of "soul liberty," or his concern about the English title to the soil, or the use of paper ballots (not secret, as alleged), from the Dutch. Mr. Rider follows up his proofs with a humorous parallel between the Greek republics and the Rhode Island colonies, in support of the thesis that "the origin of things in Rhode Island was far more Greek than Dutch."

A New England pedigree of ex-President Cleveland in the September-October number of *Putnam's Monthly Historical Magazine* (Salem, Mass.) will attract attention. On his mother's side (Neal) he is of Southern descent, and this line is not pursued; but the paternal lines, direct and collateral, are very extensively worked out and charted, with brief biographical notices. His great-grandfather, Rev. Aaron Cleveland (1744-1815) introduced a bill in the Connecticut Legislature of 1779 looking to the abolition of slavery, was the father of the Rev. Charles Cleveland, a well-known former city missionary of Boston, and was also an ancestor of the Rev. Arthur Cleveland Coxe, the present Bishop of Western New York. His great-great-grandfather, another Rev. Aaron Cleveland (1715-1757), died in the house of his friend Benjamin Franklin, who wrote his obituary for the *Pennsylvania Gazette*. Through Major Stephen Sewall (1657-1725), a brother of Judge Samuel Sewall, the diarist, Mr. Cleveland is related to many of the Higginsons of Boston and Salem; and through the father, Henry Sewall (1614-1700), to Longfellow. Another noted stock is that of Dummer. The *Magazine* has a tribute to Whittier, and we suggest that it examine hereafter the claim to a kinship between the poet and Daniel Webster—to mention no other celebrities.

In the matter of deciding the fate of vanquished gladiators, the vexed question of thumbs up or thumbs down is discussed anew with learning and fairness by Mr. Edwin Post in the current *American Journal of Philology* (No. 50). The greatest confusion prevails among the authorities on the subject, and Mr. Post makes a strong argument in favor of the view that the death-sign (*pollicem vertere* or *convertere*) was one readily distinguishable in a vast amphitheatre, and that it involved a movement of the whole hand, with the thumb pointing downwards, symbolizing the Roman short sword. An investigation of the oratorical *pollex infestus* seems to confirm this view. As for the sign of mercy (*missio*), expressed by *pollicem premere*, Mr. Post takes it to have been a concealment of the thumb across the palm of the hand under the four fingers. He cites, with a cut of it, a terracotta relief in the museum at Nîmes.

Most people will remember that Guy de Maupassant made his first appearance as a writer in a story called "Boule-de-Suif," which he contributed to a volume, entitled 'Les Soirées de Médan,' that came out some time about 1880. This was a truly masterly piece of work, and one that its author, in the opinion of some critics, has never surpassed. But there will be few who will not hear with some surprise that the story was in the main a true one, and that Boule-de-Suif was an actual person. Her real name was Adrienne Legay, though she was commonly known in Rouen, where she lived, by the name that Maupassant gave her. She is just dead there by suicide, to which she was driven by the direst straits of poverty. Her age was forty-four.

A good many persons may be interested to know that Prof. A. C. Merriam, Chairman of the Committee on Publications of the American School of Classical Studies at Athens, can supply photographs to the number of 274 from a list of negatives taken in Greece in 1891-2 by Dr. Clarence H. Young, a member of the school. This list has been printed, and can be had of Prof. Merriam, whose address is 640 Madison Ave., New York.

—Mr. Edmund M. Barton, in his current semi-annual report, as Librarian, to the American Antiquarian Society, tells of a "suggestive call" on him, to wit: "Have you any merchant's account-books from 1760 to 1770, invoice or journals that would give items, or can you tell me where there are any?" As this meets our eye in the newly published Proceedings, we receive an answer to the inquiry from Mr. Rowland Hazard, President of the Washington County (R. I.) Agricultural Society, in the shape of a pamphlet distributed on the Fair grounds, entitled 'Sundry Prices taken from the Account-Book of Thomas Hazard, son of Robert (called College Tom), showing the depreciation of an arbitrary currency as compared with the actual value of corn and other produce; to which a few other tables of interest are added.' These entries run from 1750 to 1781, inclusive. They give, indeed, a glimpse of the dire confusion of old tenor, new tenor, lawful money, Spanish milled dollars, "Connecticut Prock, so called," and "any other medium current in the Colony of Rhode Island," besides liquidation in "Pork at 3⅝ d. per pound, Beef at 3 d. per pound, Cheese at 5 Pence per pound, Indian Corn at 3 shillings per bushel." Mr. Hazard made a forcible use of these family records in a speech on silver and fiat money before his Society at their eighteenth Fair, which will be found reported in full in the Wakefield *Narragansett Times* of September 16, and deserves a very wide circulation.

—Mr. Barton's inquirer has still another resource. In No. 45 of the Harvard Library's "Bibliographical Contributions," column 64, he will find that the Essex Institute at Salem, Mass., has, among its voluminous MSS., papers of sundry families "from the early settlement of the country down to recent times, such as deeds, bills, accounts, etc." We have already drawn attention to this truly important index to study and research, called "Notes on Special Collections in American Libraries." It is now completed and provided with an indispensable index, which is, how-

ever, far from being minute enough. For example, neither deeds, bills, nor accounts are entered in it, and one is thrown back for a numerical reference on "Manuscripts." Nor is the accuracy beyond reproach, the compiler's J resembling a T, which gives us T. T. Rousseau for Jean Jacques. Still, even without an index, we could not afford to lack such a clue as this to hundreds of departments and collections and millions of books. It ought to be maintained by revision every five years, and reprinted at the expense of the leading libraries, and be accessible in the smallest public library in the country. The first half broke off at the beginning of New York's entries, and now we have the best brief exhibition ever made of the treasures of the Lenox Library. Among the scattered manuscripts are the note-books of Lewis and Clarke's expedition in the library of the American Philosophical Society, Philadelphia; the field-book and map of the Mason and Dixon boundary survey in the library of the Historical Society in the same city; the remarkable literary group of complete MSS. possessed by the neighboring Drexel Institute—a sermon of Cotton Mather's, Poe's 'Murders in the Rue Morgue,' H. Martineau's 'Retrospect of Western Travel,' Dickens's 'Our Mutual Friend,' etc., etc.; the papers of Moses Brown, the Providence merchant, in 18 volumes, in the library of the Rhode Island Historical Society; and many more impossible of enumeration here. Perhaps the most curiously placed collection is Prof. Horsford's gift of more than 400 works for the study of comparative philology, with special reference to North American languages, in the library of Wellesley College. Yet when we think of Miss Alice Fletcher's work among the aborigines, the location does not seem so odd. The greatest lacuna in this conspectus is caused by the National Library at Washington, which is in too dreadful a jumble at present to make it practicable to set forth its characteristic features.

—The thirty-second volume of the 'Dictionary of National Biography' (Macmillan) is well stuffed with great names and interesting characters, beginning with John Lambe, the astrologer, who was mobbed to death in 1628 for calling up phantoms in a crystal glass, corrupting chaste women by magic, bringing on the great London storm of June 12, 1626, and for other naughty behavior. Daniel Lambert, a prodigy of a different kind, succeeds; and two more victims of superstition, Latimer and Laud, together with the Quaker Leddra, hanged on Boston Common in 1661. The article on John Law lacks the embellishment derivable from Prof. Beljame's recent disquisition on the French pronunciation of his name. Artists are numerous—the engraver Landells, one of Bewick's pupils, who founded *Punch;* the Landseers; Sir Thomas Lawrence, who is very frankly dealt with; Edward Lear, and John Leech. Layamon and Langland head the list of authors, with Mrs. Landon and Landor at the other extreme of time and style. Landor is portrayed by Leslie Stephen in his best manner. "Meanwhile," he says of Byron's Bœotian Savage, "he found that his neighbors—as was always the case with Landor's neighbors—were utterly deaf to the voice of reason." In sum, "he was for nearly ninety years a typical English public-school boy. . . . Intellectually, he was no sustained reasoner, and it is a mistake to criticise his opinions seriously. . . . The peculiar merits of his prose are recognized as unsurpassable by all the best judges." Landor's villa in Florence is now the property of an American scholar. Other American connections in this volume are through "Junius Americanus" Lee; Joseph Lancaster, who followed his system of instruction to this country and died in this city in 1838 (one may still see "Escuela Lancasteriana" on the front of more than one school-building in the city of Mexico, and find these schools forming a category in the official statistics of education); Benjamin Lay, the anti-slavery apostle, who died in Philadelphia; Dr. Lardner, who feathered his nest handsomely by his lectures on this side of the water; and John Ledyard, the traveller, who was a native of Groton, Conn. Another traveller, John Lambert, introduced Irving's works to the British public. The musical Lanier family, of French extraction, is said to have despatched to America the branch which produced Sidney Lanier.

—'Richard Wagner's geistige Entwickelung,' by Hugo Dinger, the first volume of which has just appeared (Leipzig: Fritzsch), is perhaps the most elaborate and exhaustive effort hitherto made to trace the course and study the causes of Wagner's intellectual and artistic development. It begins with a critical appreciation of Wagner's personality, which, however, contains nothing new, and then proceeds to the "periodification" of his career. The first period of "conventional imitation," extending to 1840, is represented by "Die Feen," "Das Liebesverbot," and "Rienzi." This was followed by the period of emancipation ("Der fliegende Holländer") and the reformation of the musical drama ("Tannhäuser" and "Lohengrin"), ending in 1849. From 1849 to 1854 Wagner was under the influence of neo-Hegelianism, which was the extreme left of Hegel's tripartite school, radical in philosophy and religion, and revolutionary in politics; to this period belongs "Der Ring des Nibelungen." From 1854 to the time of his death in 1883, neo-Hegelianism is gradually supplanted by the *Weltanschauung* of Schopenhauer, most distinctly traceable in "Tristan und Isolde" and "Die Meistersinger von Nürnberg." It may be well to state that every attempt of this kind to categorize Wagner's ideas, and to discover in his musical dramas conceptions corresponding to certain philosophical systems, must be more or less arbitrary and subjective, and that there are no two of his interpreters who agree in the details of their analyses and classifications. If Schopenhauer's doctrine of "the negation of the will to life" forms the fundamental idea of "Parsifal" and "Tristan und Isolde," it appears no less clearly in the first scene of "Tannhäuser" and the final scene of "Lohengrin," and even still earlier in the devotion and sacrifice of *Senta*, faithful unto death to her ideal of duty. There is no doubt, however, that the teachings of Schopenhauer exerted a controlling and constantly increasing influence over Wagner during the last years of his life, and excited in him an ardent sympathy with the metaphysics and ethics of Brahmanism, and especially of Buddhism, from which he derived the motives of a projected musical drama, "Nirvana." In this work, which unfortunately was never composed, the pessimistic principle of "the negation of the will to life" was to find its highest artistic expression and, as it were, religious consecration. Herr Dinger devotes a long chapter, and also prints two hitherto unknown contributions of Wagner, to that rabid organ of insurrection, August Röckel's *Volksblätter*. These articles are entitled "Der Mensch und die bestehende Gesellschaft" (February 10, 1849) and "Die Revolution" (April 8, 1849), and, although they are anonymous, the evidence that Wagner was the author of them seems to be quite direct and conclusive. One argument urged against the Saxon Government was that it expended 19,000 thalers for improving the breed of horses, and only 12,700 thalers for popular education.

—An interesting account of the progress of Egypt under the English occupation was given by Mr. Justice Scott, Judicial Adviser to the Egyptian Government, on the occasion of his receiving the freedom of the borough of Wigan. His testimony is the more important since he has been in Egypt in various capacities the greater part of the time since 1872. After a brief allusion to the condition after the Arabi rebellion, when the country was in a state of anarchy, without an army or police, and burdened with a debt of more than five hundred millions of dollars, he reviewed in detail the present state of the various departments of the Government. In doing this he paid a high tribute to the young Khedive, who "has already won golden opinions from all classes; and I can say with knowledge," adds Mr. Justice Scott, "that he shows the keenest interest in the reforms which his father initiated." His Ministers, also, are "able men, who are earnestly desirous of improving their country." While the heads of departments are still mainly foreigners, Egyptians are being systematically trained to fill places of trust. "Indeed, already they hold one or two of the highest posts, and their capacity for such positions increases yearly." There is a regularly paid and impartially levied army of 13,000 men, and a police force rapidly gaining in efficiency. The revenue has increased and the debt decreased, while the area of arable land has been enormously extended by improved methods of irrigation. The cotton crop alone has doubled in the past ten years. Forced labor has been abolished, and there are "native courts of justice at every town throughout the country whose judges are well paid and whose judgments are respected." The value of education is being appreciated by parents, and school fees are paid in thousands of cases. A civil service is being gradually established on the "principles of efficiency, security from arbitrary dismissal, and sufficient pay and promotion according to service rendered. Local self-government is also being cautiously introduced. Alexandria now governs itself, and eight other big towns are to be endowed with municipal rights." A department having in charge the ancient monuments has been thoroughly organized, and all systematic pilfering and unlicensed excavations have been stopped. In conclusion, Mr. Justice Scott spoke unreservedly and strongly in favor of the continuation of the English occupation. "The good England has done will not be permanent, will not last, unless she remains in the Valley of the Nile some years longer as Egypt's friendly guide and Power."

—Mr. E. E. Barnard, Astronomer at the Lick Observatory, who has added very greatly to the distinction of that institution by the discovery of a new satellite to the planet Jupiter, has made good his title by the publication of detailed micrometric observations in the last number of Gould's *Astronomical Journal*. Since July 1 Mr. Barnard has been a regular observer with the great telescope of the Observatory one night each week, and has devoted much of that time to a search for new objects. Nothing of special importance was encountered until September 9, when, in carefully examining the region immediately surrounding Jupiter, a very faint star was found

close to the planet, and he at once suspected it to be a new satellite. Subsequently measures of precision confirmed the suspicion, and, after a few days of observation, the periodic time of the satellite was sufficiently well known to enable the prediction of its times of visibility at the greatest elongation east and west of the planet. The new satellite revolves about its primary in nearly the same plane as the other four satellites; and as the radius of its orbit is only 112,500 miles, it is distant only 68,300 miles from the surface of the planet, or considerably less than Jupiter's own diameter. Of course the accurate measurement of a body so minute is out of the question, but a rough estimation makes the diameter of the little satellite about one hundred miles. Mr. Barnard thinks this object much more difficult to see than the satellites of Mars; if so, there are hardly more than a half-dozen telescopes in existence with light-gathering power sufficient to show it. It has just been detected by Mr. Reed of the Princeton Observatory.

GREEK EPIGRAMS.

Select Epigrams from the Greek Anthology. Edited, with a revised text, introduction, translation, and notes, by J. W. Mackail, Fellow of Balliol College, Oxford. Longmans.

THE Greek Anthology is a mass of heterogeneous material which may well dismay anything but the hardihood of scholars and editors like Jacobs and Dübner, or the professional student who mines in it for antiquarian or philological lore. It has discouraged the enterprise of Prof. Mahaffy, for instance, who goes so far as to say that "no study seems to him more wearisome and profitless than the Anthology." It is easy to sympathize with him in this feeling. The Anthology, as it stands, is not a selection, in any proper sense—it is simply a vast reservoir, with some subdivision, into which about 4,000 little poems have been thrown that bear a certain mechanical resemblance in brevity and in metre. So far from being a "garland of flowers," a metaphor which was applied legitimately to the earliest selection by Meleager, it is a garden run to weeds, in which the weeds predominate with varying degrees of worthlessness and noisomeness. But the flowers are there; it would be the greatest mistake to despair in the search, and to miss the exquisite bouquet which Mr. Mackail has culled from the wilderness. His work shows that patience, a sympathetic spirit, and a refined literary method were all that was needed to reach the true worth of the collection. Even the scholar may thank him for this labor; and every reader of taste will accept with delight the gleanings which are here presented, with luxurious clearness of arrangement, with useful translations and notes, and with an introduction which combines at once learning, literary skill, and the sympathetic appreciation that a poet may bestow upon poetry.

It is true that many minor works dealing with the Anthology have already been published in English—some excellent versions by Merivale, by Mr. Butler, and by Mr. Andrew Lang, the verses edited by "Graham Tomson," and in particular the luxurious collection of renderings in many languages edited by Dr. Wellesley. But Dr. Wellesley's book, with all its merits and its undeniable fascinations for the dilettante, enshrines some doggerel, and concerns itself too much with quips and cranks. Sometimes it lapses into bad taste, as where Moore's weak version of Plato on Aster is appended to Shelley's, and, in the main, it is an apotheosis of the Musa Etonensis and her sportive but uninspiring sisters. It does not at any rate represent the Anthology in its spirit and its integrity. Mr. Mackail's is the only serious attempt in English to do for the Anthology what Mr. Matthew Arnold did for Wordsworth. It is a great deal to say that the Anthology needs this process fully as much as 'The Excursion.'

The selection is arranged on a principle which confers on 500 bits of verse something of the unity that is naturally craved by the reader. The editor's intention, as he himself explains, is, apart from the value of the poetry in itself, "to draw in little a picture of the Greek ideal, with its virtues and its failings: to give an epitome, slightly sketched with a facile hand, of the book of Greek life." If, in composing his sketch, he has omitted some ugly spots and dark lines entirely, he has every reason of decency to justify him, and perhaps even of truthfulness. It by no means follows that the large proportion of libertinage and coarse language in the epigrams fairly represents their proportion in Greek life, any more than the prevailing French novel fairly represents the average of French life and manners. The beauty and unity of the selection are increased by the same device which Mr. Palgrave used so happily in the 'Golden Treasury': each epigram has its descriptive heading, and they are so arranged as to strike a sort of symphony of varying and harmonious notes.

There is a great deal of posing in the Anthology, and it is natural to talk, as Mr. Lang does in one of his pretty essays, as if there were nothing but posing—as if the epigrams were mere literary exercises, forced sighs and laughter, composed on paper and without inspiration. Our author has succeeded better by taking his work seriously. His introduction contains a careful and scholarly sketch of the growth of the Anthology, and an appreciation of its literary quality which is, on the whole, the best that has been said on a subject which Sainte-Beuve himself has treated. One of the most remarkable features to which he calls attention is the long period embraced by the Anthology—the continuous literary tradition which it illustrates. It is a chain which reaches from Simonides—perhaps one might say, from Mimnermus and Theognis—down to Rufinus and to Cometas Chartularius; it begins with the invasion of Xerxes, its last links were gathered by Planudes, who served as ambassador from Constantinople to the Venetian Republic in 1327, at a time when Petrarch first saw Laura, when the 'Divina Commedia' was already written, and when the star of Chaucer was about to rise on the horizon of English literature. These later links, it is true, were but silver or leaden, but the vocabulary is much the same as that of Callimachus, and a couplet of Cometas is expressed in words which are partly Homeric.

Some of Mr. Mackail's gleanings from Kaibel's collection of monumental inscriptions recall us to the original meaning of the word epigram, from which the best Greek examples were developed, and from which the best usage never greatly swerved. The epigrams of Martial and of the later writers in the Anthology are indeed pointed and "epigrammatic." Most of them will answer to Boileau's definition, "un bon mot de deux rimes orné," but it is well to remember that "no good epigram sacrifices its finer poetical qualities to the desire of making a point, and none of the best depend on having a point at all." A stroll through a churchyard, it is needless to say, will introduce us to as much posing and as much false sentiment as one finds in the epitaphs of the Anthology. One encounters less art upon the tombstones, but quite as large a proportion of artifice and affectation. Kaibel's collection of epitaphs illustrates this generally; but one of the sixth century B.C. recalls by its pathos as well as its reserve those melancholy, tearless eyes which gaze from the funeral reliefs at Athens:

"Looking on the monument of a dead boy, Cleoetes, son of Menesæchmus, pity him who was beautiful and died."

A long remove from this in subject and in provenance is the following epitaph found in Florence. Simonides did not disdain to write an inscription in his grand manner for a Thessalian hound; and "the man of petty ambition" in Theophrastus follows a fashion in erecting a monument to a Maltese lap-dog. The unknown master here followed no fashion, but wrote from the heart:

"Thou who passest on the path, if haply thou dost mark this monument, laugh not, I pray thee, though it is a dog's grave; tears fell for me, and the dust was heaped above me by a master's hands, who likewise engraved these words on my tomb."

The section headed "The Human Comedy" reminds us how ancient are the immortal jests which rise again oftener than the Phœnix to fly through our newspapers. The physician whose glance is fatal; who has made an alliance, offensive and defensive, with the undertaker; who, like Achilles, sends his tens of thousands to Hades before their time; or, again, the thin lady who was accidentally fanned out of doors, and that other who wears her own hair bought with her own money—this gallery is probably prehistoric as well as contemporary. The following shows that the Greeks were entirely capable of a species of exaggeration which is supposed to be American humor. It is headed "Slow and Sure":

"Charmus ran for the three miles in Arcadia with five others; surprising to say, he actually came in seventh. When there were only six, perhaps you will say, how seventh? A friend of his went along in his great-coat crying, 'Keep it up, Charmus!' and so he arrives seventh; and if only he had had five more friends, Zoïlus, he would have come in twelfth."

This other is more pungent and Attic in flavor:

"All hail, seven pupils of Aristides the rhetorician: four walls and three benches."

The predicament of the two deaf men who pleaded before a deafer judge has lately been renewed by a case in Paris, where the plaintiff's replies in court seesawed at random from his wife to a mad dog. It is even possible that the Parisian case is a myth based on the following original, which to its verisimilitude adds a spice of 'Alice in Wonderland':

"A deaf man went to law with a deaf man, and the judge was a long way deafer than both. The one claimed that the other owed him five months' rent, and he replied that he had ground his corn by night. Then the judge, looking down on them, said, 'Why quarrel? She is your mother; keep her between you.'"

Just as it stands, this is much funnier and clearer-cut than an exceedingly clumsy paraphrase in doggerel printed by Dr. Wellesley.

The humor and a delicate tipsiness of fancy which fits the subject, make the following apostrophe to a jug of wine quite worthy of Charles Lamb in his best vein:

"Round-bellied, deftly-turned, one-eared, long-throated, straight-necked, bubbling in thy

narrow mouth, blithe hand-maiden of Bacchus and the Muses and Cytherea, sweet of laughter, delightful ministress of social banquets, why, when I am sober, art thou in liquor, and when I am drunk, art sober again? Thou wrongest the good-fellowship of drinking."

It is impossible to quit the Anthology without a word about Meleager. Mr. Mackail notices that his love verses are distinguished from most earlier Greek poetry by the whole gulf which divides ancient and modern sentiment. Between him and Sappho there is set a world of feelings and ideas. Sappho, as far as we know her, simply expresses passion—the sudden Oriental passion of the 'Arabian Nights'—with Greek directness and imagination; Meleager, in spite of the sensualism of some of his verses, has crossed the bridge toward the romantic and mediæval spirit—the spirit which issues in the *Rime* and the *Paradiso*, and, *longo intervallo*, in Mr. Coventry Patmore's "Angel of the House." His mysticism is in itself another note of division from the Greek spirit—a note of harmony with the world of Petrarch and of Dante. No Greek before him had ever thought of Cupid as "the Artist who sets his signature beneath the Soul which he has created"; as "Love the Helmsman, steering the Soul, like a winged boat, over the perilous seas of desire"; as "the Child playing idly with his dice at sundawn and throwing for human lives." And, if we take him in another vein, was ever the lover's impatience—the swift reversal of his magnetic currents—hit off more exquisitely than in this little picture, which catches the instantaneous flashes of his mood with the camera, and fixes them with the finish and permanence of a cameo?

"Take this message, Dorcas; lo again a second and a third time, take her all my message; run; delay no longer; fly. Wait a little, Dorcas, prithee a little; Dorcas, whither so fast before learning all I would say? And said to what I have just said—but no, I go on like a fool; say nothing at all—only that—say everything; spare not to say everything. Yet why do I send thee out, Dorcas, when myself, see, I go forth with thee?"

Our extracts have already illustrated sufficiently the quality of Mr. Mackail's translation. At rare intervals one might complain that it is a little severe and bald, following with superfluous closeness the idiom and the participles of the original. But this is, probably, a matter of artistic conscientiousness, and in any case the result is far removed from the slavishness of the crib. The exchanges of idiom which our editor permits himself show that he might safely trust his taste a little further. His book is not only a piece of scholarship, but a work of art, which offers the reader the pleasure of things beautiful in themselves, and at the same time presents a succession of authentic miniatures of Greek life and ideas.

FRÖBEL IN PUBLIC LIFE.

Ein Lebenslauf: Aufzeichnungen, Erinnerungen und Bekenntnisse von Julius Fröbel. Vol. II. Stuttgart: Cotta.

THE second volume of Fröbel's autobiography begins with his return to Europe in 1857, and ends with his resignation of the German consulship at Algiers and his retirement to private life at Zurich in 1888. After an absence of eight years, which had been passed for the most part in the wilds of the New World, and had been full of varied experiences and perilous adventures, he was at first rather painfully surprised to find how completely he had become alienated from ordinary European life, and how narrow and ignoble it appeared to his "Americanized eyes." Even in Paris, the chief centre of Continental culture and refinement, where he spent the first ten days after landing, the prevailing spirit seemed to him "petty, sordid, and mean." In Germany he felt like one who, having left in early youth the insignificant village of his birth and grown to manhood in a great metropolis, perceives on his return that the trees are not half so tall, nor the houses half so stately, as he had fondly imagined them to be. As this feeling was fully shared by his wife and intensified by the wanton annoyances to which he was subjected by the Frankfort police, until the energetic intervention of the American consul put a stop to them, he resolved to pass the winter of 1858-9 in London and to sail for New York in the following spring. But the sudden death of his mother-in law, Countess Armansperg, in January, 1859, caused this plan to be deferred and finally abandoned altogether.

Having reëstablished himself in his native land, Fröbel could not long refrain from taking an active part in public affairs. In 1858 he published a small volume entitled 'Amerika, Europa, und die politischen Gesichtspunkte der Gegenwart,' in which he indicated and emphasized the rapidly increasing influence of the United States as an important but hitherto neglected factor, that could not be safely overlooked in future plans for determining and preserving the political balance of power in Europe. This work was followed in 1859 by a pamphlet, 'Deutschland und der Friede von Villafranca,' containing suggestions for the reconstitution and unification of Germany, to the realization of which he devoted all his energies until the events of 1866 revealed the full extent of the fatal mistake he had made in supposing Austria capable of initiating and accomplishing the federal reform he so earnestly desired. Indeed, this error, so strange in a man of such large experience and remarkable sagacity and soundness of judgment, continued to color Fröbel's political views in a greater or less degree till 1870. "I did not," he says, "presuppose in Prussia either the power or the will to solve the German question; and but for Bismarck, who was then as little known to the rest of the world as to myself, I am inclined to believe that I should have been right. To this plea one might reply that Prussia alone was able to produce a Bismarck, and this is perfectly true." A young lady from Königsberg, to whom he communicated the drift of his pamphlet, was greatly incensed at its contents, and begged him not to print it; at the same time she submitted to his consideration the five cardinal points of Prussia's political programme: 1. Subversion of the Austrian system. 2. Liberal constitutions in Italy. 3. A liberal constitution in Hungary. 4. Repulsion and repression of France and liberation of Italy by Prussia. 5. Union of Germany under Prussia. Such, she assured him, was the sum and substance of the policy of the ministry of Prince Hohenzollern, and urged him, as a lover of liberty and a true patriot, to support it. This incident is interesting as showing what definite plans Prussia had already formed as early as 1859 touching her relations to Austria and the other German States, and how far the youthful townswoman of Kant surpassed the veteran publicist in her knowledge and appreciation of them.

Fröbel, if not the originator, was at least the ablest advocate and most strenuous promoter of the political scheme known as "the German Trias," and it was for the purpose of carrying this project into effect that he consented to enter the service of the Austrian Government in the spring of 1862. His position in Vienna was a peculiar one, and, in the words of the aulic councillor Von Gagern, "unexampled in the history of governmental usage." Without portfolio or even official recognition, he virtually directed the whole domestic and foreign policy of the Empire in its relations to the German States, as well as in its diplomatic and commercial intercourse with the other leading nations of Europe.

We need not follow our author in his minute expositions of the means by which he endeavored to secure at least the triunification of Germany, for the subject has long since ceased to have more than an academical or autobiographical interest. Suffice it to say that he proposed to establish a sort of triarchy, which was to consist of the Emperor of Austria and the King of Prussia as hereditary members, and a sovereign to be chosen periodically by and from the heads of the smaller principalities. The directory thus constituted was to be invested with executive power and presided over by the Emperor of Austria, upon whom were to be conferred the hereditary title and dignity of German Emperor. The legislative power was to be vested in a parliament consisting of two branches: a House of Princes, composed of representatives of ruling families and free cities and presided over alternately by the kings of Prussia and Bavaria; and a House of Commons, whose members were to be elected, not by popular suffrage, but by the legislative councils or local diets of the several States. Provision was also made for a federal court competent to examine and decide constitutional questions, and to exercise supreme judicial functions in all matters not falling within the jurisdiction of the single States. Fröbel confesses that this complicated and rather clumsy political machinery was very far from realizing his ideal of a perfect constitution, but it seemed to be the best attainable under the circumstances.

We may add that the informal state papers prepared by Fröbel for the information and guidance of the Austrian Cabinet and printed in this volume, his correspondence with the most prominent public men of Germany, and his contributions to the press, especially to the semi-official Vienna *Beobachter* and the Augsburg *Allgemeine Zeitung*, are very creditable to him as a patriot and a publicist, and reveal diplomatic ability and statesmanlike qualities of a high order. These documents are important as throwing new light on the personal intrigues and political plots and counterplots which preceded the foundation of the German Empire, and contain valuable material for the future historian of that formative and fermenting period.

After several years of rather annoying journalistic experiences as editor and proprietor of the *Süddeutsche Presse* in Munich, Fröbel entered the service of the German Empire in 1873 as Consul at Smyrna, and it is significant of the strictness with which the civil-service regulations are observed in Germany, that a man who had reached the sixty-eighth year of his age and distinguished himself in politics, and of whose general ability and eminent fitness for the office he sought no one entertained the slightest doubt, could not receive the appointment without first passing the prescribed examination.

The most entertaining portions of the present volume are Fröbel's characterizations of the various persons with whom he was brought into contact and had occasion to converse on the

topics of the day. Thus, in the spring of 1869, being in Paris, Ollivier invited him to breakfast, and remarked suddenly in the course of the conversation: "I will tell you the secret of French politics. We take it for granted that there will be war with Prussia. We assume that in a few days after the declaration of hostilities there will be a battle, and that of ccurse we shall win. French prestige will thus be saved. We shall then offer peace to Prussia, permitting her to do what she pleases in Germany and demanding for France only Belgium and some rectifications of the frontier." "But suppose that France should not win the first battle?" asked Fröbel. "Dans ce cas l'Empereur ne rentrera plus à Paris," replied Ollivier; "and Germany would have no longer the Emperor, but the French nation to deal with." Shortly afterwards, Fröbel had an interview with Prince Napoleon, who seemed to share Ollivier's opinions on the probable results of the impending war, but at the same time censured the policy pursued by the imperial Government towards Prussia: "D'un pouvoir comme la Prusse on doit être ou le complice ou l'ennemi décidé. Nous n'avons pas été ni l'un ni l'autre. Mais ce n'est pas moi qui fait la politique française." Bismarck, whom Fröbel first met in December, 1868, and whose policy he had formerly opposed and severely and even maliciously criticised, he sums up as "a man of clear intellect, bodily strength, terrible force of will, confidence of purpose, fidelity, and great good-nature." To the reproach that Prussia had stopped half way in the work of unifying Germany, Bismarck replied: "We must not require that the great objects we are striving after should necessarily be attained within our lifetime"; adding that the final union of Germany must not bear within itself the seeds of an irremediable hostility between the South and the North, but must be accomplished willingly and gladly, even if it should take thirty years. In his dealings with Austria he expressed the desire to reduce to a minimum the tension which it was the policy of Beust to increase between the two States, and was willing to show his vanquished rival the leniency and indulgence which leads a strong man to gratify even the whims of a capricious woman to whom he is bound for better or for worse. But Austria should not put this kindly feeling to too severe a test: "Zwischen einer Sammethand und blankem Stahl giebt es für mich Nichts in der Mitte."

Readers who care little for the vicissitudes of European politics can hardly fail to be interested in Fröbel's account of affairs in Munich after the accession of Ludwig II. and during the ascendency of Wagner as royal favorite. He characterizes the latter as "full of the thought that his confidential relations to the young king imposed upon him great and high obligations; he certainly had the noblest intentions; but for political efficiency his conception of the matter was altogether too poetic, not to say too theatrical or operatic." Even the youthful and romantic monarch detected this weakness in his protégé, and forbade by ministerial decree the further publication of a series of articles on "German Art and German Politics," which Wagner had begun to issue in the Munich *Süddeutsche Presse*.

COLUMBUS AUTOGRAPHS.

Autógrafos de Cristóbal Colón, y Papeles de América. Madrid: M. Murillo. 1892. Pp. 203.

SOMEWHAT more than a year ago the Duchess of Berwick and Alba, Countess of Siruela, published at Madrid a volume of 600 pages, containing a selection of documents from the archives of the house of Alba, which are of great value for the history of Spain and the other nations of Europe during the fifteenth, sixteenth, and seventeenth centuries. Among these papers are several relating more or less directly to the discovery of America. Thus, in the last will and testament of Janoto Berardi, a Florentine merchant of Seville, bearing the date of December 15, 1495, the Admiral Don Cristóbal Colón is instructed to pay to Berardi's executors, Jeronimo Rufaldi and Amerigo Vespucci, the sum of 180,000 maravedis (8540) besides other compensation for three years' services rendered by himself, his brothers and his sons. He also commends his little daughter to the care of the Admiral as "a good Christian and servant of God." There are also checks of the year 1504, signed by Christopher Columbus and drawn in payment for shipstores and sail-cloth. A document of still greater importance is a long letter written by the Bishop of San Domingo from Mexico, February 12, 1533, and addressed to the Empress and Queen Isabella, wife of Charles V., in which much sensible advice is given concerning the ecclesiastical and economical administration of the Spanish provinces in the New World. The Bishop censures the cruel policy of the conquerors, and denounces the theory that the resources of the country cannot be developed without enslaving the natives, as a mere pretext by which apparent zeal for the commonweal is made to serve as a cover for individual cupidity. In this connection he extols the humane and just treatment of the Indians by a certain Quirona. Still later, in 1578, we find a lively epistle written from San Domingo to the Duke of Alba by Donna Marcelina Colón de Toledo, who recommends to his Excellency her father-in-law, Capt. Adriano de Padilla, now about to return to Madrid. This lady was a granddaughter of Christopher Columbus, and remarks: "Our family is in straitened circumstances, for my grandfather, Don Cristóbal, discovered the treasures of India in order that others might enrich themselves and his descendants remain poor."

As a supplement to the aforementioned work, the Duchess of Alba has just printed another collection of 'Autógrafos de Cristóbal Colón,' containing forty-six documents which had been thrown aside as waste paper. The Duchess, who is an adept in deciphering the obscure characters and abbreviations of mediæval Latin and Spanish manuscripts, reëxamined this supposed rubbish, and was rewarded by discovering autograph letters and other records not only of Christopher, Ferdinand, and Diego Columbus, but also of Hernando Cortes, Diego Velasquez, and Diego Mendez, so that the contents of the volume is more varied than its title indicates. Of special interest are the full instructions given by the King and Queen to Juan de Aguado, who was sent out in the spring of 1495 to examine into the state of affairs in Hispaniola. The text of these instructions hardly confirms Mr. John Fiske's statement that Aguado's appointment was made in a spirit friendly to Columbus, inasmuch as gross abuses are spoken of and complaints brought against the administration of the colony for leaving the aborigines to die of hunger while "the discoverers are up to their necks in gold." It is evident, as Mr. Justin Winsor affirms, that Aguado was sent as "an inquisitor to the colony," and that his mission originated in dissatisfaction with the conduct of the Viceroy.

The material of the book is on the whole interesting, but not of the first importance, though some side-lights are thrown upon persons and events. For instance, we have known that one Muliar (as the name is generally given) married a sister of the wife of Columbus, but we have known little more of him. Here we find a mutilated letter of this person (unfortunately without date) addressed to his "illustrious and most magnificent" relative, showing how this brother-in-law was at one time in debt to Columbus for 25,000 maravedis. He signs the paper Miguel Molyart, while Columbus's endorsement on the paper calls him "migel muliart." The papers of Ferdinand Columbus are not without value, particularly one written for his father, in which he explains the charges incurred in Jamaica. The chief help to the student, however, is found in several papers concerning the Viceroyal Government of Columbus's successor, the second admiral, Diego Columbus, including his instructions to Jerónimo de Agüero, and the petition in furtherance of his interests which he made at one time to the Emperor. Diego hardly proved equal to the task which fell to his lot as the heir of the Discoverer, and nothing in this volume will raise the opinion which has been entertained of him.

We find in depositions made against Sebastian Cabot some not unexpected indications of the opinion in which he was held in certain quarters in Spain. Indeed, there is little in any of the documents here disclosed to make one have a very exalted estimate of the characters of the leading Spaniards of the time associated with American events, either from modern or from their own standards. Cortez, Pizarro, Guzman, Nicuesa, and even one of the most interesting of the group, Diego Mendez, come before us in the stray glimpses which these chance documents afford as accusers or accused. Most of them are little worthy, all things considered, of such consideration as the world is accustomed to bestow on honorable conduct.

We may add that the greater part of these "autographs," of which a portion are reproduced in facsimile, belong to the sixteenth century, only a very few bearing an earlier date.

A Formulary of the Papal Penitentiary in the Thirteenth Century. Edited by Henry Charles Lea, LL.D. Philadelphia: Lea Brothers. 1892.

THERE is nothing more striking to the student of the Roman church organization than the development of institutions within the body of the Church, which, originally creations of the papacy and subject to its direction, become in time practically independent of it and at times even superior to it. The best-known illustration of this tendency is found in the Inquisition, nominally always the servant, but capable of showing itself on occasion very plainly the master, of the Roman policy.

In an earlier work, already classic in its field, Mr. Lea has given us a complete study of the Holy Office; and now he presents us with what ought to be the first contribution towards a history of a second great Roman institution, not less potent in its effect, and not less influential, perhaps, in calling the attention of the world to the evils of the papal system. The Roman Penitentiary is that branch of the papal administrative machinery which has to do with the fixing of penalties in cases of appeal from local ecclesiastical jurisdiction, and with the granting of dispensations from local decisions. On the good Roman

principle of "as it was in the beginning," the Penitentiary claims for itself an indefinite antiquity; but Mr. Lea, in his introduction, gives it as his opinion that it did not exist as a definitely organized institution before the second quarter of the thirteenth century—a point of time, in fact, when all branches of the church life and doctrine were going through a reorganization into forms destined to be permanent. Mr. Lea's argument here is not positive; it is the argument from silence, never quite convincing when applied to periods of meagre literary productiveness; but, so far as it goes, it seems to be a sound one. In the case of an institution dealing with such varied and intricate problems, it can hardly be supposed that reference would not have been made to an organized board of appeal if such had existed.

Having settled this point as to time, Mr. Lea concludes further, chiefly on internal evidence, that the collection of formulas now for the first time printed represents a very early stage of the institution, offering a model for the future drawn from the irregular and more irresponsible practice of the past. The cases presented are plainly not *a-priori* ones, but such as had actually been decided, and were probably selected as typifying classes of cases likely to occur again. Here and there names of persons can be identified with some degree of certainty, and serve thus to fix approximately the date of the collection between the years 1220 and 1255.

The formulas themselves fill the greater part of the volume. They are grouped under 179 rubrics, and under one rubric there are frequently two or more cases, so that the whole number would be nearly 400. They include every variety of offence, from the vague scruple of conscience of a clergyman, whose only sin was that he had for years been following the wars, up to the eager personal repentance of self-convicted murderers. In almost every case the point at issue is a doubtful one. The questions are not usually such as could be readily settled in accordance with some established precedent or rule. These complicated problems of the clerical conscience form the natural justification of the institution of the Penitentiary. In a church system whose very essence was uniformity and authority, it was of the first importance that there should be some tribunal before which doubtful cases might be brought. It could only seem scandalous to the standard of the Middle Ages that local decisions should vary one from the other. If, then, as was inevitably the case, this tribunal grew to claim and exercise a fatal influence over the rights of local authorities, it should be remembered that, during the time of its development, local powers were hopelessly inadequate to the solution of such problems.

It is on this point that we find our only disagreement with Mr. Lea's conclusions. He has no good word to say for the element of actual service rendered to the peoples of Europe, during their semi-barbarism, by the very existence of a tribunal like this. Naturally its action was resisted by all local and national tendencies, whenever these were able to speak for themselves, and unquestionably there were times when abuses were abundant. No doubt the crisis must come when Europe had reached her majority and needed papal control no longer; but, on the other hand, the deep debt of gratitude that Europe owes to Rome is nowhere more clearly shown than in this attempt to put in place of a wavering and uncertain complication of legal and moral principles a uniform and authoritative practice.

Aside from the controversial aspects of the subject, this publication must be of great interest to all mediæval scholars from the peculiar light it throws upon the whole ethical spirit of the Middle Ages. It is easy to discern the opportunity for fraud, for money-getting, and for tyrannical interference offered by an infallible absolving agency; but no institution can live which is not supported by the general consent of the community, and the ethical standards here reflected were undoubtedly sincerely held. Mr. Lea emphasizes, and justly, the temptations to perjury on the one hand and to hasty and partial judgments on the other, but it would be monstrous to suppose that the trouble of conscience which was the moving impulse in most of the cases here cited was not genuine and a fair reflection of the temper of the age.

It is matter for regret that the editor has not been able to get any information as to the history of the manuscript from which his text is printed. Since this is a first edition, scholars may have a reasonable curiosity to know upon how substantial a basis of genuineness it rests. A facsimile page of the original shows it to have been carefully written, with a moderate degree of ornamentation.

France under the Regency. With a Review of the Administration of Louis XIV. By James Breck Perkins. Boston: Houghton, Mifflin & Co. 1892. Pp. xvii, 603.

THE main title of this book is derived from the lesser half of it, the review of the administration of Louis XIV. exceeding in space the account of the Regency. It is the work of a man who is at home in his subject, judges fairly, and writes well. It is therefore pleasant reading; but we do not know that it much modifies our opinions, except, possibly, with regard to the character of Dubois. Mr. Perkins claims, as others do, for the centralized monarchy of Louis XIV. the credit of having put down feudal anarchy and introduced uniformity of administration and, in some measure, of law. Richelieu had done this to a great extent, and the Fronde was an interlude not so much of revived feudalism as of personal cabal directed against an unpopular minister. Feudalism is such a political ogre that to be opposed to it is a title to approbation; but if it had an apologist, he might ask what feudalism, supposing its reign to have been prolonged, could have done much worse than waste the substance of the people in wars of ambition or the expenses of a prodigal court, throw the whole burden on the laboring class, reduce that class to want of bread and the barbarism which attends it, expel the flower of it from the country by religious persecution, debauch the noblesse, estrange them from their rural duties, get the finances into hopeless disorder, and lay the train for the Revolution. The despotism of the Great Monarch was highly gilded, and we are ready to take its gilding at a fair valuation. It was æsthetically an improvement on the coarse despotism of the East, and even on the more artificial autocracy of the Cæsars; while it scarcely had the justification which the first had in nature and the second had in the circumstances of the Empire. But St. Simon and other writers of memoirs present us—in this court of superfine manners—with instances of ill-breeding, indecency, and even filthiness, apart from the licentiousness, which would have disgraced the most plebeian home. The root of really good manners is in the heart, and where selfishness prevails, there may be polish; true courtesy there will not be. If, as Mr. Perkins reminds us, Louis bowed to every woman he met, few did more than this ostentatious adulterer to defile and degrade the sex. That the constellation of intellect which illustrated his reign was not the fruit of his despotism, but a survival from a less despotic era, has been conclusively proved by Buckle, whose demonstration Mr. Perkins repeats. Than the character of the King himself there never was one more revoltingly selfish, or, saving outward grace and majesty of demeanor, in which no doubt he excelled, further from the ideal of a Christian gentleman. That he was misled by ministers or priests is a poor excuse. He must have known perfectly well what he was doing when he bombarded Genoa and ravaged the Palatinate. He must have known pretty well what he was doing when he drove the Huguenots from their homes and sent their ministers to those galleys the horrors of which, described once more by Mr. Perkins, rival anything in the most cruel tyrannies of the East.

It is pleaded that the King, when he ordered the dragonnades, was under the dominion of his priests, and that on them the chief blame must rest. But he was not under the dominion of the priests when they bade him keep the Ten Commandments or the precepts of the Sermon on the Mount. He obeyed them only when their injunctions coincided with his own tyrannical passions. He did not scruple, when his pride was affronted, to bully the Pope; and had the priests interposed on that occasion, the limits of their dominion would have been quickly seen.

Mr. Perkins has failed, we think, to point out with sufficient clearness the social and economical mischief which Louis did by drawing all the land-owners away from their estates in the country to Versailles. There is something to be said for the manorial system so long as the lord is resident and does in any tolerable measure his duty to his tenants; but when the lord is an absentee, racking his tenants through a bailiff, the system becomes an unmixed curse, and this was what Louis XIV. made it. The comment of history on his system is the Revolution.

Mr. Perkins, we think, is successful in the defence of Dubois against the charge of corrupting his royal pupil. Nature had probably been beforehand with the tutor. It is possible, also, that, amidst the unspeakable profligacy of the Regency, the character of Dubois might have passed muster if he had not been a priest and a prince of the Church. But then he *was* a priest and a prince of the Church. It is very curious to see the intense desire of such a man to obtain the highest position in what he called the Church of Christ, and his delight when, by the most flagrant simony, a cardinal's hat had been obtained for him. That the Regent Orleans was a good-natured man, and not without light till the light in him was quenched by debauchery, would, we suppose, be generally admitted; and he and Dubois deserve credit, as Mr. Perkins says, for having done their best to keep the world at peace. To this extent France owed to them the progress in wealth which during this period she made.

Mr. Perkins seems inclined to smile on Law. Nobody doubts that Law was very clever, or that he had an inkling of economical truths. But it is hopeless to defend an economist and financier who could issue an enormous volume of paper with no other basis than the highly problematical gains of a settlement in Louisiana, and imagine that he

had to that extent increased the wealth of France.

From the moral infamies of the Regency Mr. Perkins has no deduction to make. He exhibits them once more in their well-known foulness. On the whole, the feeling with which we lay down his essay is one of increased thankfulness that, whatever may be the evils and perils of democracy, we have escaped from hereditary and personal government.

Against one incidental judgment of Mr. Perkins we must enter a caveat. He seems to think that the Jansenists were little better than the Jesuits, having no advantage over them except such as is common to all sects winnowed by persecution. It is probable that the Jansenist was hardly less narrow than the Jesuit, and that, placed in power, he might have been hardly more tolerant; but he was not, like the Jesuit, casuistical and political; he was moral, and it is reasonable to believe that, even had he been placed in power, his morality would have told. The spirit of Pascal would surely, in any circumstances, have been better than that of his antagonists.

BOOKS OF THE WEEK.

Aldrich, Anne R. Songs about Life, Love and Death. Scribners. $1.25.

Austen, Jane. Mansfield Park. 2 vols. London: J. M. Dent & Co.; New York: Macmillan. $2.

Barker's Physics.

AMERICAN SCIENCE SERIES
ADVANCED COURSE.

8vo, 908 pp. To teachers by mail $3.78.

This book is the result of five years' work, and collects and concentrates the best modern thought on the subject, as expressed in the best modern scientific journals. Besides this, there is all other essential matter for a thorough Physics for higher college work. Physics is here treated as the science of Energy. American scientists are especially drawn upon. Nearly all the cuts are new.

☞ OTHER VOLUMES IN THE AMERICAN SCIENCE SERIES ARE: Remsen's Chemistry, Packard's Zoölogy, Martin's Human Body and Walker's Political Economy (3 courses each), Newcomb's Astronomy, Bessey's Botany and Wm. James's Psychology (2 courses each), and Sedgwick & Wilson's Biology.

HENRY HOLT & CO., N. Y.

THE CHOLERA SCARE is over. If the public could be brought to realize the safety from the attacks of this disease that there is in Homœopathy the scare would never occur again. From official reports, covering over a million cases, we learn that the death-rate of the "regular," or Allopathic practice in this disease has been (and from present reports is) 54.8 per cent. of the cases treated. The same reports show that the death-rate in cholera under Homœopathic treatment was 8.5 per cent. Under the proper Homœopathic prophylactic treatment, the danger of contracting the disease is almost nil. We publish a little book, SAFETY IN CHOLERA TIMES (50 cents, by mail 54 cents), that gives the treatment of the disease and the preventive treatment. It is worth the money in the peace of mind it affords. BOERICKE & TAFEL, Homœopathic Publishers and Pharmacists, 1011 Arch Street, Philadelphia, Pa.

Dainty Foods Demand it.

IN EVERY Receipt that calls for baking powder, use the "Royal." Better results will be obtained because it is the purest. It will make the food lighter, sweeter, of finer flavor, more digestible and wholesome. It is always reliable and uniform in its work.

I have found the Royal Baking Powder superior to all others.

The Nation.

NEW YORK, THURSDAY, OCTOBER 27, 1892.

The Week.

THE report, first published by the Detroit *Free Press*, that ex-Judge Thomas M. Cooley had determined to vote for Cleveland has been denied vigorously in many Republican quarters, and the Chicago *Inter-Ocean* has gone so far as to print a despatch from Ann Arbor, in which Mr. Cooley was credited with saying that the report was "entirely unauthorized and without foundation." In order to get at the truth in the matter, we wrote to a member of the Faculty of the University of Michigan, asking him to give us, if he were able to do so, the facts in the case. His letter contains the following:

"Judge Cooley authorizes me to say to you that he stands by the statement published in the Detroit *Free Press*, and that the supposed despatch of the *Inter-Ocean* is wholly false. He is willing you should say, if you care to, that he does not believe in the McKinley Bill, and that he expects to vote for Mr. Cleveland. More than this he does not care to have said, and he is entirely unwilling to publish a letter or to take any active part in the campaign."

We are confident that if the truth were known, the number of men, hitherto Republicans, who with Judge Cooley will vote for Mr. Cleveland because they do "not believe in the McKinley Bill," would be found to be very large and to be increasing steadily. The whole tendency of the Republican campaign has been to force that party upon the extreme high-tariff ground, and to make it plain to all voters that if Harrison were to be elected, the party would be committed to a still higher tariff than the McKinley Bill embodies. The *Tribune* takes that position almost daily, saying, as on Monday, that the decision at the polls "will either sustain the Republican verdict of 1888 so emphatically that *protection will become the settled policy of the Government*, or will repeat the adverse verdict of 1890 so strongly that the country will thenceforth move toward free trade." It is difficult for the McKinleyites to realize that there is, even in the Republican party, a large number of men who do not wish to have "protection become the settled policy of the Government." These men have for several years been coming to the conclusion that the country has had more protection than was good for it, and, instead of being alarmed by the prospect of a tariff policy that will "move towards free trade," they are convinced that a policy of that kind is just what the country needs.

Amherst College, in Massachusetts, has thirty-three professors. Twenty-three of them favor the election of Grover Cleveland to the Presidency, as against seven for Harrison; and eighteen of the twenty-three have signed the following address:

"With Mr. Cleveland's views on public questions we agree. We admire his courage, his constancy, his public spirit, his studious neglect of his merely personal interests where they conflict with the calls of public duty. We remember his tariff message, his pension vetoes, and his letter against free silver as conspicuous instances of disregarding personal considerations for the public good. We therefore urge all our fellow-citizens to give Mr. Cleveland their hearty support."

The significance of this action can be fully comprehended only by people who are familiar with the history of political parties and the attitude towards them of educated men, particularly in New England, for a generation past. It is hardly necessary to say that, so far as selfish considerations are concerned, the professors would be moved to conceal their preference for Cleveland if they could not support Harrison. Massachusetts is a Republican State. A majority of the fathers who send sons to the College are strong Republicans. The institution has received more and larger gifts from Republicans than from Democrats, and among its benefactors are Republicans who have acquired their wealth through the high-tariff system which these professors denounce. Only a strong sense of duty could impel a body of men thus circumstanced to take a step which they knew must offend a majority of the supporters of the College. But in taking it they only illustrate that principle of "disregarding personal considerations for the public good" which is their ground of appeal for support of Mr. Cleveland.

A short time ago the New England Tariff-Reform League, in order to test the proposition that the foreigner pays the tariff tax on imported goods, made a proposition to the Boston Home-Market Club that they would give 13 shillings a box for 100,000 boxes of tin plate, the Liverpool quoted price being 12 shillings per box. They would give this to any foreigner who would pay the duty on the consignment. If, under existing conditions, the foreigner pays the duty, receiving only 12s. per box, here is an offer of 1s. per box as a bonus to him, or about $25,000 on 100,000 boxes. Moreover, the League offered an additional bonus of $10,000 to the Home Market Club for getting the contract, which it could well afford to do, seeing that the League would clear $200,000 out of the operation by merely selling the tin plate at the prices prevailing in this country. This reasonable offer the Home Market Club rejects with scorn. It has no doubt that an order for 100,000 boxes of tin plate would be "a great boon to your British allies," and that it would tend to "relieve their distress." (There it is again—they are in distress, and this fills us with joy.) "If we had any orders to place," it continues, "we should prefer to give them to our new American industry, which has grown up entirely since the duty was made protective, which doubled its production in the second quarter of the year, more than doubled it in the third, and more than doubled it again in the fourth, and which has already developed a capacity equal to nearly one-third of the home demand, and has brought the foreign export price down to within a few cents per box of the duty." According to this calculation of the progress of the tin plate industry, the time has nearly arrived for the establishment of a Trust, to continue as long as the Republican party remains in power. The glass industry was started in this country in 1638, and has been in continuous operation ever since. After an existence of 254 years it has ended in a Trust, or in a "combine" equivalent to that. Why should not the tin-plate men have an equal chance?

Mr. Blaine, in his often-quoted letter of July 11, 1890, on the pending McKinley Bill, used these words: "There is not a section or a line in the entire bill that will open a market for another bushel of wheat or another barrel of pork." The so-called reciprocity clauses tacked on the bill before its passage have not made Mr. Blaine's prophecy any less certain of fulfilment. The course of our foreign trade under the McKinley Bill is shown by the following statement of imports and exports of merchandise, received from the Treasury Department on Thursday morning:

EXPORTS.

	1891.	1892.	Decrease.
July	$62,668,893	$58,401,758	$4,267,135
August...	72,685,541	64,843,761	7,841,780
Sept.	82,854,085	72,949,526	9,904,560

IMPORTS.

	1891.	1892.	Increase.
July	$67,042,035	$71,526,414	$4,484,379
August...	65,953,360	77,200,127	11,246,767
Sept.....	61,504,737	72,993,023	11,488,286

These figures show no "broadening" of any foreign markets for American produce, and no "narrowing" of our own markets for foreign goods, as would be the case if reciprocity was providing new foreign buyers of our produce, and the protecting influence of higher duties was supplying our own wants with domestic products. Nor do we find in the prices of the articles named by Mr. Blaine any alteration that conflicts with his statement. Wheat closed in Chicago on July 11, 1890, at 88¼ cents a bushel, and on October 19, 1892, at 77¾

cents. Pork on the same dates was quoted at $11.25 and $11.85 a barrel, but the increase at the later date is due to other causes than "reciprocity"—the advance in corn and the broadening of our market by the admission of American pork to certain foreign markets from which it had been excluded on sanitary grounds. If Mr. Blaine is induced to make another speech for the Harrison ticket, we suggest that he take credit for his prescience.

A bit of incidental evidence showing that the McKinley tariff has not increased wages, but has decreased them if it has any effect on wages at all, is found in the recent report submitted by Mr. Geo. M. Pullman to the great company of which he is President. From the general information submitted with the report we make the following extract:

> "The average number of names on the pay-rolls at Pullman for the year was 4,942, and wages paid $2,918,997.41, making an average for each person employed of $590.65, against $610.73 for the previous year. The total number of persons in the employ of the company in its manufacturing and operating departments is 12,809, and wages paid during the year $6,619,156.63. The number of employees for the previous year was 13,885, and wages paid $7,303,108.42."

So it appears that in this particular instance not only was there a decline in the average rate of wages, but there was a less number of men employed by 1,076 than during the previous year. The explanation of the reduction in the number of men is found in the falling off of business in the car works to the extent of about $1,500,000. But this is exactly what the McKinley tariff was to prevent, or rather it was to increase business and make employment for more men instead of less, and at higher wages than before. The Pullman car works are not a protected industry, but the virtue of the McKinley tariff was to be of that overflowing kind that diffuses itself and spreads to all industries. Like the quality of mercy, it was to bless him who gives and him who takes. But it will puzzle the company's employees, we think, to view the subject in that light.

One of the boasted fruits of the McKinley tariff has made its appearance in the form of a circular issued at Providence by the Anchor Pearl Company, boasting that it is making profits of 21 per cent. in the manufacture of pearl buttons, and inviting subscriptions for $150,000 of capital stock in order to enlarge the works. When Senator Vest alleged that Mr. Whitman's woollen company was making 20 per cent. profits out of the tariff legislation that Mr. Whitman helped to frame, that gentleman denied the charge with great fervor, as though a crime had been imputed to him. No such modesty daunts the Anchor Pearl Company, whose 400 per cent. tax is perhaps the most odious item in the whole McKinley tariff. For the benefit of intending investors as well as of inquiring voters, we will add that all inquiries should be addressed to William W. Rickard & Co., Bankers, No. 25 Westminster St., Providence, R. I.

In a paper contributed by Sir Thomas Farrer to the *Forum* magazine, entitled "English Views of the McKinley Tariff," the fact is mentioned incidentally that the poor Cobden Club has been obliged to stop giving its annual dinner at the Ship Hotel, Greenwich, for lack of funds, and that it is barely able to scrape together enough money to pay its printing bills. Sir Thomas says that this is the actual condition of a society "which is credited with the expenditure of millions in order to bribe foreigners to buy English goods." He thinks, apparently, that the stoppage of the annual dinner will be accepted on this side of the water as an answer to the charge that millions are expended by it in this country to buy votes for the Democrats. On the contrary, it will have the very opposite effect. It will carry conviction to thousands of loyal hearts that the charge is true, showing that the Club, whose main, if not sole, purpose is to carry elections in the United States, has spent so much money for that object that it has been obliged to economize in its food and drink. No, Sir Thomas, we can see through all that.

Charges of "colonization," illegal registration, and frauds upon the ballot-box of every sort are now made by each party against the other with daily increasing volubility. Three arrests are reported as having been made on Friday of Albany Democrats who were trying to register men illegally, and the Democratic managers say that they are going to have a number of Republican rascals arrested for attempting similar frauds. Good citizens will hope that all the "fine workers" on both sides who are trying to tamper with the election may be caught and punished. The most important thing is that all arrests for such alleged offences should, so far as possible, be made before election day. The worst feature of Supervisor Davenport's system in this city is his practice of arresting men on election day, locking them up until after election, and then letting them off, after causing them to lose their votes. The Republican United States Marshal for this district has just admitted before the Congressional Investigating Committee that he cannot recall a single conviction which has followed an arrest on a warrant issued by Davenport, although such warrants have been issued by the hundreds. It is a prostitution of power to disfranchise an innocent voter in this way, and the extent to which it is done by Davenport in this city gives a faint idea of the vast abuses which would grow up under the Force Bill system if applied to the whole country.

A great many readers of the *Tribune* must have shared the feeling of profound relief which took possession of us on Thursday when we opened the paper and learned from its leading editorial article that the letter of the Hon. Whitelaw Reid, accepting the Republican nomination for the Vice-Presidency, met the unequivocal and even hearty approbation of such a stern critic as the Hon. Whitelaw Reid himself. There has been a good deal of natural anxiety upon the subject among Republicans lest the *Tribune* might go back on the letter, or "damn it with faint praise," but this is all dispelled now. The *Tribune* says, without the slightest hesitation that we can detect, that it is not only a very good letter, but a far better one than Mr. Cleveland's. It is, says Mr. Reid, "plain-spoken, intelligible, and uncompromising," and is "markedly in contrast with the nebulous utterances and disingenuous silence of Mr. Cleveland." Mr. Reid himself was so relieved when he saw how highly he appreciated his own letter, that he started for Chicago immediately after committing his flattering views to paper.

One of the most melancholy incidents of the canvass is the suspension of Mr. Smalley, the Tory Squire whom the *Tribune*, for some unaccountable reason, pays for furnishing to its columns views of British politics diametrically opposed to those of the editor. The effect of this on the mind of the reader must, of course, be at times a little confusing, as for instance when the editor expresses the opinion in one column that Gladstone is a glorious old man, of whom England may well be proud, and the Squire in the adjoining column intimates that he is a wicked old charlatan, bent on the ruin of the empire. But then a regular *Tribune* reader is used to contradictories, and, for the most part, swallows his dose like a man. There are times, however, when it is impossible to allow Mr. Smalley to range at will, and the approach of an election in which the Irish vote is needed is one of them. His opinions about Gladstone, home rule, and the Irish nation are such that to pay him for printing them in the *Tribune* just now would cause large bodies of our Irish fellow-citizens, it is supposed, to deny that the McKinley tariff had raised prices, and to allege that the consumer paid the duty, and that Egan was a bad man, and to vote accordingly. To prevent this extremely undesirable result, Mr. Smalley has, we understand, been "laid off" until after election, and his place has been filled by an English Liberal of much humbler origin and in lower social position than Mr. Smalley, who takes the regular Republican view of Gladstone and Egan. But, suitable as this arrangement may be for the *Tribune*, it is a very bad one for the English people, for there is little question that the watchful eye which the Squire has kept on both

Gladstone "and the Gladstonian organ," and the reproofs he has administered to them in the *Tribune*, have had a most wholesome restraining influence on both of them. On the excesses into which they have probably been led by Mr. Smalley's retirement, we do not like to speculate, and we are weary thinking of his load when we picture to ourselves the trouble he will have when he gets back, in reducing them once more to decency and morality after so long a period of unbridled license.

Webster Flannagan, the Texas Republican who leaped into fame by asking in the Republican National Convention of 1880, "What are we here for if not for the offices?" now comes before the public again, this time through the action of a Grand Jury. Flannagan some time ago got what he was after, in the shape of the Collectorship of Customs at El Paso, Tex., but, not satisfied with the lawful emoluments of that office, it is charged that he has been making money illegimately by conniving at the entrance of Chinamen into the United States. For some months past Chinese have been entering El Paso in great numbers, and it is charged that they have been conducted across the line by officials of the Government which has passed a law against their admission. Besides Flannagan, a special deputy collector was arrested on Monday, and an indictment is understood to have been found also against a special agent named Irvin, who is now making Republican stump-speeches in Nebraska. The Grand Jury also criticises the customs officials for making unwarrantable seizures of stock found grazing along the border, and altogether Flannagan must be inclined to wonder whether it is worth while to serve so censorious a community.

Touching the Tammany nominations, that of Mr. Gilroy for the Mayoralty is the best the Boss could have made without going outside the Tammany circle. Mr. Gilroy is by general consent of those who have had to do with him an able man, perhaps the only one of the lot who would be recognized in business circles as a business man. He has, according to all accounts, administered his department well, with an apparent avoidance of jobbery and corruption, although he started with an assistant in the person of "Barney" Martin, who was then fresh from an untraversed indictment for bribery. In short, there is no better Tammany man for the Mayoralty than Mr. Gilroy, and if he could get rid of his associates, his administration of the Mayoralty would probably compare favorably with that of anybody who could be nominated by any party. But he is a Tammany man. He owes all he is to Tammany, and has been identified with it in good and evil fortune since the days of Tweed, under whom he began his political career. The very goodness of his administration—should it be as good as there is reason to expect—will go to strengthen the hold of Tammany on the other offices which it reserves for the riffraff. It will redound to the credit of the Boss and of the Boss system of government.

But the nomination of Frank T. Fitzgerald for the additional Surrogateship is a different matter and calls for more comment. The Surrogateship is a judicial office of the highest importance, especially in a great city like ours. His jurisdiction covers the proving of wills and all contests over their validity, the administration of the estates of deceased persons, and the appointment of administrators and guardians of children. No judicial office, in fact, is saddled with more responsibility, or needs to be filled by men of a higher grade of character. Old New Yorkers will remember when Alexander W. Bradford, one of the foremost men at the New York bar, ranking with Charles O'Conor and Daniel Lord, was thought none too good for it. Now, Mr. Frank T. Fitzgerald has filled the office of County Register since 1888, being when elected already a member of Congress, and he drew salary from both offices for nine months. He was examined as to his administration of the Register's Office by the Fassett Committee in 1890, when he confessed that his office was "a Tammany heirloom"; and it appeared that the custodian whose duty it is to guard the books of record in behalf of the city was a head-bartender in a liquor-saloon, dividing his time between bartending and the public service, the latter getting much the smaller share. Another custodian was discovered who divided his time between a pawn shop and the Register's office; and although the business of the office was much smaller than it used to be, its subordinate working force had been increased from 16 to 50, and its salary list for them from $125,000 to $153,000. There was more entertaining evidence of the same sort, showing that the office under Mr. Fitzgerald was really a sort of roosting-place for Tammany drones and incapables. Yet his administration of it is now treated as proper preparation for one of the most important judicial trusts in this State, or, indeed, in any civilized community, just as Barney Martin's corruption in the Sheriff's office was treated as proper preparation for the Deputy Commissionership of Public Works at a far larger salary than he had ever received.

The death of Mrs. Harrison has been so long anticipated by her physician, her family, and the public that the announcement of the event does not take anybody by surprise. Although it does not produce a shock, it does move profound sympathy for the President among all classes, and none will feel this more deeply than those whose sense of political duty compels them to vote for Mr. Cleveland. Indeed, we can well believe that there will be no more sincere sympathizer, outside of the President's immediate circle, than Mr. Cleveland himself. Mrs. Harrison was an irreproachable wife and mother, possessing all the dignity which her position called for.

The statement of foreign commerce and immigration for September shows the effect of the President's proclamation enforcing a long quarantine upon immigrants. During September, 1891, there arrived at this port 41,954 immigrants; during September just past, only 21,824. Most of these, of course, had embarked before the new orders were put into effect, and the figures for October will show a still greater falling off. Some of the steamship companies manifest a disposition to resume business in this line as fully as possible, but the Cunard Company has issued a circular announcing that until further notice the ships of the line will bring from Europe in the steerage American citizens, residents of the United States who may not be citizens, and wives and children of residents of the United States, as well as aliens who may desire to visit the United States without intending to remain or reside here, but no aliens whose purpose is to remain and reside in the United States.

Every week brings the news that some last survivor of the forces hostile to the French Republic, some newspaper, or some man hitherto supposed to be irreducible and unreconcilable, has toppled over and fallen at last. M. Paul de Cassagnac's own provincial newspaper, the *Électeur*, of Gers, a younger brother of the *Autorité*, has just been fatally touched. Its old supporters have, for the most part, deserted it, and M. de Cassagnac announces, almost with tears, that it will follow them and hoist the Republican flag. The faithful few among its subscribers will henceforth receive the *Autorité* gratis. But far more astonishing even than this is the conversion of M. de Mackau, which he himself has recently announced in a speech at Carrouges. The man who has been so long the unchallenged head of the anti-constitutionalist Opposition, the leader of the Union des Droites, the most ardent apostle of "parallel action" with the Boulangists, the President of the famous Committee of Twelve, who, as the *Temps* says, during that furious campaign concentrated in himself and incarnated all the plots and compromises and tricks and hates of the Republic's adversaries—even M. de Mackau at last accepts the Republic! Political observers may well enough ask, Who will be the next? But they will have no greater surprise than this—not even if they shall see M. Paul de Cassagnac himself beating his breast and saying his "Confiteor."

"A GIGANTIC BUNCO GAME."

THE above is the name which Mr. Henry C. Lea of Philadelphia gives to the Democratic canvass. The epithet occurs in a long article in last week's *Independent* on "The Duty of Political Independents." The reason why the Democratic canvass is a bunco game, and Mr. Cleveland the "bunco-steerer in chief," is that although the party has declared that a tariff for protection is unconstitutional, it nevertheless declares also that it has no intention of establishing immediate free trade. This is "bunco" No. 1. It is about as sensible as would be a charge of fraudulent pretence against a party which declared that the Government issue of legal-tender notes was unconstitutional, and yet also declared that it had no thought of repudiating such notes as were already afloat.

His next charge is that, in proposing the resurrection of State banks of issue as the best mode of providing an elastic currency, which Government paper is not and cannot be, the Democratic party must of necessity have intended to revive also all that was bad in the old State banks—that they must mean to restore the "red-dog" and "wild-cat" currency; that they cannot have had in their mind such banks as the Scotch or Irish, or the old New York or Massachusetts banks, and he describes the "red-dog" and "wild-cat" currency with some detail. Curiously enough, unconscious, we are sure, of the figure it makes him cut in the forum of morals, he then proceeds to accuse Mr. Cleveland of "dishonesty" for taking his stand on this currency plank of the Chicago platform. Any elementary book of ethics will tell him that to put the worst possible construction on an opponent's language, when an entirely different one is not only possible but far the more probable, and base on it a charge of fraud, is recognized by all moralists as a departure from truthfulness as well as from decency. We should pass such a performance on the stump from Major McKinley or "Tom" Platt without notice, but from Mr. Henry C. Lea—oh, the pity of it! He does take passing notice of the fact that there is "a vague pretence that restrictions can be imposed which will diminish the admitted evils of the old State banks," but, after arguing that in his opinion such restrictions would not be effective, he politely intimates that suggestions of this sort "can scarce deceive even those who make them."

These are, however, comparatively trifling matters. This article in the *Independent*, in which Mr. Cleveland is treated as "a bunco-steerer" because he does not agree with Mr. Lea on the tariff and the currency, was written by the same gentleman who, on the 10th of April, 1890, in an open letter to President Harrison, accused him in terms of having entered into an "alliance," after full warning of his character, with a man who ought to be "in the penitentiary," namely, Quay; of having accepted "his man" Wanamaker as a Cabinet officer; of having placed in the hands of this Quay, with this full knowledge of his character, increased opportunities for a fraudulent and corrupt use of the public service; and summed up by informing the President that "he had degraded his party to its lowest level, till it no longer deserved or enjoyed public confidence," and had "earned for it the denunciation of the Hebrew prophet, 'The heads thereof judge for reward, and the priests thereof teach for hire, and the prophets thereof divine for money, yet they lean upon the Lord and say, Is not the Lord among us? Therefore shall Zion for your sake be ploughed as a field and Jerusalem become heaps!'"

Now, neither President Harrison nor the party has changed in the smallest degree in the two years since this was written. Quay is as potent as ever in its councils, and Wanamaker is still in the Cabinet, and is carrying on the old games which Clarkson initiated, and the President has continued to use his patronage in exactly the way Mr. Lea had in his mind when he accused him of having "entered into a political partnership" with Mr. Quay. Yet when the Independents undertake to plough this corrupt Zion as a field, and turn this rascally Jerusalem into heaps, and chase away the venal judges, priests, and prophets, Mr. Lea turns on them and abuses them, and actually urges his friends to give another term in the Presidency to the partner of Quay and Wanamaker.

This is not all. He passes over without notice the fact that the Republican party introduced and forced through the McKinley Bill, as a means of making things dear. This is the object of any protectionist measure. It can have no other. If it did not make things dearer it would not protect, and would, in fact, be mischievous child's-play. Knowing this, President Harrison praised dearness, and denounced cheapness as un-American and degrading; so did McKinley; so did Lodge; so did Reed; so did they all. At the election of 1890, however, the voters expressed in a very forcible way their disapproval of dearness, and their desire, in common with the sane portion of the rest of the human race, for cheapness. Thereupon the Republican leaders turned round, and declared that the McKinley Bill was intended to promote cheapness and had done so. Here is a small specimen of this thimblerigging:

PRESIDENT HARRISON.

In March, 1888.	*In September, 1892.*
"I am one of those uninstructed political economists that have an impression that some things may be too cheap, so that *I cannot find myself in full sympathy with this demand for cheaper coats, which seems to me necessarily to involve a cheaper man and woman under the coats.*"	"In view of this showing of an increase in wages, *of a reduction in the cost of articles of common necessity*, and of marked advance in the prices of agricultural products, it is plain that this Tariff Law has not imposed burdens, but has conferred benefits, upon the farmer and the workingman."

MR. M'KINLEY.

Speech at Kalamazoo, October 11, 1890.	*Speech at Boston, October 4, 1892.*
"Well, now, they say you would have things cheaper if you only had a Democratic revenue tariff. Cheap! I never liked the word. *'Cheap' and 'nasty' go together. This whole system of cheap things is a badge of poverty, for cheap merchandise means cheap men, and cheap men mean a cheap country*, and that is not the kind our fathers builded. Furthermore, it is not the kind the sons mean to maintain."	"But they said this protective tariff law of 1890 was going to increase the price of food and diminish the wages of the laborer. It has done neither. *The necessities of life are cheaper to-day than eighteen months ago, the commodities that go into the household of every man and woman are cheaper than eighteen months ago*, and the price of labor has increased to some extent."

Now, what would Mr. Lea say to a man who sold him a freezer guaranteed to make ice, and, when it was found to produce nothing but hot water, should impudently maintain that hot water was what it was always meant for, and that hot water was far better than ice even for cooling purposes? Would he not promptly put the law in force against him? Could "Hungry Joe" play a worse trick on a confiding farmer? But bad as it is or would be, is it not in all respects worthy of the President's "political partners"? Nevertheless, not one word of mention does Mr. Lea make of this fraud in his letter, but actually bestows on Mr. Cleveland the epithets which it has earned for McKinley and his tribe.

ANTI-BOODLE LEAGUES WANTED.

A STEP has been taken in Massachusetts which ought to be imitated in this State and in the few others which have corrupt-practices acts. The new act of that kind which was passed by the last Massachusetts Legislature will have its first trial in the present campaign and election. In most respects it is the most stringent law of the kind yet enacted in this country. It requires a full accounting by both committee and candidates of all money spent, sworn publication being required after election. Its promoters are not content, however, with the enactment of the law, but have formed an association for the purpose of securing the law's enforcement. They have chosen Mr. Edwin L. Sprague of Boston President of their organization, which they have named the Election Laws League of Massachusetts. Mr. Morrill Wyman, jr., of Cambridge is the Secretary, and Mr. Richard H Dana of Boston is Treasurer. Among the vice-presidents are men prominent in both political parties, such as Mayor Matthews, Eben S. Draper, Sigourney Butler, Col. Henry Lee, Samuel W. McCall, Josiah Quincy, and William Endicott. The Executive Committee is also made up of representatives of the Republican, Democratic, and People's party, and one or two Independents. The constitution of the League declares its objects to be the dissemination of information relative to existing legislation designed to prevent corrupt practices in election,

and the exertion of zealous effort by the League's members to enforce the Massachusetts law and bring all violators of it to punishment. This is precisely the machinery needed in every State having such a law. So long as it is nobody's business to enforce the law, just so long will it be defied by the corrupters of the suffrage; but the moment there is not only danger of detection and punishment, but very positive assurance of both, the law will be respected and obeyed.

In New York State the need of such an organization is made more and more imperative daily through the publication of the remarkable series of "boodle circulars" which Mr. Hackett, Chairman of the Executive Committee of the Republican State Committee, is sending out. There have been a half-dozen or more of these captured by the enemy and published. Of the lot, three are such palpable confessions of corrupt designs that the *Tribune* and other Republican organs do not dare print them. The first one was dated August 31, and was directed to all the postmasters of the State. In it Mr. Hackett said:

"I desire to obtain from you the names of from eight to twelve of the most active, earnest, discreet, and *trustworthy* young REPUBLICANS *who will get their mail at your post-office.* I particularly wish, also, that you keep this request a secret, even from those whose names you furnish me. I want twelve names, but if there are but ten or eleven, send the ten or eleven; if only eight or nine, send them. *Your prompt service in this matter will not be forgotten.*"

When he had obtained the names of these "discreet" Republicans, Mr. Hackett sent out, presumably to them, his second and more famous circular, which the *Tribune* refused to print even as a paid advertisement, and which stated as follows the service he wished them to perform:

"DEAR SIR: I know you are an active, earnest, and sincere Republican, and that Republican success is dear to your heart.

"It is the desire of the New York State Republican Committee to be permitted to request you to do some particular service for the Republican cause from time to time during the canvass. *Such service will call for the exercise of caution and the ability to keep a secret.*

"Are you willing to undertake such duty to help secure Republican success? If you are willing to do so, *send me the name of a Democrat among your acquaintances who you believe can be induced to vote the Republican ticket this fall.* If more than one, give their names and place your letter in the enclosed envelope. Please sign the list with your full name and post-office address plainly written.

"*You may be sure that any service you may be able to render will not be forgotten.*"

There has never been any doubt as to the meaning of these two circulars. They reveal a "boodle campaign" as plainly as possible. On Thursday morning a third circular was published in the same series, which, while further revealing the plan of the campaign, shows that the boodle distribution has begun. It is addressed to the Chairman of the Republican County Committee of Schenectady County, and reads as follows:

REPUBLICAN STATE COMMITTEE,
FIFTH AVENUE HOTEL,
NEW YORK, October 17, 1892.

MY DEAR SIR: I enclose you check for $300. This is to be used in getting a full registration in your country districts. I don't expect any of it to be used in the cities, as you should have those taken care of by this time. Please acknowledge receipt.

Yours truly, C. W. HACKETT,
Chairman Executive Committee.

Henry Bradt, Esq., Schenectady.

In the rural districts of Schenectady County there are only about two thousand registered voters, of whom less than one-half are Republicans. To be able to devote $300 to the work of registering less than one thousand voters shows a very affluent condition of finances in Mr. Hackett's Headquarters. As the circular to the Schenectady Chairman has undoubtedly been sent to the chairmen of all other counties in the State, the scale of expenditure allowed for getting the country vote registered in each of the sixty counties can be readily calculated. The total is placed by Mr. Sheehan at not less than $260,000. Mr. Hackett says expressly that the cities have been provided for in other ways; and as the expense of doing this must obviously be far greater than that of the same work in the country districts, experts place the total outlay of Mr. Hackett's committee, for registering expenses alone, as high as $750,000.

It is preposterous to say that anything like such a sum of money is needed for the work. The use of it confirms the suspicion that has been prevalent for some time that the Hackett boodle plan is to bribe as many Democrats as possible to refrain from registering. After this work has been completed, other boodle will be used to bribe Democratic voters who have registered to stay away from the polls on Election Day. Offences of this kind are expressly prohibited by the Corrupt-Practices Act, under severe penalties. The offences of bribing a man to refrain from voting and of accepting such bribe are pronounced "infamous crimes" by the act, and a person convicted of offering such a bribe, in addition to imprisonment for not less than three months nor more than a year, will also be compelled to forfeit any office to which he may have been elected; and a person convicted of accepting such a bribe will, in addition to the imprisonment prescribed, be excluded from the right of suffrage for five years. It ought to be easy to obtain proof of Mr. Hackett's wholesale operations, provided there were an organization of men who should make it their business to collect such evidence; and the friends of honest elections in all parts of the State cannot do a greater service to the country than to make such organizations without delay. Let Mr. Hackett and his boodlers be given to understand that if they buy the Presidency, they do it at the cost of imprisonment and disgrace both for themselves and the men whom they bribe.

AN OLD BUBBLE PRICKED.

ONE of the oldest bubbles of the protectionist school, perhaps the oldest of all of them, is the affirmation that the manufacturing prosperity of France dates from the introduction of the protective tariff by Colbert, the Finance Minister of Louis XIV. This was a favorite argument of the late Judge Kelley of Pennsylvania, and has done good service in many a "campaign of education." This bubble is so effectually pricked by Mr. James Breck Perkins in his new history of 'France under the Regency' that it can never, we think, be inflated so as to do any valuable service again. Mr. Perkins proves conclusively that protective tariffs were in force in France before Colbert came into power, that he merely raised the duties, in the McKinley fashion, and that the result was a great depression of trade, and especially of manufactures, in France. It is shown that Colbert did introduce order, system, and personal honesty into the finances of the kingdom; that he abolished a lot of special privileges, and removed a lot of blood-suckers from the body politic. To this extent he was a public benefactor; but even these blessings did not offset the malign influence of his high tariffs, which ground the faces of the poor and eventually crushed the manufacturing industry which they were intended to promote. It should be added here that Mr. Perkins, the author of this notable work, is a Republican in politics, and was formerly elected by his party to the office of District Attorney in the city of Rochester in this State.

We take up this subject not because we consider the arguments drawn from Colbert by the protectionists very potent, but because the course that protectionism ran in his time and under his auspices has very much in common with our own economic history. Mr. Perkins shows first that protective tariffs can be traced back as far as the seventh century: "they can be found wherever trade was sufficient to attract the attention of the Government, and the facilities of transportation made it possible for one country to deal with another." Colbert found the "American system" (we believe that was what Mr. Clay and some others since his time called it) existing when he came into office. It had been enforced more or less by Philip the Fair, by Francis I., by Charles IX., and by Louis XI. French manufactures were not inferior to any other in the world at that time. Colbert set out with the fixed idea that money was the only form of wealth, or, as he put it: "It is the abundance of money in a State which alone makes the difference in its greatness and its power." In order to secure an abundance of money, it was necessary, in his view, to prevent the buying of foreign goods, and this, he reasoned, would have the additional blessed effect of providing employment for "our own people." We have heard something of this sort from our Mr. McKinley the present year.

It was a peculiarity of the period in which Colbert flourished that he did not need to consult anybody but the King

Practically he did not need to consult anybody about the finances, because the King concerned himself only with the spending of money, not with the raising of it. So all Colbert needed to do was to map out a policy and put it into execution. And here we can see how great minds run in the same channel, for Colbert, like McKinley, not only adopted tariffs, but bounties also, and monopolies on top of all. Foreign workmen were imported "under contract," and among these were some workers in tin from Saxony—not from Wales. Colbert had another idea, and that was that large establishments where multitudes of people are congregated together constitute manufactures, while the same number of people working at home do not. So he granted monopolies or gave subsidies, here and there, to carry out this conception. For example, he gave a monopoly for ten years in the making of point lace, which enabled the proprietors to pay 30 per cent. dividends, but he was obliged to protect the establishment against riots of the working people, who claimed that 8,000 persons had been forced to abandon the craft by which they had long obtained their livelihood, and the girls employed in the new manufactory complained that they were forced to work for less wages than they had formerly earned when working for themselves at home.

Another peculiarity of Colbert's system was that none of the manufactures started by tariffs, bounties, or monopolies was ever able to go alone afterwards, or to continue long on the amount of Government pap allotted to it, but was always asking for more. It was not necessary in those days for the protected or bountied classes to contribute money to carry the next election. Therefore, Colbert felt free to express his opinion about them. He never had any doubt about the efficiency of the system he was pursuing, but he berated the inefficiency of the particular persons whom he had chosen to illustrate it. "The merchants," he wrote in 1671, "do not try to surmount by their own industry the difficulties which they encounter so long as they hope to find easier means through the authority of the King. They seek to obtain advantages of every sort, and declare that unless aided their manufactures will be ruined." This might be said of the Dolans and Whitmans of the present day. Forty years after the manufacture of laces had been undertaken by the royal assistance, one of the subsidized manufacturers who had failed, applied to the King for a pension and it was granted. "Never have manufactures decayed so fast in the kingdom," wrote the superintendent from Rouen in 1685, "*as since we have endeavored to increase them by the interference of the Government.*" The system had then been in operation twenty-one years.

Mr. Perkins distinguishes between the disasters caused by the wars of Louis XIV. and those caused by the industrial policy of Colbert. A potent cause of the triple alliance against France and the war of 1672 was Colbert's tariff of 1667. As years rolled on, Colbert became more and more a protectionist and a pedant, and French industry sank lower and lower. He applied the paternal principle to the dyeing of cloth as well as to the making of it. Regulations were issued prescribing the width and the margin and the color of woven fabrics. "The artisan who, by accident, made a piece of cloth a few inches shorter or longer than the size prescribed, might be exposed in the public square, and consider his offence while boys threw rotten eggs at him." The same interference was applied to the industry of the colonies. "The planter in the West Indies had to raise and prepare his sugar to comply with usages established at Bordeaux. Girls were sent out to become wives of the colonists, and Colbert wrote the Governor that they must all be married within fifteen days at latest."

The thirty-eight pages which Mr. Perkins gives to the industrial policy and achievements of Colbert are very instructive and amusing, and especially so if one is inclined to make comparisons between the economic policy of those days and of our own time.

WAYS OF CHOOSING PRESIDENTS.

THE recent decision of the Supreme Court, sustaining unanimously and unreservedly the constitutionality of the district system of choosing Presidential electors which has been adopted in Michigan, brings up the whole subject of the best method of filling the chief executive office. This was one of the hardest problems which the framers of the Constitution had to solve, and so many and conflicting were the schemes proposed that for many days it seemed as though no agreement could ever be reached. The plan finally adopted was theoretically almost an ideal one—that each State should select a number of electors equal to the number of its Senators and Representatives, these electors to be the most eminent citizens of their respective States, and that they should pick out the most eminent statesman in the whole nation for its chief magistrate. So beautiful, indeed, was this theory that Hamilton, writing in the *Federalist*, thought it "not too strong to say that there will be a constant probability of seeing the station filled by characters preëminent for ability and virtue." Never did a theory more utterly collapse in practice. The framers of the Constitution were not dead before the Presidential elector had sunk into a mere machine, without a particle of independence, obliged to cast his vote for a certain candidate.

The method of choosing Presidential electors was originally left to the Legislatures of the various States simply because it was thought that different States might find different plans worked out by themselves better than any uniform system which could be devised. As the Supreme Court has just decided, the grant of power to the Legislatures was absolute. They might adopt any "manner" of appointing the electors which they chose, and various manners were immediately adopted. In half-a-dozen States the Legislatures named the electors. In New Hampshire an act was passed under which the people virtually nominated the electors, but the actual appointment was reserved for the Legislature. In Massachusetts the people of each Congressional district brought in their ballots for two candidates for electors, and the Legislature chose one of these two for each district, besides naming the two electors-at-large. The Legislatures of three States passed laws providing for popular election of the whole number of electors.

It is obvious that the absolute vesting of the appointing power in the Legislature of each State affords opportunity for sharp practice, and the "fathers of the Republic" were not above that sort of thing. Pennsylvania had chosen electors by popular vote in the first, second, and third Presidential elections, and although it was the practice to pass a law every four years which expired after each election, the system was regarded by everybody as a permanent one. In 1796 all but one of the fifteen electors thus chosen had been supporters of Jefferson. During the Adams Administration, however, the Federalists carried the State, and as the State Senators were elected by classes, for four years, that party in 1800 controlled the upper branch of the Legislature by 13 to 11, although more recent elections had given the other (Jefferson) party the Governorship and House of Representatives, and shown that it would again carry the State on a popular vote. Obviously the Jefferson men were entitled to the State. But the Federalists in the Senate would not consent to either a popular election or an election by joint ballot of the Legislature, where they would be outvoted. They held their ground firmly, and finally compelled a compromise by which a Jefferson State was made to give seven votes for Adams, as against eight for Jefferson, receiving therefor this glowing tribute from a Federalist organ:

> "The Federal thirteen deserve the praises and the blessings of all America. They have checked the mad enthusiasm of a deluded populace and the wicked speculation of designing demagogues. On reviewing the present aspect of our political affairs, it may be figuratively said, *They have saved a falling world!*"

The desirability of an amendment to the Constitution which would prevent a resort to such "dodges" as this was early perceived; and when the changes demanded by the Jefferson-Burr controversy were made, it was suggested that one part of the new system should be a provision for the choice of all electors by popular vote, the States to be divided for that purpose into districts. But the matter never got beyond the stage of newspaper discussion until 1813, when a proposition for such an amendment was made by a Congressman

from North Carolina, where the Legislature had suddenly deprived the people of their traditional right to choose Presidential electors. After some debate, the proposition was rejected by a narrow majority, but three years later the same member secured a good majority for his plan, though not the necessary two-thirds. During "the era of good feeling," under Monroe, it appeared as though the amendment would be carried through Congress. Between 1817 and 1822 the Senate twice sent such a proposition to the House, besides endorsing the principle a third time by nearly the requisite two-thirds; but the House each time either laid the matter on the table by a close vote, or failed to give it the necessary two-thirds, and finally, in 1822, refused to consider it at all. After this last rebuff the advocates of the change seem to have lost heart, and no further attempt to secure the amendment of the Constitution was made.

The drift towards the system of choosing all the electors of a State by popular vote, which was evident from the first, became so pronounced that after 1832 no State pursued any other method except South Carolina, which stuck to the practice of choice by the Legislature down to the civil war. The generation which has grown up since that time is so accustomed to the existing system that Congressmen and editors were found in Michigan who actually declared that they had never heard of any other, and that the adoption of the district plan would be "revolutionary." The Supreme Court has decided that the Michigan plan is entirely constitutional, but every candid man must admit that it is unfair and unjust for one State to adopt a system which gives one party an advantage over the other, as this does. All of the other forty-three States elect by popular vote, and the minority will not secure a single elector in any one of those forty-three States. It is not right that the Democrats of Michigan should get four or more of the fourteen electoral votes from that State, even if the Republicans have a majority of the whole popular vote, while the Republicans of New Jersey, for example, do not get a single electoral vote, although they may carry, as in 1888, a majority of the Congressional districts.

Obviously there ought to be uniformity in the matter, and the only way to secure such uniformity is by the adoption of a constitutional amendment. Only three systems will be seriously thought of—the common one, of electing all a State's electors by popular vote on one ticket; the district system in some form, most naturally by the choice of one elector in each Congressional district, and the two electors-at-large by the Legislature; and the election of President by popular vote of the whole Union, without the intervention of electors—the candidate who receives the most votes to secure the office.

THE COLLIERY STRIKE AT CARMAUX.

PARIS, October 12, 1892.

FOR nearly two months the miners belonging to the collieries of Carmaux, a small town in the Department of the Tarn, have been on strike. We have had in the last few years strikes more important in many respects—for the number of workmen idle, for the dis arrangement threatened in the public services, or for the sanguinary conflicts they have provoked. Of all such strikes, however, that at Carmaux is at once the most interesting and the saddest to note. Certain trouble-boding tendencies, hitherto more or less clearly outlined in the distance, have suddenly developed into concrete shape in a manner that causes anxiety; and, whatever happens, the counter-effects of present events will make themselves felt for a long time to come. It may even happen that the Ministry will be so affected by them as to fall upon the reopening of the Chambers.

One of the consequences of the principle of the liberty of labor, so say the political economists, is the right of workmen to combine together in order to obtain from their employers the advantages to which they may think themselves entitled by circumstances—such, for instance, as the raising of wages or the diminution of the hours of labor. Though the principle of the liberty of labor has been long recognized in France, it was only in 1864 that the workmen succeeded in making good their claim to be allowed to strike. Twenty years later a new law was passed, which considerably increased the facilities at their disposal when engaged in a struggle with the employers. After a series of debates that continued for several years, the Chambers voted in 1884 an important law in reference to kinds of trades unions (*syndicats professionnels*). By the terms of this law—affecting, it is true, the interests of the workingman in the greater proportion—both workmen and employers can freely combine; in other words, can form associations, without let or hindrance, of which the members shall belong to the same trade or profession. These associations, which are authorized to acquire property and to plead in a court of justice, may in their turn associate together and form larger amalgamations.

These trades unions were no sooner formed than they assumed great importance from the very fact that they grouped and disciplined large bodies of workmen, taught them how to agree on the claims to make, and how to act with greater unity. Certain large firms wished to prevent their workmen from thus acquiring greater power, and sought to hinder the growth of the unions. They refused to treat with them, or endeavored to weed out the workmen that belonged to them. As a result of this attitude, strikes ensued in which the workmen had generally the best of it; and so up to the present time the influence of the unions has grown, until now they are beginning to go beyond the purpose for which they were originally formed. Their original object was, as a matter of fact, a wholly economic one. According to the law, they exist for "the study and the defence of industrial, commercial, and agricultural interests." But by a kind of natural tendency and by reason of the close relationship existing between economic, social, and political questions, they come at length often enough to take up an attitude distinctly political. This is so at Carmaux. If in preceding strikes one might see political issues involved, yet industrial questions were clearly preponderant, and the ordinary strike, as I said above, was always one arising out of their treatment. In the Carmaux case the question is entirely different. There is no dispute here as to wages, hours of labor, or the recognition of a union. The workmen have struck for a reason purely political.

Among the workmen in the employ of the mining company was a man named Calvignac, who possessed considerable influence among the members of the trades unions. At the last municipal elections he was elected town councillor, and was chosen subsequently by the Council to be Mayor of the town. Absorbed by his new duties, he began, from the day of his election, to be more and more irregular at his ordinary work. Intimations were given him in reference to this state of things. It was either out of his power or not in his desire to take notice of them, and ultimately the company discharged him. This step at once caused a great commotion. The workmen protested. They declared that Calvignac had been sent away for the sole reason that he had been chosen Mayor, and that the company, with their capitalist and middle-class sympathies, were not willing to admit that such duties should be performed by a workman. So the workmen demanded his reinstatement. The company replied that it did not matter to them whether Calvignac were Mayor or not; but that since he did not attend regularly to the work he was engaged to do, they did not intend to keep him, and should maintain their first decision. The strike was forthwith declared, and the union that had given the order began to make arrangements for its continuance until such time as the company would yield.

As soon as this state of things was made public, a veritable swarm of politicians descended upon Carmaux, as indeed always happens in like circumstances—Socialist and workingmen Deputies who have made a sort of specialty of this kind of affair. In general these latter are men who reach the position they occupy by means of working-class agitations. For instance, one of them is a former innkeeper from the Department of the Nord, who, having been the ringleader in a certain number of strikes—innkeepers are only too willing to play this part, since suspension of work often enough fills their bar-rooms—acquired a notoriety among the Socialist party, and succeeded in getting himself elected as one of the Deputies for Paris. Men of this kind, who have nothing else to keep them in power but the popularity they acquire among the workmen, introduce themselves everywhere that an agitation arises, take the lead of the movement, and fan the passions already excited into greater activity. They know neither the difficulties nor the responsibilities of the employers, and if the strike is prolonged they are not the ones who suffer. Accordingly they never advise conciliation even when they are charged with a mediatory mission. They always seek to give the dispute the greatest importance possible, and, thanks to them, Parliament, which has really no concern in the matter, generally intervenes. A strike such as this one at Carmaux, being placed from the very first on a political footing, furnished these agitators with an admirable opportunity, which they have not been slow to take advantage of. They went about declaring, in one public meeting after another, that the discharge of Calvignac was an attack on the right of universal suffrage, which "Capital" sought to annihilate, and that the dispute between the company and the workmen was one of the highest import, since the latter were fighting

to maintain the rights of the people as a nation. Thus, through the action of these political agitators, the strike is being organized in a way hitherto unknown in France.

There is not, however, at Carmaux an entire unanimity of the workmen in reference to the strike. A certain number of them would be only too glad to go back to work, these being naturally the miners who do not belong to the unions, and who consequently are not amenable to the same spirit of discipline nor subject in the same degree to the agitators' influence. But their good-will is powerless. The trades unions will not permit these "suspects," as they are called, to come, even indirectly, to the aid of the company, and employ every means in their power to prevent the least resumption of work whatsoever. This situation ought, it would seem, to have brought about an intervention of the public authority; for if the principle of the liberty of labor authorizes the strike, it likewise forbids the strikers to prevent others from working. But the Government throughout the whole business has shown a weakness that cannot be too strongly condemned. It is true it has arrested some individuals concerned in a riot; and, in spite of the political pleading of their barristers, among whom figured naturally a Deputy of the extreme radical section, the court condemned them. But, on the other hand, the strikers have been considered as a regularly organized power. They have been permitted to organize a special police patrolling the town, and exercising in reality a watch over the "suspects," and, in order not to discontent them, the Government has countermanded the orders issued to troops that were to be sent to Carmaux to maintain order. What is more, during the parliamentary vacation which is still unfinished, at a time when Deputies lose their privilege of exemption from arrest, and can be arrested on the spot like ordinary mortals, certain Deputies have been allowed to make speeches constituting an offence in the eye of the law, and, clad with their official sash, to interpose between strikers guilty of some offence and the police who were proceeding to arrest them.

The reason of the Government's attitude is apparent enough: it is afraid of the attacks of the ultra-radical party. It is a constant rule, at least in France, that moderate majorities always yield to the pressure exercised by ultra minorities—our parliamentary history of the last few years furnishes a long list of examples. And the Government is all the more disposed to give satisfaction to the radicals in that there is often enough a very slender line of demarcation between them. The fundamental principles are oftentimes the same in both camps; and nothing is more embarrassing for a government with little that is homogeneous in it, and obliged to rely on a fickle majority, than to see itself attacked in the name of the very principles which it invokes, and to listen to reproaches from other republicans of not being really democratic or of betraying sound republican principles.

The humiliating attitude adopted in the present case by the Ministry does not, however, seem to succeed. First of all, it is a mistake to suppose that one can ever in politics succeed in maintaining power by means of indecision. The Radicals and Socialists will never rest content, and will become all the more exacting as they meet with less resistance. On the other hand, the Ministry will probably lose a good number of its supporters. Those who are beginning to be called the conservative republicans are of opinion that this compliance is going really too far; and the newspapers that seem as a rule the most disposed to admire the Government in everything, do not hesitate to blame its weakness. The session about to open is expected to commence its parliamentary labors with violent interpellations, and the fall of the Ministry is currently spoken of as almost certain to happen. But even if this prediction is not fulfilled, the Government will nevertheless be considerably weakened, and should it subsequently fall on some other question, most probably in the majority that will overturn it will be found Deputies who have fallen away from it in consequence of its attitude over the Carmaux affair.

Meanwhile, the situation at Carmaux remains the same. The workmen apparently are not willing to yield, and the company on its side is equally inflexible. It is to be supposed that a solution of the difficulty will ultimately be found; but even when work is resumed, there will remain more than the material loss for both shareholders and workmen—more even than a Ministry weakened or overthrown. This first strike of a purely political order will form a significant precedent that will not fail to be imitated. S.

THE FUNERAL OF RENAN.

PARIS, October 12, 1892.

WHEN I was living in the Latin Quarter, I often took long walks with a friend who had some literary ambition. He wrote afterwards a book which is well forgotten and which never had much success. I remember well, after so many years, what he said to me about Renan, who was at that time entirely unknown outside of the smallest circle of friends. I did not then know Renan myself and had never seen him; he had written nothing except a *thèse* on "Averroès et l'Averroïsme," not a very attractive subject, and this I had not read. "Renan," said my friend to me, "is the most surprising man you can imagine. Could you suppose that a few days ago he quietly unfolded to me his plan of life, in these terms: 'I am preparing a work on the history of Christianity; after the first volumes I shall be elected a member of the Institute. I prefer to enter first the Academy of Inscriptions—it is the most serious; afterwards I shall enter the French Academy. I intend also to be made a Professor at the Collège de France. For the present I am not going to meddle with politics; but later, when my reputation is made, I shall offer myself as a Deputy.'" All this was said, so I was told, in the most simple manner, with a decisiveness which did not admit of doubts or difficulties.

I have always kept this conversation in mind; it gave me the impression, which nothing has changed, that there was a very positive and practical side to the character of Renan, though, if you judge him only by his books, he appears merely an idealist. He had his way to make in the world, and he made it. I often saw him afterwards, when he became a candidate for the Academy of Inscriptions, at the house of M. Mohl, who was one of the most important members of this Academy. Renan became a member of it himself, he became a member of the French Academy; he did not become a Deputy or a Senator, and, whatever he may have said, his disappointment on this score was very great. Renan insists too much in many parts of his writings on his utter want of that practical spirit which is a necessity in politics; there is practicality enough in the electoral circular which he addressed in May, 1869, to the electors of the second district of Seine-et-Marne. It was the year before the war; the Empire seemed strong and secure. Renan said to the electors: "No revolution! I belong to no party; my conviction is that the best revolution would be mischievous, would impede material progress. . . . I am persuaded that the regular development of the present order of things will bring France into a situation in which the country will carry out its own will through the hands of its Government, and will realize without shocks the profoundest reforms." This language does not differ from the language of all the candidates of the time, official or non-official.

Renan was not elected; he received fewer votes than two other candidates. He was surprised. He had so well fulfilled every part of his programme that he found it difficult to explain to himself why the field of politics remained shut to him. He did explain it, however, and attributed his defeat to very remote causes. In his description of Tréguier, his native place, he speaks with inimitable grace of the cathedral, of the great monastic buildings surrounding it, of the legends of the saints of Brittany.

"It was," he says, "in this place that my childhood was spent and that I contracted an indestructible tendency. This cathedral, a masterpiece of lightness, a mad attempt at the realization of an impossible ideal, distorted me first. The long hours which I spent in it have been the cause of my utter practical incapacity. This architectural paradox has made of me a chimerical man, a disciple of St. Iltud, of St. Cadoc, in a century in which the teaching of these saints can have no application."

There is a page in his 'Souvenirs d'Enfance,' the book which will probably be the longest read, where Renan, analyzing himself (and nobody was ever more given to self-inspection), finds in his character and his aspirations two different tendencies, derived from hereditary causes. On his father's side he was a complete and true Breton; on his mother's side he was a Gascon. The Gascony explains many traits, many things, which the Brittany could not explain nor approve. Renan's case is, in some senses, unique. He began life in a clerical atmosphere, being destined for the Church. He was already on the steps of the altar; he was for many years in the state of mind and of heart of a true believer. This places him quite apart from so many other writers who have attacked or merely analyzed the Christian dogma. The scientific and critical spirit met in him the Catholic spirit; his infidelity, mingling with the remains of the lost faith, defended this faith against sarcasm, contempt, or hatred; the memories of his youth remained sacred to him, and enveloped themselves in poetic associations; in short, his soul became a sort of laboratory where conflicting elements constantly met—the theatre of unknown combinations of sentiment.

I witnessed the funeral of Renan from the window of a restaurant in the Place de la Madeleine. Many people were waiting on the flight of steps of the church and on the Boulevard. When the procession approached, a waiter kindly informed me of it, as well as the other people who were taking their breakfast. Everything was done with the precision which characterizes all French ceremonies. First came two lines of policemen to clear the way; then came dragoons, with their lances and their gay little flags, red and white, moved

by the wind; heavy gendarmes, on their strong horses, with shining helmets; an old general, on a fine Arab horse, looking very careworn and disconsolate; battalions of infantry, moving with unusual slowness behind their military band, which played a funeral march. Then came the crowns of flowers —immense crowns, carried each by two or four men; the crown of the *Intransigeant*, Rochefort's paper, followed by all the venders of the *Intransigeant* in their uniform; the crown of the Freemasons, the Great Orient of France; of the *Journal des Débats*, of the *Temps*, of I don't know how many societies and associations, each crown followed by a troop of people who seemed delighted at producing an effect on the bystanders. Now comes the funeral hearse, an immense catafalque, the same which was used for M. Thiers, drawn by black horses, each led by the hand. Under the immense structure, all black and white, I distinguish the green uniform of the Academician spread over the coffin; four Academicians, in that same green uniform, march by the car which carries their illustrious colleague. Now there is a movement in the crowd; there comes a fine coupé, with two beautiful horses, the coupé of the President of the Republic. The crowd admires the style of the Presidential vehicle. Then comes a crowd, somewhat disorderly, of Ministers, Senators, Deputies, Academicians, conversing with each other; among them are noticeable two or three generals in uniform, Gallifet, Saussier—"le reste ne vaut pas l'honneur d'être nommé." Great black carriages with black horses succeed; then come more soldiers, more infantry, more cavalry, more gay lances, and finally stern and gloomy batteries of artillery, with their shining silent guns, all ready for a fight.

This great pageant, I must confess, inspired me with nothing but sad feelings. This pomp of war, this theatrical show, seemed to me in bad taste. The crowd was indifferent—it knew but little of Renan. I could not remain indifferent—I had known him, and should have preferred that his funeral should not be the occasion for a sort of demonstration. I remembered that during the Second Empire, when Béranger died, who had never been a friend of the Second Empire, the imperial police surrounded his coffin and took him to his grave; afflicted, but inflexible, the police never allowed the people to break through its ranks. There was in the character of Renan, in his habits, in his domestic life, a simplicity which was not in harmony with the outpourings of official eloquence, with the pomp of state ceremonies. Nobody would have felt more keenly than he the incongruity of the military splendor of such a funeral; he would have delighted in analyzing the sentiment of some of these peasants' sons, dressed as soldiers, who followed to the grave a man who was a pure civilian, and of whom probably they had never heard before. If, hidden behind one of the columns of the Madeleine, he could, like Charles V. in his convent, have witnessed the rehearsal of his own funeral, what ironical remarks could he not have made!

M. Mohl, of whom I have spoken, and who was one of the first patrons of M. Renan, had a friend called Fauriel, the author of the 'Histoire de la Gaule Méridionale' and of the 'Histoire de la Littérature Provençale,' two very distinguished works. When M. Fauriel died, he left no family, and his funeral was at the expense of the Institute. M. Mohl, as his intimate friend and a member of the Executive Committee of the Institute, had to see to the details of it. I remember his telling me how he negotiated with the agent of what we call the "Pompes funèbres." "The Institute wishes to give M. Fauriel a funeral suited to his importance and his character, without making an extravagant outlay." "Of course," said the agent, "you will have green Bengal lights burning in the church at the corners of the catafalque?" "Green lights!" said M. Mohl; "no, I think we will do without green lights." "But surely, you will have silver tears on the hangings?" "As for that, no; we will shed the tears ourselves."

Renan had the silver tears and the green lights, and God knows what; he had the spontaneous generation of I don't know how many speeches and newspaper articles; but it would have been more agreeable to his real friends and his real admirers if his end had had something of the poetical simplicity of his beginning.

ASSISI AND ST. FRANCIS.

ROME, October, 1892.

ST. FRANCIS of Assisi, the great unrivalled mediæval reviver of the power and vitality of the religion of Rome through the new addition to its appeals to the devotion of simple minds, in that great scheme of self-abasement and self-sacrifice which seems to have held such thrall over the Southern European races, and especially the Italian, has made his native Assisi a place of pilgrimage for six centuries. Reared on an eminence of the great central plain of Umbria, the city (chief among its buildings the great convent and double church which was the school of ascetic Christianity) is a landmark for many leagues around. Across the valley of the Tiber, which drains the underlying plain, rises on another hilltop Perugia, birthplace also of a form of worship which, like the Franciscan, still keeps, though a fading reflection, the fascination of a past phase of true human life and aspiration. The Umbrian art and the Umbrian religion are things of the past, but live in the reverence of the pilgrims who throng to both cities.

Looking from Perugia towards Assisi, we recognize the landscape so often painted by Perugino, Pinturicchio, and Raphael—the river winding with serpentine grace at first through green and brown hills, then away through a series of mountains growing blue in fainter shades and melting into a silvery sky as they succeed each other in the distance. Those old Umbrian masters never wearied of repeating this landscape with the changes their foreground and figures demanded; and they were right, for no country is more decorative in form and color than this. Dante, also, mentions Perugia, with the mountains seen in the distance, and Assisi. In his day the fame of St. Francis was at its zenith; the monument in honor of this follower of poverty, the marvellous church, had already been completed, and the memory of the saint was cherished by a multitude of followers. To this day the principal buildings which stud the hillside and the vast plain, and even Perugia, are convents, monasteries, and churches in honor of St. Francis and of Santa Chiara. One is awakened by the sound of convent bells for matins, and for this reason the traveller who sleeps lightly need never miss the opportunity of seeing the sun rise in all its glory above the ultramarine blue hills (Subasio, in a cleft of which lies Assisi, being the principal) that form a cup round the mist-covered plain. It is in this vaporous light and amid the exquisite golden haze of sunset, like an atmosphere of miracles, that the naïve stories told in the "Fioretti" of St. Francis by his followers seem credible.

We happened to be at Assisi while they were hanging small crystal prisms around the lights in the lower church, and were told that these preparations were being made for the Festival of St. Francis on the 4th of September. The monk who showed us about said there would be splendid music; we inquired if they would chant a mass of any of the old composers, but he answered with dignity "that they used old music on ordinary occasions, but a maestro of their own had written something new in honor of the great day." He added that this festival attracted all the peasants from the neighboring villages and towns, bringing together a great concourse of people. We were curious to see if religious feeling still remained among these Umbrian peasants, whose manners are so gentle and courteous, so we determined not to miss the festival; and in order to see all there was of fasting and feasting, we arrived in Assisi the afternoon of the 3d, the vigil of the feast.

We were too early for vespers, so we walked up to the higher church, which is still in the hands of workmen restoring the handsome sixteenth-century choir which had been removed by the orders of the Government, and which is now being put back into its former place, since public opinion so much blamed its removal. We wandered through this splendid example of polychromatic architecture, admiring the tender pathos in Giotto's rendering of the "Fioretti," and the grandeur of the conception of Cimabue's angels in the roof of the nave. We sat on the red papal throne of Assisi marble, in order to judge better of the effect of the church from this central position; then we descended to the sacristy, where the splendid vestments were being prepared. The monks were not too busy to converse with us and give us all the information we desired. Above the door hangs a Byzantine-looking picture of St. Francis by Giunta Pisano, said to be the most authentic of his portraits, having been painted only two years after his death, in 1230. The abbot allowed us to examine the rich embroideries of the chalice cloths he was choosing from, and, on being questioned about the music, answered with a sigh: "We cannot produce anything really fine nowadays, and we are too poor to give any great work of our old composers. We are but fourteen in number here. The music they write now appeals only to the senses." He shrugged his shoulders with a pathetic gesture, and continued to deplore the want of appreciation for artistic things and the corruption of taste brought in by the new régime.

We next visited the convent, which has been turned into a Government school for the sons of municipal teachers. The dormitories looked airy and scrupulously clean. There is a splendid terrace on arches where the monks used to walk, and from which there is an extensive view of the plain cut up by brown serpentine lines, the changing bed of the Tescio, a river which flows into the Tiber at Bastia when the rains permit. This Umbrian plain, bordered with mountain-tops peering one above the other, has an ineffable melancholy, a sentiment of past activity and present inertia, although it is so highly cultivated and produces corn, wine, and olives.

It was now four o'clock, time for vespers. The acolytes were lighting the tapers as we walked into the solemn gloom of the lower church. The effect of so many thousands of lights in groups round the high altar is impressive, and the frescoes were much easier to

see than by daylight. The tawdry little chandeliers looked well once lighted up. The choir was reserved for the officiating priests and the canons. The archbishop's throne, which remained vacant, was covered with cloth of gold; the monsignori and abbots sat on seats covered with tapestry; the walls below the frescoes were hung with red cloth bordered with gold braid.

The chanting began to a full accompaniment of organ and stringed instruments (the organ, by the way, was always much too loud). The bishop and accompanying prelates, after walking in procession to their places, and the six officiating priests in vestments of gold cloth, knelt before the altar. The service being fully choral, the perfect immobility of the bishop was the chief characteristic in his part of the ceremony after the changing of his mitre, which is accomplished with great form. The music was disappointingly melodramatic; had one closed one's eyes to the surroundings, one might have supposed himself at the opera, the changes and variety of movement were so similar; there seemed to be a military march, a love duet, a ballet, and the never-failing solos, for soprano, contralto, tenor, and bass. It was all commonplace and poor, having no connection either with the church or with the saint we were there to honor. The church was by no means crowded; a row of nuns sat within the priests' enclosure, and there were children and country people in the body of the church.

As we walked to our inn, the streets leading to the upper town seemed as empty as usual. Some tame rabbits came down a side lane into the paved street to nibble the cabbage stalks lying in the gutter. The children we met begged persistently, as is their wont, although many of them looked well-to-do. The women were leaning out of windows, and chatting to those drawing water at the fountains; some were watering their red carnations in the iron brackets at the side of their window. We had been wondering at the fondness for scarlet carnations among the poor of Italy, but we were told they bring good luck, which explains why they are so carefully tended. They are to be seen in almost every window, in pots or old petroleum tins. The upper town, however, was more full of movement; booths lighted with strings of colored paper lamps were being set up, with every kind of cheap toy, and already the sound of the penny trumpet was painfully prevalent. At the theatre they were giving "Esmeralda." The prima donna was staying at our hotel—a handsome young woman with a powerful form, column-like throat, and large rolling eyes, which she had strongly emphasized with a bold line of black. She dined with her elbows on the table, discoursing meanwhile in a kindly vein with the head-waiter. We remained proof against her attractions, and resisted the temptation of the theatre in order to be up early the next morning.

The church bells broke the silence of the night at three and continued to peal forth at intervals till dawn. We had promised ourselves a walk to the "Carcere" in the early morning, the sanctuary to which St. Francis used to retire to pray, and where he is said to have wrestled with the devil. The road leading to this mountain gorge is up-hill all the way, through olive orchards whose pale, bluish foliage is here and there relieved by dark green cypresses; and as one climbs he sees the stone walls of Assisi and the castle overcapping the town. The good monks who live at the sanctuary were, like ourselves, going to attend high mass at St. Francis's Church below at ten, so we had no time to tarry. We looked into the Duomo (early twelfth century), dedicated to St. Rufinus, as we passed, to see the font at which St. Francis was baptized. It is a plain stone basin, entirely railed in with an iron grating to protect it. The streets were showing signs of life by this time; people were hurrying to the great church, dressed in their best garments; pigs roasted whole, stuffed with raisins and herbs, were being carried on long poles to conspicuous corners of the town, where they were to be cut up and sold by the pound. Along the arches leading to the church the omnibuses were drawn up after discharging a horde of visitors from neighboring towns. We were everywhere assailed by the inevitable beggars, who make capital by displaying their deformities at every festa. "For the love of the blessed St. Francis, give me a soldo, and I will pray daily for you." The venders of melon seeds, rosaries, and little medals were also clamorous. We found the church already crowded with people, for the poorer portion of the community, wishing to see and to hear all, had climbed up the little flights of stairs to the galleries and had gathered as near to the high altar as the railing permitted. There were children's schools brought from far and near. The peasant women wore yellow or orange handkerchiefs for the most part. We saw many extremely handsome faces with black eyes; one or two among them were of a singularly beautiful Etruscan type, like figures from an ancient vase.

The innumerable tapers being lighted, the chanting began, and the bishop, in most splendid vestments, attended by his cortège of monsignori and priests, went in procession round the church before officiating at the high altar, where the usual ceremonies of high mass were gone through, with all the pomp and form which are so imposing. As a spectacle this mass was singularly telling. The bright cold daylight, coming through the jewel-colored glass of the stained windows, blended with the warm yellow light of thousands of small wax tapers, and the clouds of incense produced a haze above the living figures in the comparative shadow below, while it lighted up the frescoes on the vault and showed them brighter and clearer than they are ever seen by simple daylight. This effect was concentrated round the high altar, where the most tapers were, while around through the chapels in the aisles a crowd of people was circulating—people come to see the show, greeting their acquaintances, whispering, staring right and left in search of friends, sometimes repeating a prayer at a side altar, but paying but little attention to the mass. The music was of the same popular, melodramatic quality as that of the night before, reminding one of the old Italian operas which since Wagner's time have fallen into discredit. Only at Assisi could this kind of music be produced as novel or composed for any special occasion.

A double flight of steps leads to a crypt beneath the lower church, in which the body of the saint was found early in this century. A priest was holding a silent mass in the underground chapel, in which only snatches of the music could be heard. Here we found people prostrate in fervent prayer, absolutely unconscious of any lookers-on. These few alone seemed to show any religious fervor.

At mid-day the mass was over, so we gladly repaired to our inn. We were amused at the incongruous mixture of guests round the same table—actresses, priests, artists, distinguished foreigners, and a sprinkling of titled folk from their country-seats, all good-humoredly eating and drinking together and joining in general conversation; only the priest, seated by the fascinating actress, persisted in keeping his eyes on his breviary when not occupied in eating.

The fair on the piazza was now at its height. The lamp-posts were decorated with little tricolor flags, and the booths extended down one street, though the objects sold were very similar and extremely limited as to choice. Penny toys, sweets, bad English cutlery made expressly for the foreign market, Venetian glass beads, chaplets, bright-colored handkerchiefs, felt hats, with cheap stuffs from Switzerland and tawdry silver ornaments, formed the staple of the show, from which the visitors chose remembrances to take away and exchanged presents with their friends.

At St. Francis's Church there was another full service for vespers, and between eight and nine the little paper lamps were lighted all over the town for the illumination; a few fireworks were also sent up from the piazza; but after nine all was quiet at Assisi, and the festa was considered a success. S. S.

Correspondence.

STATE BANK CURRENCY.

To the Editor of The Nation:

Sir: With all my respect for M. D. Harter as a man of sound financial views, I cannot assent to his position that the prohibitory tax on State issues of paper money can be repealed without bringing in many of the evils of the wild-cat currency before the war. Mr. Harter seems to think that if there is a large amount of good paper money in circulation, such as greenbacks, national bank-notes, and other notes fully secured and readily convertible, no other and weaker currency could be floated alongside of it. This is an erroneous view, and just the opposite of what is known as Gresham's law. The experience of our own country tells a different story. The paper money of New York and New England was always at par, yet many people in the South and West had to take in payment, and took in payment every day, notes depreciated from one to five per cent.

I am fully aware that banks will not receive any currency that is not legal tender and is less valuable than the best, unless at a discount; I am also aware that wholesale dealers, railroad officials, and tax-receivers will refuse any currency which the banks in their neighborhood do not receive on deposit at par; but it does not follow hence that the inferior currency cannot be floated. It will be taken—whether gladly or reluctantly, is indifferent for my purpose—by workingmen and workingwomen, when it is offered to them for their wages; the grocer and the saloon-keeper will accept it from them, reimbursing themselves fully for their loss by scant measure or a lower grade of goods. In fact, the men and women who toil and who can least afford to lose, will be the heaviest, probably the only losers, and the so-called bankers who issue the stuff the only gainers.

I can give you a little story by way of illustration. In the winter of 1879-80, when silver had become sufficiently depreciated to make the Mexican dollar worth about 88 cents in American gold, and thus considerably less than the "dollar of the daddies" to which people were accustomed, a couple of bankers in a

Kentucky town went into the speculation of importing a large lot of Mexican dollars, which they sold at a profit, but still at a discount, to a number of heavy employers of labor, who paid them out in wages at par. The workingmen paid these dollars out for a week or less without loss, the retailers and saloonmen being glad to get the shining disks, which were slightly heavier than the legal-tender dollars. But when these retailers and saloon men came to deposit the Mexicanos in bank, even in a bank the president of which had imported the deceitful stuff himself, they were thrown out, and, as the news gradually spread over town, these dollars became uncurrent, and every poor workman on whom they were palmed off lost ten or twelve cents on every dollar that he still held.

The same result will always follow from a mixed currency: business men will protect themselves, the toilers will be fleeced. I agree with Mr. Harter and Mr. Sherman that the national-bank currency must soon come to an end, as the people are unwilling to keep a national debt outstanding for the purpose of making the bonds a basis of good paper money; but it does not follow that State paper issues should again be allowed, unless it can be done under such a national guarantee as will prevent the floating of any currency which is liable to even the slightest discount.

Respectfully, LEWIS N. DEMBITZ.

LOUISVILLE, KY., October 20, 1892.

THE TARIFF ON TOBACCO.

TO THE EDITOR OF THE NATION:

SIR: A bright and well-informed correspondent of the *Tobacco Leaf* (issue of October 19, p. 9), writes from Cleveland, O.:

"Tariff-prophet McKinley has been in receipt of many letters addressed to him by tobacco men in regard to the tobacco schedule. It is hinted that the Governor has promised, black on white, that the grievance would be looked into and remedied, provided his petitioners would be instrumental in helping the Republican cause of the nation in November. McKinley has been credited with veracity and honesty, and in the foregoing furnishes us with a direct means to find him out."

The way in which the Ohio tobacco-growers are to test McKinley's "veracity and honesty" is interesting. Bribery and corruption seem to taint every phase of protective-tariff politics.

Curiously, in the same paper is given an interview with one of the largest tobacco-dealers in New York, pointing out how the enormous duty of $2.00 per pound on imported wrappers has hurt American growers, owing to a striking peculiarity of the trade: "Cigars must be sold at the same price and have the same external appearance—that is, have *Sumatrá* wrappers." Hence, the cigar-maker must save on his filler—that is, buy the domestic article cheaper. T. B. B.

NEWBURGH, N. Y., October 21, 1892.

UNIVERSITY INSTRUCTION IN JOURNALISM.

TO THE EDITOR OF THE NATION:

SIR: I have only just now seen the thoughtful article devoted, in the *Nation* for October 6, to the consideration of what is proposed in the way of educational undertaking in the University of Chicago. I beg, on my own part, as member of the faculty of instruction, to thank you for the friendly freedom of your critical suggestions, both those that approve and those that doubt or even censure.

As to the one point of what is said about the course offered in "journalism," let me explain that no one feels more strongly than does the instructor immediately concerned, that such a course, considered as supposed to be adequate, would well deserve to be pronounced "delusive." But assuredly one might fairly hope to make in a good degree profitable instruction that should go no farther than, for instance, to put into just and effective comparison the very different ideals and standards of journalism represented respectively by two such dailies as the *World*, on the one hand, and the New York *Times* on the other; and, again, to put into like comparison the different types of journalism prevailing in the United States, on the one hand, and in Great Britain on the other. If the influence of the instructor should be decisively given in favor of what the *Nation* itself, with all other competent judges, would say was the better standard and ideal, would not something substantial have been gained? And if students should, besides, have practice in writing editorial articles and paragraphs on current topics, perhaps also in "reporting," under criticism carefully directed to make the product good in substance, in spirit, and in form, might not even a few weeks of such discipline be at least something better than nothing at all? In the end, there might be created a demand, which would be responded to here, for university education in journalism more like what the *Nation*, with the writer hereof, would regard as satisfactory. WILLIAM C. WILKINSON.

UNIVERSITY OF CHICAGO, October 14, 1892.

THE SIGNING OF THE DECLARATION.

TO THE EDITOR OF THE NATION:

SIR: I cannot see that the point raised by your correspondent "C." in the *Nation* of October 20 affects my statement, in *Scribner's Magazine*, as to the influence of the weather on July 4, 1776. The myth that the great heat forced the members to agree to the *adoption* of the Declaration, which I supposed I had ended, can hardly be revivified by claiming that the *signing* did not take place on July 4, but on August 2. The *adoption* was disputed, and so the weather might have formed an element in affecting the disputing members. The signing was never disputed, and indeed was mandatory. The heat of August 2, therefore, could not affect the *Declaration* of Independence, for it was already an accomplished fact.

As to the question whether the Declaration was not signed on July 4, we are hardly in a position to say positively, the most recent evidence tending to prove that there was a formal signing of a copy on that day. Certainly, if it was not signed on that day, it is to be questioned if there ever was such a formal signing. It is true that the "engrossed copy," according to the Journal of Congress, was signed on August 2, but the Journal is untrustworthy, and would have been apparently more accurate if it had stated that it was ordered signed. The truth is, that less than half of the fifty-six men whose names are attached to it were in Congress on that day, most of them, in fact, being in their own colonies. To give the proof of this in full would be too long, but a sample delegation—the Virginian—will illustrate it sufficiently. As inscribed on the engrossed copy, they stand thus: Wythe, R. H. Lee, Jefferson, Harrison, Nelson, F. L. Lee, Braxton. Of these, only Harrison was in Philadelphia on August 2, Jefferson being absent from the city for two days. Thus, as a curious bit of contradiction, the only Virginian delegate who could have signed the Declaration on August 2 was Harrison, who had opposed its adoption. On August 20 R. H. Lee arrived from Virginia, and was followed on September 3 by Nelson, and by F. L. Lee on September 7, while Wythe did not attend till well into the next year. The most curious case is Braxton's, who had left Philadelphia on July 22, 1776, and, not being reëlected, never returned to the Congress as a delegate. Yet he signed the Declaration, and was, so far as I know, the only man not a member of Congress who did so. It must, of course, have been done on some subsequent visit to Philadelphia. In short, the signing of the engrossed copy of the Declaration must have been a desultory affair, done by each member at his convenience, and in one case not inscribed till 1781.

Thus "C." will find that historic statements are ever subject to revision, as the investigation of history grows broader and deeper; and that even incidents hitherto not "disputed," and of which there can be "no doubt," may prove as mythical as the temperature of our nation's birthday.

PAUL LEICESTER FORD.

CENTURY CLUB, NEW YORK.

Notes.

A NEW work on the 'Local Indian Names of New York,' with names from other States, by the Rev. W. M. Beauchamp, will shortly follow his 'Iroquois Trail.' It will be published at Fayetteville, N. Y., by Howard C. Beauchamp.

The Cambridge (Eng.) University Press will issue during the present season, among other works, 'The Growth of British Policy,' by Prof. J. R. Seeley; 'The Science of International Law,' by Thomas Alfred Walker; 'Ancient Ships,' by Cecil Torr; 'The New History,' a circumstantial account of the Bábi movement in Persia, from its first beginnings to the death of its founder (A. D. 1844-1850), by Edward G. Browne; the fifth volume of the 'Collected Mathematical Papers of Arthur Cayley,' to be completed in ten volumes; and the second volume of the late I. Todhunter's 'History of the Theory of Elasticity and of the Strength of Materials,' edited and completed by Prof. Karl Pearson.

Longmans, Green & Co.'s fall publications will include 'Fifty Years in the Making of Australian History,' by Sir Henry Parkes, Prime Minister of New South Wales 1872-5, 1877, 1878-9; 'Twenty-five Years of St. Andrews,' being the second volume of reminiscences by Dr. Boyd (the "Country Parson"); 'A Selection from the Letters of Geraldine Jewsbury to Jane Welsh Carlyle,' edited by Mrs. Alexander Ireland; 'The Ruined Cities of Mashonaland,' an account of excavations and explorations 1891-2, by J. Theodore Bent; 'St. Peter and the First Years of Christianity,' from the French of the Abbé Constant Fouard, by G. F. X. Griffith; 'Letters to Young Shooters,' by Sir Ralph Payne-Gallwey; 'The Formation of the Union, 1750-1829,' by Prof. Albert Bushnell Hart; and 'Longmans' Object Lessons,' by David Salmon.

The second part of the second volume of the late Prof. Bernhard Ten Brink's 'Geschichte der Englischen Literatur' (Strassburg: Trübner) has just appeared, and comes down to the reign of Queen Elizabeth. The work will be completed in two additional volumes by the author's successor at the University of Strassburg, Prof. A. Brandl, who will use Ten

Brink's posthumous papers and treat the subject in the same general spirit.

Dr. Wilhelm Busch, a pupil of Maurenbrecher and professor in Leipzig, has published the first volume of 'England under the Tudors' (Stuttgart: Cotta), which is devoted to the reign of Henry VII., and traces the gradual growth of absolutism, culminating in Cardinal Wolsey's arbitrary rule under Henry VIII. The work is to be completed in six volumes and to conclude with the death of Elizabeth.

All published accounts of the character and contents of Ibsen's forthcoming drama are mere conjectures. The poet is exceedingly reserved in ordinary social intercourse, and almost morbidly reticent and absolutely interviewer-proof as regards his literary plans. The betrothal of his son, Dr. Sigurd Ibsen, to Miss Bergliot Björnson is an event invested with a certain literary interest on account of the well-known antagonism existing between the fathers of the youthful pair in their views of poetry and politics. The antagonism, however, is a disagreement in opinion, and has never degenerated into personal animosity. Björnson has a strong liking for young Ibsen, who sympathizes with his prospective father-in-law's political aims, while Ibsen shows a marked fondness for his son's attractive and highly intelligent bride.

The *Bookman* states that one of the illustrations in the new edition of Green's 'Shorter History of England' will be a portrait of Oliver Cromwell's mother, photographed from a picture in the possession of a direct descendant which was discovered by the historian himself in a country house. This October number of the *Bookman*, by the way, is itself noticeable for the portraits it gives—of Prof. Henry Drummond, of Emily Augusta Patmore, and of Mrs. W. K. Clifford. Mrs. Patmore's face would seem to have had a certain resemblance to George Eliot's, of which writer some unpublished letters are given in the same number. They belong to the period 1838-1850, and show a marked change in religious sentiment of Miss Evans, who begins with scruples against oratorio, and doubts if it be "consistent with millennial holiness for a human being to devote the time and energies that are barely sufficient for real exigencies to acquiring expertness in trills, cadences, etc." Her correspondent was a Miss Martha Jackson (now Mrs. Henry Barclay). The anonymous contributor to the *Bookman* of so many good papers about Carlyle now opens up several chapters on George Henry Lewes which promise to be not less piquant.

An important quarto volume, of 414 pages and 12 plates, by Capt. Charles Bendire, entitled 'Life Histories of North American Birds, with Special Reference to their Breeding Habits and Eggs,' is published by the Smithsonian Institution as Special Bulletin No. 1 of the United States National Museum. It deals with the gallinaceous birds (Grouse, Partridges, etc.), Tetraonidæ, Phasianidæ, and Cracidæ; the Pigeons or Doves, Columbidæ; and the birds of prey (Vultures, Falcons, Hawks, Eagles, and Owls), Cathartidæ, Falconidæ, Strigidæ, and Bubonidæ. The plates contain 185 beautifully colored figures of eggs, illustrating those of nearly two-thirds of the birds mentioned in the list. The title describes the contents of the book very well. Descriptions of nests, eggs, and habits and the geographical distribution are given, but detailed descriptions of the birds are not attempted. Only sufficient synonymy is introduced to fix the authorities directly responsible for the name adopted. From the nature of the case, the histories are the product of numerous detached observations, frequently by a number of different observers. The work is admirably done, and the author is to be congratulated upon having produced a standard work of so much excellence. In most cases of conflicting authorities his judgment is satisfactory; an occasional item still needs verification. Among the remarks on the burrowing owl (*Speotyto hypogœa*) the following occurs: "Frequently when within a foot or two of the nest proper, and before it was yet visible, the occupant made a rattling noise, produced by the rapid movement of its mandibles, which sounded very much like the warning of the rattlesnake when disturbed. This would easily impose on the average investigator, and, proceeding out of the burrow, somewhat muffled and subdued, is very similar indeed to the rattle of the latter." Others, who have kept the young owls in camp, are equally positive that the sound is a scream, and not a rattling of the beak.

The third edition of 'Berghaus' Physikalischer Atlas' (Gotha: Justus Perthes), of which the first sheets were printed in 1886, is just out. It comprises seventy-five maps in seven divisions, containing in all 514 graphical representations of the latest results of scientific research in geology, hydrography, meteorology, terrestrial magnetism, the distribution of plants and animals, and ethnology. The first edition of this work was prepared by Heinrich Berghaus and printed in 1836. The present one was edited by his nephew, Prof. Hermann Berghaus, who died December 3, 1890, and therefore did not live to see its completion. The price of this magnificent volume is eighty-two marks (820).

The extent and variety of the recent French contributions to geographical science are very well shown in the last Bulletin of the Société de Géographie. It opens with a brief description of the work of the recipients of the nine annual prizes awarded by the Society, among whom M. Élisée Reclus stands first with the "grande médaille d'or." This was given in consideration of the completion of his monumental work, the 'Nouvelle Géographie Universelle,' of which the publication began in 1875 and was continued in parts that appeared "with absolute punctuality during 900 weeks." Prince Albert of Monaco also received a gold medal for his researches during the past nineteen years into the direction and strength of the ocean currents, and the depth and temperature of the sea, as well as into the marine fauna in general. The result of these investigations since 1885 is now in course of publication. The other medallists were men who had made extensive explorations, often years in duration, in Indo-China, Persia, Guiana, Equatorial Africa, and Egypt. The Society very appropriately awarded a special gold medal to M. Ch. Maunoir, to commemorate the completion of his twenty-fifth year's service as its Secretary. It was also announced that his annual reviews of the progress of geography, accompanied by maps and an index, would be republished, forming a work in three large volumes. Among the papers in the Bulletin is one upon the temperature of the Arctic regions, illustrated by a map with the isothermal lines for July, 1882, and January, 1883, and an interesting account of a recent exploration of the Ivory Coast. In the latter the writer dwells strongly upon the evil effects upon the natives of alcoholic liquors sold them by the English merchants who have the monopoly of the trade upon this coast.

The poverty and destitution prevalent among the Europeans and Eurasians of Calcutta has at length become the subject of a Government investigation. From the minute of Sir Charles Elliot, the Lieutenant-Governor of Bengal, it appears that nearly one-sixth of the Europeans and one-fourth of the Eurasians are dependent upon charity, and their number is increasing with each generation. This condition, which, he says, can scarcely be paralleled in any other community in the world, is attributed, apart from climatic causes, to the competition of Bengalis for the subordinate posts in the public service and in the mercantile offices, once filled wholly by the Indo-European community, to the maladministration of charitable relief, and to early and improvident marriages. What renders the problem more difficult to solve is that, as a class, a large proportion prefer to depend on charity rather than on their own exertions; the spirit of self-help is rapidly dying out. The Government is able to suggest no real remedy for this pathetic and dangerous state of things. It has apparently exhausted every effort to secure education and employment for the children of European parents without checking the evil. In the Sibpur Engineering College, for example, where, at a cost of $18 a year, there is given "a training fitting an apprentice to become a foreman mechanic," there are a large number of vacancies in what may be termed the Government scholarships. The fall in the value of the rupee, too, tends to intensify the evil, since many parents are now unable to send their children to England to be educated; and apparently to bring them up in India is practically to condemn them to "the submerged Fifth."

The whole of No. 63 of Proceedings of the U. S. Naval Institute (Annapolis, Md.) is given up to six illustrated lectures on "First Aid to the Wounded and Transportation of the Wounded," by Surgeon H. G. Beyer. It forms a useful physiological summary even for the general reader.

The October Bulletin of the Boston Public Library is distinguished by several interesting facsimiles of Revolutionary broadsides of the years 1773-1775, and by a list of the Columbiana in the Library, where a rare Columbian exhibition is in progress.

Prof. E. Lattes, the well-known archæologist of Milan, reviews in the *Perseveranza* of October 5 Prof. J. Krall's memoir on the inscribed Etruscan mummy-bands in the Agram National Museum, just published with illustrations by the Vienna Academy of Sciences. Prof. Lattes will make a report on the same subject before the Royal Lombard Institute on November 10. He considers the inscriptions to be especially concerned with funeral rites, and to be comparable to the *acta* of the ancient priestly body of Fratres Arvales. He enumerates the probable gains to the scanty Etrurian vocabulary, particularly in the numerals. He concludes that while in some aspects the language is clearly next of kin to that of Latium, and in others hardly recalls any known tongue the world over, the problem is no greater or more hopeless than would arise in the study of any of the Italian dialects under like circumstances. It seems reasonable to expect that Egypt will still further enlarge our material.

In our recent article on "English at Harvard, and Elsewhere," we said, referring to the recent report of the Committee to visit the department of Composition and Rhetoric of Harvard College, that the report, which was calculated "to raise a blush on the cheek of every principal who reads it," "ought to make its way to every Normal School, as well as to the academies." The Committee by whom the report was prepared now request us to say

that copies of it can be obtained on application, by postal card, or otherwise, to Allen Danforth, at the office of the University, No. 50 State Street, Boston.

—Prof. Luigi Cossa contributes to the May number of the *Giornale degli Economisti* a discriminating review of the history of Political Economy in the United States. His classification and some of his comments possess especial interest as coming from a friendly as well as learned critic, who has given more attention to the work of Americans than any other European scholar. He remarks that the rapid evolution in the United States of a wonderfully varied economic life might have been expected to promote similar progress in economic research. Excellent monographs, historical and critical, and very instructive to the European student, have been produced, yet for various reasons the progress of the science has not kept pace with the increase of wealth. The special conditions prevailing in the United States seemed to impair the universal validity of the economic laws proclaimed by the classical school. Over-population, the law of diminishing returns, the theory of rent, and pauperism, the majority did not believe in; others thought them possible but of no practical importance. On the other hand, the questions of slavery, banking, currency, and taxation produced an abundance of writing which was of little scientific value, because economic reasons were steadily subordinated to the aims of political parties. Yet some statesmen, like Hamilton and Sherman, are to be excepted; and to Government officials, like Gallatin and Wells, we are indebted for important works on special questions.

—American economists are roughly classified into four schools. Of the National school, Franklin and Hamilton are the leading names; of the lesser writers, Cossa notes that Colwell's 'Ways and Means of Payment' is marked by subtle and accurate analysis. The second school are the Optimists, who took the attitude of opposition or incredulity towards the doctrines of the Classical school. They have been divided on the question of free or restricted trade. Such of them as have favored restriction are also known as the Pennsylvania school. Carey, their leader, was a writer with convictions, ingenious and in part original, but ignorant of scientific methods. His 'Unity of Law' abounds in errors in physics. Of the Optimists who have supported free trade, Perry, who combines the doctrines of Bastiat and Macleod, is conspicuous. The third, or Classical school, became prominent about the middle of the century, and particularly after the war had disposed of some of the older questions. Walker, Dunbar, and Sumner are its best known representatives. Henry George is considered by himself. 'Progress and Poverty' is full of strange contradictions, errors of fact, and fallacious reasoning, which reveal on every page the lack of scientific training. The brilliant success of the book, in spite of these blemishes, is explained by its sincerity, vivid descriptions, and its lively and picturesque style. The last ten years have seen a marked increase in the amount and quality of work in economics, and the rise of a body of able writers who in intellectual grasp, learning, and industry rival the best European scientists. So many of the younger men have been trained in Germany that a German-American school may be recognized. The division of this school into two distinct sections is noticed. One party, led by Ely, relies upon induction and historical and statistical research, and discards the study of pure theory as antiquated. The other party is devoting itself with more originality to the pure science. Patten is the most original of this group, but his defence of protectionism is specious. The effect of the polemical writing of the German school and the criticism it has received from older and more independent writers who follow the German methods less blindly, has been stimulating to all workers in the field.

—In a circular letter "agli amici della verità," Signor T. Cassini, an Italian Dante scholar well known for his full and accurate scholarship, informs us of the charges of plagiarism which Dr. Scartazzini brings against Cassini's commentary on the 'Divine Comedy' (Florence, 1888-91) with regard to his own larger and more widely known commentary (Leipzig, 1874-82). He accuses Cassini, first, of using his explanatory citations from the Bible, the early fathers, and especially Thomas Aquinas; second, of appropriating his references to parallel passages in classical authors; third, of reprinting in his notes the extracts which Scartazzini had already made from the older commentators; fourth, of following him closely in the history of certain doubtful points of interpretation; fifth, of following without acknowledgment the text used in his commentary. To these charges Cassini replies in a dignified and wholly satisfactory manner. First, the Biblical, patristic, and theological citations were either the common property of all commentators, from Della Lana down, or were obtained from the usual concordances, indexes, and other repertories. Second, the comparisons between Dante and the classical writers are likewise matters of common property, having long ago been definitely ascertained. Third and fourth, as Scartazzini's plan was to quote as fully as possible all the chief commentaries, Cassini could not help duplicating him in part; he had, however, always done this by direct reference to the originals, thereby avoiding numerous errors which occur in Scartazzini's quotations. Fifth, the text belonged to neither of them, but was that of Witte, which each had only slightly modified. In commenting a few months ago on Scartazzini's 'Dante Handbuch,' we noticed with pleasure his change of tone towards Witte, of whom he had formerly written with unnecessary severity, and hoped —in vain, it seems—the years were bringing him a calmer judgment. No one can see without regret such foolish jealousy against his brother scholars of one to whose persevering industry we owe perhaps the best existing commentary on the 'Divine Comedy.'

—No one of the many recent books about bookbinding is more sumptuous than the illustrated catalogue of the exhibition held at the Burlington Fine Arts Club in London a year ago. The catalogue has been revised since the exhibition closed, and it is now issued in a stately folio with two prefaces, one on stamped bindings by Mr. E. Gordon Duff, and one on gold-tooled bindings by Miss Prideaux, and with more than a hundred chromolithographic reproductions of book covers. Fine as have been certain of the bibliopegistic exhibitions held in New York, this one in London was richer, as it drew from more and from older collections, and it was well worthy of this noble memorial. The stamped bindings, by which the British set great store, are of interest historically rather than artistically. Indeed, a splendid collection like this emphasizes the decorative indigence of the English. The really artistic designs are seen at once to be due to some Italian or to some Frenchman. Most of the attempts at originality on which the British binders ventured now and again are pitiful. Exception must be made in behalf of the remarkable workman who is responsible for half-a-dozen of the bindings here reproduced; his name is unknown, but his handiwork is unmistakable; his chief peculiarity is the use of a curiously shaped tool not unlike the outline of a bent sausage. He is not equal to the good French binders of the period, but he shows a sense of design very rare in England at the time. Among the six-score bindings reproduced in this catalogue are half-a-dozen from the Grolier collection, and no year passes that one or more are not engraved for some sale catalogue. Has not the time come now for some book-lover to reprint M. Leroux de Lincy's list of the surviving books known to have been in Grolier's collection, making all possible additions, and appending to each number a note stating where and how often this binding has been reproduced? Probably three-quarters of the books known to have belonged to Grolier have had their covers reproduced, either in color or in black-and-white; and it will interest all who love the masterpieces of this art to have such a guide to the collection of one of the greatest of book-lovers. Here is a pleasant task for one of the members of the Grolier Club of this city, which has already done so much for the bookmaking arts.

PAYNE'S NEW WORLD.

History of the New World Called America. By Edward John Payne. Vol. I. Oxford: Clarendon Press; New York: Macmillan. 1892. 8vo, pp. xxviii, 546.

Mr. Payne, having sailed westward some years since, as supercargo on certain 'Voyages of Elizabethan Seamen,' returns, in these anniversary days, with nothing less in hand than a several-volumed history of America, the first instalment of which lies before us. No such ambitious work upon this country has appeared in Great Britain since Robertson. Indeed, Mr. Payne distinctly reminds us of his great predecessor in the conception of his task, though not in the execution. Dr. Robertson was familiar with the latest available research. Mr. Payne is oblivious of the recent literature of his subject. Apparently he ceased to read on the historical side many years ago, and has since devoted himself exclusively to elaborating his theory of aboriginal culture.

Mr. Payne is a mild disciple of Buckle. His faith in the logic of events is so strong as sometimes to give the impression that he could just as well have written much of the story in advance of its occurrence. Noting three physical pathways of westerly discovery, the arctic and equatorial currents and the trade winds, he assigns the Northmen to the first, the Portuguese to the second, and Columbus to the third. He develops the causes that led to these voyages from the earliest conception of the sphericity of the earth. Nowhere is there a better account of the geographical ideas of the Greeks and Romans, and their effect in moulding mediæval thought and action. Nowhere is the continuity of belief in these conceptions so well brought out. We begin to hope that the child of the next generation will not think that Columbus first discovered that the earth was round. Admirable, too, is the author's bearing toward those who in times past have in good faith held erroneous beliefs; there is a grateful lack of that asper-

ity of judgment which occasionally disfigures otherwise good work.

The purely historical narrative is not so satisfactory. We do not complain that all the writers consulted are not referred to—an author may properly decline to smother his text in notes; but we do complain that Mr. Payne, after adopting opinions which now pass for antiquated or rebutted, should so write as to seem ignorant of opposing evidence. He has either failed to read all that he should have read, or has ignored authorities whose dicta he does not accept. He has assumed ignorance if he has it not. That this is a charitable statement is easily shown. The account of the Norse discoveries is drawn chiefly from Rafn, whose identifications of localities are accepted with but one reference to another view, and that misleading. It is, of course, not true that the only alternative places Leif's houses in Greenland, and one must stare at the statement. Between Narragansett Bay, Charles River, Nova Scotia, etc., a man may have a preference, if he will not reject them all; but the evidence will not justify him in excluding all but one from mention. The "Old Mill" is said to be "not devoid of resemblance to buildings left by the Northmen in Greenland" (p. 77). True: both are built of stone. Has Mr. Payne not read Palfrey on the mill at Chesterton, to which that at Newport is still less devoid of resemblance?

Mr. Payne adopts Peschel's date of the birth of Columbus, 1456 (p. 108), and dwells on the youthfulness of the discoverer. He quotes, besides the older writers and Peschel, Muñoz, Navarrete, Humboldt, and D'Avezac. Not a word of recent Italian investigations, nor of Harrisse's skilful demonstration that Columbus attained his twenty-fifth year in 1471-1472. In 1501 Columbus wrote that he had been a seaman for forty years, and had gone to sea at a very early age. "Even taken literally," says Mr. Payne, "this tallies with the date 1456." It does indeed. 1501-40=1461; 1461-1456=5! In what capacity does Mr. Payne think that Columbus first went to sea? Since the declaration of October 30, 1470, was printed by Staglieno, it is self-stultification to accept a date later than 1451 without formally disproving the identity of our Columbus with the Christopher of this and the other notarial acts.

In regard to the character of Columbus, Mr. Payne ranks with the critics, not with the eulogists. He would sit on the right of Mr. Winsor, but on Mr. Fiske's left. Columbus, in his view, was an excellent seaman, and should have stuck to his trade. His estimate of Vespucius is unfavorable—more unfavorable, apparently, than he cares to say. While Varnhagen's argument in favor of Mariguana as the island of the landfall is accepted, his life-work on behalf of Vespucius is not recognized even in allusion. Upon the Cabots the author is not clear. Sebastian is disposed of as untrustworthy in a footnote of four lines, and the two voyages of John, who is somehow got to winter in Iceland, are apparently jumbled into one. No reference is made to Biddle, Deane, or Harrisse. It is characteristic that Mr. Payne, who is disdainful of American historians, accepts Sir John Mandeville as a veritable personage, and asserts the discovery of Punic coins in the Azores upon an unsupported statement of Chateaubriand.

Mr. Payne breathes freer air in the fields of physical geography and ethnology. He is good at generalities, and his second book is his best. While he derives the Indians from Asiatic Mongols, he believes their development upon this continent to have proceeded without foreign influence. After outlining the physical features of the country, he indicates the effect of these factors upon the fortunes of the various European settlements, and so comes finally to the main subject, the effect of the same factors upon the original inhabitants. He applies here a theory of human advancement which he thinks has not been previously enunciated: The grade of culture attained by a tribe is determined by the relation of that tribe to the food-supply. Subsistence is imperative upon all men, and the greatest change that ever occurred in human society was the substitution of an artificial for a natural basis of subsistence.

"Where such a change has not only been accomplished, but, owing to favorable circumstances, has completely wrought out the ultimate effects which it is capable of producing, the condition which results is called Civilization. Where an artificial basis of subsistence has been established, but the production of these ultimate effects is checked by unfavorable circumstances, the resulting condition, in default of a better name, is called Barbarism. Where society still rests on a natural basis of subsistence, the social state is called Savagery" (p. 276).

This thought is developed at length with much ingenuity; the results of the demand for food and for clothing are differentiated, the importance of a permanent food-surplus is indicated, and the contributions of the animal and vegetable kingdom to human advancement are analyzed. The flora and fauna of America are reviewed from this standpoint, and it is shown how, the pastoral stage being excluded, a large portion of the inhabitants were condemned to savagery or low forms of barbarism associated with migratory agriculture. Especially noteworthy are the remarks upon the effect of the want of milch animals in keeping down the increase of population, and consequently hindering rather than helping progress to stationary agriculture (p. 289). A few communities, however, upon the basis of artificial cultivation of maize, manioc, potato, and the llama, reached a culture just below civilization in Mexico, Central America, New Grenada, and Peru. Mr. Payne, by the way, promises to show in the next volume that the culture of Peru was lower than that of Mexico, and that Peruvian "state-socialism" is but a misnomer for despotic exaction of common labor. What else, we wonder, would state-socialism be anywhere?

The remainder of the volume is devoted to tracing out in these communities the ultimate effects of an agricultural basis of subsistence in social organization, art, and religion. There are some indications of apparent overlooking of recent research, and especially of recent American research, in this well-written and valuable chapter. Not to speak of the "Turanians," who are said to have once divided the Old World with the negro race, and who, with "Toltecs" and "Chichimecs," we had supposed to be as much out of place in modern ethnology as the first "r" in Tartar, we find Mr. Payne combating the theory of a mound-builder civilization by the aid of Schoolcraft and Waitz, apparently oblivious of all that has been done in the field by the American Bureau of Ethnology and the Peabody Museum at Cambridge, in the last few years, and ignorant of what has here been learned by the labors of Abbott, Wright, and others, about primitive man, and the glacial and interglacial periods—matters not without effect upon that theory of Asiatic origin of the Indians to which he adheres. Nor is this all. Had Mr. Payne been in the habit of reading American books, he might have seen Ward's 'Dynamic Sociology'; had he seen it, he would not, we are sure, have expressed himself quite so unreservedly upon the originality of his theory of civilization. For Mr. Ward, in his sections upon the origin of society, the production of food, the origin of acquisition, etc., has wrought in the same line as Mr. Payne, and established the same principles.

It is quite possible, however, for an historian to be unfamiliar with the literature in some portions of his subject, and yet have vision to see the true significance of facts, and skill to describe suggestively the operation of the great forces that weave the web of human fortunes. Mr. Payne's book will in parts repay perusal, but the reader must bear in mind that theory sometimes takes precedence of impartial research, and that what is magisterially asserted may none the less belong in the lumber-room of history.

Before closing we must quote a most remarkable instance of what has been called the depolarization of the Scriptures. Behold a new version of the story of the Fall! The italics are ours:

"The familiar Biblical narrative . . . furnishes us with a vivid picture of the fruit-eating savage. Naked, shameless, and fearful, feeble in force, and languid in desire, *largely dependent in the food-quest*, which principally occupied him, *on the industry of his female companion*, incapable of self-control, because moral restraint was necessarily unknown to a creature whose only guide in life was the food-taboo, though the penalty for the breach of this was death, he grovelled in superstition, heard the voice of the dreaded gods in every wind, and attributed to the sleek, well-nourished, and fatally armed serpent a higher degree of intelligence than he possessed himself" (p. 308).

BOOKS ABOUT THE STAGE.

The Glasgow Stage. By Walter Baynham. Glasgow: Robert Forrester.

Shadows of the Stage. By William Winter. Macmillan & Co.

How to Write a Good Play. By Frank Archer. London: Sampson, Low, Marston & Co.

Une Comédienne au XIXe Siècle: Virginie Déjazet. Étude biographique et critique d'après des documents inédits. Par Henry Lecomte. Paris: Léon Sapin; New York: F. W. Christern.

Victorien Sardou: Poet, Author, and Member of the French Academy. A Personal Study. By Blanche Roosevelt. Preface by W. Beatty-Kingston. London: Kegan Paul, Trench, Trübner & Co.

FEW books are more useful in their way, humble as it is, than are the volumes of theatrical annals devoted to a single theatre—like the history of the Opéra-Comique, recently published in Paris—or to the theatres of a single town. The theatrical history of a city is as laborious a task and as thankless as a county history; and, when well done, it is as worthy of reward. Perhaps we may consider Dr. Doran's 'Their Majesties' Servants' as the earliest local theatrical history of this sort; but Mr. Clapp's 'Records of the Boston Stage' was almost contemporaneous with the annals of the London theatres. Then came Mr. Ireland's invaluable history of the New York stage, unfortunately not extended beyond 1860; and that was followed by Mr. Blake's volume on the Providence stage and by Mr. Phelps's on the Albany theatres. Only a year or two ago Mr. Dibdin gave us the annals of the Edinburgh theatre, and now Mr. Baynham has attempted a history of the drama in Glasgow. Mr. Baynham is an actor himself, and he

writes part of his story from his personal knowledge. His inexperience as an author is evident enough. In Glasgow, as in Edinburgh, the most popular plays for half a century were dramatizations of the Waverley novels; we have here a playbill of 1852 on which Mr. Mackay is announced to perform *Bailie Nicol Jarvie* for the 1,134th time. Mr. Baynham's book is neatly printed (in an edition limited to 400 copies), and has for its frontispiece a clear photogravure of the Dunlop Street Theatre.

Into a very pretty little volume Mr. William Winter has gathered a score or more of his minor theatrical articles, written from day to day as occasion served and as the passing show gave opportunity, and yet written always with abundant literary art and with the constant desire to pay due meed of praise to those features of the contemporary stage which were best worth commemoration. There are criticisms here of Mr. Booth, Mr. Irving, Signor Salvini, Miss Mary Anderson, Miss Ellen Terry, Miss Ada Rehan, Mr. James Lewis, Mrs. G. H. Gilbert, and Mr. Jefferson among the living, and of Charlotte Cushman, Lawrence Barrett, W. J. Florence, John McCullough, and Charles Fisher among the dead. These latter are supplementary, as it were, to the essays in the 'Brief Chronicles' which Mr. Winter prepared for the Dunlap Society two or three years ago, just as the former are, some of them at least, appendices to his longer studies of the theatrical career of Mr. Booth, Mr. Jefferson, Mr. Irving, and Miss Anderson. In spirit and in quality Mr. Winter's writing varies but little. Perhaps the best paper of all is the first, on "The Good Old Times," in which Mr. Winter, out of the fulness of knowledge—and no man has a more minute acquaintance with even the details of stage-history in Great Britain and in the United States—answers those who bemoan the decadence of the art of acting and ignorantly sacrifice the present to the past.

In the past four or five years there have appeared in Paris, in London, and in New York half-a-dozen manuals of play-making, each and every one pretending to set forth the whole art of the dramatist in ten easy lessons. Mr. Archer's book is the last of these, and its merits and its demerits vary but little from those of its predecessors. Its special characteristic is that its author is an actor, who looks at plays from the actor's point of view. It may be doubted whether a perusal of all these manuals would not confuse a novice more than it would help him; and yet the dramaturgic art is very difficult, and abounds in technicalities which the beginner must master somehow. Mr. Archer's analysis of Dr. Marston's "Favorite of Fortune," scene by scene and character by character, is likely to be of service to the beginner, as it reveals the method by which the skilful dramatist prepares his effects, leading up to them adroitly; and, as M. Dumas *fils* has put it boldly, "the art of the dramatist is an art of preparation."

Four years ago M. Henry Lecomte gave us a full and elaborate biography of Frédérick Lemaître; and he has now followed this with a biography of Lemaître's contemporary Déjazet, written according to the same method, but fortunately not extending to the same length. The longest chapter in the book contains the love-letters of Déjazet in 1850 and thereabouts to an actor whose Christian name was Charles, and whom the reader familiar with the Parisian stage will have little difficulty in identifying with the late Charles Fechter. Just how these letters came into the hands of the author is not explained, and the reason for their publication at the present time is equally inexplicable. What is most piquant in M. Lecomte's biography is the attack on M. Victorien Sardou, who owed his first chance as a dramatist to Déjazet, and who is here charged with the grossest ingratitude toward her.

But M. Sardou is used to attack, and he is generally able to give a good account of himself. It remains to be seen whether he can defend himself as successfully against the "personal study" which the lady who signs herself "Blanche Roosevelt" has recently put forth. A "study" this little book of hers is not, as any one could guess who had seen her earlier volumes on Longfellow and Doré and Verdi; but it is "personal" enough, and if M. Sardou has read it, and if he has approved of its publication, as we are told in the preface, then he must take the consequences. Even more absurd than "Blanche Roosevelt's" own writing is the preface in which a Mr. Beatty-Kingston declares that this volume, like the fair authoress's other works, is "suffused with the personality of its illustrious subject, while bearing the impress of its author's vigorous individuality." In this preface there is also a quotation from a preface of M. Arsène Houssaye's to one of the author's other books, describing her appearance at the age of seventeen, when she was "lovely with every loveliness." All that is of value in "Blanche Roosevelt's" book is the report of certain of M. Sardou's views in regard to the supreme importance of construction in the modern drama. The author not only is without a clear understanding of M. Sardou's real and obvious qualities as a dramatist, she is even at sea in regard to the facts of his career, blundering as to the dates of his plays—recording "Nos Intimes," for example, "as produced in 1869," and setting down on the list of his plays both "Séraphine" and "La Dévote," ignorant that these two titles refer to one and the same piece, originally called by the latter name and actually acted under the former. That "Les Ganaches" is here miscalled "Les Gauches" is probably only one of the misprints in which the book abounds—some of them very comic indeed. Perhaps most ridiculous is that on pp. 117-18, by which the sex is changed of those actors of the Comédie-Française who had parts in "Thermidor." But almost as humorous is the assertion that the Comte de Chambord threatened to come from Versailles "en Rio," which is probably a transmogrification of "*en roi*."

Select Cases on Evidence at the Common Law. By James Bradley Thayer, LL.D. Cambridge: Charles W. Sever.

THIS bulky volume, the preparation of which has been compelled, the compiler tells us, by the increasing demands of the classes in the Harvard Law School on the overtaxed library in Austin Hall, is the latest of a notable series of case-books which includes Langdell's 'Cases on Contracts,' Ames's 'Cases on Bills and Notes,' Keener's 'Cases on Quasi-Contracts,' and Gray's admirable and monumental collection of 'Cases on Property.' Prof. Thayer's book has departed a little from its models, of which the earliest contained nothing at all but cases, and in which nothing served to break the continuity but the heading of a new chapter; for each of his chapters and subdivisions of chapters is prefaced by liberal selections from standard text-writers, such as Maine and Stephen, and illumined by explanatory notes, which are, in many cases, selections from some of his own striking articles on the Law of Evidence that have appeared in the *Harvard Law Review*. This articulate development of the theme makes the book so suggestive that it is a pity the necessities of the School forbid that head-notes and an index-rerum should also make it easy of constant reference by the practitioner.

A selection from one of Prof. Thayer's articles, prefatory to the first chapter, surpasses, for reasonable and clear treatment of the Law of Evidence, almost anything ever written on it, and makes us impatient for the appearance of the author's long-expected treatise on that subject. "Evidence," Prof. Thayer thinks, "is any legal fact which is furnished to a legal tribunal—otherwise than by reasoning or reference to what is noticed without proof—as the basis of inference in ascertaining some other matter of fact." The Law of Evidence fixes the qualifications and privileges of witnesses, but chiefly determines what matters of logically relevant fact—for logic must first determine whether one fact be relevant to another or no, before the Law of Evidence is invoked at all—"shall *not* be received" in evidence. We have here a seemingly contradictory but historically correct definition; for, a Prof. Thayer explains, the law of evidence is a set of rules not as to the admission, but as to the exclusion, of things in themselves relevant, and various exceptions to those rules, which have been evolved from the separation in the English common law of the functions of a judge on the bench, who is to judge of law, from the jury, who are to judge of facts alone. From the jury's consideration must be removed all things, however logically relevant, whose importance may be distorted or whose distastefulness may prejudice their determination, although Scotch and French judges, and English chancery and ecclesiastical judges, sitting without a jury, would take such matters under consideration, as unlikely to affect unduly their disciplined minds. It is a question whether, if the jury were abolished, those rules of exclusion would relax as insensibly as they originally grew, or whether they are now such an integral part of the English law that nothing would substantially do away with them; but if the abolition of the jury system were to accomplish such an end, it would be another argument for that often-mooted but never-attempted revolution that it would greatly simplify trials of fact by facilitating proof.

It is at all events most interesting to follow Prof. Thayer's historical analysis of how the jury—the "fairest jewel" in the English judicial system—has in reality hampered the determination of cases by admitting in evidence on them only facts capable of comprehension by a gross intellect rather than a keen one; and how (the historical origin of this arbitrary rule of selective exclusion being lost sight of) a parasitic growth of rules of substantive law, affecting the production of evidence on the trial of cases, has come to make the very name of the Law of Evidence a terror to the student. It can be said of Prof. Thayer's book that it divests the law of this confusing growth, and permits the student to understand its original and derivative function, and the practitioner to understand how best to attempt to simplify and ameliorate it.

B. F. Stevens's Facsimiles of Manuscripts in European Archives relating to America, 1773-1783. Vol. XIV. Nos. 1372-1450. London: B. F. Stevens.

THE papers contained in this volume relate to

the same subject as those in the thirteenth. They cover the dates from November 6, 1776, to March 14, 1777. We see Lord Stormont, the English Ambassador in Paris, a haughty, ill-mannered man, who yet thinks himself very polite and diplomatic, remonstrating with the French Ministers and trying to bully them. They are lying to him, and he knows it, but neither side is ready to throw away the mask. Both countries expect war, and both are willing to postpone it.

In a letter written by the American Commissioners in France to the Committee of Correspondence of Congress in Philadelphia, we get a glimpse of the methods by which the English Ministers are recruiting their armies in America:

"The Anspachers who were to be embarked in Holland mutinied & refused to proceed; so that their Prince was obliged to go with his Guards & force them on: A Gentleman of Rotterdam, writes us that he saw Numbers brought bound Hands & Feet in Boats to that place. This does not seem as if much Service can be expected from such unwilling Soldiers." (1448.)

The incident referred to was not unknown. The British Government, among its contracts for "Hessians," included one for a contingent of the subjects of the Margrave of Anspach-Bayreuth. The soldiers who were thus sold marched out from Anspach in two regiments, with 101 chasseurs and 44 artillerymen—in all, 1,285 men. They marched in good order to the neighborhood of the little walled town of Ochsenfurth, which is prettily situated on the Main, and which belonged at that time to the Bishop of Würzburg. Here, toward nightfall, they were put into the boats in which they were to float down stream to Holland. But one night aboard made the hearts of these landsmen sink within them. They had enlisted to face the enemy, but not the perils of the deep and rapid Main, or of that even greater expanse of water of which they had vaguely heard as the Ocean. They were willing to stand their ground, but they wanted ground to stand on; so they broke out into mutiny and rebellion, pushed their boats ashore, and refused to obey their officers.

Here was news to disturb the serenity of the Most Serene Highness, sitting there quietly in the palace at Anspach and wondering in a dreamy way on what day he might expect the first instalment of the subsidy he was to receive for the services of these very troops. A fine time he expects to have spending that money. He has planned a most charming journey to Paris. Visions of the Boulevards, with their rows of smaller theatres, of the Palais Royal and its mixed company, of Versailles and the court, are chasing each other in somewhat confused fashion through His Serene Highness's day-dream. The young Queen of France is smiling most graciously on a prince supposed to have leanings toward her native Austria—but a chamberlain has burst into the room: "The troops, Durchlauchtester Herr, the troops are in revolt!" "What does he say?" The Margrave is out of his arm-chair. "Bring me my boots! *Saperment!* not those things!—the riding-boots! Never mind the watch! No need of a carpet-bag. My gray horse and such cavalry as are on guard, and see that the pistols are in the holsters!" And so His Highness gallops off to Ochsenfurth, and appears among his naughty children by the waterside, and coaxes and drives them aboard, and even accompanies them down the river, stopping at Hanau to borrow some clean shirts, and brings them to Rotterdam, where Dr. Franklin hears of them; but His Serene Highness does not go with his men to America.

Perhaps it would have been better for their reputation and his own had he done so. Perhaps in that case Sir Henry Clinton would not have found it necessary to send the Anspachers round by water from Philadelphia to New York in the summer of 1778, with the invalids and the non-combatants instead of including them in his marching army. Perhaps the German prince would have shown himself a brave man if an unscrupulous one, willing to sell his own body for foreign service as well as those of his subjects. But no, the Margrave returned to Anspach, picked up his watch and pocketed his subsidy, and went off to Paris after all.

Distinction and the Criticism of Belief. By Alfred Sidgwick. Longmans. 1892.

MR. SIDGWICK enjoys a certain reputation, he carries an air of distinction and mundanity in his style, and he professes to discuss questions of logic in a fresh and enlightened way; so that we open his books in high expectation. But we lay them down with a sigh. All that has been accomplished in this department of thought since the days when it was possible for a Hegel to publish such attempts at analysis as Hegel's were, might as well have remained unrecorded as far as Mr. Sidgwick's teachings are concerned. Now, that a man can do fine work in logic without being well read in its literature, several eminent instances render more than evident. But the requisite to such fruitfulness is an extraordinarily vigorous mind, that brings forth genuine flowers of thought, bright, delicate, and redolent of suggestion, and not mere fabrications of tissue-paper, needing wires stuck through them to hold them in shape.

The author opens by explaining that the subject of his studies is Ambiguity. This promises well, for there is nothing thinkers of his quality need more to study. But we soon find ourselves wondering whether he knows what the word ambiguity means. He can hardly be unaware there is such a fault, but he appears to have little dread of it. The real topic of his book is not that, but vagueness. Ambiguity is a confusion between ideas quite distinct, such as the *unlimited* and the *immeasurable;* and though 'Distinction' does not *treat* of this, it richly illustrates it. Vagueness is an indeterminacy in the limits of the application of an idea, as to how many grains of sand are required to make a *heap*, and the like. It is not necessarily a fault of reasoning; in its lower degrees it is but an unavoidable and harmless imperfection of thought. The problem Mr. Sidgwick sets himself is to note the precautions needful that vagueness may not lead into positive error; and a problem of elementary simplicity it is. Yet 280 pages might suffice to muddle it, and this volume has 279. An efficient aid in treating such a subject, so as to satisfy the skimmer of books that he has gone over matter which would have been worth reading—and this class numbers important critics—is a vocabulary well chosen to render the meanings of dubious propositions questionable, and to dress up familiar ideas in queer disguises.

Mr. Sidgwick informs us that "distinction as such—distinction at all—is the separation of kinds; and the notion of separate kinds is unavoidably opposed to the notion of differences which are merely of degree." The first half of this statement is, of course, true, if the writer chooses to take the word "distinction" in the sense which makes it so. In the received language of logic the separation of kinds is called *division*, and *distinction* is restricted to a separation of significations; in metaphysics, *distinction* is any kind of otherness. But the second part of the statement, that a "distinction" cannot be merely quantitative, is a fair specimen of Mr. Sidgwick's logic. Is there any "distinction" between the color of scarlet iodide of mercury and that of Paris green? If not, we fear the new meaning of "distinction" is not a very useful one. The two colors are defined by the following equations:

Scarlet = .78 R + 0.10 G — 0.05 B.

Emerald = — 0.03 R + 0.91 G — 0.12 B,

where R, G, and B denote a standard red, green, and blue respectively. It is seen that the colors differ only by the magnitudes of certain coefficients. There seems to be some conflict here.

Is Mr. Sidgwick quite sure of his position? Here is his argument, with which he is plainly very well satisfied: "In order to put any meaning into the name 'difference in kind,' we must have some alternative contrasted with it, and that alternative is 'difference in degree.'" What shall we say of this reasoning? It is highly philosophical, no doubt; but a favorite division with Mr. Sidgwick is that of thought into philosophy and good sense.

He tells us that wherever there is continuity, every distinction must be vague and hazy in its outlines. If he means that a surface cannot be part scarlet and part emerald, with a sharp boundary between them, he is making a large draft upon the confiding trust of the reader. But on p. 72 Mr. Sidgwick lets drop a remark about continuity (and a long annotation shows it to be no inadvertency) which disqualifies him from teaching the properties of continuity, by showing him ignorant of one of the fundamental discriminations established by modern discussions, and no longer in intelligent dispute. The remark in question implies that infinite divisibility—that is, the presence, in a row of points, of intermediate points between every two points—excludes the existence of finite gaps in the row. But put this to the test. From the whole series of rational fractions remove ½ and ⅔ and all fractions intermediate between these in value. This makes a gap in the series; yet it remains as true of the series so mutilated as it was of the unmutilated series, that if any two fractions which belong to it are given, a fraction of intermediate value can be found belonging to it.

Mr. Sidgwick says that if nature is continuous, it *certainly* follows that "the laws of thought" (the quotation-marks are his) are false in every case, as applied to actual things. By the laws of thought he means the principles of identity, contradiction, and excluded middle, which he says are "usually" so called. If he would look into the last fifty treatises on logic in German, English, and French, he would find, we think, that these principles are not now usually called the laws of thought. Any deeper acquaintance with the actual state of logical analysis would show that such a designation is the mark of an obsolescent and degenerate school of logicians. But let us see what his reasons are for saying these principles are falsified by continuity. In the case of the principle of identity, the reason is that "any actual A has been non-A and will be non-A again; it has therefore some non-A in it." But suppose we grant this (though its *therefore* is absurd), it does not touch the principle of identity, which simply says, "A is A"—*i.e.*, every term can be predicated of itself—

and makes no reference to the relation between A and non-A. For the principle of contradiction his reason is, that "any actual A may deserve to be called non-A." For the principle of excluded middle his reason is, that "between the actual A's and non-A's there is always a middle region, or borderland." Besides being the baldest possible *petitiones principii*, these reasons overlook the paradox which really does give to continuity an appearance of inconsistency. If a surface be painted part red and part green, it is true that points on the boundary-line are equally green and red, and thus for them it seems that either the principle of contradiction or that of excluded middle must be violated in form. But this is not true of points in general, nor of any *region*, as Mr. Sidgwick's reasons imply. The violation of consistency is merely apparent, as any sound brain will feel. Every portion of the surface is either red or green, those which cross the boundary being partly red and partly green. But a point is not a portion of a surface; and the true characters of the points with reference to the colors are three: namely, they are either (1) wholly surrounded by red portions, or (2) wholly surrounded by green portions, or (3) partly surrounded by red and partly by green portions. Literally, nothing but a surface is colored; to call a point colored is a figure of speech, and this figure of speech it is which alone gives the appearance of a violation of the principle of contradiction.

But enough of this. The spectacle of Mr. Alfred Sidgwick grappling with the problem of continuity is like an infant slapping the face of the Great Sphynx: it is so ridiculous as to become positively touching. He is more in his element with such questions as these: "Is snow a thing, or is it only an accidental state of matter? And is water, for that matter, anything more than an imperfectly stable condition of its two component gases?" He reaches his largest proportions in our eyes when we find him criticising with success the reasoning in those gigantic efforts of intellect, the debates in the British House of Commons, such as the following:

"Lord R. Churchill—He says it is well known in war that movements which are offensive in their nature are sometimes defensive in their essence.

"Mr. Gladstone—Offensive in their *form*.

"Lord R. Churchill—What does that come to—that the attack of Gen. Graham was offensive in its form but not in its nature? Three thousand men or more were slaughtered, as a matter of form, by movements which were not offensive in their nature!"

Until our "G. B." has his way, it may be feared we shall not hear debating like that in the House of Representatives. In this country we have not time for such reasonings, nor for the other argumentations which Mr. Sidgwick is occupied with refuting, nor for the closely similar ones with which he would replace them.

Memorials of Sarah Childress Polk, Wife of the Eleventh President of the United States. By Anson and Fanny Nelson. Anson D. F. Randolph & Co.

THE writers of these memorials of the wife of President Polk have erred in trying to draw too much of her personality from its "dread repose" in the past. Not satisfied with recording what they knew from personal experience of the object of their naïve and almost childish veneration, they have sought to reconstruct her life from its commencement—in the third year of the present century. In spite of their elaborate pains to produce a contrary effect, the reader is able to descry only the figure of a sufficiently ordinary young woman, who, while at school at the Moravian Female Academy in Salem, N. C. (whither she was sent from her home in Tennessee), produced in needlework, on a satin background, the picture of a tombstone with trees, in which "the different shades of green, brown, and yellow blend naturally"; and whose "playful wit and ready repartee" do not, at any time in her life, in the samples offered strike one as either very witty or wise overmuch.

During her fourteen winters in Washington as the wife of a Congressman, from 1825 to 1839, Mrs. Polk seems to have preserved a conduct void of offence. Typical of her merits at this time was the habit of "instantly checking" her hasty remarks whenever she observed a certain smile of Mr. Polk's, "which she well understood to mean disapproval of her inconsiderateness." "The dazzling and deceptive allurements" of life in the White House were powerless to shake the firmness of her Presbyterian principles. She studied the "abstruse and complicated political questions of the day," and is said to have had insight and judgment, but too much delicacy and reserve to proclaim political opinions. This, however, should have been considered the pity of it. Delicacy and reserve in political affairs are well-bred virtues that have cost Mrs. Polk's country too dear. It would have been as one who set an example of actively expressing enlightened opinions on public questions that she would have deserved to be held up to admiration by her biographers.

It was, in fact, not until her widowhood that Mrs. Polk became a notable and interesting figure. The prestige that she gained and kept during the many remaining years of her long childless life (which did not close until August, 1891) she owed to the rare capacity she was gifted with—the capacity to understand herself. Had she chosen any other line of conduct than the one she persistently pursued, the brilliance of her past would probably have been forgotten, and she herself lost to view in the pressure of a society with whose developments she could hardly have kept pace. As it was, she never left, save for visits to her mother at Murfreesborough, the home in Nashville to which her husband had retired in 1849, as soon as his term of office had ended, and only four months before his death. In her dignified house, in the capital of the State of which her husband had once been Governor, within sight of his tomb—conspicuously built in the grounds—and surrounded by portraits which recalled the prominent associations of her earlier years, and by relics around which hung an historical odor, she played to perfection her rôle of Dowager "First Lady of the Land."

Another gift Mrs. Polk also possessed in an eminent degree—one that very fitly makes her an ideal for a people whose habits of life tend to produce an old age that is neither mellow nor replete. This was her power of growing old consciously, serenely, and graciously. Hence came her supreme charm, a charm that made her so touching a figure to the many eminent persons who visited the home where she and her sorrow sat in state. It was doubtless this charm that inspired the enthusiasm of her biographers, and made their task so much a labor of love that it is easy to pardon them the literary failings and the provinciality of tone that mar its effectiveness.

History of the English Landed Interest, its Customs, Laws, and Agriculture. By Russell M. Garnier, B.A., Oxon. London: Swan Sonnenschein & Co.; New York: Macmillan. 1892.

ONE wonders whether a book like this does harm or good. It has an attractive title, and will probably get into the hands of many English landlords who would not be reached by more scholarly treatises. As a land-agent of long experience, the author is qualified to give an opinion on the technical side of mediæval agriculture; and accordingly there are passages here and there which are worth reading. But, with these inconsiderable exceptions, there is absolutely nothing original in all his four hundred pages. It is not even a good abstract, for it is tediously long-winded. The author is without adequate historical training, and falls into ludicrous blunders; his style is lumbering and occasionally obscure, relieved only by purple patches of untrustworthy rhetoric; and he has no notion of what is meant by argument or proof. There is a plentiful array of references, but they can hardly be relied upon. Many of them would seem to be borrowed, and probably borrowed wrongly—to judge from some of the more patent absurdities, as where the farmer who turned clothier is said to have "incurred by so doing the statute-book's contemptuous *synonym* (1) of '*foreigner*'" (1), with a reference to 5 and 6 Ed. VI., c. 8.

The descriptions and narratives which the book contains are hardly more than paraphrases of Rogers, Seebohm, Vinogradoff, Ashley, Prothero, and other easily accessible writers. As a rule, the author docilely acquiesces in whatever his authority tells him; where he tries to be independent he is generally wrong. On the one question where opinions are so divergent that the author has to make up his mind between them—that of the origin of the manor—he attempts a compromise. But this compromise can assuredly retain an appearance of probability only so long as it is left in the easy vagueness with which Mr. Garnier clothes it. Neither in this nor in any other part of the subject will the reader find a clear picture of past conditions, nor a real sense of historical development.

Text-Book of Comparative Anatomy. By Dr. Arnold Lang. Part I. Macmillan & Co. 8vo, pp. 562, illustrated.

THIS is an improvement on the majority of the manuals relating to its subject. It is especially adapted to teachers of general zoölogy in grammar or high schools or the minor colleges, and to their pupils. To a certain extent it will prove of advantage to more advanced students and to specialists, but the lack of references to authorities for statements in the text makes it necessary to investigate elsewhere before citing the author as originally responsible for anything. The text is good so far as it goes, and is tolerably well up to date; the illustrations are numerous and of good quality. There are six chapters in all; these are apportioned to the Cell and the Protozoa, the Metazoa, the Platodes, the Vermes, the Crustacea, Trilobites, Gigantostraca, Hemiaspidæ, Xiphosura, and Pantopoda, and the three classes of the Tracheata—Protracheata, Antennata, and Arachnoidea, with an appendage to the arthropods, the Tardigrada. The classification adopted may not be one that will meet with general acceptance; this, however, is not a serious matter, since the phylogenies given by the different authors are usually regarded by students as subjects for all sorts of changes and revisions. The work, being in greater part a compilation, is naturally somewhat uneven in quality, some portions having

been repeatedly verified and others being still in need of verification. A good supply of prefaces is furnished; there is an author's preface, a translator's preface, and a preface by Prof. Haeckel, in which, after the familiar announcement that Haeckel once wrote a work called 'Die Generelle Morphologie,' etc., a good word is spoken for Prof. Lang. The book is one of the best, if not the best, in its particular field.

BOOKS OF THE WEEK.

Aldrich, Auretta R. Children, their Models and Critics. Harpers.
Austin, Jane G. David Alden's Daughter, and Other Stories. Boston: Houghton, Mifflin & Co. $1.25.
Ballantyne, R. M. The Hot Swamp: A Romance of Old Albion. T. Nelson & Sons.
Barker, Prof. G. F. Physics: Advanced Course. Henry Holt & Co. $3.50.
Bates, Clara D. From Heart's Content: Poems. Chicago: Morrill, Higgins & Co. $1.25.
Besant, Walter. The Ivory Gate. Harpers.
Boyd, Rev. A. K. H. Twenty-five Years of St. Andrews. Vol. II. Longmans. $3.
Boyesen, H. H. Boyhood in Norway. Scribners. $1.50.
Buckley, J. M. Faith-Healing, Christian Science, and Kindred Phenomena. The Century Co. $1.25.
Cathrein, Rev. V. Socialism Exposed and Refuted. Benziger Bros. 75 cents.
Craig, W. J. Complete Works of Shakspere. (The Oxford Miniature Shakspere.) 6 vols. T. Nelson & Sons.
Craig, W. J. Complete Works of Shakspere. (The Oxford Shakspere.) T. Nelson & Sons.
Cuyler, Rev. T. L. Stirring the Eagle's Nest: Discourses. Baker & Taylor Co. $1.25.
Deems, Rev. C. F. My Septuagint. Cassell. $1.
Eaton, Rev. A. W. College Requirements in English Entrance Examinations. Boston: Ginn & Co.
Everett-Green, Evelyn. The Lord of Dynevor. T. Nelson & Sons.
Fennell, C. S. M. The Stanford Dictionary of Anglicised Words and Phrases. Cambridge, Eng.: University Press; New York: Macmillan.
Fouard, Abbé C. St. Peter and the First Years of Christianity. Longmans. $2.
Frederic, H. The Return of the O'Mahony. Robert Bonner's Sons. $1.50.
George, A. J. Wordsworth's Prefaces and Essays on Poetry. Boston: D. C. Heath & Co. 55 cents.
Goss, W. L. Tom Clifton; or, Western Boys in Grant and Sherman's Army. T. Y. Crowell & Co. $1.50.
Hawthorne, N. Wonder Book for Boys and Girls. Illustrated by Walter Crane. Boston: Houghton, Mifflin & Co.
Herrick, Christine T. The Little Dinner. Scribners. $1.
Hobson, E. W., and Jessop, C. M. An Elementary Treatise on Plane Trigonometry. Cambridge: University Press; New York: Macmillan. $1.25.
Holmes, Dr. O. W. Dorothy Q. Illustrated. Boston: Houghton, Mifflin & Co.
Humphrey, F. P. A New England Cactus, and Other Tales. Cassell.
Imbert de Saint-Amand. The Duchess of Berry and the Court of Charles X. Scribners. $1.25.
Johnston, Prof. H. W. Selected Orations and Letters of Cicero. Chicago: Albert, Scott & Co. $1.25.
Jessopp, Rev. Augustus. The Coming of the Friars, and Other Historic Essays. 5th ed. Putnams. $1.25.
Jessopp, Rev. Augustus. Wise Words and Quaint Counsels of Thomas Fuller. Oxford: Clarendon Press; New York: Macmillan.
Kellog, Rev. S. H. The Genesis and Growth of Religion. Macmillan. $1.50.
Knox, T. W. The Boy Travellers in Central Europe. Harpers.
Laidlaw, Rev. J. The Miracles of Our Lord, Expository and Homiletic. Funk & Wagnalls Co. $1.75.
Lee, S. Dictionary of National Biography. Vol. XXXII. Lambe—Leigh. Macmillan & Co. $3.25.
Le Gallienne, Richard. English Poems. London: Elkin Mathews & John Lane; New York: Cassell.
Lubbock, Sir J. The Beauties of Nature and the Wonders of the World We Live In. Macmillan. $1.50.
Maartens, Maarten. God's Fool: a Koopstad Story. Appletons. $1.25.
Machar, Agnes M. Roland Graeme: Knight. Fords, Howard & Hulbert. $1.
Magill, Prof. E. H. A Reading French Grammar. Philadelphia: Christopher Sower Co. 60 cents.
Mahan, Capt. A. T. Admiral Farragut. Appletons.
Moeller, Wilhelm. History of the Christian Church, A. D. 1—600. London: Sonnenschein; New York: Macmillan. $3.75.
Molesworth, Mrs. Robin Redbreast: A Story for Girls. Thomas Whittaker. $1.25.
Muddock, J. E. Maid Marian and Robin Hood. Philadelphia: J. B. Lippincott Co. $1.25.
Munroe, Kirk. Canoemates. Harpers. $1.25.
Musick, J. R. Saint Augustine: A Story of the Huguenots in America. Funk & Wagnalls Co. $1.50.
Nelson, Anson, and Fanny. Memorials of Sarah Childress Polk. Randolph. $1.75.
Normand, Prof. C. J. B. Greuze. Macmillan.
Ohnet, Georges. Nemrod & Cie. Paris: Ollendorff; New York: Westermann.
Old Italian Masters Engraved by Timothy Cole. The Century Co. $10.00.
Ompteda, Baron. Memoirs. B. Westermann & Co. $5.
Our Presidents from 1788 to 1892. Nicoll & Roy Co.
Page, H. W. Railway Injuries. William Wood & Co.
Page, T. N. Marse Chan: A Tale of Old Virginia. Illustrated. Scribners.
Paris, G. Extraits de la Chanson de Roland. 3d ed. Boston: Ginn & Co. 70 cents.
Parker, G. F. A Life of Grover Cleveland, with a Sketch of Adlai E. Stevenson. Cassell. 50 cents.
Parkman, Francis. The Oregon Trail. Illustrated. Boston: Little, Brown & Co. $4.
Pennell, J., and Mrs. E. R. Play in Provence. Century Co. $1.50.
Perry, Nora. A Rosebud Garden of Girls. Boston: Little, Brown & Co. $1.50.
Powell, E. P. Liberty and Life. Chicago: C. H. Kerr & Co. 50 cents.

Letters of Credit.

We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travelers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,
NO. 59 WALL STREET, NEW YORK.

SPECIAL BRAIN FOOD & NERVE TONIC.
CROSBY'S VITALIZED PHOSPHITES.

Composed of the Phosphoid Principle of the Ox Brain and Wheat Germ.

The very elements which produce vital force, increase brain power, sustain in vigor all the functions, prevent mental and nervous debility.

It is a *vital nutrient* phosphite, not a laboratory or acid phosphate. Formula on each label. Pamphlet with full information free on application to
56 West 25th Street, N. Y.
For sale by leading druggists.
F. Crosby Co.

Dyspepsia

Dr. T. H. Andrews, Jefferson Medical College, Philadelphia, says of
Horsford's Acid Phosphate.

"A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

It reaches various forms of Dyspepsia that no other medicine seems to touch, assisting the weakened stomach, and making the process of digestion natural and easy.

Descriptive pamphlet free on application to
Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

For sale by all Druggists.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 3, 1892.

The Week.

WE must, all things considered, admit that the Republicans have been very moderate in giving up one of their principal instrumentalities in the last two canvasses, namely, forged and garbled quotations from English newspapers. These quotations sometimes showed the admiration of the English press for something which the Democrats were doing, but more frequently contained either horrible accounts of the havoc the tariff was playing with British industry, or else dismal forebodings as to the havoc it would play if the Republicans kept their hold on the American Government. Sometimes these extracts purported to come from leading journals like the *Times* and *Economist*, and the passage quoted was prepared for use here by a change in punctuation, or by dropping a clause of a sentence, or by the total omission of a qualifying context. More frequently, however, the safer process was resorted to of taking the quotation from some obscure or non-existent journal—like the *Iron Æra*, or Liverpool *Echo*, which was unknown here or difficult to get hold of for verification. In these cases all restraint was laid aside, and the foreigner was made to say exactly what suited the occasion. The Liverpool *Echo* has been very useful in this way. Its language is so pat that, as it is never heard of here except during Presidential campaigns, one is always inclined to believe either that, like Mrs. Harris, there is no such paper, or that it is maintained simply to supply extracts for American campaign documents. The end and aim of all these extracts is the same, namely, to drive us into carrying on our Government not in such a manner as will best subserve our own interests, in the opinion of our wisest citizens, but in such manner as will most spite and damage foreigners. It is only on this view that the irritation caused among foreigners by our domestic policy can have any value for us as a political guide.

In this canvass the production of bogus or inaccurate statistics on the platform has been substituted for these forged quotations, and it is much more effective. Nothing is more telling on the platform than big figures rolled off in a sonorous way, and yet nowhere are statistics in any quantity more out of place than on the platform. Figures on any subject owe all their value to strict accuracy, and, when they are used for political purposes, not only must the addition and subtraction and multiplication and division be correct, but the source from which they come must be above suspicion and easily ascertainable. On the platform, of course, these guarantees can rarely be supplied. Another protectionist device which has played an important part in this canvass is the effort to persuade the Irish that, as English rule over Irishmen has been odious and bad, all English modes of governing Englishmen themselves are therefore to be eschewed and even detested. Irishmen are asked to hate and vote against a tariff for revenue only, because this is the kind of tariff Englishmen have for themselves—which is about as sensible as asking Irishmen to abandon bookkeeping by double entry because the English use it in keeping their public accounts. We are sorry to say, plenty of Irishmen are foolish enough to believe this and act on the belief, thus furnishing Englishmen with another argument against home rule; for, they say, "What kind of rule would it be carried on by men whom the Yankees gull so easily?"

Ex-Congressman Butterworth's speech in Cooper Union on Saturday night showed that he still is disposed to play the part of Republican *enfant terrible* in discussing the tariff. His outbreak against the McKinley monstrosities on the floor of Congress, on May 13, 1890, did not embarrass him in the least as a stump-speaker, for he affirmed that he has since "had no reason to change his views." And he made this assertion good at more than one point in his speech, expressing his contempt for "the extreme tariff men," and saying, of the almost unanimous contention of the Republican party that a protective tariff lowers prices, that, if this is true, "the whole system would be a sham and a fraud." By what inadvertence the *Tribune* printed these un-Republican utterances of his we cannot guess. It may yet reproduce his famous prophecy in Congress: "I assert that there never was a time in the history of the Republican party when it was in more danger of defeat than upon this one suggested idea that it is permissible to levy tribute upon all the people of this country of 65,000,000 to confer a benefit upon a few hundreds."

It has been supposed that Mr. McKinley, though narrow-minded and ignorant, was at least honest in his fanaticism, but it is hard to believe this in the face of his continued use of statements which are both false on their face, and to which his attention has been repeatedly called as being such. On Monday night in Brooklyn he asserted again: "England paid $230,000,000 in gold at the end of the year to settle a balance of trade in our favor. We've got that money now." That gross and palpable falsehood was greeted with "great applause" by the immense audience of Republicans who heard it. Probably McKinley's audiences are partly responsible for his carelessness about the truth. They wildly cheer everything he says, true or false, and why should he take pains to be accurate?

One point in his speech may do very well for an Ohio audience, but it was a good deal of a blunder to try to make it in this part of the country. He held up a pitcher and said that, but for the duty of 55 per cent. upon that kind of ware, it could not be made in this country. This is an echo of what a Trenton potter said to the McKinley Committee on Ways and Means, when demanding higher duties: "It is for you, gentlemen, to say whether this struggling industry shall be destroyed for the benefit of foreign manufacturers." Of course he got the duty he had "bought and paid for," but the true inwardness of his "struggling industry" was made public not long after in the prospectus of the "Trenton Potteries Company," in which it was shown that the earnings on the common stock of the five leading firms entering into the Trust were 16 per cent. in 1891, and had averaged 11 per cent. for the three years previous. On the appraised value of the entire property the annual net profits for three years were equal to an average dividend of 22½ per cent.; in 1891 they were equal to a dividend of 29 per cent. The Trust was organized with a capital of $3,000,000, at least half of which was water, and of course McKinley will have to see to it that a good per cent. is earned on water and all, or else there will be another pitiful cry in behalf of a "struggling industry."

Mr. Depew's growing taste for flippancy has so far demoralized his political oratory that his audiences are beginning to revolt. He stopped in Indianapolis to make a speech on his way home from Chicago, and even a journalistic supporter of Harrison like the *News* felt constrained to publish next day in its editorial columns a most stinging rebuke of "the vulgarity and indecency which in certain places marred his speech." It appears from the editorial article in the *News* that, in the presence of an audience which included some of the most cultivated ladies in the city, "Mr. Depew had the audacity to insult his hearers by repeating a vulgar antediluvian anecdote (untruthfully pretending that he was a witness of the incident described, a day or two before at Chicago), and by making an indecent allusion which must cause the witty orator's cheeks to burn with shame every time he recalls it." The *News* article concludes with the remark that "the only thing to do when he finished his speech was to sprinkle a disinfectant." Other speakers who have taken up

Mr. Depew's rôle of treating everything as a joke might well take warning from this illustration of the depths to which they may sink.

Mr. Stevenson has written his letter of acceptance, which, like that of the Republican candidate for the same office, is somewhat longer than such documents used to be. The reason why has been explained in an interesting passage in Mr. Blaine's late article in the *North American Review*, in which, speaking of the great length of President Harrison's letter of acceptance, he says:

> "Formerly the platform was of the first importance. Diligent attention was given, not only to every position advanced, but to the phrase in which it was expressed. The Presidential candidate was held closely to the text, and made no excursions beyond it. Now the position of the candidate as defined by himself is of far more weight with the voters, and the letter of acceptance has come to be the legitimate creed of the party."

Mr. Cleveland has this time adhered to the earlier practice by writing a letter about one-third the length of Gen. Harrison's, and Mr. Reid's and Mr. Stevenson's cover about the same amount of space. It is difficult to compare the letters of the two Vice-Presidential candidates. We are bound to admit, however, if, as Mr. Reid has said in his *Tribune*, his own letter was "plain-spoken, intelligible, and uncompromising," and "markedly in contrast with the nebulous utterances and disingenuous silence of Mr. Cleveland," or in other words was much better than Mr. Cleveland's, it is *à fortiori* much better than Mr. Stevenson's. However this may be, the passage in Mr. Stevenson's which was looked for with most interest was that containing his views about the currency, for it is his supposed unsoundness about silver which has made some Mugwumps question whether they ought this year to vote for Mr. Cleveland. "Mr. Cleveland," they said to themselves, "is mortal, and if he should die, we should have a Vice-President who would sign a free-coinage bill, and after that the deluge." Mr. Stevenson has in his letter done what he could to dissipate these apprehensions by quoting the Democratic platform on the currency question and adding his own endorsement in the following terms:

> "To this plain and unequivocal declaration in favor of sound, honest money, I subscribe without reservation or qualification. A safe circulating medium is absolutely essential to the protection of the business interests of our country, while to the wage-earner, or the farmer, it is all-important that every dollar, whatever its form, that finds its way into his pocket, shall be of equal, unquestioned, and universally exchangeable value and of equal purchasing power."

Consequently, unless Mr. Stevenson is unusually false, which nobody alleges of him, if he should ever become President he will veto any bill which creates a silver dollar for which a gold dollar cannot be obtained in exchange; and such a silver dollar is the only one a "silver man" would care for.

There is no great degree of interest about the letters of acceptance of the two candidates for Mayor in this city, since the success of the Democratic ticket by a large majority is fully assured. Nevertheless, every citizen will want to know what the next Mayor has to say in his own behalf and in Tammany's. So far as it goes, Mr. Gilroy's statement is correct that "every municipal government owes to the people who sustain it well-paved and well-lighted thoroughfares, an abundant supply of wholesome water, an efficient system of street-cleaning, protection to life and property either from lawlessness or conflagration, and the adoption and enforcement of intelligent rules for the preservation of the public health." But it is not true that "all of these functions have been efficiently discharged by the government of this city for the past four years," which covers Mr. Gilroy's incumbency of the Public Works Department. It is true, however, that there has been during this period a most gratifying advance in the important matter of street-cleaning, and that the cleanliness of the city has been vastly improved during the past six months as compared with the previous three years and six months. The primary credit for this great reform belongs to private citizens, and most of all to a public-spirited woman; but Mrs. Kinnicutt herself is the first to acknowledge that the Tammany Commissioner of Public Works, and still more the Tammany Street-Cleaning Commissioner (Mr. Brennan), have administered the new system with vigor and success. The streets of New York are undoubtedly clean now, and Tammany has, for the first time, some excuse for "pointing with pride" to the cleanliness of the municipality.

The managers of both parties concede one State to Weaver—Nevada. The silver issue is the controlling one in that mining camp, and the larger part of the Republicans, headed by Senator Stewart, with most of the Democrats, are supporting the third-party ticket. Nevada has three electoral votes, although its population has been shrinking for many years, and the total poll shrank from 19,766 in 1876 to only 12,605 in 1888. It is possible that these few thousand miners in what was formerly a "sure Republican State" may deprive Harrison of a majority in the electoral college, and throw the election of President into the Democratic House.

Iowa votes for the first time this year under the Australian system, and the familiar complaints against the reform are heard from the Republican organs. The *Iowa State Register*, the leading Republican newspaper, denounces it as "a new and cumbersome mode of balloting," and predicts that "there will be a good many stay-at-homes unless the voters are promptly instructed as to how to prepare and cast their ballots." But the trouble is that many of the "sensitive" Republicans are so sensitive that they will not even attend a ballot-reform school so as to learn how to prepare and cast their ballots. As Mr. L. E. Chittenden said of the Vermont "sensitives" in his letter to the New York *Tribune* a few weeks ago: "Old farmers who have been accustomed to vote openly for the candidates they wish to support resent any interference with their ballots. They will not go into a shanty or behind a door to prepare them—they will not ask or take instructions from anybody concerning them." The "old farmer" is much the same in Iowa as in Vermont, and there is, therefore, every reason to believe that the Republicans will suffer seriously next week from the adoption of this reform in the Western State, as they lately did in the Eastern one.

Unfortunately for the Republicans, they cannot stand such a loss in Iowa. In Vermont they could lose nearly 10,000 votes and still have a plurality of about 19,000. But in Iowa they were in a minority of 7,816 last year, and that, too, on the heaviest vote ever cast in the history of the State. In 1888 there were cast for President in Iowa 404,130 votes, while in 1891 the total for Governor was 420,214—more than 16,000 larger. We think this is the only case on record in an old and well-settled State where the vote for President in a warmly-contested year has been exceeded by the vote for Governor in a State election not long afterwards. It shows that the "reserve vote," upon which the Republicans always place so much reliance, was "out" in Iowa last year, and that the reëlection of the Democratic Governor was no snap judgment. If the Australian system is going to make a good many Republicans who turned out last year stay at home this year, the outlook for Harrison cannot be considered encouraging.

The Wisconsin Democrats have made their third trial at reapportioning the State for members of the Legislature, the first two attempts having been such gross gerrymanders that they were annulled as unconstitutional by the Supreme Court. From the comments of the Milwaukee *Sentinel*, the chief Republican newspaper of the State, we judge that the last measure is about as fair as any party usually passes. "The differences in the population of the Assembly districts," it says, "are inconsiderable, and arise for the most part from the proper disposition, inspired by the holy wrath of the Supreme Court, to make a district of any county having anything near the quota of population. But the hand of the gerrymander is in it, nevertheless"—and it proceeds to show how the Democratic county of Ozaukee, with 14,943 population, is made a district, while the Republican county of Buffalo, with 15,997 population, is not also made a district,

but is joined to another Republican county, making a total population of 23,000; how Chippewa County, with a population of 25,153, is cut into two districts because the Democrats can carry one, while Vernon, with 25,111, is a single district because no Democratic district can be carved out of the county—and so on. The Democrats expect this act to stand, and estimate that it will give them the Legislature by about a dozen majority, and thereby a United States Senator to succeed Philetus Sawyer. But experience has repeatedly shown that the gerrymander is as likely as not to prove a boomerang.

We were glad to see that a clergyman of this city preached a sermon on Sunday on the sin of bribery and the wickedness of those who raise a huge corruption fund for the purpose of carrying an election. This is a timely topic, and we wish it might be generally chosen as a subject for pulpit discourses on the coming Sunday. There ought to be an especially pointed sermon on this theme preached in Wanamaker's church, and it would be a good thing, too, in the case of so difficult a sinner to convict, to follow it up with an address in Wanamaker's Sunday-school on the same subject, and also to work in a talk on it at the last prayer-meeting before the election. We take it as a matter of course that Senator Quay will be present next Sunday in the Presbyterian church which he has lately endowed, and we commend to his pastor, too, the duty of discoursing on the severe retribution which is certain to overtake bribers in the next world. He ought to make it specially clear that it will be vain to plead as a defence the fact that the briber voted to keep the World's Fair closed on Sunday.

The elimination of the silver issue becomes more obvious as the end of the campaign approaches. Some of the more unscrupulous Republican politicians in the East, like Henry Cabot Lodge, and the more reckless organs, like the Boston *Journal*, make a pretence of believing that the re-election of Harrison is necessary in order to avert free coinage—even when Republican organs and Republican candidates for Congress in Colorado are supporting him as a much better friend of silver than Cleveland. But more intelligent and candid Republicans confess that free coinage is equally impossible whichever candidate is elected. In an editorial article entitled "An Issue Settled," the St. Paul *Pioneer Press* says that the defeat of the Free-Coinage Bill at the last session "means the death of free coinage as an issue. It has settled itself. The facts which are coming to light day after day—facts which the silver-men have kept in the background as long as they dared—are such as to put an end for ever to any agitation in favor of free coinage of silver at the existing ratio." The *Pioneer Press* reviews the enormous development of the silver-mining business during the last few years, with the resulting fall in the price of silver bullion, and thinks that "we must be prepared for a decline of silver to probably not more than half the present quotation, and a corresponding diminution in the actual value of the silver dollar. This," it adds, "disposes of the free-coinage issue."

The negro preachers have always been the main reliance of the Republican politicians for keeping the negro vote solid, and the churches have often been used as the party headquarters. It is therefore a noteworthy sign of the times when colored clergymen announce their repudiation of Republicanism and their intention to support Cleveland. One such case is that of the Rev. Joseph W. Crofton, described as one of the most prominent colored preachers in the South, who published a card in a Memphis newspaper last week renouncing the Republican party because of his opposition to the Force Bill and the high-tariff system, and promising to take the stump for Cleveland. A still more prominent convert is Bishop J. M. Brown of the African Methodist Church, who has written an open letter stating his belief that the time has passed for the colored men as a race to cast their vote solidly for one party, and giving the reasons why in his opinion it is the duty of the colored man who wishes to advance the interests of his race to vote for Cleveland. Mr. Crofton says that in his travels through Georgia, Alabama, and Tennessee he has found hundreds of colored men who have always heretofore voted the Republican ticket, but who are going to vote for Cleveland this year, and it is well known that the Democratic ticket in Georgia received much support from this class at the recent State election. The solidity of the negro vote has been the worst obstacle to the progress of the race, and it is most encouraging to see the race beginning to divide, like the white race.

Lord Salisbury has written an article in the *National Review* examining the Liberal threat to create new peers to swamp the Conservative majority in the House of Lords—a threat which carried the Reform Bill in 1832, after all other means had failed. He says, and says truly, that this course, if once entered on, would be revolutionary, or at all events could only be justified by a state of national feeling overwhelmingly in favor of the policy advocated in the House of Commons and against that advocated in the House of Lords. No such state of feeling, he says, now appears to exist in favor of Mr. Gladstone's home-rule policy, if one may judge from the last election. The swamping process applied to the House of Lords would, therefore, be revolutionary, and, if used by one party, would certainly be used also by the other, and end in the destruction of the Upper House. There is much show of reason in all this, but Lord Salisbury overlooks certain considerations bearing on it more or less directly. One is that it would, as tit for tat, be in a measure justified by the Tory plan of governing Ireland, which during the last seven years has been distinctly revolutionary, inasmuch as it has practically suspended trial by jury and created new offences triable before removable magistrates only, in one portion of the kingdom, not in order to meet a temporary emergency, but as a permanent system. The Liberals now in office have met this by the plan, in many ways objectionable, of refusing to execute the law, but they could not, as the House of Lords now stands, possibly get the act repealed.

Lord Salisbury also cites the provisions contained in the Constitutions of the United States, Holland, Norway, Sweden, Greece, and Switzerland against hasty changes of a grave character in the organic law or constitution of the government, and says the House of Lords in England furnishes the only hindrance to such changes in England. But he overlooks the fact that, in all these countries, changes in the composition of all branches of the Legislature follow, as a matter of course, from changes in public opinion as indicated by the election. The voters, in other words, control the upper as well as the lower house, though not so directly. The English House of Lords, on the other hand, is not affected in the least by any elections. The majority in it has for a hundred years belonged to the same party, and is not in the smallest degree amenable to popular opinion. In fact, it is an institution whose existence, in its present shape, is incompatible with government by popular suffrage, and would, in any of the countries which Lord Salisbury cites, be abolished or altered.

The confidence of European investors in the recovery of Chili from the shock of civil war, and in her conservative financial management, was shown by the way the new Chilian loan was taken up. It was for $9,000,000 at 5 per cent., the price of issue being 95. The Messrs. Rothschild offered $5,000,000 of this on the London market on October 19, and in a single day the amount applied for was upwards of $150,000,000, and in three days the new bonds were quoted at a premium of 3 per cent. This result is highly creditable to Chili, especially in view of the general distrust of South American securities, and proves afresh the great advantage of sound management of the finances and a long record of punctuality in meeting all foreign obligations.

THE MORAL ISSUE.

It is now more than four years since President Cleveland's message made protection the great issue between the parties, and whoever reviews the course of discussion during this period cannot fail to be impressed with the development of the popular comprehension of the subject. At first every one was taken by surprise. The opposition of the Democrats to the principle of protection was felt to be purely formal, and one of their ablest and most popular leaders, the late Samuel J. Randall, was as orthodox on this subject as any Pennsylvania Republican. To be suddenly called upon to defend the musty platitudes of the platform, formulas inherited from a departed generation and repeated without thought of their significance, was as embarrassing to the ordinary Democrat as it would be to most people to have to state the arguments in favor of the Copernican system. Both parties, it may be said, were ignorant of the strength of the case against protection, and the Republicans accepted the issue with delight, anticipating an easy victory. They won a victory, but it was as ominous to the Republicans as Pyrrhus's victory over the Romans was to him. They had brought forward the free-trade scarecrow as their great reliance, but, so far from stampeding their adversaries by panic, they prevailed over them only by bribery and trading, and with all their strategy they were left in the minority.

It was evident enough after this that protection was no longer a name to conjure with, and that the battle was to be one of argument. So soon as the Democrats recovered from their surprise, they found that what they had repeated as political platitudes were propositions that rested upon experience and were supported by reason. They found at their hands a perfect arsenal of weapons of the most scientific construction, against which the protectionists could bring only a collection of mediæval fallacies which had long been the laughing-stock of all trained logicians and economists. The "infant industry" fallacy was too decrepit to be of much service. It had become as ridiculous as that "profane patriarch" described by the lamented A. Ward, who used to get drunk every Fourth of July and weep bitterly because he was an orphan. The balance-of-trade fallacy, the real tap-root of protectionism, could not be made to fit the facts of our commerce. The home-market fallacy was not adapted to the consumption of a people half of whom were farmers and most of whose exports were agricultural products. There was nothing to do but to swear stoutly that protection raised wages and diminished profits, and that protective duties were paid by foreigners. But it was easy to show that in that case we had a tariff for revenue and not for protection, while every workman able to count knew whether his wages were raised better than any one else.

The result of the discussion has thus been to drive protectionists out of the court of reason. They keep up the fight by reiterating falsehoods that have ceased to deceive, and by threatening disasters that no longer terrify. Many of the more intelligent among them have had their eyes opened to the weakness of the Republican cause by listening to the arguments by which the Republicans have been driven to support it. The more self-respecting have become affected with "apathy," which simply means that they decline as thinking beings to endorse the insane contentions of the high-protection fanatics. There remain only an old guard who hate their traditional opponents too bitterly to yield, no matter how badly or how wickedly they are led, and a mass of voters either pecuniarily interested or uninformed, the wreck of a glorious army. The educated men are gone, except those who are too old to change; and the party that once numbered almost all the college professors among its members, now hopes to succeed in its "American policy" by naturalizing Italians and Russians.

This narrowing of the issues between the parties has proceeded rapidly of late. It is perhaps still open to discussion whether protection has raised the wages of the employees of protected manufacturers. It would seem extraordinary if such tremendous machinery should altogether fail of its predicted effect. But it is becoming evident that the public are no longer greatly interested in the answer to this question. They have awakened to the fact that there is more involved in protection than dollars and cents. As Sir Walter Scott said, it does not follow because you have demonstrated that a certain line of conduct is most consistent with men's interest, that you have therefore and thereby demonstrated that they will adopt it of course. If it were conceded that protection increased the wealth of the people, that would by no means end the matter. Slowly, but of late with increasing clearness, the American people are coming to see that the principle involved is not one of money but of government, not one of expediency but of justice. Mr. Cleveland, Mr. Schurz, and Mr. MacVeagh have shown them that under protection the taxes to be paid by the people are determined by a small group of rich men, and that the elected representatives of the people merely register the will of the tariff beneficiaries. Congress ceases to be a deliberative body, and the defenders of protection thank God!

It may be urged that the protected manufacturers are but trustees, and the higher profits insured them by favoring tariffs are diffused through the whole community, enhancing wages and stimulating industry. Unfortunately, the "Trusts" that interest our great manufacturers are not of this beneficent character; but were the contention true it would be immaterial. It involves the principle of an aristocracy and not of a democracy. The American citizen does not desire to have the benefits of his Government held in trust for him. Such benefits as Government has to offer he considers that he is directly entitled to. No intermediaries are necessary, and all history shows that their existence leads to wrong and injustice. Our Government is founded upon equality; but there can be no equality when private citizens are armed with the taxing power for their own immediate emolument, no matter with what benevolence they afterwards distribute their gains. The principle is wrong, and the heart of the common people is now stirring with the determination that this wrong shall not continue.

The significance of our constitutions and bills of rights lies solely in this, that they establish as the foundation of our society the principle that the powers of majorities are limited. The majority may be convinced that the minority should profess a certain religion, but the Constitution forbids persecution. The majority may sometimes desire to confiscate certain property, but the Constitution will not allow it. It has been found wise to limit the activity of Government to matters as to which there is substantial unanimity. At present a large minority, if not a majority, of the American people are satisfied that our protective tariff is unjust. Granting that a majority are sincerely of the opposite opinion, they are in the position of forcing their theory upon a reluctant people, upon the plea that it is for their good. It would seem to require the heart of an inquisitor to compel the poor of a country to pay tribute to the rich upon the plea that the rich would somehow restore it to the poor. A great emergency might justify such a policy, but to continue it under our present circumstances in the face of the deepening sense of injustice that it arouses, is a public wrong. Conscientious citizens, even though believers in protection, may well pause before casting their votes in favor of thrusting its present extreme form upon their exasperated countrymen.

MAKING POLITICS OF SCIENCE.

The Statistical Bureau was established in order to make a science of politics; it is being conducted so as to make politics of science. The manner in which the census-takers were selected and the results reached by the census of population indicated this. The results reached by the census of manufactures have demonstrated it.

By a coincidence, the month of October, when the Presidential campaign is fairly on, is the time the bulletins on manufactures begin to appear. Nearly every day one of them is published, revealing to one astonished city after another the fact that it actually enjoys a prosperity such as no protectionist prophet ever dared to predict. The number of manufacturing

establishments reported has almost everywhere doubled in the last decade, though, in the decade before, the number of establishments increased less than one per cent.; the number of hands has increased out of all proportion to the population, while the wages of labor have increased 50 per cent. without the laborers knowing it.

Unfortunately for Superintendent Porter, the field covered by his statistics was covered by other Republican statisticians during the same year, and the results reached by them differ widely from the results reached by him. In Massachusetts, for example, where his bulletin for Worcester shows wages averaging $541, the State Labor Report for 1890 showed the average wages to be but $369. In Michigan, where the wages reported do not differ essentially from those given by the State Labor Commissioner, the latter referred only to the wages of the men, while those of the census bulletin refer to men, women, and children. All over the country the actual wages reported in the bulletin bear a strange resemblance to Carroll D. Wright's report as to what wages would be if each hand taken on worked every day throughout the year at his temporary pay.

This last point is worth bringing out more clearly, for it indicates how wage statistics may be manipulated by any one who has a personal or partisan end to gain by manipulating them. In Part II. of Commissioner Wright's report of the National Labor Bureau for 1890 he publishes the wage-tables of several iron and steel establishments in various parts of the country, showing the "actual and theoretical time and earnings." In the first of these establishments the average rate of wages of men employed was $2.08; the number of working days was 365. The yearly earnings, if the men had worked continuously, would have been $760. The actual yearly earnings of the men was but $122. In the next establishment he notes, the average daily wages paid were $1.70, yet the actual yearly wages paid were but $154 instead of the $589 which an unscientific or unscrupulous statistician might have figured out. It is useless to multiply illustrations from this report. Superintendent Porter's bulletins themselves illustrate the methods he has employed and their value.

Take the bulletin for this city. In the preceding decade the marked feature of our industrial development was the growth and consolidation of existing establishments rather than the starting of new ones. No one was aware that this tendency had spent its force. Yet the bulletin for New York city sets forth that during the last decade the number of establishments increased 103 per cent., though the number of hands increased but 49 per cent. In other words, instead of the growth and consolidation of old firms, we find the number of firms increasing twice as fast as the number of employees.

But the reported increase in the number of employees is itself incredible if we assume that the Porter census of our population is credible. That census showed that 62,000 families had been added to our population; the manufacturing census shows that 124,000 hands have been added to the force in our factories. In case all other industries have remained stagnant, the two reports might be reconciled on the supposition that two persons have been sent into the factories for each family added to our population. But even this method of harmonizing Mr. Porter with himself is made a little difficult by his statement, in the bulletin before us, that part of the increase in wages is due to the relatively decreased number of women and children in many industries. That the employment of women is relatively decreasing in many industries is another sign of the millennium first discovered by Mr. Porter.

Yet the astounding increase in the number of firms and employees is as nothing to the reported increase in wages. In 1880 the wages paid in our factories were returned at $97,000,000; in 1890 the return is $228,000,000. The average wages per hand, it is said, have increased from $427 in 1880 to $663 in 1890. In 1880 the wages bill was but 21 per cent. of the value of the product. In 1890 it is 31 per cent. But it must not be supposed that this advance of labor has been at the expense of profits and rents. Protection protects capital as well as labor. It is the cost of raw material that has been reduced, and reduced without lowering the tariff. Ten years ago the cost of materials was just three times as much as the wages of labor; now it is only half again as much. The wages paid in 1890 were $228,000,000; the cost of materials was $357,000,000; the value of the product was $763,000,000. If we deduct the cost of the materials in order to find how much factory labor and capital between them added to the wealth of our city, we find it to be the sum of $406,000,000, or $1,300 for every family in the city. As less than half of our people are engaged in manufacturing industries, the average family income of these is very nearly three thousand a year. No Anarchist, in his wildest vision, ever dreamed of such wealth until the United States Census Bureau came to be administered as a party perquisite.

A SHORT-HAUL DECISION.

THE Western papers are very properly making much of the decision of Justice Brewer in the Iowa district of the Circuit Court of Appeals. It is unquestionably the most important interpretation of the Inter-State Commerce Act which has been made. The decision, rendered October 17, briefly stated, is to the effect that through-rates, when agreed to by two or more railroads, need bear no relation to the local rates imposed by either one of the carriers separately. This far-reaching opinion is arrived at by drawing a technical distinction in the use of the word "line" in the act to regulate commerce: any one railway constitutes a line, while any number of them formed into a through-route make another line, whose charges are independent of the charges of either company on its own traffic. The illustration introduced by Judge Brewer is, that if a rate from a small town to Chicago is fifteen cents per hundred and from Chicago to Cleveland is fifteen cents more, then a through-rate from the village to Cleveland may be twelve cents—lower than the sum of the local rates, and less than either local rate separately.

In the earlier decisions of the Inter-State Commerce Commission it was assumed that the law intended the whole system of railway tariffs to be interdependent, every rate to be proportional to every other rate. Judge Cooley's language was, "The smallest hamlet is to be put on an equality with the largest city," so that each village could have the opportunity of becoming a large distributing centre, so far as the transportation lines were concerned. As a theory this reasoning had undoubted attractions, being seemingly based on equal rights for all. But actual business is not conducted on that principle. Commercially the battle goes to the strongest; nor do tradesmen advance prices in order that weaker men may make a living. As a practical measure, enforced equality in railway charges resulted in lower prices to producers whose markets were restricted, and higher prices to consumers whose purchased products could not reach them cheaply. This extreme view was afterwards modified by the Inter-State Commission to the extent of saying that long hauls need not be charged proportionately as high as for shorter distances; still, the old interpretation of the law colored the later opinions.

One form which the controversy assumed was the debate upon the question whether through-rates ought to be less than the sum of the local tariffs. The question was a vital one for Kansas City, for example. If the farmers in the interior of the State could ship their wheat or corn direct to Chicago at a less rate than to Kansas City and thence by reshipment, manifestly the middlemen at the latter city had no excuse for existence. For their right to this jobbing trade in grain eastward and supplies westward, the merchants of Kansas City have always contended. In so far as their contention has been successful, it is probable that the farmer in Kansas has received less for his produce; for if prices of corn and wheat are made through competition at Liverpool and New York, then anything which prevents a lowering of the charge for transportation through is detrimental to agricultural interests. Abstract equality between Kansas City, Chicago, or New York may prove a dear right if purchased at the expense of actual profits to those most concerned. Judge Brewer's decision implies that producer or consumer, wherever located, has the right to sell in the dearest or buy in the cheapest market, and that railways, if

they are to fulfil their proper function, can only assist in such distribution.

It must be acknowledged that such a principle will tend to perpetuate the supremacy of the cities now the centres of trade and manufacture. Chicago, for illustration, with its large capital and great energy, if railway rates are left to self-adjustment, must draw business from towns less important. In short, concentration of trade means favors in the charges for transportation. On the other hand, the railways may extend the market for the products grown or manufactured along their lines, so that town will compete with town and city with city, the trade victory going, as it must and ought to go, to the places best fitted to survive by reason of geographical location, superior ability, or the abundance of money. If we eliminate from view the abstract right of the hamlet to become a trade centre through equality in railway charges, it is correct economically, as Judge Brewer pronounces it correct legally, to say that local, station-to-station charges have little relation to through-rates. This abstract equality in business matters now cuts no particular figure; if railways have equal duties to all citizens, then the citizens who demand that equality of charge must pay for it in lower prices for things produced and higher prices for things consumed. Either theory of transportation may be carried to an extreme; the decision of Justice Brewer seems to mark a return towards a middle course.

The long-and-short haul section, as we have several times stated, should not have been incorporated in our act to regulate commerce. It applies a hard-and-fast rule to cases with varying conditions. These cases would, without this section, have been amenable to that part of the law forbidding unjust discrimination; and whether the discrimination was just or not could then have been discussed upon its merits, and not, as now, decided before trial. Justice Brewer's opinion, if taken up by other courts as a correct precedent, will go far towards correcting that economic error in our law by which, according to Judge Cooley, it was sought to make every village a possible distributing point through railway charges arranged theoretically to that end, and not allowed easy adjustment as are other prices in the business world.

SPOKEN ENGLISH.

WE made some comments in our issue of October 20, apropos of the recent report to the Overseers of Harvard College on the manner in which English composition is taught, or rather not taught, in the preparatory schools. As a rule they send their boys up to Harvard unable to write their mother tongue even decently. An article in the last *Forum*, by Dr. J. M. Rice, upon the condition of the public schools in Cincinnati and Buffalo, describes a state of things equally lamentable as regards the teaching of English speech. Dr. Rice has been visiting the public schools in various large cities, paying special attention to the capacity of the teachers as revealed in the examination of pupils under his own eye. He found an enormous amount of time and attention given to spelling, and some of the modes of making good spellers—singing the letters, for instance—very peculiar; but with this we are not now concerned. Here is one of the scenes he witnessed in a Cincinnati school:

> In one of the pieces read the word "merchant" appeared.
>
> "What is a merchant?" the teacher inquired, after one of the children had read the word.
>
> "A merchant is a tailor," answered one.
>
> "A merchant is a man what keeps dry-goods stores," said another.
>
> "A merchant is a man what buys cheap and kin sell dear," remarked a third.
>
> At last a little boy, with a triumphant air, cried out: "A merchant is a man what sells goods."
>
> The teacher corrected none of these mistakes in language; but when one of the children had read the sentence, "I broke the glass and I will pay for it," the teacher said, "What mistake did he make?"
>
> "Teacher," answered one, "he said 'glass' and he ought a' said 'glars.'"
>
> "Right," said the teacher.

This is one in a Buffalo school:

> When all was quiet, one of the pupils called out:
>
> "I ain't got no ruler."
>
> In answer to this the teacher, without correcting the child's language, said:
>
> "You don't need a ruler. Do it the way you *done* it yesterday."

We presume these illustrations could be multiplied *ad infinitum* in most of the schools in the country. Great attention is given in all of them to the spelling of words; little to the proper use of words themselves in composition, and none whatever to the most important use of all, their use in speech. Nor is this true of the schools only. It is true of the family. We presume there is no country in the world in which the classes that get a fair education in schools and colleges pay so little attention to the manner in which their children speak their mother tongue—that is, to correctness of accent, distinctness of enunciation, and grammatical collocation. The result is seen in a very remarkable degeneration of the spoken English, especially in New England, where the English of the last generation was, on the whole, taking the whole population together, probably the best in the world, while the English of this generation is to a sad degree slovenly, slangy, and indistinct; that is, the syllables are slurred over and the open vowels closed as if through sheer laziness. We have seen illustrations of this in the difference between the English of a father and his son or grandson, which would be painful to any one who looked on a pure and carefully guarded speech as one of the most precious of national inheritances. In many parts of the West this process of degeneration has gone so far that the English language has become a mere dialect, into which each individual introduces such varieties as he pleases.

Indeed, it may be said that as a rule the only class who now pay any attention to pronunciation and grammar and the choice of words in speaking are the ministers, and, except from them, since the lyceum lecturers of the Phillips, Chapin, and Curtis sort have died out, the people in many parts of the country never hear what may be called pure spoken English. The bar has long given up any attempt to take care of the language. Some lawyers in this city talk slang and bad grammar purposely in court in order to "get solid" with the jury, who never talk anything else. We have been told recently by a gentleman brought up in the West, who was graduated from Yale College, that until he went to New Haven, a lad of seventeen, he had never heard pure English, and, on hearing it from the Yale professors, it seemed to him a new and beautiful language, which he was delighted to think he understood. Parents seldom take any more pains to correct the solecisms and blunders of their children's speech than Dr. Rice's teachers. We heard of a case lately where a teacher, having undertaken to give some drill in enunciation and intonation to a girl in whom she was interested, was promptly stopped by a message from the child's mother, that "Mamie spoke well enough," and she desired her to talk "whatever way she wanted to."

One reason, and perhaps the most potent, why Europeans take better care of their language than we do is that in all the leading European countries correct speech and a good accent are, if not marks of a good social position, powerful aids in climbing into one. The pains which Irish and Scotch barristers, seeking their fortunes at the English bar, take to get rid of their brogue, would by most Americans be considered very ridiculous. So great a man as Lord Mansfield made it a subject of unwearied vigilance, and Lord Campbell says his Scotch origin was finally discoverable only through two or three words, which he never could master, one of them being solicitor, which he always made "soleecitor." A man who "drops his h's" in England, or sticks them on improperly, has to be very able, or witty, or wise to escape social damnation. A man to be well received in what is considered "good society," has not only to dress and use his knife and fork like a gentleman, but has to speak like a gentleman. His accent and grammar must indicate, whether truly or not, careful bringing up in a circle in which these things were considered of consequence. An English child's speech is watched as carefully as his morals or manners. The same thing is true of France, Germany, and Italy. The educated and well-to-do classes in these countries are expected to look after their native tongue. It is one of their charges, for neglect of which they are punished by loss of social consideration.

Here we have no such stimulus to orthoepy or good grammar. One hears every day men who pride themselves on all sorts of social advantages, birth, education, clothes and money, and what not, talking like Southern "crackers"; and girls who think themselves the pink of fashion, gabbling in the tongue of cooks and housemaids. Liberty to talk in any way he pleases is, in fact, the birthright of the modern American child, and he uses it to produce a jargon, half made up of slovenly pronunciation and half of street slang uttered with a loud, harsh, bar-room intonation. Now that the country is beginning to pay some attention to the æsthetic side of life, this evil of bad language ought to be taken in hand by parents and teachers, and dealt with promptly before we get into the linguistic condition which existed in Rome even in Cicero's day, and exists to-day in Turkey, in which the literary language differs wholly from the spoken language, and the unlearned man has to work over a book as he would over a foreign tongue.

A CARIBBEAN AMONG THE AMERICANISTS.

SEVILLE, October 5, 1892.

LET there be no mistake about my nationality. I am not a Carib, but a Caribbean. This is "the next best thing," as Father Prout makes the Lord Mayor of Dublin say when offering a potato to Sir Walter Scott, after the presentation of the freedom of the city of Dublin to the author of 'Waverley.' It would, no doubt, have been better that a true Carib should have been brought to Spain, if "for this occasion only," to give the world an account of his impressions of the coming celebration of the discovery of America. But such a treasure is not easily found. Caught young in one of the Antilles, I was sent to England for my schooling, where I received "just that veneer of civilization which people of that sort —of the subject races—get." On my return to the West Indies I proceeded to Guiana, on the mainland of South America; that vast country which lies between the great rivers Amazon and Orinoco, and the home of the Carib Nation, whence they set out to people the Caribbee Islands. There, in that part of it over which floats the British flag, is my home.

One is not without hope that, in return for the discovery of the New World, Americans may yet be able to do something for the Spaniards. There are, indeed, signs of a movement in this direction. Just stand in the Puerta del Sol at Madrid, and look around. On the sternboard of some of the tram-cars you cannot but be struck by the words "Singer-Máquinas." Then, just raise your eyes and behold that the New York Life Insurance Company tells you in large golden letters that it has a capital of "652 Millones" (I presume, of pesetas). If I can make out the meaning of a notice in a shop in a street leading out of the Puerta del Sol, it says that American sweetmeats are to be sold there. Other indications there are of an intention on the part of the New World to repay its obligations to Spain. Where, however, are the Americans themselves, or, for the matter of that, the English? Whether it be the cholera or what not, in no capital of Europe that I have been in have I ever seen so few signs of the presence of members of the Anglo-Saxon race as in Madrid. Your new Minister, Col. Snowden, arrived a few days ago, and is staying at the Hotel de Rome, which, it may please some to know, is the most expensive hotel in Madrid. Admiral Luce, your Commissioner to the Exhibition, has also arrived and is staying at the Hotel de Russia. On our side, the British Ambassador, Sir Drummond Wolff, is spending his holiday in England, while the subjects of her Britannic Majesty are being well looked after by Mr. Reginald Tower, C.B., as *chargé d'affaires*. But where is the ordinary Briton who is buttoned up with reserve, who will not speak to me, nor will I to him, because we have not been introduced? And where is the American, who is ready to be on terms of civility, and who is "just taking a walk around" in Europe? It hardly requires a prolonged stay in Spain to justify one in saying that those who do not visit this noble country miss a great deal that is well worth seeing.

The Spaniards do not trouble themselves much to learn the languages of other people. It seems strange that French should be so little spoken in this country. English is very much of an unknown tongue. Excepting at the British Embassy, I had been unable to have a conversation in my own language when, a few mornings ago, as I was descending the stairs of the Hotel de Embajadores, a gentleman in clerical garb said, "You are an Englishman or American, I believe!" A thirsty man offered a glass of water could hardly be more pleased than I was. It was the Rev. Charles Warren Currier from Boston who did me this friendly turn. Father Currier is on his way to Huelva, and there may be something later on to tell you about the paper he has written upon the Caribs, for the Congress. It seemed odd that he, too, should have been in British Guiana, where he stayed a while when he was stationed in Surinam, in Dutch Guiana. But it is the unexpected that often happens. At dinner yesterday at the Hotel de Paris, in Seville, I found a John Bull-looking gentleman seated nearly opposite to me. Taking him to be a New Englander on his way to Huelva, I asked whether he had been in Seville long. "I speak a little English, but I am a Frenchman," said he. Then he asked me whether I was bound for Huelva, and told me he was going to read a paper at the Congress. On my inquiring the subject of his lecture, you may fancy my surprise when he told me that it was upon the languages of the aborigines of British Guiana! My new acquaintance is a Monsieur Adam, who was a magistrate in Cayenne forty years ago. His paper is founded upon some philological treatise published by the Society for the Promotion of Christian Knowledge some four years ago. The author, he says, is, or was, a missionary in British Guiana.

Should any Americans who may visit Seville hereafter wish to have pointed out to them the stone in the cathedral which marks the spot where Ferdinando Columbus lies buried, and which bears, in Spanish, the famous inscription which in English runs,

"To Castile and Leon a new world gave Colón,"

they need only say interrogatively, "Lápida, Colón?" and any urchin will, for a small copper coin of less value than a cent, point out the stone. The mention of Colón alone will suggest the Biblioteca Colón, or library of papers relating to Columbus.

At a later date it may be convenient for you to hear something of the Archivo de Indias, which is one of the great storehouses of records for the history of America, North and South. Meanwhile I shall be off to-morrow to Huelva, to attend the Congress of Americanists.

SEVILLE, October 13.

After a week at Huelva, I returned to Seville last night, by a train which was only between three and four hours late. As the attention of the world is being drawn to Huelva at the present time, and as many of us failed to get entrance into the Hotel Colón, perhaps the best hotel in all Spain, it may be well to point out that Murray's 'Handbook for Spain' does not give the whole truth when it says of Huelva, "It is an excellent resort for invalids in the winter, being many degrees warmer than Nice or Pau." This is true so far as it goes, but, on the other hand, the condition of the place is most unsanitary. Having regard to the pronunciation of its name (Well-bar), and to the abundance of its stenches, Huelva might well be renamed Smell-bar, or, better still, Smell-bad. Many eminent as well as some obscure persons have been so affected by the unwholesome condition of the place that they have had much cause to take note of the want of sanitary conveniences. Some of the inhabitants have tried to get things improved, but opposition is said to come from a medical man who is a local potentate and a true descendant of the famous Dr. Sangrado. There are signs that even the Hotel Colón, so admirably constituted, may yet suffer from the want of a general system of sanitation.

Hospitality was extended to the Americanists at Huelva in a splendid manner. Indeed, there has been more dissipation than science, and, at times, grave men have hinted that things were not as they should be. As regards organization, on all hands it has been observed that there was a sad want of it. Some people say that congresses are successes everywhere but in Spain. It is only fair to say that but few of the foreigners who attended seemed to be able to speak Spanish, and the present occasion was notably a Spanish affair. Apparently we were invited not so much to assist in glorifying Spain as to stand by and see the dons glorify themselves. As each speaker may address the Congress in his own language, there is a Tower-of-Babel air about the whole business, with sometimes a want of understanding, or a misunderstanding, of what has been said. Although the Assistant Secretary, Señor Toda, speaks English as well as French, it was a grave disadvantage for Señor Saragoza, the Honorary Secretary, that he spoke neither of those languages.

You will have heard that the next regular meeting is to take place in 1894 at Stockholm, and that a special meeting is fixed for next year at Chicago. A well-informed person tells me that but few prominent Americanists will go from Europe to Chicago, for want of a proper organization there. What on earth should make them think so, I cannot say; but I tell the tale as 'twas told to me, that there may be no chance of reproach to the New World.

Some eminent persons in the world of science and letters have been present at the Congress. Among them were Prof. Oppert and M. Hamy, both members of the Institute of France, who wore the quaint court dress of that illustrious body when court dress was *de rigueur* in the presence of the Queen. Then there was Baron Nordenskjöld, the Columbus of our age, in face the very beau ideal of culture. It was, indeed, most gratifying to see the recognition given to him on the opening day by Cánovas del Castillo, the Prime

Minister of Spain, who caused a general to leave his chair that the Scandinavian scientist might take it, and thus range himself only one place from the Premier's left hand. Prof. Pierson, from the University of Amsterdam, a notable archæologist, of whose deep studies the world will learn more ere long; Mr. Bikélas, from Athens, whose cultivated writings have found much favor outside of Greece as well as at home; Hellmann, from Berlin, who spoke fluently in Spanish; Penk, from Vienna; Storm, from Norway; Rein, from Bonn—were all there, and others besides. Marcel, the Keeper of Charts in the Bibliothèque Nationale at Paris, was also a regular attendant. It is to him that we owe the admirable exhibition of old charts of America and of parts of America which is now on view in Paris.

A distinguished man who took part in the proceedings of the Congress was asked whether he thought anything had been added to the sum of knowledge by the several contributions. He answered, "Nothing!" It is right, however, to say that the question was put and answered before the admirable paper upon the Mexican Calendar, by Mrs. Nuttall, an American lady, was delivered. As that had the publicly expressed approval of Prof. Oppert, whose own researches in the Babylonian and Hebrew chronologies are so famous, it must be regarded as a good piece of work. To the ordinary mind, even, the paper in question seemed to let in light, and it was not the less useful because, as some one said, "it was not all original." We must make allowances for the natural jealousy of literary and scientific people. *Homo homini lupus* is true in science and art as in nature. Some one had even dared to say of Prof. Oppert himself that he was consumed with envy when he heard that Renan was to have a public funeral in France.

There was not a very large representation of the United States at the Congress. Father Currier was there and was a universal favorite. Speaking some seven or eight languages, he had an obvious advantage in such a polyglot gathering; but the charm of his manner is exceptional. Mr. A. Lawrence Rotch, A.M., Director of the Blue Hill Meteorological Observatory, was an interested spectator of the proceedings. He seemed to enjoy himself as much as it is possible for a genial scientist to do. Mr. Cullin, Curator of the Museum of the University of Pennsylvania, took some part in the proceedings. With the exception of somebody from a British colony, there was no one present to represent Great Britain, which alone of European countries is possessed of territory in each of the three Americas. This seems odd.

Three Spaniards are said to speak Spanish in an exceptionally masterful style: they are Cánovas del Castillo, Martos, and Castelar. We have had the gratification of hearing the orator first named. In the courtyard of the Convent of La Rábida, the Americanists were addressed by Señor Cánovas, and, although many of them did not know what he was saying, the sonorous sounds he uttered in the magnificent language of Castile fell like music upon the ear. It was like being at a concert and listening to "songs without words."

Prof. Storm observed to-day at the Columbian Library, which is in the cathedral here, that there appeared to be more books with notes upon their margins in the handwriting of Columbus than had hitherto been stated. He has gone off to get an order to enable him to examine the books, and, should his examination establish the correctness of his opinion at first sight, we shall hear further from him.

As the *Nation* numbers ladies among its readers, I feel in duty bound to point out that old Spanish lace can be secured here from an American, Mr. Benjamin Caldwell, 17A Plaza Nueva. The younger Spanish ladies are given to adopting Paris fashions. They part with the old laces to get the new French articles. The thing being to get a genuine lace, I make no excuse for touching upon this matter. To-day the secretary of the Hotel de Paris refused a 5-peseta piece I tendered him, as he thought it was base coin. From what he tells me there is much base coinage afloat. In the same way visitors get imposed upon in the matter of lace. D. D.

Correspondence.

TARIFF PRINCIPLES OF THE G. O. P.

To the Editor of The Nation:

Sir: To the end that the Republican doctrine of "protection" may be fairly stated, I have compiled from the platform and speeches of eminent orators the following, viz.:

(1.) The people are compelled to contribute to Andrew Carnegie and other infant industries because they will thereby foster the workingmen. If the contributions were made directly to the workingmen, they would not foster the Carnegies *et al.*

(2.) One of our "moral ideas" is that by increasing the misery of the pauper laborers of Europe, through the McKinley tariff, we demonstrate our sympathy with the laborers at home.

(3.) Hamilton (although sympathizing with the workingmen as much as his modern disciples) was satisfied with a low tariff, because he did not need $1,000,000,000 in order to carry on the Government; but we are confronted with the problem how to keep out imports as much as possible and at the same time raise the greatest possible revenue from imports; therefore,

(4.) In order to help the protected classes most effectively, we exclude imports of those manufactured articles which the greatest number of people require; while, in order to raise the greatest revenue, we lay a heavy tariff on such materials as have to be imported to manufacture said articles.

In this manner we compel the poor and moderately wealthy consumers, who constitute the masses of the people, to support the Government and the protected classes also, thus carrying out the principle of "the greatest tax to the greatest number." A. S. B.

Hyde Park, Ill., October 29, 1892.

THE MODERN ODYSSEY.

To the Editor of The Nation:

Sir: In your review on August 4 of my book, 'The Modern Odyssey,' attention is called to some apparent inconsistencies of chronology, and it is suggested that I never went to some of the places of which a description is given. I ought to have explained, but I then thought it unnecessary, that the chapters on the United States and Canada were the outcome of *two* visits to America, the first of which was in the fall of 1886. In the summer of the following year I again visited the Continent on my way round the world.

Yours faithfully,

The Author of 'The Modern Odyssey.'

London, October 15, 1892.

FAME IN THE *UNIVERSITY MAGAZINE*.

To the Editor of The Nation:

Sir: A professional-looking person walked into my office the other day with his card and introduced himself as one of the editors of the *University Magazine*. He then said he desired to have my photograph and a sketch of my life to publish in the *University Magazine*, a periodical devoted to the interests of university education in general and the great American universities in particular. "Our object at present," he continued blandly, "is to publish portraits and sketches of the lives of graduates of colleges who are distinguished in the business walks of life. We aim to show the youth of America that high intellectual accomplishments fit men to become millionaires, as well as to shine in the professional walks of life; and there is no plainer, shorter way of proving how many college graduates are eminent in business affairs than to publish a list of celebrated names, with portraits and sketches, in the *University Magazine*."

Mr. Editor, I was very much flattered. I took down my portrait from a pigeon-hole in haste, and, leaning back in my chair, I gave the professional-looking gentleman a sketch of my career—not forgetting a few facts of history that brought in the Philadelphia Biddles and the Baltimore Garretts. It was soon finished and written down, and then my companion, dropping his voice to a confidential key, asked me how many copies of the magazine containing my portrait I would take at twenty-five cents per copy. Now, although I am a New Yorker, I did not expect such a proposition from the representative of a magazine devoted to the cause of university education. I was a little surprised. Had the professional-looking person been connected with the *Grocers' Monthly* or the *Dry Goods Weekly*, I should not have been surprised: advertisement by portrait or otherwise, in trade papers, must be paid for. But to pay for a notification to the studious youth of America that one is an A.B. or a LL.D, in a periodical devoted to the cause of higher education, seemed to me to be a new departure. I asked my friend whether every one paid for the printing of his portrait in the magazine devoted to the cause of university education. "Every one," he answered. "Do you mean to tell me," I said excitedly, seizing the magazine from his hand and putting my finger on the portrait of a well-known gentleman—"do you mean to tell me that this gentleman paid you anything for printing his portrait?" "He sent me a check for $100," the professional-looking person replied deliberately. "Then you do not intend to publish my portrait and the sketch of my life unless I hand you a check; and all the eminent lives that the *University Magazine* celebrates contribute $100 each?" I inquired. He looked me full in the face as much as to say, "Of course; what a fool you are to ask such a question."

Well, Mr. Editor, I would not contribute $100, and they did not publish my portrait and my life in the *University Magazine*. I have examined the periodical since then, where it is on exhibition at the elevated-railway stations, and I am struck with the profit there is in the publication of about thirty-six photographs in each number at $100 per head. A. B.

New York, October 27, 1892.

COLLEGE ENGLISH.

To the Editor of The Nation:

Sir: The article in your No. 1425, entitled

"English at Harvard, and E'sewhere," recalls to my mind the trial of a case some years ago in our Federal Court. It involved the good faith of a subscription-book publisher towards his solicitors. The correspondence between them was received in evidence. The solicitors, to the number of forty or more, were undergraduates—about one-half of them of Colby. *Not one* of their letters produced was free from orthographical errors. Their general style and appearance suggested anything rather than that they were the work of men who had been "prepared" for college. These facts are in line with those stated in your article, and furnish their own comment.

O. K.

DETROIT, October 24, 1892.

"A PERVERT."

TO THE EDITOR OF THE NATION:

SIR: De Quincey, discoursing on "Coleridge and Opium-eating," designates as "modern slang" the expression which I purpose to discuss.

Dr. R. G. Latham, in his fraudulent appropriation of the Johnson-Todd *Dictionary*, a work probably no better known in the United States than it deserves to be, delivers himself, respecting it, as follows:

"A word of recent coinage, formed after *cónvert*, for which it is a term of disapprobation or sarcasm. It, of course, implies that the creed or doctrine of the speaker is right; the adopted one, wrong. Hence, when used by each of two parties, it has a different import, and, when used by one only, it is a term of limited application. As far as the editor can judge from his individual experience, it is chiefly used by Protestants, and applied to converts to Romanism. It is, however, a term of abuse, which one party is as free to use as the other. *Etymologically*, it is a good word; and this is as much as can be said in favor of it."

On one ground or other, a good part of what is here laid down is liable to demur.

Of A and B, who once professed identical opinions, B comes to profess opinions of a discrepant complexion. In these circumstances, if B takes offence because A calls him a *pervert*, A has no less ground for taking offence because B calls himself a *convert*. If, then, the newer term is to be frowned on, it should fare similarly with the older. To Dr. Latham's lip-delicate, mealy-mouthed Utopians the ambidextrous mutilation *'vert* might prove acceptable, to take the place of both the terms, with, for company, *doxy*, instead of *orthodoxy*, *heterodoxy*, and *cacodoxy*. In short, *convert* and *pervert*, as describing, from diverse points of view, one and the same person, are expressions equally useful with *emigrant* and *immigrant*. But, like Dr. Latham, I have travelled out of the record.

The position, regarding the substantive *pervert*, that, "etymologically, it is a good word," also calls for remark.

It cannot have occurred to Dr. Latham that the substantive *convert*, which suggested *pervert*, is conspicuously peculiar, as a derivative, and that *pervert* is no less so. What would he have said to such a substantive as *advert*, *avert*, *controvert*, *divert*, *invert*, *obvert*, *revert*, or *subvert*, if it had been proposed? Their analogue *pervert*, since it means "one who has been perverted," ought, normally, to be traceable to a participial adjective docked of its termination; like, in form, the obsolete *afflict* and *concoct*. But, historically, it is an infinitive, transsensed, so to speak; and, especially, it denotes a personal agent. This being the case, it is even more anomalous than *cheat*, "cheater," and *brag*, "braggart." I have assumed to be indefensible the views that it originated as a shortening of its predecesser *convertite*, from the Italian *convertito*, or else under the influence of the French *converti*.

Whatever it was in De Quincey's days, it is no longer, as he stigmatized it, "slang." Nor is it "modern," or "of recent coinage," as he and Dr. Latham, respectively, assert. Presumably, it will turn up in many an obscure old book not yet ransacked for its vocabulary. At all events, as is shown below, it was used by three authors of the seventeenth and eighteenth centuries:

"I have ordered the ministers of those parishes to proceed against such *perverts* according to the utmost severity of the law." Roger Boyle, Earl of Orrery (1666), *State Letters* (1743), vol. ii., p. 75.

"So that, at present, they are seldom found at their Books, but, for the most part, Ranging from one House to another, upon pretence of encouraging and confirming their new *Perverts*, and boasting themselves for great Doctors," etc. Gabriel d'Emilianne (1699), *The Frauds of Romish Monks and Priests* (1691), p. 50.

"A Popish *pervert* and a Protestant convert are, indeed, two different provisionals." Rev. Myles Davies, *Athenæ Britannicæ*, vol. ii., p. 316 (1716).

"How unfortunate soever those native *perverts* to Popery may be deemed, 't is certain some of the first foreign converts to the Church of England were not much less unlucky," etc. *Id.*, *ibid.*, vol. iii., *A Dissertation upon . . . Pallas Anglicana*, p. 27 (1716).

And twice elsewhere in vol. iii. of *Ath. Brit.* occurs the substantive *pervert*.

I have seen in print *retrovert*, "relapsed convert or pervert"; a fact just worthy of passing mention. F. H.

MARLESFORD, ENG., October 22, 1892.

Notes.

MR. THEODORE BENT'S book on 'The Ruined Cities of Mashonaland' will be brought out by the Longmans early next month. It will contain upwards of one hundred illustrations, besides maps and plans, and will enter into minute details concerning the cities and fortresses of the earliest gold-diggers of the world, dating back centuries before Christ. Mr. Bent's expedition was set on foot by Mr. Cecil Rhodes and the Chartered Company of South Africa. Besides archæological points, Mr. Bent's book will touch at length on the habits and customs of the inhabitants of Mashonaland, among whom his party lived for seven months.

Among other English announcements we note the following: Lord Selborne, whose accomplishments as a hymnologist have been well known since the publication of his 'Book of Praise' thirty years ago, has in the press of A. & C. Black a volume to be entitled, 'Hymns: Their History and Development.' The Dean of Rochester, Dr. Reynolds Hole, has a volume of memoirs just about to appear. It will comprise his recollections of all sorts and conditions of men, from bishops to gamblers, with many anecdotes and stories, and with some illustrations by Leech and Thackeray. The stories are likely to be good, we should say, for the Dean has a rather remarkable sense of humor, and rather less than the conventional staidness and formality of a Church dignitary. His publisher will be Edward Arnold. The conversations of Dr. Döllinger, recorded by Louise von Kobell, have been translated and will be published by George Bentley & Son. They are of the date of the last ten years of Döllinger's life, and will doubtless set forth his latest conclusions.

Mr. Charles de Kay has translated a volume of letters from Heine to his mother and sister which Cassell will publish along with 'Thoughts of Busy Girls,' by Miss Grace H. Dodge, and a translation of Ohnet's new novel, 'Nimrod & Co.'

A. C. Armstrong & Son announce, as a new number in the "Booklover's Library," 'Books in Chains,' by the late W. Blades.

S. C. Griggs & Co. have in press and will shortly issue a translation, by Mrs. Mary Bushnell Coleman, of the 'Youth of Frederick the Great,' by M. Ernest Lavisse of the Sorbonne.

Lovell, Coryell & Co. have in preparation an *édition de luxe* of Barrie's 'Little Minister,' with portrait and nine etchings on Japan paper, in two volumes, of which only 260 copies will be printed.

The Funk & Wagnalls Co. have nearly ready a book on 'English Compound Words and Phrases,' by F. Horace Teall. Its main feature is a list of nearly 40,000 terms, originally made for guidance in the preparation of the 'Standard Dictionary.' The list has been very carefully revised and explained, and is now offered as a practical aid in determining word-forms.

As usual at this season of the book trade, there is a flood of new editions, both plain and fanciful. T. Nelson & Sons send us the "Oxford Shakspere," edited by W. J. Craig, newly printed on thin India paper, making a very light duodecimo volume; and the same excellent text in the same type has been distributed in six tiny volumes, confined in a neat box, which have been dubbed the "Oxford Miniature Shakspere." The print is small, but the impression is clear, and all the appointments are in the best of taste. T. Y. Crowell & Co. have added to their "Handy Volume Classics" 'Paul and Virginia.' To embellish the text, they have copied the decorative etchings of Maurice Leloir, reduced. The binding of this series is in two colors, with much gilt, but more showy than elegant. In comparison with the artist just named, Jean Claude is but a poor illustrator, and his designs furnish little excuse for the new edition of Souvestre's 'An Attic Philosopher in Paris' (Appletons). The reproduction of his drawings by "process," too, entailed the shiny paper which is so trying to the eyes. 'Dorothy Q., together with a Ballad of the Boston Tea Party and Grandmother's Story of Bunker Hill Battle' (Houghton, Mifflin & Co.), is in its contents an obviously homogeneous volume, and the three ballads have been illustrated by Howard Pyle in his familiar manner and with his usual felicity for the most part. In imagining a Copley he is not at his best, and Dr. Holmes's counsel in his preface to "ascertain where the portrait by Copley is now to be found" is doubly enjoyable humor. The self-rhyming lines in the Bunker Hill ballad break a little awkwardly in the narrow measure. The cover is in dark cloth with a quaint device of silver clasps. The same firm has brought out a very generous edition of Hawthorne's 'Wonder-Book,' with sixty designs by Walter Crane. Some of these are full-page and chromolithographic, and will best suit the childish eye and fancy; but their elders will prefer the graceful head and tail-pieces and initial letters freely scattered through the book. The embossed cover is very successful.

A very welcome reprint is 'Notes by a Naturalist,' with a portrait and brief memoir of the author, the late H. N. Moseley, naturalist of the *Challenger* expedition (London: John Murray; New York: G. P. Putnam's Sons). This work was a true offspring of Darwin's

'Journal of a Voyage,' by reason of the influence of the latter first in determining Moseley's career and then in furnishing a model of many-sided observation. The present edition is handsomely made, and retains the sufficiently numerous illustrations.

The younger Dickens relates in the new reprint of the first edition of 'Dombey and Son' (Macmillan) the circumstances of the inception of that story, in Switzerland in 1846, amid the familiar complexity of carrying on another story at the same time, and in that absence from the madding crowd which seemed to fetter Dickens's productiveness. A facsimile of the wrapper for Part i. is given, and attention is drawn to the evidence it supplies of the definiteness of the original plan of this novel, whose success was instantaneous and beyond expectation. Playwrights, however, have been able to do but little with it.

Victor Hugo's 'Quatrevingt-treize,' adapted for school use, with copious notes, and Gaston Paris's 'Extraits de la Chanson de Roland,' with grammatical observations and a glossary, in a third edition, are issued by Ginn & Co. in their "International Modern Language Series," and will be welcome to teachers.

Mr. Charles Plummer, whose little book of extracts from the Anglo-Saxon Chronicles was received with so much favor three years ago, is preparing a complete edition of the Parker MS. and the Laud MS. arranged side by side. The first volume, just published by the Clarendon Press (Macmillan), under the title 'Two of the Saxon Chronicles Parallel,' contains text, variants, appendices, and glossary. The second volume, which is to contain the introduction and notes, will not appear until Mr. Plummer has finished his projected edition of Bede's 'Historia Ecclesiastica.' The present instalment, however, is complete in itself, and, with its carefully revised text and elaborate glossary, can be heartily recommended to all students of English history or the English language.

The fourth part of Gotch's 'Architecture of the Renaissance in England' (Boston: Ticknor & Co.) has the good qualities of its predecessors, which we have already noticed. Many of its examples are interesting; others would hardly be thought worth publishing if they were in continental Europe. The well-composed chimney-piece in South Wraxall manor-house is very characteristic of English work at that period—of its rich exuberance, vigor, and picturesqueness, and also of its faults of proportion and want of scale. The interiors are perhaps the most attractive plates, but, as we see in those of Canons Ashby and of the Red Lodge at Bristol, are curious examples of an incapacity, likewise characteristic, to design a ceiling with any proper relation to the architecture under it. They tempt one to suspect, as do many other peculiarities, that building in England more than elsewhere was the product of workmen who were pretty independent, and worked without much coördination or close direction from any artistic chief.

The projected "Delights of History" series, under the editorial care of Dr. Eggleston, with the literary and artistic assistance of his two daughters, gives us its first fruition in the little popular 'Story of Columbus' (Appletons), in which the latest researches are used, and an attempt is made to strike that mean in the character of Columbus which gratifies the common run of readers.

Mineralogists need no introduction to the new edition of Dana's 'System of Mineralogy,' lately published by Wiley & Sons, but other readers may be interested in the development of this great work. The first edition, by Prof. James Dwight Dana, appeared in 1837, and combined with his studies in zoölogy and geology to place him in the front rank of scientific Americans. The voluminous fifth edition of the work came out in 1868. The present sixth edition is the work of the author's son, Prof. Edward S. Dana, and fully maintains the high standard of scientific accuracy set by the father. It is a noble contribution to American science.

Among the newest reports of State geological surveys, we notice a volume from Arkansas, on the Novaculites or whetstones of that State, by L. S. Griswold, setting forth their remarkable structure in a very complete manner; another, from the same State, on iron ores, by R. A. Penrose, who has lately been called to the University of Chicago to take charge of Economic Geology. Prof. Branner, having completed his charge of the Arkansas survey, is now at Stanford University, Cal. The third annual report of the Texas Survey, under E. T. Dumble, contains papers by several assistants; the printing and illustration of the volume being notably better than is common in reports from official printers in Western States. Bulletin 4 of the Alabama Survey presents a comprehensive account of the structure and topography of the northeastern part of the State, by C. Willard Hayes; its analytical style being a decided departure from the simply descriptive and statistical accounts of many survey reports.

Hill's pocket 'Souvenir Guide to Chicago and the World's Fair' (Laird & Lee) begins with a description of the globe, followed by lists of places of general interest in Europe, and does not reach North America till p. 32, nor Chicago, properly speaking, till p. 71. But the information as to steamship lines and fares from all parts of the globe to Chicago will be appreciated by the foreign tourist, who will find that the 'Guide' is not devised for tourists alone, since it shows the practical workings of the Illinois secret-ballot law, and gives the cost of burial lots. The index to streets and sections of the city is ingenious, and is illustrated with views of buildings. These tiny vignettes occur throughout the book, and even the various styles of public carriages are pictured. The statistics are very full.

The Proceedings of the Numismatic and Antiquarian Society of Philadelphia for 1890-91 forms a rich volume of 129 pages, and the list of members is a strong one as regards both numbers and ability. Probably the most important paper is contributed by Benjamin Smith Lyman, on Japanese swords. Dr. Lyman was for a number of years in the employment of the Japanese Government as geologist, and knows the archipelago and people well, remembering withal the time when the sword was a necessary part of a Japanese gentleman's equipment. Gathering together the historic and sentimental lore of the sword, well acquainted with the literature of his theme, and expert as a metallurgist, the writer furnishes a paper of fascinating interest. The article is well illustrated, and concludes with the prophecy that very speedily the Japanese sword will be "regarded in its own country as an emblem of rude savagery as well as of unenlightened military art." A paper, as appropriate appendix, is reprinted from his excellent report of 1873 on the "Japanese Method of Making Iron and Steel." Incidentally, we are reminded of the fact that the most abiding and worthy monuments of the American Scientific Commission for Yezo are the geological surveys and truly scientific reports of Dr. Lyman. Another touch with Japan is found in the article on "Tip-cats," which game is asserted by Mr. Tsuda of Kumamoto to be confined to this southern city of Japan, and to have been introduced from Corea. Among other interesting papers is one by Mrs. Cornelius Stevenson on the symbols used in the decoration of recently excavated Egyptian painted pottery. Much light is cast on the ancient symbolism, ritual, and commerce of the Mediterranean nations.

Mrs. Bishop, the well-known traveller, contributes to the *Scottish Geographical Magazine* for October an account of a journey in Lesser Tibet which is of unusual interest. This region, lying in the heart of the Himalayas, is inhabited by Tibetan Buddhists whose chief characteristic is their extreme devotion to their religion. The lamas, 11,000 in number, constitute nearly a tenth of the entire population. Their monasteries, "vast irregular piles of fantastic buildings, almost invariably crowning lofty isolated rocks or mountain spurs," are to be found everywhere. By the roadside there are numerous figures of Sakyamuni and "frequent rows of prayer-mills, occasionally as many as 150 in a row, each containing a long roll of paper inscribed from 10 to 1,000 times with the sacred words (*Aum mani padme hun*), and revolving easily by being brushed by the hand of a passer-by." One of these cylinders, said to contain 20,000 repetitions of this mantra, is worked by water. Of one of the religious dances, symbolizing the triumph of Death, Mrs. Bishop gives a striking description. Notwithstanding such zealous fervor, the Moslem influence is increasing, partly owing to the renewal of proselytizing energy throughout Asia, and partly to the intermarriages of Moslems and Buddhists. The people are industrious—the men seldom being seen without the distaff in hand—kindly and merry and hospitable, though very stupid. Children are not weaned till they are four, five, and even six years old. This number of the magazine also contains a paper by the Prince of Monaco on the currents of the North Atlantic, illustrated by a new chart; and a description of the ruined temples of Mashonaland, having especial reference to their orientation. Mr. Bent gives various facts to show the possibly Semitic origin of the Mashona Kaffirs—such as their dynastic name, their methods of inheritance, the custom of circumcision, and the keeping of a weekly day of rest during the ploughing season.

The principal article in the October Proceedings of the Royal Geographical Society is upon British Guiana by Mr. E. im Thurn, who since 1882 has been the "post-holder" or administrator of the northwestern district. Three distinct divisions characterize this part of the colony: the mangrove swamp which lines the coast; the dense forest belt, in places more than a hundred miles broad; and the upland savannah. The only method of communication is by water, the rivers all being connected together by an extraordinary network of narrow waterways, partly natural, partly artificial. In the forest these form leafy tunnels into which the direct rays of the sun never penetrate, while upon the trees are innumerable orchids like insects in shape and color, and gorgeous butterflies colored like flowers. Bird-life is represented mainly by humming-birds and small herons. Mr. im Thurn illustrates the astonishing fertility of the soil by the fact that in his own garden, which was cleared and drained hardly two and a half years ago, there are now already "avenues of trees (*Casuarina*) of over forty feet high which I then planted." In the past eight years great progress has been made in the development of the country

through the discovery of gold. This bids fair to be the principal industry of the inhabitants, the export having increased from 250 ounces in 1884 to 101,297 in 1891. Mr. im Thurn gives an interesting account of the native Redmen, the principal tribes being the Caribs and the Arawaks. He holds that the manner of life of the Indians of the interior is the same as it was in the days of Columbus. Their old customs, however, are now fast disappearing before the advance of the gold industry.

We have received the first number of the *American University Courier*, published at Washington "to promote the movement, so wisely and auspiciously inaugurated by the Methodist Episcopal Church of the United States, to found at the National Capital a great university." The words quoted are President Harrison's, in a letter dated October 31, 1890, conspicuously printed as his "endorsement" on the first page of the *Courier*. But when he goes on to say, "It must be a National University, with strong emphasis on both words," how can he think a sectarian institution capable of fulfilling either condition? The editors lay stress on Washington's well-known desire for a national university at the capital; but do they really believe they are carrying out his idea?

Good Government, Washington, has, by permission of Harper & Bros., reissued on plate paper the portrait of the late George William Curtis which was selected to commemorate him in his own journal, *Harper's Weekly*. It is a process engraving, and ranks among the best of the permanent prints of Mr. Curtis's humane countenance. *Good Government* offers it at a nominal price to all subscribers.

A competent American observer writes from Cassel, under date of October 3:

"I looked forward to a visit here of some length, hoping to see the gallery, which is (or was) a fine one, many times. You can judge of my disappointment when I tell you that the pictures *all*, individually and collectively, have undergone a 'cleaning' by the same sacrilegious hand; and the Rembrandts, which were exceedingly fine, are scraped down almost to the canvas, so that even in the best there is no color left. Every picture in the gallery has been treated with the same diabolical mixture of black varnish, which would be prime on a carriage and would undoubtedly stand all weather, even a German winter. The whole large gallery shines like a boot-blacking establishment. I was never so horrified by any waste as that of this splendid collection."

The demand for the report of the Harvard Committee on Composition and Rhetoric has proved so great, and the cost of printing is so considerable, that the pamphlet is to be sold hereafter for 50 cents. It may be had of the Publication Agent of Harvard University, or of Henry Holt & Co., No. 29 West 23d Street, New York.

—The first number of the "Leland Stanford Junior University Monographs" (such is the uncouth title which this institution finds itself compelled to assume for its publications) is a bulky paper by Dr. O. L. Elliott on the tariff controversy in the United States from 1789 to 1833. Dr. Elliott devotes some 270 large pages to this subject, and confines himself to it strictly: the controversy, the arguments pro and con, the debates in Congress, the writings of public men and of pamphleteers—these alone are his theme. Legislation is touched but briefly, and the crucial question of the effects of legislation is not touched at all. At this rate a complete history of tariff legislation in all its aspects would fill several volumes. Truly, of the making of books there is no end! For the rest, Dr. Elliott has performed his appointed task faithfully and intelligently. He has waded conscientiously through the dreary mass of literature on protection, and calls attention anew to some things which, if not buried in such an accumulation of uninviting material, might be pertinent to the controversy as it stands to-day. He reminds his readers that the chief circumstance which led men like Jefferson and Madison to acquiesce in a policy of protection was the absence of reciprocity—the rigid protective legislation maintained by all European countries, England included. He notes, too, that the pauper-wages argument in the early days was a weapon in the hands of the free-traders; they reasoned that, with wages so much higher in the United States, it was folly to try to foster manufactures which would not spring up of their own accord. He finds, it is true, a sporadic case of the pauper-labor argument in the hands of protectionists as early as 1809, but says with truth that it was not until twenty years later that it ceased to be used as an argument against them. When Dr. Elliott expresses his own mind, as he does in an occasional note or parenthesis on this topic and others, he speaks with sense and discretion; and we hope that if he gives us another instalment of his work, he will not only plan it on a smaller scale, but will give us less paraphrasing of the arguments of others and more of his own conclusions.

—The impressive funeral ceremony held at Westminster Abbey on the 12th of last month, when Lord Tennyson was buried in the presence of representative mourners from all classes and of all shades of opinion, offers a striking contrast to the civil rites performed about the same time in Paris in honor of Renan; but its most complete antithesis is found in the celebration also of the purely civil rite in honor of Victor Hugo. The two anthems at Lord Tennyson's funeral were lines in each case of his composition, and contained utterances about the hereafter which, though beautiful, were so very vague that neither Victor Hugo nor Renan would have found it difficult to discover in them his own ideas. Therefore the exclusion of the Church from participation in Renan's funeral was hardly necessary according to English ideas. Darwin received the same national and ecclesiastical honors that were given to the late Lord Tennyson. In England, as George Grote once indignantly exclaimed, "we can do nothing of this kind without the Church!" And this was so true that Grote himself was buried according to the rite of the Church which had exasperated him while he lived. In France both the Church and those who represent a scientific protest against her are far more logical. What Renan and Hugo would have been forced to go through in order to receive other than a civil burial is best shown by Renan's own description of the last hours of Talleyrand, when he "became convinced that the usages of society required of him *un dernier mensonge*, and resolved to reconcile himself, for appearance' sake, with a Church the authority of which, when finally submitted to by him, would convict him of sacrilege and blasphemy." Lord Tennyson, of course, was a most faithful member of the Church which honored him, but had he been as pronounced in opposition to it as Victor Hugo was against the Church in France, the last rites in his honor would hardly have been different from what they were.

—The death of Xavier Marmier does not remove a very great name from the list of French Academicians and men of letters, but it none the less makes a perceptible gap in it. For Marmier was a personage—a man with a special field of his own in literature, and with special work to do fitted to his solid if not brilliant qualities. He was, throughout his long life of more than eighty years, an intermediary between foreign literatures and French readers. He knew thoroughly English and German, and read Dutch and Russian and the Scandinavian tongues. Early in life he travelled in the north of Europe, and later made himself familiar with the United States and Canada by long visits to each. He had friends and correspondents everywhere, and by translations of books and introductions of authors he did a great deal—more than anybody else, M. A. Mézières thinks—to popularize foreign literatures in France. His was almost the typical life of a literary man, spent in the midst of books and of friends who sympathized with his tastes and pursuits, varied by not much beyond his weekly attendance at the Academy and his daily stroll among the bookstalls on the quays. The bookstall-keepers he remembered in his will, leaving a thousand francs to pay for a dinner for them and an hour of merriment spent in his memory. "This shall be my return," his will reads, "for many hours of intellectual life that I have lived during my almost daily walks along the quays from the Pont Royal to the Pont Saint-Michel."

—Ever since the publication of 'La Débâcle,' a curious little tempest has been raging in Paris over a minute historical point in that great novel. Zola, in describing the appearance of the Emperor on the morning of Sedan, says that he was rouged to conceal the ravages that moral and physical distress had made upon his countenance. "Fardé comme un acteur," his words are, and he recurs to the point two or three times in the course of the story of the day of disaster. This assertion of Zola's was contested almost at once by M. Melchoir de Vogüé, in a review of the book in the *Revue des Deux Mondes*. Zola replied through an interviewer that he had the fact from people who had often heard a princess of the imperial house (meaning, of course, the Princess Mathilde) recount it. Denials followed from M. Paul de Cassagnac, who saw the Emperor at Sedan; from Mr. Robert Mitchell, who also saw him; and, lastly, from the Princess Mathilde herself, who said that she had never told the story, and had not the faintest notion from what source the legend could have sprung, since many well-informed persons have told her that there was no truth in it. Then came silence for a little space, broken only by heavy booming at intervals, as one general after another fired a gun Zolawards in the newspapers. The incident is closed by an article by Zola in reply to his critics. He says that he got his "fact" out of M. Gabriel Monod's book, and that it had been verified by eye-witnesses. But he adds, somewhat amazingly when one considers who the writer is, that at most the thing was no more than a matter of trifling detail, about which a poet might very properly take the version most calculated to heighten the effect of his work.

—On the 20th of September Venice erected a monument to Fra Paolo Sarpi, the contemporary of Shakspere, the friend of Galileo, the sympathizer with the Reformation, the opponent of papal pretensions. A local sculptor, Marsili, designed the heroic statue, double life-size, in bronze, which stands in the little Campo di Santa Fosca, near the former site

of the buildings of Fra Paolo's order (dei Servi di Maria), and hard by the bridge (Ponte Diedo) which witnessed the futile attempt on his life, October 5, 1607. The artist had for his guidance a portrait preserved in the Marcian Library, and by some attributed to Bassano, by others to Tiberio Tinelli. Fra Paolo's tranquil end appears to have intensified the odium attached to his memory in papal circles, and the project of the monument was the signal for a fresh outburst against this "Calvinist." On the other hand, the Marcian library has lately come into possession of thirty-six unpublished letters of Fra Paolo's, written on generous sheets, each bearing an embossed seal which has been reproduced on the monument, the motto being *In plano quiesco*. Another find of great importance is also recent. This is a petition to the Venetian Committee of Public Safety in 1802 by the Dominican Father, Barnaba Vaerini, who confesses himself author of a scurrilous 'History of the Hidden Life of Fra Paolo Sarpi,' composed some thirty years previously, which he now asks leave to print. The libel in question in fact saw the light in 1802, and was imputed on its title-page to Monsignor Fontanini, Archbishop of Ancyra *in partibus*, a faithful subject of Venice if also a stout defender of the rights of the Church, who died at Rome in 1736. By this pious fraud the 'Storia della Vita Arcana' acquired great vogue and authority.

BESANT'S LONDON.

London. By Walter Besant. With illustrations. Harper & Bros. 1892.

THIS seems to be the best work we have yet had on the antiquarian topography of London; and if we can trust its accuracy, of which only investigators on the spot and those who have access to the records are competent judges, it contains the fruits of much painstaking research. It is not confined to mere antiquities, topographical or architectural, but gives pictures of London life through successive ages.

Between the Roman and the English London Mr. Besant thinks he has found an historical gulf. Under the form, which we do not particularly admire, of an imaginary chronicle of the time, he conveys the idea that the Saxon invader thoroughly sacked and wrecked the Roman city, and that London was deserted except by a wretched population such as finds its lair among ruins. His proofs are the absence of anything Roman either in the configuration or street nomenclature of the English city, and the paucity of the architectural remains, which, we may observe, are far inferior to those of Calleva (Silchester), though Calleva was undoubtedly razed to the ground. Afterwards, Mr. Besant thinks, the flood of barbarian invasion having subsided and peaceful times having returned, commerce crept back to its ancient and once prosperous seat. What he fails to account for is the preservation of the name Londinium, while Eboracum became York, Rutupiæ Richborough, and Calleva Silchester, and other Roman cities lost their Roman names.

We entirely concur with Mr. Besant in holding that the municipal institutions of English London were original and not derived from the Roman municipality. It appears that their origin was not political but industrial. Here Mr. Besant is at issue with Palgrave, whose love of tracing institutions to a Roman origin amounted to a passion, leading him in this direction far beyond Freeman, who was at least as tenacious of the continuity of the Roman Empire as any rational version of history would permit. These antiquarian pedigrees of institutions sometimes leave nature and circumstance too much out of account. Some government a city, whether Roman, Italian, or English, must have had, and there could hardly fail to be a certain similarity in the forms. The same may be said with regard to all the antiquarian theories about the origin of feudalism. Feudalism was the natural product of an age in which, the law affording no protection, the personal protection of the powerful was necessary to the weak; in which, there being no regular army, the military services of land-owners were the only national force; and in which, there being no central administration, territorial delegation was the only mode of government. We find territorial delegation in the Ottoman and Persian Empires, neither of which can have had any connection with the feudal system of Europe.

Another point on which Mr. Besant has his own opinion, and with regard to which he is interesting, is the aspect of London in Plantagenet times. By some antiquaries it has been depicted as a city of mean dwellings. Of mean dwellings and positive hovels, no doubt, there were great numbers, perhaps whole quarters; but in its general aspect Mr. Besant maintains that the London of the Plantagenets was a city not of hovels but of palaces. By the palaces he means the city mansions of the great nobility. Of these he believes that there were no less than thirty-five in London, some of them capable of holding a retinue of four, six, or even eight hundred men. It is not, however, to be supposed that beds were made up for all these men, as in a New York hotel. The retainers slept like dogs upon the floor. When to all these palaces are added the great number of monasteries, the municipal buildings, the halls of the companies, and the mansions of the great city merchants, we can understand that the city might deserve Mr. Besant's epithet. Over all rose the towers and spires of a multitude of churches, monastic or parochial, with the mighty St. Paul's, ill-replaced even by Wren's noble work, soaring above the rest. It was also a city of pomps and pageantry, for which the breadth of some of the streets, especially the historic Cheapside, gave room enough. It was a city of merry and brilliant social life, as well as commercial activity. On the other hand, its sanitary condition was evidently dreadful, plague was a frequent visitor, and fever was never an absentee. The accumulation of smells must have been sickening, and the combination of noises must have been most trying to the nerves, if there were such things as nerves in Plantagenet times.

The passage of Mr. Besant's book is instructive in which he describes the political connection between the London of the Middle Ages and the country. This he deems, and no doubt rightly, to have been more important than was the connection in later times. The political influence of London was great: her voice more than once morally decided the accession to the crown. But her voice was not only her own, it was that of the nation, with which, through the frequent presence in her of the rural nobility and their retainers, she was closely united. Mr. Besant suggests that the retainers, during their residence with their lords in London, would imbibe and carry back with them to the country the spirit of municipal freedom. The social separation of the landed nobility and gentry from the commercial class he thinks is of comparatively recent date. The younger sons of the mediæval nobility and gentry did not, he thinks, disdain trade; he finds that Whittington, the traditional type of a self-made man, was a gentleman by birth. London had the advantage over the Italian cities as the capital of a nation under a national government; she was thus exempted from the revolutionary politics of urban republics, and the party proscriptions of which Dante was the most illustrious victim.

Only two or three specimens now remain of the city mansions of the great merchants. The departure of the chiefs of trade from the City to West End or suburban residences has made a vast difference in the problem of city government. Elective institutions might work well enough when the election was sure to fall on a Whittington or a Gresham, as it was so long as Whittington or Gresham lived among the citizens and made his social influence felt. Perhaps no city is now so thoroughly deserted by social life as the City of London. It might furnish Prohibitionists, as has been said, with an awful instance of the decline of population accompanying the consumption of drink, for beverages of all kinds are consumed at the eating-houses where the clerks and men of business dine in the middle of the day, while there are scarcely any residents, and out of business hours hardly a footfall is heard.

What with the demolition of the monasteries and their churches, the wide ravages of the great fire, and the migration of the nobility and the merchant princes, there is a gulf between the mediæval and the modern city—not so wide as that between the Roman and the English city, yet very wide. If London was a city of palaces in the time of Edward III., it was, says Mr. Besant, a city of ruins in the time of Elizabeth. He alludes to the destruction of the monasteries and the churches attached to them, some of which, as the Church of the Dominicans, were magnificent, full of the most venerable monuments, and consecrated by the most interesting traditions. The Church of the Knights Hospitallers was blown up with gunpowder. Crutched Friars Church was turned into a carpenter's shop and a tennis court. The Priory of the Holy Trinity was, with great labor, pulled down, and the material sold for paving or building-stones at sixpence a cartload. The Church of Austin Friars escaped, but the spire, the finest in the city, was pulled down by the Marquis of Winchester, and a priceless group of historical monuments was sold for £100. Mr. Besant is here led to ask how there should have been, even among the baser sort, so little reverence for the past and so little regard for art as to allow these glorious buildings to be demolished, and these treasure-houses of monumental art to be rifled without a protest; for it appears that no protest was made except in the case of the spire of Austin Friars. He cites instances of recent vandalism, with the remark that the reverence for what is historical is confined to a few. This is true, and the present revival of mediæval art, while it has produced an effect on the religious sentiment of people of taste, has produced no effect whatever on the religious sentiment of the masses. But in this case there was something more than æsthetic insensibility. The corruption and the covetousness of the monks and ecclesiastics had made them and their houses objects of positive hatred to the people, who, so long as they got rid of the cormorant brood, would care nothing for the destruction of the loveliest nest. In Spain the monks of one of the richest and stateliest abbeys, when the abbey was dissolved, had to flee for their lives from popular

hatred. Not a single note of mourning, we believe, is to be found in the Elizabethan literature over what seems to all of us, now that monastic corruption is a thing of the past, an act of extreme vandalism, while to churchmen it seems an act of sacrilege.

About the London of the Stuarts and Pepys, or that of the Georges, Hogarth, and Dr. Johnson, there is less to tell that we did not know before, but there is something new in the aspect under which the familiar facts are presented by Mr. Besant. One important change, he says, was that mercantile life ceased to attract the younger sons of the gentry, who found employment in the army or navy, and the city was thus severed from the counties.

"Trade," he says, "was no longer recruited from the better sort, class distinctions were deepened and more sharply defined even among the middle class. A barrister looked down upon a merchant, and would not shake hands with an attorney, while a simple clergyman would not associate with a man in business—Sydney Smith, for instance, refusing to stay a night at a country house because its owner was a banker and a tradesman."

We cannot help doubting this anecdote of Sydney Smith, who was not a man of family, but was a man of sense. What we believe to be true, and what would serve Mr. Besant's purpose as an illustration equally well, is, that the banker poet, Rogers, who was extremely sensitive about his social position, quarrelled with Sydney Smith for having alluded, in aristocratic company, to the firm of Rogers & Co.

We must not overlook the illustrations to this volume, which are numerous and very interesting.

FRENCH DANTE MANUSCRIPTS.

Les Manuscrits de Dante des Bibliothèques de France. Essai d'un catalogue raisonné. Par Lucien Auvray. Paris: Ernest Thorin. 1892.

Dante Allighieri. Traité de l'éloquence vulgaire. Manuscrit de Grenoble, publié par Maignien, Conservateur de la Bibliothèque de Grenoble, et le Dr. Prompt. Venice: Olschki. 1892.

Some months ago we called attention to the fact that France, which, since the days of Fauriel and Ozanam, has shown a singular lack of interest in Dante and his century, has recently awakened from her temporary neglect of a great poet. Prof. Gebhardt's 'L'Italie Mystique' was followed by Rod's 'Vie de Dante,' and that by Mlle. Augis's translation of J. A. Symonds's 'Introduction to the Study of Dante' and by Jeanroy's excellent article in the 'Grande Encyclopédie.' More recently the Dominican Father Berthier has begun the publication of a copiously illustrated theological commentary on the 'Divine Comedy.' Now we see a further proof of this reawakening of interest in the full descriptive catalogue which M. Auvray, Assistant Librarian at the National Library, has attempted of all the manuscripts of the 'Divine Comedy,' or of commentaries on it, or of the lesser works of Dante, possessed by the libraries of France—a total of about sixty manuscripts, of which thirty-six are of the 'Divine Comedy.' This work of classification, identification, and description had been attempted in 1835 by Marsand, whose scholarship was so little trustworthy that on different occasions he gave two conflicting accounts of the same manuscript; and again, in 1846, in the well-known bibliography of De Batines, who, however, had not himself had an opportunity to study the collections in the French libraries, availing himself, instead, of information furnished him by Ferrari. M. Auvray's catalogue is therefore the first that can be regarded as both trustworthy and complete.

The notes on the manuscripts of the 'Divine Comedy' are not the most interesting part of the book. Twenty-one of the thirty-five have already been described, so far as the character and value of their textual readings go, by Dr. Moore, in his 'Contributions to the Textual Criticism of the Divina Commedia.' Moreover, fourteen of the MSS. mentioned by De Batines have now found their way back into Italy, to the Laurentian Library at Florence; two are now in America—one the property of the Harvard College Library, the other of Prof. Norton. Of what may be gathered from the French collections as to Täuber's two families of manuscripts—the Boccaccio group, the type of which is the Vatican MS. long attributed to Boccaccio; and the Barberino group, so called from the copyist, Francesco ser Nardo da Barberino, whom Täuber attempts to identify with the poet Francesco da Barberino, Dante's contemporary—M. Auvray has little that is definite to state. But nothing, he says with reason, could be a more fitting task for the new Italian Dante Society than the publication of a "palæographic album" which should contain photographic facsimiles of the writing of Nardo and his pupils, and typical specimens of the more important MSS. of the 'Divine Comedy.'

It is not surprising to find the French libraries rich in commentaries on the 'Divine Comedy'; that would be only natural in a country where Italian and the Italians have never been an object of common knowledge. Of the many commentators of the fourteenth and fifteenth centuries, there are few which are not represented there by at least one manuscript. These MSS., however, have very rarely been made use of by editors of the commentaries, and several of them in M. Auvray's catalogue are for the first time brought to the knowledge of scholars under their proper titles.

Besides the commentaries, the French libraries possess an important MS. of the 'Convito,' an instructive translation of the 'De Monarchia,' and the Grenoble MS. of the 'De Vulgari Eloquio.' This last, which we now have before us in a complete photographic reprint, is of unusual interest and importance. Only two other MSS. of this work are known to exist; one is at the Vatican, a copy from an older original, now lost, which belonged to Lorenzo dei Medici; the other is in the library of Prince Trivulzio at Milan. That of the Vatican is of inferior importance, but between the manuscript of Grenoble and that of Milan there exist interesting relations. First, both evidently go back to the same original, for the mangled Provençal quotations and certain peculiarities of the arguments prefixed to the chapters make it hard to believe that the two texts were not copied one from the other or from an original identically the same. Second, the Milan MS. was that on which Trissino based his translation of the 'De Vulgari Eloquio,' the rare *editio princeps* printed at Vicenza in 1529, the year before Trissino, as ambassador of the Pope, attended Charles V. at Bologna and witnessed the definitive establishment of the Spanish power in Italy. Trissino did not add the Latin original of his version, and the theories which Dante advanced agreed so aptly with those for which he was then sponsor, that there were not wanting then and later those who declared the translation an imposture. That there was a Latin original was proved, to the satisfaction of many, by the publication of it at Paris, in 1577, by Jacopo Corbinelli, from a manuscript in his possession. It now appears, from the investigations of M. Maignien and Dr. Prompt, that the Grenoble MS. is that which Corbinelli owned, for, first, the numerous marginal comments, long supposed to have been made in the eighteenth century, are identical, the editors assert, with the emendations which would bring the text into conformity with Corbinelli's edition of 1577; and, secondly, the handwriting is the same as Corbinelli's own fluent and graceful script, which has been preserved for us in a number of his books. More than this, the editors declare that these emendations of Corbinelli, these adaptations by which the Grenoble MS. became the text of 1577, were in almost every instance the modifications necessary to make it agree with Trissino's earlier Italian version.

If that be so, and a comparison shows grounds for the assertion, we have a curious spectacle. Trissino, the Dryden of his age, publishes—anonymously, it would seem—an Italian version of the 'De Vulgari Eloquio,' leaving a mystery hanging over the source of his translation. Fifty years later the Florentine exile, Corbinelli, ex-tutor of Henry III., and already secret informer for Henry IV., publishes the Latin text, dedicating it to Henry III.:

"Recevrez ce present, ouvrage qu'en exil,
Honorant sa Patrie, fit Dante le gentil.
Dante en exil le fit: et Corbinel en France.
Sans aucun sien meffait exilé de Florence.
Fort de vostre bonté, tesmoignant les bienfaits
De vostre cueur Royal qui par vous luy sont faits:
Corbinel, en exil honorant sa Patrie.
Remet ce livre au jour, d'une seule Coppie
Rescous du fons d'oubly: et d'exil le tirant,
Le rappelle de ban, à voz pieds le sacrant."

But of Trissino and the edition of 1529 Corbinelli says not a word, although, if the editors are right, it was by it that he was guided in emendation. It would certainly not have added to his prestige that the French Court should know that his "seule coppie" was not unique and his publication virtually not the first.

The reproduction of the MS., which is entirely successful, includes even the binding. The notes of the editors are less satisfactory. Indeed, for a full and trustworthy rehabilitation of the confused text and the determining of the many questions depending thereon, we must still wait for the long-promised edition of Prof. Raina.

State Papers and Speeches on the Tariff. With an Introduction by F. W. Taussig. Cambridge: Published by Harvard University. 1892.

This volume contains Alexander Hamilton's famous "Report on Manufactures," presented to the House of Representatives in 1791; the speeches of Henry Clay and Daniel Webster upon the Tariff Bill of 1824; Gallatin's Memorial of the Free Trade Convention of 1831; and Robert J. Walker's "Treasury Report" of 1845. While this material is to be found in large libraries, it is not conveniently accessible to the public, and Prof. Taussig deserves the gratitude of all who are interested in following the history of our fiscal policy, as well as of those who care to make the question of protection a subject of serious inquiry.

It must be said, however, that the perusal of these papers gives rise to very mingled emotions. After the lapse of a century it is now contended by protectionists that our favored manufacturers require the aid of duties fourfold and in many cases tenfold as high as those recommended by Hamilton when the

plea of "infancy" was plausible; and they have succeeded in embodying their contention in law. On the other hand, the arguments upon which Hamilton relied for establishing his case, and which for the most part were conclusive upon the issue as then presented, have become obsolete, and modern protectionists have nothing that deserves consideration to urge in their place. The battle of argument has gone altogether against them, but they have succeeded in the contest of legislation. Sufficient explanations of this phenomenon may be offered; but it is melancholy to consider that any cause has practically triumphed in our counsels while its logical support has disappeared. At the same time, after a careful review of Gallatin's argument, we must concede that it is upon the whole superior to any modern presentation of the cause of free trade with which we are acquainted. The particular illustrations are no longer in point, but the general principles are the same, and their statement is so nearly perfect that very unusual talent must be employed to improve upon it.

Yet it must not be forgotten that the weight of argument had its legitimate effect. After forty years of increasing duties, the protective tendency was checked, and although the progress of reform was arrested in 1842, it was resumed in 1846, and continued until the contest with the Slave Power absorbed the zeal of all reformers. Walker's report is of interest as announcing the improved policy which was about to prevail, and it is a state paper of great ability; but there will be no difference of opinion with Prof. Taussig as to its falling below the work of Hamilton and Gallatin. It has no lack of argumentative power, but it is neither so complete in substance nor so symmetrical in form as the earlier discussions. Perhaps it is worth notice that the declaration made in the platform of the Democratic party this year as to the unconstitutionality of protective duties is implied in Walker's report as well as in Gallatin's memorial.

The speeches of Clay and Webster are of course not without interest, but they do not contribute much to the scientific study of the issue. As argument, Clay's speech is little superior to the puerilities of McKinley, and it must have owed its effect to the eloquence and earnestness of the orator. It consists chiefly of impassioned assertions of long-exploded fallacies, and contains little in the nature of fact. Webster's reply is effective by reason of his acquaintance with economic data, but he was hampered to some extent by the existence of protected manufacturers among his constituents. It contains nothing finer than his denunciation of the contemptible practice, not confined to that era, of calling protectionism the "American policy." As he effectively pointed out, the so-called American policy was an imitation of the policy of foreign States, while the "foreign policy" consisted in "a preference for our own established system as it now actually exists and always has existed."

We concur with Prof. Taussig in his judgment that Hamilton's report remains the strongest presentation of the case for protection that has ever been made by any American statesman. At the same time we incline to regard it as the strongest arraignment of that case, as it now stands. His theoretical argument is pervaded with that native aristocratical sentiment which his political experience had done so much to strengthen. He had practically forced the Constitution upon an ignorant and reluctant people, and he believed himself competent to force industries upon them which should be as beneficial economically as the Constitution was politically. Singularly enough, he embodies in his argument a tolerably complete list of manufactures which were already flourishing, without apparently noticing that he refutes his own theoretical propositions. As is well known, he fixes the highest protective duty at 15 per cent., at a time when our country was feeble and exposed to the vindictive commercial rivalry of Great Britain. Had he foreseen the culmination of his policy in the tariff of 1890, we believe that he would have shrunk in terror from its inception.

The American Missionary in Japan. By Rev. M. L. Gordon, M.D. Boston: Houghton, Mifflin & Co.

DR. GORDON'S handy little book, of fewer than three hundred pages, and dainty in its American dress of Quaker gray and silver, with Japanese design of full moon and plum-blossoms, is a striking commentary on President Arthur's felicitous term for the United States of "the great Pacific Power." The American missionaries, beginning with Liggins, Brown, Verbeck, and Hepburn, have done more than propagate dogma: they were the exemplars of the civilization of Christendom in its most winning form. They introduced good medicine, rational therapeutics, the wash-tub and board, the stove, soap, and household comforts. They ministered to intellectual hunger and fed the mind. They lived down suspicion and disarmed prejudice and even persecution. They trained some of the young men who led the revolution of 1868, and most of the mature men who now hold the helm of Japan. They educated thousands in parliamentary procedure. It may fairly be questioned whether representative and constitutional government in Japan could have won the marvellous measure of success thus far attained without the presence of the American missionaries and their long and patient training of the people. The overwhelming majority of church members, for a decade or more, consisted of men—young samurai, of the class, hereditarily gifted and numbering now about 400,000, which always has governed Japan and for a long time to come will govern it. These young men, in scores of well-known instances, graduated directly from the church meetings in which the special virtue of self-control had been emphasized and cultivated, first into the local, and then into the national assemblies. For their scholarship, varied abilities, character, and demonstrated unselfishness, the names of some of these Americans are household words in the Mikado's Empire. Both Government recognition and private popular esteem have been strikingly manifested.

With a directness, frankness, and clearness that charm, Dr. Gordon tells the story of his twenty years' experience as missionary, evangelist, helper, servant, and friend of the Japanese. There are no "natives" or "heathen" in his lexicon. He knows only friends, brothers, and the needy. He tells of his study of the people and their fascinating and exasperating language, of the famous "Kumamoto band" of converts that now form a coterie of literary and theological leaders, of Japanese preaching and preachers, of the incidents of evangelistic tours, of the lights and shadows of the work, of the Independent and Associated churches, of the great university founded by Neesbima in Kioto, of medical missions, and of Christian womanhood. With practical good sense, he discusses denominationalism and comparative religion, and pictures the merits and demerits of Shin Nippon (New Japan). As full of wit and humor, choice anecdote, racy allusion, and poetic thought as a pudding is of plums, this book is sure to be widely read.

Like a sensible man, Dr. Gordon mourns neither over the so-called "reaction" nor the tendency of the Japanese to do their own thinking, even of a theological sort. He rather rejoices that they have passed the nursling stage, in which swallowing is the only act necessary to nourishment. Now that they have grown teeth and are able both to chew and eschew, and even desire occasionally to rest in order to sound digestion, our healthy-minded Christian is actually happy. So well-grounded is his confidence in the ultimate victory of Christianity in Japan that, his vacation over, he again sets his face towards Kioto, for a new term of service. As a means of intelligently informing the average person exactly what Protestant Christian missionary work in Japan is, this little volume is equal to a barrel of the much-printed but little-read sectarian literature intended to hold both prejudices and pocket-books.

On the Modification of Organisms. By David Syme. Melbourne: George Robertson & Co.; London: Kegan Paul, Trench & Co. 1892. 8vo, pp. 164.

AFTER perusal of treatises advocating the Darwinian hypothesis, Mr. Syme's book is a good one to take up as a corrective. The author clears his ground as he raises his own construction. In doing so he makes numerous generally well-considered attacks on the theories of his predecessors. Darwin's conclusions receive by far the greatest amount of attention, and, it must be admitted, they do not improve under their merciless treatment. Some of the points are familiar already, but in the critical dissections in which they and others are made to figure, further havoc is wrought upon the premises against which they are turned. At first, six of the seven chapters in the work seem to be filled with destructive onslaughts on Darwinism; closer examination shows each to be attended by something which, in the author's opinion, will more satisfactorily occupy the position attacked and at the same time form an additional element in support of the theory for which it is proposed to displace that of natural selection. The common objection urged against dissenters, though applicable to the majority of advocates, that they have not fully comprehended selection, is of no avail in the present case. Any uncertainty vanishes before Mr. Syme's discussions of the definitions and offices of selection, results of competition, elimination, origin of variation, coloration, sexual characters, intelligence, instinct, cross-fertilization and insects, and modifying agents in general. In the author's scheme the single cell is taken as the point of departure; it is the source of all change; it is the biological unit, the irreducible vital entity, the seat of life and energy, the key that unlocks the mystery of organic modification. It is also the psychological unit, the irreducible unit which feels, thinks, and wills—a marvel and a mystery, possessing potentialities beyond anything in nature; a unit behind which it is not possible to go any more than behind the biological unit or the physical unit or atom. The community of the psychi-

cal units is called the soul, and a synthesis of these units the ego; the functions of the two being so distinct that the latter not only does not direct, but is not even conscious of, the operations of the former. The modifying actions proceed from the organism as a whole, and also from every part, external conditions furnishing only occasion or incitement, while organic change is the result of physiological changes.

Some of the most important differences between Mr. Syme and other anti-Darwinians exist in terms rather than in substance. The existence of the struggle to conform is recognized, but perhaps not in its due importance as compared with the struggle in direct competition. To the great struggle to adapt we should trace the tendencies of portions of species to vary in particular directions, thus inducing divergences through which new species originate without the elimination or even existence of intermediate forms. Severe competition is shown to be always degrading. It is shown that dichogamy in plants is not the result of benefit from insect visits, but of injury and adaptation; it is stated that the greater number of plants do not cross-fertilize, and that where insects are most numerous, in the tropics, attractive flowers are least abundant. Insect intelligence is made to account for protective resemblances. Certain sexual features usually supposed to be related to the same sex are shown to be adaptations relating to the other. The breeding habit of the Megapodes, hatching the eggs in heaps of decaying vegetation, is said to be a secondary instinct. "This is a modified or acquired instinct; but had the bird not possessed the primary incubating instinct in the first instance, it could never have acquired this modified form of it." How would Mr. Syme explain the case of the alligator, which makes a similar nest? "Many Arctic animals change their coats as many as four times during the year—are dark-colored in summer, white in winter, and an intermediate color in spring and autumn." It needs but one change of coat (moult) to account for all these colors: the new coat of dark color is acquired in summer; in the fall it passes through the grayish tint as it becomes white for the winter, and, as the new summer coat appears among the white hairs late in spring, the intermediate tint again is visible.

Primitive Man in Ohio. By Warren K. Moorehead. G. P. Putnam's Sons. 1892. 8vo, pp. 246.

In this volume Mr. Moorehead gives us the result of some years of work in the Ohio valley, in the course of which he explored 107 mounds, graves, and cemeteries. Much of this labor was done at his own expense and under circumstances that entailed great personal discomfort; but in spite of the adverse conditions his enthusiasm never flagged, and, as a result, he has brought together a collection which has rarely if ever been surpassed. As was to have been expected, some of these mounds were mere heaps of earth, or earth and stones, and contained nothing of interest, while in others the finds were rich in number and varied in character. To enumerate all the different types were a profitless task. Suffice it to say that among them may be found the usual assortment of implements and ornaments in stone, bone, shell, and copper, together with a number of the skulls and other osseous remains of the people who made and used them. Specimens of the different kinds are figured and described, and though perfectly satisfactory as far as they go, yet they do not give an adequate idea of the collection, which in point of size and variety of contents, and by virtue of the presence of certain new forms, is of the first importance.

While fully appreciating the amount and character of Mr. Moorehead's work, we are obliged to confess that, from an ethnological point of view, it tells us nothing new. Articles similar in kind to those he unearthed have been described by Squier, Putnam, Thomas, and others, and, so far as they and the crania bear upon the question of race, they do not indicate a different civilization from that which the Indian is known to have reached, nor do they require the invention of another people in order to explain them. This our author evidently perceives, for though he does not say it in so many words, yet it is clearly what is meant when he tells us, p. 199, that "nothing more than the upper status of savagery was attained by any race or tribe living within the limits of the present State of Ohio"; that "all statements to the contrary are misrepresentations"; and that "if we go by field testimony alone (not to omit the reports of early travellers among North American tribes), we can assign primitive man high attainments in but few things, and these indicate neither civilization nor an approach toward it."

To this conclusion, except so far as the charge of misrepresentation is concerned, we certainly do not object; but when our author, abandoning the field of personal exploration, approaches the subject from what may be termed the historic side, he betrays a want of preparation that makes it impossible for him to discuss the origin of these works in a full and satisfactory manner. Take, for instance, the statement, p. 106, that he "had never heard that" articles of European manufacture "were found in any of these hollow or earth-filled graves"; while it is doubtless true, it carries no weight in the investigation, for the reason that others of us have heard of such discoveries. Indeed, if he will consult "Aboriginal Monuments of New York," in vol. ii. 'Smithsonian Contributions,' p. 129, he will find that glass beads were taken from similar graves at Augusta, Ky., hardly a day's travel from where he was at work. So, too, the statement, p. 115, that there is "evidence that this region was occupied by an industrious community long anterior to the invasion of the Shawnees," may be true if, by invasion, he means the retreat of this people westward, across the Alleghany Mountains, and their return to Ohio, about A. D. 1725. But if, going back some two or three centuries, he refers to the time when they were first in Ohio—before they had been driven away by the Iroquois—his evidence will lose much of its force; for we are told that they were living in that region when it was first visited by the whites, and, so far as we know anything to the contrary, they may have been there for hundreds of years. Now, it must not be supposed from this that we intend to assert that they built all of the remains, or any particular one, for the Cherokees and other mound-building tribes are said to have lived there at some time in the past, and they may have erected some of them. What, however, we do affirm is, that the evidence, historical and archæological, of the Shawnee origin of some of these graves, cemeteries, and mounds is of such a character as to make it incumbent upon any one who denies it to give a reason for the faith that is in him.

In the preparation of this volume, as well as in the work of exploration, Mr. Moorehead had the assistance of Messrs. Gerard Fowke, H. T. Cresson, and "Jack" Bennett. To the first of these gentlemen we are indebted for a valuable paper upon the character and extent of Flint Ridge—that immense storehouse from which the aborigines drew the crude material for many of their arms and implements, while in chapter i. Mr. Cresson gives, in a clear and concise form, the evidence upon which is predicated the existence of palæolithic man within this region. He is also to be credited with the chapter upon the crania, in which, among other things, he notes the presence of different forms of skulls in these cemeteries, and uses it as proof that this region was once the seat of a war between a people with long and one with short heads. This may or may not have been the case; but, admitting it to be true, it will fit in with the account of the expulsion of the Shawnees from this region, for the Iroquois, who drove them away, had, according to Dr. Wilson, long heads, while the testimony of the graves in places once held by the Shawnees, and, so far as we know, by no other people, leaves but little doubt as to the prevalence of short heads in that tribe. The illustrations, of which we have fifty-four, were made from drawings by Mr. Bennett, and give a good idea of the different articles and the conditions under which they were found.

Early Bibles of America. By Rev. John Wright, D. D., Rector of St. Paul's Church, St. Paul, Minn. Thomas Whittaker. 1892. 12mo, pp. vi, 171.

The author has done rather uneven work in giving one-half of his pages to three Bibles, and condensing his treatment of all the others which he notices to such an extent that often he appears to be giving little more than a bare list. To be sure, the Eliot Indian Bible, the "Saur" German Bible, and the "Aitken" English Bible are of interest as the first American editions in those languages; but others also possess considerable interest and should not be passed by too lightly. It is evident that Dr. Wright has not seen all of the books which he describes, though, in fact, no one else is likely to have had that privilege. His accuracy is thus dependent upon that of secondary sources, conditioned by the liability to error incidental to compilation, type-setting, and proof-reading. Errors of date are, in fact, we believe, rare. The sources in question are not numerous, but have been well used. References to them, however, being infrequent, it is not always possible to trace a given statement. It is strange not to find any mention of Dr. Isaac H. Hall's monograph upon the Greek Testament of America, a book which is practically exhaustive in its line. It can scarcely be that Dr. Wright was ignorant of its existence. His main service is in having, after considerable correspondence, determined the whereabouts of a number of the "Saur" Bibles and some of the others, and in having told his story in popular language.

BOOKS OF THE WEEK.

Addis, W. E. The Documents of the Hexateuch Translated and Arranged. Putnams. $3.
An Exquisite Fool: A Novel. Harpers. 50 cents.
Appleton, R. Mrs. Harry St. John: A Novel. Chicago: Morrill, Higgins & Co. $1.25.
Baby John. By the author of Miss Toosey's Mission. Roberts Bros. 50 cents.
Bailey, Prof. M. A. American Mental Arithmetic. American Book Co. 35 cents.
Barbour, Rev. L. G. The End of Time: A Poem of the Future. Putnams. $1.50.
Barnes, Mary S. Studies in American History. Boston: D. C. Heath & Co. $1.50.
Batchelor, Rev. J. The Ainu of Japan. Fleming H. Revell Co. $1.50.

Bell, Malcolm. Edward Burne-Jones: A Record and a Review. London: George Bell & Sons; New York: Macmillan. $20.
Bourgade la Dardye, Dr. E. de. Paraguay: The Land and the People. Scribners. $2.25.
Bourget, P. La Terre Promise. B. Westermann & Co.
Calmettes, F. A Fisher Girl of France. Dodd, Mead & Co. $1.50.
Champney, Elizabeth W. Witch Winnie's Studio. Dodd, Mead & Co.
Coolidge, Susan. Rhymes and Ballads for Girls and Boys. Boston: Roberts Bros. $1.50.
Dale, D. The Little Doctor; or, The Magic of Nature. E. & J. B. Young & Co.
Dear, By the author of Miss Toosey's Mission. Boston: Roberts Bros. $1.
Degrerdon, W. E. The Grammar of Woodwork: A Graduated System. Macmillan. 60 cents.
Dickens, C. Dombey and Son: A Reprint of the First Edition. Macmillan. $1.
Dickens, C. The Old Curiosity Shop. M. J. Ivers & Co. 25 cents.
Douglas, Amanda M. Sherburne House. Dodd, Mead & Co. $1.
Ellinger, G. Kirchenlied und Volkslied. Stuttgart: G. F. Göschen; New York: International News Co.
Evans, Mrs. E. E. The Story of Kaspar Hauser from Authentic Records. London: Swan Sonnenschein & Co.; New York: Macmillan. $1.75.
Ewing, Mrs. J. H. Jackanapes—Daddy Darwin's Dovecot—Lob-Lie-by-the-Fire. E. & J. B. Young & Co. $2.
Fenn, G. M. Gil the Gunner. E. & J. B. Young & Co. $2.
Foster, L. C., and Williams, S. Selections for Memorizing. Boston: Ginn & Co. 60 cents.
Freeman, Prof. E. A. The Story of Sicily. Putnams. $1.50.
Greener, W. W. The Breech-loader, and How to Use It. Forest and Stream Publishing Co. $1.
Halsted, Prof. G. B. Elementary Synthetic Geometry. John Wiley & Sons.
Harper, H. A. From Abraham to David. Macmillan. $1.
Haviland, Dr. A. The Geographical Distribution of Disease in Great Britain. 2d ed. London: Swan Sonnenschein & Co.; New York: Macmillan. $4.50.
Henderson, F. By the Sea, and Other Poems. 2d ed. London: T. Fisher Unwin.
Henley, W. E., and Stevenson, R. L. Three Plays. Scribners. $2.
Hill, T. E. Souvenir Guide to Chicago and the World's Fair. Chicago: Laird & Lee. 50 cents.
Holder, C. F. Along the Florida Reef. Appletons.
Howerton, G. T. Short Talks on Character Building. Fowler & Wells Co. $1.
Hugo, V. Quatrevingt-treize. Boston: Ginn & Co. 70 cents.
James, Prof. B. W. Alaskana; or, Alaska in Descriptive and Legendary Poems. Philadelphia: Porter & Coates.
Johnson, Annie E. Songs from Nahant. Lynn, Mass.: F. A. Ireson.
Kaplan, A. O. The Magic Laugh: A Poem. Cincinnati: Robert Clarke & Co. 75 cents.
La Favre, Carrica. The Royal Road to Beauty, Health, &c. Fowler & Wells Co. 25 cents.
Landor, W. S. Poems, Dialogues in Verse, and Epigrams. 2 vols. London: J. M. Dent & Co.; New York: Macmillan. $2.50.
Lang, A. The Green Fairy Book. Longmans. $2.
Langtry, Rev. J. History of the Church in Eastern Canada and Newfoundland. E. & J. B. Young & Co. $1.
Ledoux, M. Ice-Making Machines. D. Van Nostrand Co.
Loir, Lieut. M. La Marine Royale en 1789. Paris: Armand Colin & Cie.
Lovett, Richard. James Gilmour of Mongolia. F. H. Revell Co. $1.75.
Lyall, Edna. The Autobiography of a Slander. Longmans, Green & Co. $1.50.
Marchmont, A. W. The Old Mill Mystery. John A. Taylor & Co. 30 cents.
Markham, C. R. Life of Christopher Columbus. London: George Philip & Son.
Medd, Rev. P. G. The Greek Devotions of Lancelot Andrewes, Bishop of Winchester. E. & J. B. Young & Co. $2.
Meriwether, L. Afloat and Ashore on the Mediterranean. Scribners. $1.50.
Miller, Rev. J. R. The Every Day of Life. T. Y. Crowell & Co. $1.
Nadaillac, Marquis de. Manners and Monuments of Prehistoric Peoples. Putnams. $3.
Nöldeke, Prof. T. Sketches from Eastern History. London: Adam & Charles Black; New York: Macmillan. $3.50.
Norman, J. H. Complete Guide to the World's Twenty-nine Metal Monetary Systems. Putnams. $2.25.
Olinet, Georges. Nimrod & Co. Cassell. 50 cents.
Oliphant, Mrs. The Cuckoo in the Nest. U. S. Book Co.
Orme, B. Treasure-Book of Consolation. London: T. Fisher Unwin; New York: Dodd, Mead & Co. $1.50.
Paine, Barry. Playthings and Parodies. Cassell. $1.
Paley, F. A. Fragments of the Greek Comic Poets, with renderings into English verse. 2d ed. London: Swan Sonnenschein & Co.; New York: Macmillan. 98 cents.
Ransome, Prof. C. Battles of Frederick the Great. Scribners. $1.50.
Riis, J. A. The Children of the Poor. Scribners. $2.50.
Sand, George. The Naiad: A Ghost Story. Wm. R. Jenkins.
Sargent, N. B. The Hour of Song. Leach, Shewell & Sanborn. 85 cents.
Schallenberg, V. Green Tea: A Love Story. Cassell. 50 cents.
Scollard, Clinton. Songs of Sunrise Lands. Boston: Houghton, Mifflin & Co. $1.
Scott, Sir W. Waverley. Dryburgh ed. Macmillan. $1.25.
The Great Streets of the World. Scribners.
Tolstoi, Count Alexis. Prince Serebryani. Dodd, Mead & Co. $1.50.
Van Rensselaer, Mrs. S. English Cathedrals. The Century Co. $6.
Weymouth, R. F. The Resultant Greek Testament: The Text in which the Majority of Modern Editors are Agreed. Funk & Wagnalls Co. $3.00.

NOVEMBER
EDUCATIONAL REVIEW.

ARTICLES.—The Service of Psychology to Education, James Sully; Normal Training in Women's Colleges, Francis A. Walker; Habitual Postures of School Children, Eliza M. Mosher; Educational Methods at West Point, Peter S. Michie; The University Spirit, John M. Coulter; Some New Text-Books of Ethics, James H. Hyslop.
EDUCATION IN FOREIGN PERIODICALS.—Oral Teaching, J. W. Langsdon; On the True Lever of Education, H. G. Wells.
DISCUSSIONS.—Large School Boards or Small? James M. Greenwood; On So-Called Honorary Degrees, Charles W. Super; Generalization in Arithmetic, A. F. Ames.
REVIEWS.—Sharpless's English Education in the Elementary and Secondary Schools; Hyslop's Elements of Logic; Volbrecht's Griechische Schulgrammatik; Wright's Primer of the Gothic Language; Manning's Practical Spanish Grammar; Hutchinson's Story of the Hills; Shaw's Physics by Experiment; Allen's Laboratory Exercises in Elementary Physics; Notes on Recent Pedagogical Literature.
EDITORIAL.

35 cents a number: $3.00 a year (monthly except ing July and August).

Henry Holt & Co., N. Y.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

187 PICCADILLY, LONDON W.

Letters of Credit.

We buy and sell bills of exchange and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travelers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,
NO. 59 WALL STREET, NEW YORK.

YALE MIXTURE

The choicest Smoking Tobacco experience can produce or that money can buy. MARBURG BROS.

SPECIAL BRAIN FOOD & NERVE TONIC.
CROSBY'S VITALIZED PHOSPHITES.
Composed of the Phosphoid Principle of the Ox Brain and Wheat Germ.

The very elements which produce vital force, increase brain power, sustain in vigor all the functions, prevent mental and nervous debility.

It is a *vital nutrient* phosphite, not a laboratory or acid phosphate. Formula on each label. Pamphlet with full information free on application to

56 West 25th Street, N. Y.

For sale by leading druggists.

F. Crosby Co.

Make Two Hundred

CAKES with Royal Baking Powder and every one will be whiter, sweeter, lighter, finer flavored, more delicious and wholesome than cakes made with any other baking powder.

The last spoonful in a can of Royal Baking Powder will be found as good as the first, and the last cake will be as light as the first, because the Royal has keeping qualities which all others lack.

A spoonful of Royal will go further than a spoonful of any other powder because it is the purest.

A MOST excellent book for personal or domestic practice is **Stepping Stone to Homœopathy and Health.** 256 pages. 12mo, cloth, $1 00, post free. A good book for the family. Published by
BOERICKE & TAFEL,
1011 Arch Street, Philadelphia, Pa.,
Homœopatic Pharmacists and Publishers.
Book Catalogue mailed free.

RAG DOLLS. Made and sold by the Moravian Ladies' Sewing Society. Price $3, sent by mail, prepaid.
Apply to 107 Market St., Bethlehem, Pa.

The TRAVELERS' BUREAUS of the News Series (Herkimer, N. Y., office) will send trustworthy information about winter resorts.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 10, 1892.

The Week.

As we go to press, not only is Mr. Cleveland elected by an overwhelming majority of the Electoral College, as well as by a popular majority, but there seems good reason to hope that he may be supported by a Congress Democratic in both branches. The House of Representatives is Democratic by a great majority. The Senate now consists of 47 Republicans, 39 Democrats, and 2 Farmers' Alliance men. The Democrats have gained one Senator in this State. There seems no doubt that Nevada will return Senator Stewart as an anti-Republican. He took his stand against the Republicans on the Force Bill two years ago, and he has openly opposed Harrison and the whole Republican policy during the late canvass. The loss of two other seats would cost the Republicans their control of the upper branch, for there is no issue on which they can win over the two Independents, and, in case of a tie, Vice-President Stevenson, as the presiding officer, would decide the question against them. The chances seem at least even that the Republicans have lost the Legislatures in at least two of these five warmly-contested States which are to choose Senators — Wyoming, Michigan, Wisconsin, Minnesota, and Nebraska. Even if there proves to be a nominal Republican plurality of two or four, it is not a plurality upon which dependence can be placed. Two Republican Senators voted against the McKinley Bill two years ago, and it is not unreasonable to expect that Republican votes can be secured, if necessary, for its repeal. On every account, it is to be hoped that both branches of the legislative department may be in sympathy with the Executive.

Returns from about three-fourths of Massachusetts indicate that Gov. Russell has been reëlected by a small plurality. If the full vote sustains these indications, it will prove one of the greatest personal triumphs ever achieved by a public man in this country. Massachusetts is a Republican State, and has chosen Harrison electors by a considerable majority, but there is so much independence among her voters that about 10,000 men who supported Harrison for President at the same time voted for Russell for Governor, on the ground that he was the better man of the two candidates and deserved another term. It is a matter of little consequence to the Governor, however, whether he is reëlected or not. In either case no man of his generation has a brighter political future before him, and the best of it is that he deserves all that he has had or may yet receive.

The result in Connecticut is cause for especial congratulation. Not only does Cleveland carry the State by a very large plurality, but the Democrats appear to have elected the Governor by a majority on the popular vote, and there will be no more Bulkeleyism. The spectacle presented by the old-time "land of steady habits" for two years past has been most discreditable, and it is encouraging to find that Republicans enough have turned against their party to put an end to the disgrace.

The State law makes a bet on an election a disqualification for voting, but it is never enforced by challenge or otherwise. For a good while, however, betting on the result was confined to the sporting fraternity, who bet on everything which has an element of chance in it. When it first spread beyond this class, the stakes were trifles, such as hats, boxes of cigars, cases of champagne, dinners, and the like, or submission on the part of the loser to some sort of public penalty, such as wheeling somebody in a barrow on the street or walking down Broadway with his coat turned inside out. But within the last eight years, that is, since 1884, the practice has grown to such a degree that betting on the election has become almost as common among the community at large as betting on horse-races among the occupants of the grand stand. What is most amazing and alarming is, however, that the party committees have taken it up as a regular and legitimate and effective mode of influencing the opinion of the voters—a not unnatural result of the raising of the tariff issue, let us add, and of the conversion of the Republican party into a business organization, pure and simple, for pecuniary gain. The committees have since 1888 made a regular practice of arming betting men with large sums of money to be "placed" on the chances of their respective candidates. Quay did this with remarkable success in 1888, for, under our new régime of secret purchase of votes, nothing spreads more terror than the news that the other side are offering heavy odds, because people think it shows that they have "squared" some boss, or bought up some "block" of voters, or made some sort of an arrangement in some doubtful district or State which will insure them the victory. Twenty years ago, if this had been done by a campaign committee, it would have been done on the sly, with some care as to privacy. It is now done openly and with loud shrieks of defiance.

In truth, "the use of money in elections" has reached a pitch of which the gloomiest pessimist of half a century ago could never have dreamed. It is almost a point of honor now with a rich man who interests himself in politics at all, to back his opinion of his candidate's prospects by laying odds on him. The amounts offered, too, rise in every canvass. A million, or any part of it, has been offered in this campaign by one man. Poorer men "place" what their means will allow, and the practice has spread through all ranks of society. The clerks and office-boys are all betting on the election, just as the bad ones who rob the till bet on horse races. How long will it be before the tills begin to be robbed in order to back up the cause of protection or free trade? We hope thoughtful men and women all over the country are reflecting on the probable effect on the rising generation, the lads of from fifteen to twenty, of getting their first view of American politics in the betting-ring, and seeing the Presidential election treated as a game of chance, on which it is no harm for the best man to "take a flyer." They will do well, too, to consider the probability that a man who has staked ten thousand dollars on the result, will refuse to cover himself by advancing a Quay or a Carter one or two thousand as "soap" to make assurance sure.

The latest appeal of the McKinleyites was for "stability" in tariff legislation. They assured their victims that what is needed by business interests is the avoidance of changes, and that steadiness could be secured only by keeping the Republican party in power. One scrap of history will suffice to demolish this argument. The Republican party has made twenty-six changes in the tariff by separate bills since it came into power, viz.:

Act of March	2, 1861	Act of July	14, 1870
Act of Aug.	6, 1861	Act of May	1, 1872
Act of Dec.	24, 1861	Act of June	6, 1872
Act of July	14, 1862	Act of June	22, 1874
Act of March	3, 1863	Act of Feb.	8, 1875
Act of April	29, 1864	Act of March	3, 1875
Act of June	30, 1864	Act of July	1, 1879
Act of March	3, 1865	Act of June	14, 1880
Act of May	16, 1866	Act of May	6, 1882
Act of July	28, 1866	Act of March	3, 1883
Act of March	2, 1867	Act of May	9, 1890
Act of March	25, 1867	Act of June	10, 1890
Act of Feb.	24, 1869	Act of Oct.	1, 1890

If there has been any one speech in the campaign which has summed up the moral position of the party in whose behalf it was spoken, it is the speech of Thomas B. Reed in Cooper Union last Saturday evening. These were the ex Speaker's closing words, than which there could not possibly have been a more fit and proper closing to the Republican campaign of 1892:

"I am very honestly in favor of the Republican party. [Cheers.] I am not in favor of the Republican party on account of its principles, but on account of itself. I believe that principles do not make parties, but that parties make principles. [Applause.] The only wise and sensible thing for a man to do in a practical world is to find out which is the best crowd and then belong to it. [Applause.] And when he has once found the best crowd and has belonged to it, the best thing he can do is to keep on."

Of Mr. Reed's honesty in making this declaration there can be no doubt. The declaration is too characteristic, too explicit, too thoroughly accurate as a picture of the present mental condition of the Republican party to be the fruit of anything but sincerity. That so monstrous and stupid a confession of faith could be made by a conspicuous party leader at the last great meeting of a Presidential compaign, renders unnecessary further comment on the recent stampede of American intellect out of that party's ranks. To a man in ordinary mental condition Mr. Reed's doctrine would be sufficiently blasted by showing the absolute impossibility of party purity or party reform, of good government or independent citizenship, under such a rulership. It could be met by showing that, with Reed's proposition put conscientiously into practice by every citizen, the voters coming of age and the immigrants brought up for naturalization could alone serve to alter the results, for good or bad, of a previous election.

If there were nothing else to account for the extraordinary way in which the college graduates and professors have abandoned the Republican party, reason enough would be found in the speeches which McKinley has been delivering on trade and finance. That a man who has fathered one of the most noted pieces of economic legislation of modern times, in the American Congress, and is Governor of one of the greatest States in the Union, should be as ignorant of the mechanism of international trade as he has shown himself to be, naturally makes educated Americans blush for their country. His ridiculous story about our gold receipts from England last year, would be punishable in most preparatory schools in England and Germany. When we export more than we import, the balance is accounted for, as a rule, in one of three ways, or in all three: we may take payment of it or part of it in gold; if so, the amount appears in the Custom-house returns. If it does not appear there, it shows that we have by our exports been paying interest on our debts due in Europe (such as railroad bonds and other bonds), or have been providing funds to meet drafts on London which we have given to other countries in payment for goods which we could not obtain by barter. In South America in particular, we are constantly compelled to pay for products in this way, and the reason is that through free trade London has become the great clearing-house of the world, although Mr. Blaine some years ago described the process as the result of cunning British machinations against American commerce.

Moreover, nations do not trade with each other as nations. The United States and Great Britain do not exchange products as political corporations. Individual Englishmen carry on the international commerce with individual Americans, and they settle their balances just as rational New Yorkers do in trading with rational Massachusetts men. They do not give twelve months' credit, and then wind up at the end of the year by transferring enormous masses of gold. They remit promptly, when they get the goods, by buying a draft from bankers, and the bankers provide for the draft by sending goods to be sold in the place where the draft is to be paid, or by setting them off against other drafts due in the place in which the draft is made. The operations of commerce as McKinley and Depew describe them are not to be witnessed anywhere but in lunatic asylums, and even there only with the permission of the keepers. We ought to say, however, that Mr. McKinley is more excusable than Mr. Depew, for Mr. Depew is a prominent figure in the financial world and the President of a great railroad, whereas Mr. McKinley's pretensions to financial knowledge or understanding excite great merriment, we hear, among his intimate friends and neighbors. Between them both, however, they have been making the college professors put dust and ashes on their respective heads.

It is probable that the stiff lying of Republican orators about balances of English gold paid over to us in the past year, is partly to be excused by their recalling the vast amounts of "British gold" which for many Presidential campaigns used to be poured out in this country by the Cobden Club to defeat the Republican party. They know that this was the fact, for the highest Republican authority asserted it, and yet that gold, which came over by the ton, cut no figure in the Custom house returns, but was smuggled in on the persons of British emissaries. What more natural than for them to infer that gold always entered the country in that furtive way? Indeed, how could England be expected to acknowledge openly that we had beaten her out of $230,000,000 in gold, and what other course could it be supposed that she would pursue than to bring it here secretly, pay it over at midnight under a solemn pledge of secrecy, and then go home brazenly to deny that she had ever sent it? Some such plan must have been followed if what McKinley says is true, and he must be true though every man is a liar.

While Gov. McKinley has been manufacturing campaign capital out of the report of New York's Labor Commissioner for 1891, he has, with malice aforethought, pigeon-holed, ever since January, the last report of the Labor Commissioner of his own State. Moreover, although this report has been for two months electrotyped ready for printing, the State Printing Committee—all Republicans—have up to date failed to supply the State printer with the necessary paper on which to issue the (for their purposes) inconvenient data. It has, however, leaked out, through the investigations of the Democratic National Committee, that the suppressed 1891 report indicates that in one State at least the Republican protective tariff system not only fails to raise wages, but has actually brought about a reduction all along the line; this reduction being largest in such protected industries as mining, agricultural works, engine and boiler works, stove and iron castings, etc. Comparing the reports for 1890 and 1891, we find that, after deducting the cost of materials from the value of manufactured product, the balance—the joint earnings of capital and labor—is divided as follows:

Capital.	Labor.
1890.. 37.34 per ct.	62.39 per ct.
1891.. 39.77 per ct. (inc.)	60.23 per ct. (dec.)

In 1890 the 80,305 employees engaged in industrial establishments earned an annual average wage of $492.91; in 1891 the annual average wage of the 99,257 employees was only $470.05, or a loss of $22.86 per man.

The grape-growers in western New York have just found out the swindle in the McKinley Act which was devised to give the California wine-producers an advantage over them. It is embraced in sections 42–49 of the act. It provides that any producer of wine who is also a distiller of brandy, may use the spirits which he makes to fortify the wine to the extent of 14 per cent. of the volume of the wine without paying the internal-revenue tax on the brandy, provided that the wine in its natural state contains not less than 4 per cent. of saccharine matter. In order to avail one's self of the benefits of this act, the following conditions must be fulfilled:

(1.) The wine-grower must be a distiller.
(2.) He must use grape brandy to fortify his wines—not whiskey or alcohol.
(3.) It must be his own brandy.
(4.) His wine must be sweet wine, such as ports and malagas, not the hocks which are produced in New York and Ohio.

Now all these conditions were imposed in order to give the California wine-producers (and only a few of those—namely, those who are rich enough to own distilleries) an advantage over the wine-producers east of the Rocky Mountains. The consequence of this is that California wine is now offered for sale in Steuben County, New York, at the very gates of the vineyards, at 13 cents per gallon less than it can be produced for there. The point is easy to see. The California producer gets 14 per cent. of the strength of his wine free of tax. The tax is 90 cents per gallon, and 14 per cent. of that is as nearly as possible 13 cents.

The announcement was made two or three weeks ago that the Temescal tin mines of California had been closed, the workmen discharged, and the whole thing given up as a bad job. This is the mine whose output was advertised by a

New York firm last spring in such a curious way—the advertisers begging as a special favor that customers would not order too much of it at one time, because they wanted everybody to have a fair chance to get some. It was some of this Temescal tin that furnished the background to a photograph of President Harrison when he was in California two years ago. It would, perhaps, be nearer the truth to say that President Harrison furnished the foreground to a photograph of the tin. However that may have been, the photograph had a great run, and the tin-mine was set down to the credit of the McKinley Bill, although its discovery dates from the year 1867, and lawsuits respecting the title to the property began about that time and continued without intermission for twenty years. The need of a political tin-mine was almost as great as the need of political tin plate, because there is a duty of four cents per pound on metallic tin in the McKinley Bill, to take effect on the first day of next July. This duty was enacted at the instance of the Senators of South Dakota, in the usual log-rolling way. They fancied that they had tin-mines, or would have if the price was high enough; but the Harney Peak mines were provokingly slow in getting to work, and men of science (in the pay of foreigners, no doubt) scoffed at them. Hence the necessity of clinging to the Temescal mine at all hazards. It was like a certain passage in sacred literature, of which a learned commentator said that it was probably spurious, but must not be given up without a fight.

It has come out that Gen. Draper, one of the millionaire manufacturers of Massachusetts and a Republican candidate for Congress in the Ninth (Dedham) District of that State, is now, and for years past has been, in receipt of a pension of $25 per month for disabilities incurred in the war, and acknowledges an aggregate receipt of pension money of $5,000. Gen. Draper justifies his application for and receipt of a pension on the ground that he is entitled to it, although his disabilities are not sufficient to prevent his management of a great manufacturing business, the Presidency of the Home Market Club, and the management of a very active political campaign, saying that he gives away every year to the soldiers much more than the amount of his pension. It is lucky for Gen. Draper that he did not serve in the Revolutionary army, for under the administration of Gen. Washington the rule that Congress adopted in the matter of pensions was that, however great might be the services of a soldier, or however great his disabilities incurred in the service, he was not entitled to a pension if he had other and adequate means of support.

A remarkable case of political indifferentism is reported from Princeton College. President Patton announces that he cares nothing for politics. "I am interested in philosophy and theology, and these are the only things I want to be known in. I vote for neither party." It must be a curious kind of theology or philosophy that a man can be thus content to study *in vacuo*, with no desire to know how they operate in society. What does it avail a philosophical recluse to speculate on the highest good if, in the meantime, through failure to attend to his political duties, he allows himself and his fellow-citizens to be robbed of highest and lowest goods alike? And theology must be a more unpractical discipline than is commonly supposed if it compels a man to give all his thoughts to abstract propositions, and allows him no time to consider the actual effects of theological tenets on civic life. Wanamaker, for example, is a stout upholder of the system of theology with which President Patton is identified, and we should say his notorious exploits in debauching the suffrage were fully as deserving of study as the iniquities of any heretic that ever lived. In short, we do not believe that any man has a right to shirk his responsibilities as a citizen on the ground that he spends his time in the still air of delightful studies. To say that you are interested in theology and philosophy, but not in the practical affairs of life, is to recall the newspaper humorist's saying of the Czar, that he had established arbitrary government to his perfect satisfaction, but that he did not dare step out of doors to see how it worked.

One is struck, in reading the correspondence between Senator Sherman and his brother, the General, now publishing in the *Century*, with the low opinion held of the Chairmanship of the Ways and Means Committee in 1861. Appointed to that position after being defeated in the struggle for the Speakership, Mr. Sherman found it very wearisome and unsatisfactory. That was before the discovery of the truth that the Chairman of the Ways and Means has the prosperity of the country in his keeping, and that it is his function to apportion profits and wages in every shop in the land. In 1861 his business was simply to lay taxes for carrying on the Government; now he is courted by powerful manufacturers, and his favors sought as slavishly as were the grants of monopolies by monarchs of four centuries ago. The correspondence referred to promises to be of great interest in many ways in lighting up the early history of the Republican party, but in none, perhaps, more than in marking the contrast between the youth of a party, devoted to moral and patriotic ends, and its last years, given over to the service of mammon.

Can anybody explain the object, aim, or policy of treating all alien cabin passengers arriving in steamers from Europe, and not residents of the United States, as "immigrants" and subjecting them to twenty days' detention? Orders to this effect have, it is said, been received from Washington, but the motive remains a profound mystery. Some of our pessimists detect many symptoms, especially in the Republican party, of a rapid assimilation of the United States to China in our attitude towards foreigners. The hostility to foreign goods, they say, has begotten hostility to foreign science, literature, and art, and is slowly producing hostility to people who go to Europe for pleasure and unwillingness to let them return. The laudable desire to prevent Europe from dumping her criminals, paupers, cripples, and Anarchists and ignoramuses on us is now being made a pretext for keeping out *all* Europeans who have not already got a foothold here, as if they were infected in some way. In good keeping with this is the McKinley and Depew rejoicing over the suffering they think they have caused among the European poor, and the pride McKinley takes in being hated by the whole human race outside the Republican party. There is in all this a strong savor of the politics and morals of the Central Flowery Land, and we are bound to say President Harrison's quarantine begins to look as if it had been dictated by the Vermilion Pencil.

It seems as if one of the cleverest bits of imposture of modern times was the book known as the 'Englishman in Paris.' The authorship of it has been traced to a Mr. Philip Vandam, a Dutchman of the Jewish persuasion, who, Mr. Lucy says in the *Tribune*, has long lived in Paris, attached to "the outer skirts of journalism"; and "the outer skirts of journalism" are no better in Paris than they are in New York. The first volume is a very clever piece of work, stuffed full of entertaining gossip of the courts both of Louis Philippe and Louis Napoleon, most of it having the air of coming from somebody who enjoyed what used to be called the "petites entrées," or the privilege of running in and out and seeing the royal personages as an intimate private friend, and belonged to the most select Paris clubs. Pains were taken in it, too, in all sorts of small ways, to fasten the authorship on Sir Richard Wallace, who was for forty years one of the chief personages of the English colony; and on the strength of this the book had in the months of July and August a great sale, until Sir Richard's friends and his widow roused themselves in contradiction. Mr. Vandam, it appears, is only forty years old, so that his recollections of the Courts of Louis Philippe and of Louis Napoleon, even if he had been a favored guest in them, would be very feeble. As matters stand, he appears to be simply a wonderfully clever compiler and romancer, and has got a remarkable "scoop" on the other gentlemen who cling with him to the "outer skirts of journalism" in Paris.

A GREAT EXAMPLE.

WHEN Mr. Cleveland, in December of 1887, sent in his anti-tariff message, there was hardly a prominent man in his party who did not think he had made a great mistake. Even those who agreed to the full with his opinions thought the publication of them a piece of magnificent folly, for which he and the party were sure to suffer. His reëlection before he wrote his message was, as he stood, all but certain. Even the Republicans, large numbers of whom had come over to him as, on the whole, a wise and prudent statesman, admitted this. It seemed as if his canvass, in spite of the poor antecedents of his party, would be a walkover. He aggravated his fault, from the politicians' point of view, by failure to consult with them before taking his plunge. The language of the message was not sufficiently studied, some said. It showed want of thorough familiarity with the workings of the tariff, said others. Others, again, wished that before he wrote it he had made a more thorough study of political economy. But, for one reason or another, all except a few of the more enthusiastic tariff reformers thought he had destroyed his own usefulness as a candidate, and condemned his party to another period of eclipse. What groaning and moaning over him there was among "the practical men" during the remainder of the winter! How they cursed the Mugwumps and the professors for leading him astray! How sure they were that the American people would not stand such foolishness! How glad his enemies—the Hill men, Tammany men, and political debauchees of every description—were that he had planned his own destruction and would soon trouble the party councils no more.

His defeat came almost as a matter of course. His message took the public, bred in protectionist fallacies, by surprise. It alarmed the manufacturers, and gave the Quays a larger fund than they had ever had before to save their monopoly. He was nominated largely because the party had no one else of any prominence to put up, and almost with a certainty of failure. Mr. Cleveland went back into private life with serenity, leaving his message to be pondered, and leaving the Republicans in full possession of the Government, with full power to push the protectionist principle to any extreme they pleased. It then soon appeared that the message was a stroke of genius; that it had at last secured for the tariff thorough popular attention and discussion, such as no speech, article, or book could secure for it. Its very simplicity, its freedom from details, its avoidance of the reserves, qualifications, and discriminations which a more erudite economist would have introduced into it, proved its greatest merit. There never was a more signal illustration of the poet's saying, that a man's best "armor is his honest thought, and simple truth his utmost skill." The fact that the author had staked his chance of the Presidency on it, had issued it in defiance of the advice of the worldly-wise, and was prepared to live or die by it, was an appeal of the utmost power to the love and admiration which the American people, and all people of the Western world, feel for the man who is not afraid—who says, with the noble army of martyrs and the goodly company of patriots and reformers of all ages and all countries, "Here I stand. I can do no otherwise, God help me."

In his letter about silver Mr. Cleveland gave another and almost as striking a proof of the wisdom of his boldness. When he wrote it, in February, 1891, his party was apparently bent on rushing down another steep place to its ruin by conniving at or avoiding collision with the currency lunatics, who, in conjunction with a band of tricky mining speculators, were trying to debase the currency of a great commercial nation. The "practical men" again thought that, as a possible candidate, he ought carefully to hold his peace about this immense folly and wickedness, or, if he spoke at all, clothe his thought in such cloudy phraseology that it could be made to bear two or three meanings, if not wholly to conceal it from the popular understanding. But he refused to be a party to this little stroke of low cunning, and, taking his courage, as the French say, in both hands, gave the silver folly a blow from which it never recovered. He blew it clean out of the party mind and the party platform by a single shot. Again the shrewd politicians sat down on the party stoop and wept, and prepared sorrowfully to nominate a first-class juggler in the person of David B. Hill, who was to show the wretched Mugwumps how much better it was to be able to keep six balls in the air at once than to be able to show the absurdity of a fluctuating currency. In one year that letter of February had again confounded the shrewd, and put heart and hope into the timid and shifty.

Mr. Cleveland's triumph to-day has been largely due to the young voters who have come on the stage since the reign of passion and prejudice came to an end and the era of discussion has opened. If the last canvass has consisted largely of appeals to reason, to facts, to the lessons of human experience, to the teachings of Christianity and science, and has brought confusion on the preachers of mediæval barbarism and absurdity; if it has put a stamp of horror and contempt on the attempts to make mutual hate a necessary accompaniment of peaceful industrial competition—thus furnishing Socialism with one of its best weapons—it is to Mr. Cleveland, let us tell them, they owe it. But they are indebted to him for something far more valuable than even this—for an example of splendid courage in the defence and assertion of honestly formed opinions; of Roman constancy under defeat, and of patient reliance on the power of deliberation and persuasion on the American people. Nothing is more important, in these days of "boodle," of indifference, of cheap bellicose patriotism, than that this confidence in the might of common sense and sound doctrine and free speech should be kept alive.

BOSTON BANKERS ON STATE BANK-NOTES.

SOME of the most conservative bank presidents in Boston have prepared and signed an argument in favor of a repeal, on suitable conditions, of the 10 per cent. tax on State bank-notes. They show in the first place that the present national-bank currency has shrunk $200,000,000 since it reached its maximum, and that the conditions of its existence are such that it must wholly disappear when the bonds are paid off. They consider it illusory to expect that any United States bonds will be issued or reissued, even at as low a rate as 2 per cent. interest, to form the basis of national-bank circulation, and they do not consider such a policy wise or just, since it would be a permanent unnecessary tax on the people. They consider some system of bank-note issues desirable, and they agree with Mr. John Sherman in his Senatorial opinion that the popular will has been expressed adversely to the continuance of the national system beyond the existence of the national bonds. They consider Mr. Sherman's later opinion, expressed on the stump at North Fairfield, Ohio, that the national bank-notes may be replaced by United States notes "resting on the honor, wealth, and resources of 65,000,000 people" as objectionable, being merely an extension of the greenback system in time of peace. Another objection to it is, that the act of issuing greenbacks is the borrowing of money for which the Government has no use, since by the hypothesis the bonds will have been paid off.

The signers of this paper then take up the proposed repeal of the 10 per cent. tax. They agree with the Democratic campaign text-book that the repeal should apply only to banks in States which come up to a certain standard. They think that the conditions which prevailed in some parts of the country before the war, and which led to, or at all events did not prevent, "wild-cat and red-dog" currency, have long ago disappeared, but they are not willing to take any risks on that score. The power of Congress to impose conditions on the issue of circulating notes has been affirmed by the Supreme Court on two different grounds. One is the taxing power, which the court said was in the discretion of the legislative branch of the Government exclusively. The other is the right of Congress to restrain the circulation of any money issued in competition with its own.

No question will be raised as to the power of Congress to impose conditions by those who hold that the present tax is

constitutional. The question what conditions ought to be imposed is a matter for deliberation hereafter. The signers of this paper make a suggestion or two which ought to have weight. They suggest in the first place that any State which allows bank-notes to be issued should guarantee their prompt redemption, and should also allow itself to be sued under the contract of guarantee. The objection that the State's guarantee would make the notes so issued "bills of credit" of the State, which are prohibited by the Constitution, is met by adducing a Supreme Court decision to the contrary. The conditions of issue suggested in the paper are not exclusive, however. The security of the noteholder may be hedged about in other ways by requiring the deposit of bonds of different kinds. The State's guarantee is, nevertheless, looked upon as the most important consideration, because it will enlist the self-interest of the States on the side of a sound banking system.

It will occur to all who are competent to discuss such questions that the nearer we come to a perfect system of State bank-notes, the nearer we come to the present national-bank system. This is true. The national system, although unelastic and rather slow moving, is not only the best one we have ever had, but probably the best we ever can have. Given a permanent national debt as the basis of security, and it would be idle to think of any change. But a permanent national debt it is idle to talk about. Nobody is in favor of that; nobody ought to be in favor of it. An issue of bonds merely as security for bank notes is the same thing to the Government as handing its own notes to the bank to be loaned to the public for the bank's benefit. The case is different while the bonds are still outstanding, for it can make no difference to the Government in a pecuniary sense whether they are held by A or B or C, by national banks, or savings banks, or private investors.

Of course, there is an important question back of this, namely, whether other security may not be found to take the place of the bonds in the national system, so as to rejuvenate that system, and whether that would not be better than any State system. That question was learnedly discussed in a recent paper by Mr. Cornwell of Buffalo, in *Rhoads's Journal of Banking*. Of course this will have to be discussed in a wider forum before the bank-note question is settled. Meanwhile the concluding paragraph of the Boston argument is worthy of all commendation, viz.:

> "Our appeal is, therefore, for a sober consideration of this question apart from party politics; and we believe an unsound system cannot be sprung upon the country unless this sober consideration is wanting."

LEGISLATIVE DISCOURAGEMENT OF BUSINESS.

It is the theory of representative government, as expounded in the treatises upon that subject, that legislators consider and adopt such measures as are manifestly calculated to promote the general welfare. In practice, in the State of New York at least, legislators discharge no such function. The Legislature fulfils Mr. Thomas Reed's ideal in not being a deliberative body. All its acts, it may be said, are prepared outside of the legislative halls, and most of them are dictated by special interests. Unless there is some "politics" in a bill, it generally meets with little opposition, except that if there is "money in it" a species of rude natural equity requires that the spoils shall not be greedily appropriated by a favored few. The general public seldom demands the passage of any measure except a measure of repeal, and, as a rule, is ignorant of the laws by which its conduct is supposed to be regulated until some new hindrance to business is disclosed. The Legislature of New York finished its work last May, but its acts were not published in accessible form until the latter part of October. During that interval it has been practically impossible even for lawyers to ascertain the existing state of the law; which will not seem incredible if it is added that the work of the session is represented by two bulky volumes of some 2,500 pages, containing 715 different statutes.

Let it not be supposed, however, that a perusal of these 715 statutes will enable any one to determine what the law is. Some of these statutes are general in character, covering great departments of human activity and completely restating or altering previous legislation. By one of these statutes over a thousand acts or parts of acts are repealed, and altogether the number repealed must be between 3,000 and 4,000. To ascertain the present state of the law, he that knew it in its former state must compare the new statutes with all that are repealed, a labor of truly appalling proportions. The idea that any business man can now conduct the affairs of a corporation in which he is interested without the best legal advice is preposterous. Lawyers themselves must for a long time advise reluctantly, and it will be only after extensive and protracted litigation that it will be known how the ordinary transactions of business are to be carried on according to the present statutory requirements.

It is hardly necessary to say that the Legislature which enacted these statutes knew little about them. It may be doubted if a single member of the Legislature read them all, and it is certain that many members neither read them nor could have understood them if they had. This extensive reconstruction of the law took place at the hands of a commission appointed by Gov. Hill, composed of men of whom it need only be said that they are much better known from their connection with his political activity than from their professional distinction. It may be conceded that a codification of our statutes was desirable, although no coherent demand had been made for it. It may be granted that a commission might have been made up of men whose names would have assured the profession of the wisdom of their action. But to commit a labor of this kind, which requires not only the most profound and extensive knowledge of law, but also an expert acquaintance with the conduct of financial affairs—which demands the qualifications at once of the man of business, the lawyer, the economist, and the statesman—to the hands of Gov. Hill's pet henchmen, was an act of outrageous recklessness. The full consequences of the act cannot for a long time be known; but if their character may be judged from such as are already apparent, a long heritage of mischief awaits the business of the State of New York.

The first fruits were quickly harvested. The new law applicable to corporations, enacted in 1890, contained some provisions so vexatious as to oblige the Legislature to repeal them at the earliest possible opportunity. Some others aroused such universal complaint as to compel the commissioners to redraw the whole statute within two years of its enactment, leaving out many of the exasperating and senseless features which they had elaborated. A decision just made, which does not seem to have attracted sufficient attention in Wall Street, illustrates the formidable character of the innovations which remain to be abolished. A stockholder in a certain corporation pledged his stock as collateral security for a loan, and gave the pledgee an irrevocable proxy therewith. But when the election occurred, the pledgee found that he could not vote on his proxy, the pledger having decided to vote the stock himself, and the candidates who would have been elected by the vote of the pledgee were defeated. The court held that the new law required this result. Nor would it have been different, apparently, had the proxy not been irrevocable. Under the circumstances no proxy could have been legally given, nor under any circumstances can any proxy be given for any term that the giver cannot revoke in five minutes if he is so disposed.

By the act of 1890 all persons acquiring stock within thirty days of an election were disfranchised, nor could any one vote or issue a proxy if he had pledged his stock, although it stood in his name. As it was obvious that legal elections under this law were likely to be few and far between, the Commissioners graciously reduced the period of disfranchisement to ten days, and restored, as we understand it—for no one may now positively declare what the law is—the right of suffrage to pledgers of stock. But let those houses—for well-known reasons the most substantial houses in the street—in whose name stock is kept standing after they have parted with it, beware of giving their proxies. We know not what punishment they may render themselves

liable to, but we should not be surprised if it should be discovered to be the penitentiary, and they may not improbably vitiate most of the elections of the principal corporations of the country.

Since corporations are numbered by hundreds of thousands, and since there are perfectly legitimate reasons for conducting business under corporate management, it does not seem wise to make this management complicated and difficult. Most corporations consist of a very few members, and their corporate proceedings are, as a rule, very informal. A few busy men meet together for a few minutes, and, knowing just what they want done, do it quickly. But the Commissioners will have none of this. In their view every act of a corporation is to be regarded by the law with suspicion, and every stockholder as presumptively actuated by iniquitous motives. If an election is to be held, although there may not be half-a-dozen persons interested, all of whom could be easily notified, the public is to be kept advised by a newspaper advertisement for four weeks. At such election the inspectors must be sworn and must file copies of their oaths with the County Clerk, together with a certificate of the result of the election. Every stockholder must on demand make oath that he has not, "either directly, indirectly, or impliedly, received any promise or any sum of money, or anything of value," to influence the giving of his vote, and that he has not sold or otherwise disposed of his interest in or title to any shares of stock upon which he offers to vote. A proxy must make equally solemn and explicit declaration of the purity of his motives, and of his belief in the integrity of the title to the shares which he proposes to vote.

We could go on indefinitely pointing out needless and arbitrary requirements inserted in recent years in our corporation law, but for the present this will suffice. It may be submitted in behalf of the business men of the State that corporations are no more dishonestly managed than ordinary business partnerships and require no more legislative interference. The fact that fraud sometimes occurs is no reason for hampering all honest business with vexatious technicalities, especially since these technicalities will have the effect, not of hindering fraud, but of entangling hosts of innocent people in unintentional violations of law. The old corporation law had been thoroughly construed and was thoroughly understood. It might have been simplified, but it was easy for business men to comply with it. Under malign influences a legislative policy has been of late adopted in New York which leads to the formation of corporations under the more enlightened laws of other States, and which will, if persisted in, lead to the transfer of much of their business as well. Such a policy is unworthy of a commercial community, and ought to draw such vigorous protests from business men as to lead to its abandonment.

THE "DUCHESS OF MALFI" AT THE INDEPENDENT THEATRE.

LONDON, October 25, 1892.

THAT the drama has fallen to the lowest depths in England, it would take a bold man to deny. With gorgeous pageants dubbed "Shakspere" prospering at the Lyceum; with a patent for turning tragedy, comedy, and farce into melodrama controlling the Haymarket; with real turf, and real water, and real horses drawing rapturous crowds to Drury Lane; with the variety-show usurping the legitimate stage on every side, it is no wonder that now more than ever one turns to the Independent Theatre Society for the promised production of new and unconventional plays, the promised presentation to the public of hitherto unknown or misdirected talent among actors and actresses.

The Society's first season went far to prove that it is easier to announce new plays than to obtain them. Still, when everything else failed, there was always Ibsen to fall back upon, until indeed, for a while, it seemed as if the Society had been founded for no other object than the encouragement of the Scandinavian drama. However, it was probably realized that for the beginning of the second season it would be as well to make a new departure, and Webster's "Duchess of Malfi," as already explained in the *Nation*, was prepared for the first performances. So long as no original play was forthcoming, the choice could not have been better. If modern dramatists refuse to arise, ready armed and equipped, at Mr. Archer's word of command, if we cannot create a drama of our own, the most sensible alternative is to revive the great work of the old men which the still greater genius of Shakspere has cast into the shade. Of all the Elizabethan plays, perhaps not one is known (if only by name) as widely as the "Duchess of Malfi," perhaps not one suggests, even to those who have not read it, the same degree of tragic intensity and dramatic strength.

"The very throne of night, her very crown,
A man lays hand on, and usurps her right,"

Swinburne says of Webster, and to the average reader Webster means the "Duchess of Malfi." The tragedy has been revived from time to time; it is associated with the successes of at least one actor of renown, Betterton; and it has never been put on the stage without producing the same impression of power almost Æschylean, of horrors poetically woven into a masterpiece surpassed by none. But it is some forty or fifty years since it was last revived at Sadler's Wells, nor did it appear likely that it would appeal to the fancy of Mr. Irving, who is wary even when most enterprising, or to Mr. Beerbohm Tree, who has long ago given up his daring but not paying weekly experiments. Therefore, to drama and literature alike, it seemed as if the Society's choice must render valuable and important service. So thoroughly was this appreciated that Mr. Irving came forward to second Mr. Grein's efforts, and lent, from the Lyceum's rich wardrobe, costumes and stage properties to the not too wealthy Independent Theatre. It is seldom that I have looked forward to a theatrical event with so much interest.

And now as to the performance itself. Perhaps I might as well say at once how deeply I regret that the Society is so much more praiseworthy in intention than in achievement. In the present deplorable dramatic stagnation, one does not like to find fault where there is certainly a striving in the right direction. But unfortunately the effect of a play upon the stage depends wholly and entirely on the manner in which it is interpreted by actors and actresses, and this is doubly true when the play is a tragedy in verse, dating back to a day when dramatic ideals were not as ours, and when, in point of dramatic construction, Shakspere was a giant among pigmies. I venture to say that it would be absolutely out of the question to give an unrevised version of the "Duchess of Malfi," though this fact does not excuse the Independent Theatre Society's unexpected squeamishness in suppressing some of the more vigorous Elizabethan passages. The changes made, however, were chiefly in the arrangement of the scenes, and here Mr. William Poel, the Shakspere scholar, had a work made to his hand. But, despite his labors, scene followed scene and incident succeeded incident with an irrelevancy and a suddenness that left one fairly bewildered. The deadly hatred of *Duke* and *Cardinal* for their sister, even before she has married her steward without their leave, one had to accept simply, without asking for a reason, as one accepts the screen in the modern society play, or the convenient arrangement of doors in the modern farce. The motives of *Bosola*, the hired murderer, discoursing of pity, singing the dirge, as it were, of his own victim, was another problem for which one did not seek the solution. The intrigue of the *Cardinal* with *Julia* apparently had no other use in the tragedy save to add one more corpse to the many strewing the stage in that indescribable fifth act, which even Webster's most ardent admirers think superfluous. In a word, to make the play, even after revision, not only convincing, but possible, to a modern audience, it must be consummately well rendered by trained and experienced actors who understand the value of the lines and their proper delivery. The programme, on the night of the performance, quoted the critical appreciations of Lamb, who thought that only a Webster could move a horror skilfully or touch a soul to the quick; of Mr. Swinburne, who declared no poet to be morally nobler than Webster; of Mr. Symonds, who finds his excellence in his power of blending tenderness and pity with the exhibition of acute moral anguish; of Mr. Gosse, who ranks the "Duchess of Malfi" as second only to "King Lear." But to read a drama in the library is a very different thing from seeing it performed on the stage. If the beauty and power depend upon the lines rather than the construction, then, when those lines are cruelly murdered in the mouths of second-rate or inexperienced actors, beauty and power disappear and tragedy degenerates into burlesque.

Miss Mary Rorke, who played the *Duchess*, is an actress of some refinement and dignity in mediocre parts, but her entire misconception of what was expected of her was shown by her close study of Miss Ellen Terry's methods. It were a charity not to give the name of the man who parodied the *Duke*, and ranted and raved up and down the stage, so that from the very first, instead of waiting until the end of the fourth act, *Bosola* might have proclaimed him distraught. But to me it was *Bosola* (Mr. Murray Carson) who was the chief offender, because of his greater pretensions. He began at that high pitch where the wise tragedian leaves off; he spoke with his eyes, his nostrils, his forehead; he writhed and grimaced so unrestrainedly that by the end of the first act he had exhausted his resources, and could but begin and go through

the same tricks all over again. As for the others, the kindest that can be said is that their incapacity was a trifle less aggressive—probably because their rôles were more than a trifle less important. Lowell was also quoted on the playbill. "Whatever effect," he says, "Webster may produce upon us, he never leaves us indifferent." At moments when the audience should have wept they tittered, and this, too, in the fourth act, where horror crowds upon horror in the long ingenious torture to which the *Duchess* is submitted as a preparation for her own murder. However, it was in this same act that the one scene adequately impressive was presented; an impressiveness due not a little to the fact that not a word was spoken, while "ladies" in Holbein dress danced the Dance of Death with grinning skeletons, to the far tap, tap of a muffled drum, and the *Duchess*, in her white robes, sat watching, reading her doom in every step, her faithful *Cariola* crouched at her knees.

Mr. Grein and his society proposed to give aspiring actors and actresses the chance, elsewhere denied, of a hearing in parts suited to them—an admirable proposition. But to aid and abet the incompetent in the full display of their incompetency is another matter. It is just here that the directors of the Independent Theatre so far have followed such a mistaken policy. They may yet discover rare talent in new playwrights, they may revive old masterpieces; but until for the interpretation of their dramatists they find actors and actresses of fair average ability and intelligence, their performances, artistically, must be failures. Who would want to listen to Wagner ground out of a hurdy-gurdy? Who would want to look at a Titian on the canvas of the cheap copyist? I, for my part, would rather never have seen Webster's "Duchess of Malfi" on the stage than to have allowed the sad parody presented on the boards of the Opéra Comique on Friday last. N. N.

THE UNITED STATES AT THE HISTORICO-AMERICAN EXPOSITION.

MADRID, October 19, 1892.

THE courtesy shown to your correspondent by Admiral Luce, Prof. Wilson, Mr. Walter Hough, and Mr. Culin has enabled him to take stock in a leisurely manner of the various exhibits of the United States delegation. It may be well to state that the designation of "Americans" is, in Spain, at the present time, reserved for persons coming from the South American Republics. You come under the denomination of English, Yankees, or people from the United States. Hence the word American has not been used in the first sentence. To do the Spanish Americans justice, they look upon Spain as a country behind the age.

The republican simplicity which distinguishes your Government, if not your people, has perforce been cast aside in the decoration of the various rooms or courts. The Spaniards insisted upon this, and a Spanish artist has been intrusted with the duty of giving effect to the wishes of the administration of the Exhibition. A good deal of the ornamentation consists in the tasteful arrangements of flags. Excepting the small exhibit from Sweden, over which Baron Nordenskjöld presides, the United States section seems the most advanced of all—indeed, is almost complete. This is due, no doubt, to the good organization of the delegation, who work under all the disadvantages inseparable from their surroundings. For certain things, local assistance must be obtained; and then——! I accompanied Mr. Culin to a printing-office, whither he went to get some labels for marking the exhibits, and was edified by his use of strong language when he was disappointed by not getting delivery of them. As the Secretary of the delegation spoke in English, the Spaniard did not understand what was said, but he could not have failed to understand that Mr. Culin was angry. The incident is a trivial one, but it is an instance of the worries which your representatives have to suffer. As an outsider, I should gladly bear testimony to the enthusiasm with which your representation is being carried out here. Let me give you an instance. Between four and five this afternoon Mr. Bikélas, the distinguished Greek author, was in one of your courts, and apologized for asking Prof. Wilson for an explanation of some exhibit. The Professor's answer was something like this: "Our Government has gone to great expense to collect and send these things here, and they are here to be explained," and then he proceeded to go *con amore* into a plenteous description of the matter. Now, I had entered the U. S. A. section soon after nine A. M. with Mr. Culin, and had found Prof. Wilson at work there. Later in the day, I had the privilege of joining Dr. Hamy, the Director of the Trocadéro at Paris, and his friend, Prof. Henri Cordier, when, for about two hours, the Professor entertained them with a flow of instructive and scientific talk about the contents of his cases of prehistoric implements, and upon other kindred matters. Between that *conversazione* and the Bikélas incident, other inquiries had been disposed of. Meanwhile, the business of arrangement and administration had received attention.

As Dr. Hamy is not only a Vice-President of the Geographical Society of Paris and a member of the French Institute, but also a distinguished ethnologist, it cannot but be satisfactory to know that he evinced the keenest interest in Prof. Wilson's scientific talk (carried on in French, by the way), and afterwards informed your correspondent that he found the United States ethnological exhibit very interesting. Even though one may be no scientist, it is a great pleasure to observe how these savants glow with fervor as they sharpen their wits one against the other, as when Mr. Culin and Prof. Rein of Bonn made acquaintance. The climax came when Prof. Rein received from his younger confrère an acknowledgment of the latter's indebtedness to the former's famous work upon the Chinese.

The show of prehistoric implements made by the United States may not, perhaps, be so large as that of one or two of the Latin republics, but arrangement of the exhibits for scientific inquiry cannot be better illustrated than in the cases under the charge of Prof. Wilson and Mr. Culin, while Mr. Hough's exhibits pertaining to Indian life within the historic period cannot be surpassed. That some of the implements are rare may be gathered from the fact that Dr. Hamy has asked to be furnished with specimens.

There is a Linguistic Chart of North America (stopping short at Mexico), which has been prepared by the Bureau of Ethnology. It shows very distinctly, by coloring, the distribution of twenty-nine different stocks, speaking so many different languages, at a time when Europeans first made acquaintance with the "aboriginals," as Sir Walter Raleigh used to call them. To philologists this cannot but be of the highest interest, and it is well that it should be the intention to publish this chart. Another valuable exhibit is an Archæological Map of North America. It shows village sites, mounds, groups of mounds, effigy mounds, groups of effigy mounds, burial mounds, mounds with single-stone graves, mounds with stone graves, single graves or single burials, cemeteries, stone graves, stone grave-cemeteries, ossuaries, enclosures with interior mounds, enclosures with exterior mounds, excavations, canals, flint mines, soapstone mines, mica mines, refuse heaps, shell heaps, petroglyphs, groups of petroglyphs, caches, cairns, undefined antiquities, groups of villages, cavate lodges, villages of cliff lodges, inhabited stone villages (pueblo), and varieties undetermined. An ordinary map of the United States has been used, and the distribution, as set forth above, has been denoted by special marks. This valuable chart also is to be published.

There is an admirable exhibit by the Archæological Department of the University of Pennsylvania which Mr. Culin explains to visitors with the keenest enthusiasm. I was much interested in finding that he shared the opinion of Mr. im Thurn of British Guiana, that the rudely chipped implements represent an unfinished stage of manufacture, rather than a stage of civilization. To an unscientific observer like your correspondent, the degree appears to be in the process of manufacture rather than in the state of culture. The specimens of stones, apparently rejected in the operation of manufacture, are each characterized by a hump which appears to have been formed by maladroit flaking or by defect in the stone itself. At all events, this hump proved an obstacle to further shaping of the stones into the ordinary forms. The exhibit of the Bureau of Ethnology at Washington is displayed in a manner that could not but be pleasing to that ardent archæologist, Mr. Holmes, with whose name the collection is identified.

By pictures, engravings, by life-size figures, and by exhibits of articles of their every-day life, the Indians of the United States get a very considerable share of notice. In fact, the Exposition offers a splendid opportunity to ethnologists and to archæologists, who will find, in the various exhibits from North and South America, a collection not in any way to be approached by that of any single museum in the world. Ethnology—in its archæological aspect more particularly—more than anything, is the distinctive feature of the general exhibition in the lower part, as distinguished from that other special exhibition, of an almost purely Spanish character, which is to be found in the upper part of the Exposition building and is particularized as the Historico-European Exhibition. The exhibit of the Hemenway Expedition, made by Mr. Fewkes of Boston, is in itself a superb display of the culture of the southwestern tribes, principally of the Moqui Indians of the United States. It is, in fact, an ethnological museum in itself. The famous Morton collection of crania shows skulls of forty-four different tribes in the United States of America. Literature bearing upon all these subjects is also displayed, more especially in the valuable Smithsonian publications.

A collection of models of Mint medals is one of the exhibits. Here may be seen effigies of Presidents of the United States, of naval and military worthies, and of Directors of the Mint. For your correspondent the reproduction of the medal struck in honor of the capture of the *Peacock*, by Capt. James Lawrence of the *Hornet*, afterwards of the *Chesapeake*, had a special and mournful interest.

The model is numbered 36. The original gold medal was awarded by Act of Congress on the 11th of January, 1814, to the nearest male relative of Capt. James Lawrence, "for gallantry and good conduct of that officer in the conflict between the United States sloop-of-war *Hornet* and the British vessel of war *Peacock* on February 24, 1813. A silver medal of same design was awarded to each commissioned officer of the *Hornet*." Lawrence, a brave among the brave, deserved all that was done for him and for his memory. The fight took place off the coast of what is now British Guiana. It was short and sharp. Capt. Peake, who commanded the *Peacock*, brave and true, having done his duty, fell early in the battle. His body was wrapped in the Union Jack, and went down as the ship sank beneath the muddy waters that lave those shores. A medal in honor of Capt. Henley must have a special interest for his relative, Admiral Luce.

Among the coins shown are two facsimiles of New England pennies. A facsimile of a Somers Island, or Bermuda, shilling is described in Spanish as *Primera Moneda Americana*. The effigy of the hog upon this coin was, no doubt, a mark of the gratitude of the early 'Mudians to a beast that had given them "store of fle-h," without which they had wanted animal food. There is a Massachusetts shilling of 1652; a bronze quarter penny of "Mark Newby," of 1681; two facsimiles of Elephant tokens of Carolina, and two similar tokens of New England of 1694; and a Rose penny of 1722. One of the famous, or infamous, Woods's quarter-pennies, of 1723, described as "acuñada en Inglaterra para Irlanda y América," not only recalls the witty Dean of St. Patrick's, but the not generally known fact that it was at one time seriously contemplated to make Dean Swift Bishop of Virginia. There are three facsimiles of a Connecticut token of 1737; then a token *Voce Populi* of 1760; a cent of the State of Vermont, 1785, and others of 1786, 1787, and 1788. Half-cents of Massachusetts of 1787, and cents of the same State of 1787 and 1788, can be seen here, and cents of New Jersey of 1786 and 1787. In cent pieces of 1787 are shown specimens of the first money used by the Government of the United States. Examples are shown of many other coins of more modern date. Besides the coins, there is a capital collection of paper money issued from time to time in the United States. This exhibit comes in part from the National Museum at Washington and in part from the Numismatic and Antiquarian Society of Philadelphia, and is so admirably displayed that persons curious in questions of paper currency will find the examination of the series a very easy matter. The series embraces issues from 1756 down to our own day. To the historical student the most interesting examples will be those of the Revolutionary era, of which there are a number; some issued by individual States, others by resolutions of the Continental Congress. The rage of the collector has been painfully illustrated here. Some one has broken the glass of one of the cases in which these exhibits are displayed, and has stolen a note from it. Specimens are shown of Treasury notes and bonds and of postage stamps and post-cards. A feature in the exhibit is a collection of the old State banks' notes, which should be especially interesting to the financiers of Argentina. An ample collection of literature upon numismatic and kindred subjects is well displayed.

A bear from the Rocky Mountains and other specimens of the fauna of the United States are shown, and a circular slab cut from a tree which must have been a sapling in the Mississippi Valley when Columbus discovered the New World. Prof. Wilson has formed this opinion of its age from the 420 rings which go to make the bulk.

Although not so fortunate as to find an opportunity of making the personal acquaintance of Mr. Curtis, I have learned that he is very much the right man in the right place. In the two rooms under his immediate charge are hung numerous portraits and photographs and engravings of buildings and places in the New World. Of these the most important are the portraits of Columbus, numbering nearly seventy in all, mostly copies. On my expressing the opinion that these portraits might have been arranged on some plan as to the age of Columbus at the time they were taken, I was informed that Mr. Curtis had hung them systematically, but that the irrepressible Spanish artist—our friend the decorator—had insisted upon rearranging the portraits after his own fashion, which seems to be the highly scientific system of hanging them according to their sizes.

As regards the allotting of space, the Dons have treated the United States very handsomely. You have no less than six compartments, all but one being large, and one being one of the largest of the salons. The smallest one, in which is a model of the cruiser *Columbia*, is to be given up for the use of Queen Christina, as her reception-room. A German lady, the wife of a distinguished ethnologist, and herself very accomplished, volunteered to me the opinion that the United States exhibition was "the best" at the Historico-American Exposition. While sharing this opinion at the present time, it may be well to point out that the Mexican courts promise to make a very grand show in matters of historic interest by reproductions of temples, images, and other famous things. The facsimile of a sacrificial stone which greets one in the entrance court is blood-curdling enough. It was on such a stone, you will remember, that Prescott tells us one of the Guzmans was done to death after he had been taken prisoner. D. D.

CRIME AND POLITICS IN ITALY.

ITALY, October 23, 1892.

Now that the pending elections occupy the press and the public, there is a truce in the sensational articles on crime in Sicily, brigandage in Sicily, Maffia, etc., and one can handle the subject without contributing to the unjust and ungenerous attempt to brand more than three millions of islanders as criminals of the worst species, or as aiders and abettors of crime and criminals. I have read with unremitting interest the *Nation's* articles and paragraphs on the switchmen's strike, the tyranny of labor, etc., and all confirm the old proverb, "Tutto il paese è mondo." Sicily, owing to the peculiar institutions of the Bourbons, was, for a long time after the unity of Italy was an accomplished fact, infested with vagabonds and criminals of the worst species. After the suppression of successive revolutions, the Bourbon authorities let loose the denizens of the prisons and the galleys, enrolling them often as a police force and using them as spies on the patriots. When the last successful revolution was initiated, many of these went over to the revolutionists, enrolled themselves in the *squadri*, and fought manfully. Garibaldi, aware of their character, disbanded the *squadri* and sent them home. Then followed years of anarchy and disorder, when the Piedmontese Government, bent on rooting out the influence of Garibaldi in the island, reinstated many of the Bourbon agents and enforced the law of conscription with unwise rigor. The priests, who had assisted the patriots during the revolution, turned against the national Government when they found that the law on ecclesiastical property was to be applied to the island. They instigated the conscripts against the levy, hid them in the mountains, and in 1866 headed the rabble who invaded and pillaged Palermo, which for several weeks after was kept in a state of siege. This state of things, and the special facilities afforded by the want of roads and railroads to malefactors to hide themselves in the mountains and caves, kept the island in continual disorder and confusion. Exceptional laws were the order of the day; the civil and military authority was often vested in the same person. Arrests were numerous, the prisons and galleys overflowing, but the chiefs of the malefactors were left at large and often held high place.

In 1876 the Moderate party was superseded by the Liberals, and the first care of the new Government was to restore order to Sicily. No exceptional powers were asked for, but resolute men were sent as prefects and heads of police, enjoined to apply the common law without distinction of person or rank. The effects were soon seen and felt; the malefactors were arrested, the population gladly assisting the authorities. Hitherto they had unwillingly submitted to the extortions of blackmail, to the presence of malefactors on their estates, fearing their vengeance as long as there was no strong hand to put them down. Now they brought to the authorities all the letters of *ricatto* (extortion), informed them where the malefactors were hidden, and often aided in person in their arrest. The law of conscription was no longer evaded, the law enacting the performance of the civil contract of marriage was obeyed, and Sicily ceased to be the byword of nations. Roads and railroads were made, schools opened, and for some time order reigned in Sicily.

But it is not easy to uproot habits and customs; and while crime decreased and criminals were no longer left at large, the old leaven of evil pervaded and still pervades the masses. One of the defects of the Italian system of penalties is that of enforced domicile in the islands of the Mediterranean (*domicilio coatto*), which condemns men who have committed a series of misdemeanors to a period of exile from their homes for not more than five years. At the end of the term they may return, are subjected to police surveillance for another fixed period, and then left at large. The term of their enforced domicile generally ends by leaving the delinquent a worse criminal than at the commencement. He is left at large among his fellow-criminals on the island, is not compelled to work, receives half a lira (ten cents) per day, with the sole obligation to return to his quarters at a given hour at night. This system is not calculated to reform any individual who has a tendency to evil. On the contrary, most of the *coatti* arrange and combine fresh crimes to be perpetrated on their return to their homes. The idleness, often compulsory, as there is little or no work on the islands, has unfitted them for a life of toil; hence they but seek for an opportunity to live by crime and violence, and most of the crimes committed of late years in Sicily are traced back to returned *coatti*. Another error in the system is the employment of men in the various departments of police who have no authority, who have no character, and who

too often are accomplices of the evildoers. In Sicily this defect, common to the whole of Italy, has been aggravated by the existence of a special corps of mounted militia, whose business it was to scour the country and keep order in the rural districts. This corps had too much resemblance to the old *compagni d'arme*, later called *militi a cavallo*, who were, in short, the *bravi* of the old barons, maintained by them to defend their persons and property, and as often as not to attack those of their neighbors. Of these the Bourbons availed themselves freely for their own purposes. A corps with the same name, mounted militia, was formed by the Italian Government, and opinions differ as to their probity and utility. In Sicily the people seem unanimous in denouncing them as untrustworthy, and, if not aiders of the malefactors, at least of very little use in detecting and bringing them to justice.

In 1889 Crispi, Minister of the Interior, devoted his attention to the state of public security in Sicily, and, convinced that the mounted militia was in part corrupt and totally inefficient, decided on its abolition. Meanwhile, he authorized the Commander-in-Chief of the Royal Carbineers to select 600 Sicilian carbineers from the corps, with the intention of distributing them over the seven provinces of the island. He deemed that it was necessary that all should be Sicilians, because of the extreme difficulty for individuals of the other provinces to penetrate into the mountain districts, and, ignorant of the various dialects; of the manners and customs of the peasants and miners and their relations with the proprietors, to act as guardians of the public peace. Meanwhile, Crispi was defeated, and the Rudini-Nicotera Ministry succeeded. Nicotera, approving the decision of his predecessor, abolished the *militi a cavallo*, and was organizing a new corps not only of carbineers, but of a select police, when he too was defeated, and the Giolitti Cabinet took his place without carrying out his design. Malefactors in general took advantage of the disorganization; armed aggressions in the various provinces, and especially in those of Palermo, Catania, and Messina, became frequent. Letters demanding blackmail were addressed to proprietors and wealthy citizens; three glaring seizures occurred within a brief space of time.

The first was that of Cav. Francesco Billotti, a proprietor of Castrogiovanni in the Province of Caltanisetta. On the 3d of August he was sleeping in the open, on the threshing-floor of his father's farm, with a peasant and his two sons. The peasant was awakened by a blow on his head and saw four armed men, who went up to his master, battered his head with the carbine by his side, and made both mount on mule-back. Blindfold, they were carried through several districts, then confined in a cave and barely fed. The Cav. Billotti was delirious after a few days; nevertheless, the brigands managed to make him write to his family and ask 50,000 lire for his liberation. This was a sum impossible for the family to raise; 4,000 lire, so the peasant reported, was all that they could put together. Make it five, said the brigands, and he returned. Meanwhile, the authorities demanded that the peasant should be given up to them, and with him as guide they tracked the path to the cave, where poor Billotti was found assassinated and burnt so entirely that his ashes were carried back in a handkerchief. The authorities and the population, the carbineers and the country police, went to work with a vengeance, and all the assassins were discovered and seized; one was a Calabrian, the others of Calascibetta, one only of Castrogiovanni. Here there were no *manutengoli* (aiders and abettors), no attempt on the part of any to hide or aid the assassins to escape. The assassination seems to have been perpetrated because the wounded man was too far gone to be kept alive until the ransom should arrive. Several of the culprits are returned *coatti*.

In the same month, August 22, another audacious extortion was effected. Baron Antonio Spidaliere, whose wines and brandy are among the most renowned in Sicily, having purchased a new farm, went to take possession, and spent the night with his son at the house of his wife's stepmother, the Baroness Ciacco. In the morning at seven, sending on four of his forest-guards, and leaving his son with the Baroness, he followed on horseback with other three of his dependents. At a short distance from the house armed men bade him halt, seized and bound him and his three followers as they had already seized the *campieri* who preceded him. The captors of the latter returned to the house of the Baroness with a letter demanding 50,000 lire. The young son of Baron Spidaliere aimed at them from a window, but meanwhile arrived the second relay with the captured Baron. The Baroness threw them the 50,000 from the window, but this no longer contented them. They entered with their prisoner and compelled the Baroness to conduct them over the house. When they had despoiled her of another 110,000 lire, they expressed their regret for the "inconvenience" caused, and returned to the Baron his watch, chain, and purse. This audacious aggression was the work of a band of malefactors whose headquarters were the forest of S. Mauro on the borders of the province of Catania. A dependent of the Baroness kept them informed of the movements of the family; the parish priest seems to have connived at their plot. In a short space of time the band was arrested, and its members are now in durance vile.

At the end of the same month the third aggression was enacted. One Sangiorgio of the province of Trapani was seized, bound to a mule, and carried off. The family paid a large sum for his release, but he did not return. The police and the carbineers patrolled the district, and one day during a village festival a peasant who was among the crowd excited their suspicion; he was arrested, and on his person was found a large sum of money. He at once confessed and revealed his accomplices. The carbineers went to the cave, and there found the poor Sangiorgio half dead of hunger and fright, expecting to be murdered every moment. The malefactors were arrested and are now awaiting their trial.

These are the worst cases and there is nothing uncommon in the stories. The Government has now sent a relay of police, or carbineers, and of the much desired bersaglieri. No more is heard of "brigandage in Sicily." But what will be the fate of the malefactors—will they be tried and condemned, or merely sent to *domicilio coatto?*

One of the characteristic crimes of Sicily is the theft of animals (*l'abigeato*), recalling the *razzie* of the Arabs and the rustlers of America. In these exploits, though there are no special associations of *abigeatori*, it is evident that the thief must have accomplices. The old penal code of Italy was very severe on this theft: the penalty for stealing *one* solitary horse, mule, or horned beast, was imprisonment for not more than three years; but if the beast was stolen from a herd or from the stable, the penalty was to be not less than seven years, and might extend even to the galleys for a longer period. By the new code the penalty may not exceed six years of imprisonment. No crime is more difficult of detection. Animals in Sicily live in the open except during the winter months; each herd has its special mark and so has each animal. Sometimes a number of proprietors hire a waste for pasturage, but each man knows his own animal, and all pay in common one or more herdsmen. Rarely are the animals of a large landed proprietor stolen, he having his special *campieri*, who are responsible, and who would make the thief pay heavily for the insult more than the loss of the cattle. It is the poor owner of a few acres of land and perhaps three or four mules or cattle, who is generally the victim. The thief in large wastes where the cattle of various proprietors are assembled, must have some accomplice, as, even if there are 100, all answer to their special names—"like Christians," say the peasants—and answer only to the voice they know. Then wild dogs are kept who would tear an intruder to pieces. Consequently, one of the herdsmen must be an accomplice. He calls the beast and leaves it outside the boundary, the thief comes early at night, drives off the animal, mounting it if it be a mule or horse, and rides to some distant spot, where he sells or kills it in a cavern, destroying the mark and cutting it up to sell to the various butchers in the district. When the owner of the missing animal is warned of his loss, he notifies the police, but takes care never to accuse any one. Rarely are the lost animals found, unless the proprietor is very powerful, when often the beast is returned at night as it was taken. Even this crime might be repressed if trouble were taken to alter the system of marks, and the remedy was long ago suggested by a well-known ex-member of the police, Giuseppe Alongi. But no synthetic system for the prevention, discovery, and repression of crime has yet been attempted in Italy.

The reformation of criminals once convicted has rallied to the task some of the finest intellects and noblest hearts of the peninsula. The penal establishments for women at Messina, that for men at Procida, are simply magnificent, perfect in all their arrangements. The wards are airy, healthy, the due number of cubic feet are assigned to each criminal. The food is good though scant; but as work is provided, a portion of the proceeds is given to the worker, and, a restaurant being at hand, he can supplement the prison fare with all sorts of delicacies—beefsteaks, cutlets, fried, roast, or boiled meat, and a certain quantity of wine. Never did I realize the cruel truth of Carlyle's "model prisons" as during my last visit to Procida. The absurdity of the system in Italy is aggravated by the circumstance that not only is no attention paid to the dwellings of the honest poor, who live in caves in parts of Sicily still, and in kennels and hovels unfit for beasts in most of the cities, while the proprietors exact enormous rents and never give a brush of whitewash or mend a tumbling roof, but the prisons where the accused are taken as soon as arrested are something that baffles description. The prisons of Naples and of some parts of Sicily are as bad as the Black Hole of Calcutta. No person can breathe unless he has got accustomed to the stench, the filth, the stifling atmosphere. Here old criminals, condemned and awaiting their second, third, or fourth trial, are huddled together with per-

haps a young lad of decent parents who has been taken up because his "weights or measures" have not the right mark, or because he has been at a *sciarra* (a scuffle), and here he may remain long enough to learn all the details of crime and infamy known to his comrades. These are the plain truths, and no one can gainsay them.

The present Ministry have published a programme for the restoration of the finances of the country, and if they should succeed in this, a great step would be made towards the decrease of misery, one of the great factors of crime. But the hour of social awakening has not yet dawned for Italy. The people are remembered during the elections because many of them have the vote. The Socialists promise all sorts of benefits if they should get a seat in Parliament, but such as have hitherto obtained one have done nothing—nay, they vigorously opposed many of the propositions of Crispi, who, belonging to the old school, considers that the new country can never become prosperous until all her cities are partakers in the benefits of freedom. Meanwhile the Island of Sicily has returned to its normal state. Giolitti has pledged himself *not* to interfere with the elections, to dissolve no municipal councils, to remove no prefects, until the elections are over. If he keeps his word, a great gain will ensue, for political corruption goes hand in hand with crime of every species. This is the case especially in Sicily, where malefactors have often been let alone by special orders from the central Government because they were known to dispose of a certain number of votes in favor of the said Government.

One question is now especially mooted, and that is the payment of the Deputies. Some of the best members of Parliament have refused to stand, declaring themselves incapable of living in Rome. One of these is the late editor of the *Isola*, one of the best newspapers in Sicily, nay, in all Italy—Napoleon Colaiani, a celebrated writer on social questions. His pamphlets on 'Political Corruption' and 'Crime in Sicily' are text-books for students of these questions. But his newspaper has failed and he retires into private life. So with three other members of the Left. The workmen of Milan maintain their fellow-workman, Maffi, but I know of no other instance where the political workman is deemed worthy of his hire. How far the payment of Deputies will further political morality, it is difficult to say. Crispi has always strongly advocated this measure. J. W. M.

Correspondence.

THE GUARANTEES FOR STATE BANKS.

To the Editor of The Nation:

Sir: Apropos of the much-discussed repeal of the 10 per cent. tax on State banknotes, I should like to offer a little testimony that was obtained the other day from a conversation with a Southern gentleman living near Columbia, Tenn. This city had one national and two State banks a year or so ago, when a period of depression, followed by a tight money market, brought on a crisis which resulted in the failure of the two State banks. An investigation of their affairs revealed a wretched condition indeed. The smaller bank, with a capital of $50,000, had more than $100,000 overdrafts; and the larger one, with $100,000 capital, had more than $200,000. The most reckless banking in the East can conceive nothing like this — overdrafts large enough to wipe out both the stock and the 100 per cent. assessment, with no account taken of worthless notes and depreciated collateral, the usual cause of bank failures! One may well be pardoned for crying out lest he be asked to take the currency of such banks.

But where were the examiners? You may well ask the question, for Tennessee has such officers, and I understand that they are expected to make investigations at least yearly. How well they do their duty you may infer when I tell you that one of these banks, so it transpired, had not been examined for ten years. Yet the neglect was doubtless in accord with the business methods of a community that not only tolerates but encourages such a system. For it is well known that the South and West are hostile to the national banks. The cause ordinarily assigned for the prejudice—exceptional profits on the circulation—has been removed by the premium on United States bonds. Where money loans at 5 per cent., the bank that invests $100,000 in Government fours for the purpose of issuing notes, finds the privilege worth $400 per annum; where money loans at 6 per cent., the profit is $85 per annum; where it is worth 7 per cent., the profit turns to a loss of $230; and so on, the loss increasing as the clamor against the system increases.

Has, then, the prejudice no foundation? It must have, and I believe it is found in the following answer of a Southern gentleman when asked for his explanation: "Go to Mr. A. (President of a national bank), and the first thing he inquires is, 'What collateral have you got?' Go to Mr. B. (President of a State bank), and he simply says that he shall expect 12 per cent." The national banker knows that he must be prepared for four Comptroller's calls and a searching examination each year. The State banker feels no such restraint. Undoubtedly an increased currency would be a stimulus to the South and West, but at the same time it might be made a means for introducing conservative business methods, by wisely conditioning the repeal of the tax. At any rate, too great care cannot be taken lest it be so inadequately secured as to invite still more reckless banking.

Richard W. Nutter.

Boston, October 31, 1892.

PORTRAITS IN THE *UNIVERSITY MAGAZINE*.

To the Editor of The Nation:

Sir: As one of the men whose pictures appear in a recent issue of the *University Magazine*, I wish to correct certain inferences that might be drawn from an article in the *Nation* of November 3, entitled "Fame in the *University Magazine*." While in no way championing the magazine, I, for one, take exception to your correspondent's statement, "I am struck with the profit there is in the publication of about thirty-six photographs at $100 per head."

The facts in my own case are as follows: I was informed that I was one of six selected to represent '76 among Princeton Alumni appearing in the *University Magazine*, that it was necessary to forward a photograph and to pay *ten* dollars for the expense of having it transferred. This did not seem to me an unjust request, and, feeling honored by the selection, as I still feel, I forwarded the amount. Nothing was ever said about copies, except that I asked them to send me one, which they did. I gave no bonus for "fame," and am at a loss to know why "A. B." was charged so heavily unless his picture presented insuperable obstacles.

Yours truly, Robt. W. Johnson.

Baltimore, November 4, 1892.

THE CULTIVATION OF TREES.

To the Editor of The Nation:

Sir: May I call the attention of your readers to the following paragraph taken from the London *Spectator* of October 22?

"The statistics connected with British agriculture show that the landlords are by no means the helpless, 'played-out' class they are often represented, and that they are meeting the fall in the price of wheat as business men ought to meet it—by turning their land to other uses than corn-growing. This has been shown year after year by the increasing amounts of land laid down to pasturage. A recent return shows another form of landlord activity. Suitable land is constantly being planted, and the acreage under woodland, which in most civilized countries is diminishing, is increasing in England. Ten years ago, the woodland surface of Great Britain was computed at 2,458,000 acres. By the year 1888, the acreage thus occupied had risen to 2,561,000 acres, and the measurements taken in 1891 show a further advance to 2,695,000 acres. Of the 134,000 acres thus added to the approximate woodland area of Great Britain, 96,000 acres are assigned to England, 31,000 to Scotland, and 7,000 acres to Wales. Hampshire heads the list, as the best planted county in England, with 122,574 acres of wood; Sussex has 122,073 acres, and Surrey and Kent come next. These four counties have, indeed, twenty-five per cent. of the English woodlands, and of their entire surface eleven per cent. is wood. In Scotland, the most wooded county is Inverness-shire, with 169,000 acres."

If it is possible in England to plant trees as a crop and derive profit from their growth, why may not some of the deserted farms in New England be made profitable in the same way? Such farmers as I have talked with value their woodland at a high rate, but they never replant with trees the acres they have once cleared. Each year new railroads are built in the mountain regions of New Hampshire for the sake of bringing the lumber of its beautiful wooded steeps to market. There seems to be plenty of capital and of energy for the destruction of the forests nature has provided for us; is it Utopian to think that if part of the energy and capital were expended in replanting some of the deserted farms, the return for the capital might be as great here as it is in England?—Very sincerely,

M. N. S.

Cambridge, Mass., November 4, 1892.

Notes.

Charles Scribner's Sons have nearly ready the 'Life and Letters of Washington Allston'; 'French Art,' by W. C. Brownell; 'Rowen: "Second Crop" Songs,' by H. C. Bunner; and 'With Trumpet and Drum,' verses for children by Eugene Field.

Dodd, Mead & Co.'s forthcoming publications include several translations from the French, as, 'The Memoirs of Madame de Staal-de Launay,' with forty-one etchings by Lalauze; Jean de la Brète's 'My Uncle and My Curé'; and Maxime de la Rocheterie's 'History of Marie Antoinette'; one from the Italian, 'The Poems of Giosuè Carducci,' by Frank Sewall; reprints relating to the stage, as, 'The Dramatic Essays of Charles Lamb,' edited by Brander Matthews, and 'The School for Scandal,' illustrated by Frank M. Gregory; and the following miscellany: 'The Ballad of Beau Brocade, and Other Poems,' by Austin

Dobson, together with 'Eighteenth Century Vignettes,' by the same writer; 'Beauty of Form and Grace of Vesture,' by Frances Mary Steele and Elizabeth L. S. Adams; and the 'Universal Atlas,' including county and railroad maps of the United States.

'Seen from the Saddle' is the title of a volume of out-door sketches, by Isa Carrington Cabell, which Harper & Bros. will bring out some time this fall.

The Centenary Edition of Shelley's Complete Works, edited in four volumes with a life by Prof. George E. Woodberry, is in the press of Houghton, Mifflin & Co., as are also Prof. Lanciani's 'Pagan and Christian Rome,' 'Italy from the Congress of Vienna, 1814, to the Fall of Venice, 1849,' by William R. Thayer (in two volumes), and 'The Nature and Elements of Poetry,' by Edmund C. Stedman.

'Man in Art,' by Philip Gilbert Hamerton; 'The Lost Atlantis, and Other Ethnographic Studies,' by Sir Daniel Wilson; and 'The Last Touches, and Other Stories,' by Mrs. William Kingdon Clifford, will be published directly by Macmillan & Co.

The Cupples Co., Boston, are about to bring out 'Heinrich Heine: His Wit, Wisdom, Poetry,' edited by Newell Dunbar.

Lee & Shepard will issue 'A Woman's Philosophy of Love,' by Mrs. Caroline F. Corbin.

William Doxey, San Francisco, announces 'Petrarch, and Other Essays,' by the late Judge T. H. Rearden; 'The Sleeping Princess California,' a poem by Alice Edwards Fratt, with illustrations of California scenery and flowers; and 'At the Gates of Light, and Other Poems,' by Mrs. Amie S. Page.

Funk & Wagnalls promise an important work on 'Criminology,' by Dr. Arthur MacDonald, with an introduction by Prof. Cesare Lombroso and a very extensive bibliography.

An illustrated popular account of six famous journeys of recent times, 'Leaders into Unknown Lands,' will be issued by Thomas Whittaker.

Prof. Robert Baird of Northwestern University has prepared a 'Greek-English Word-list,' containing nearly one thousand of the commonest Greek words, mastery of which will insure a most valuable nucleus for the student's vocabulary. It will have the imprint of Ginn & Co.

Mr. F. B. Sanborn and Dr. W. T. Harris are engaged upon a biography of the late A. Bronson Alcott.

A memorial volume from the papers of the late James R. Osgood is being compiled by Mrs. A. V. S. Anthony.

The following are some English announcements: a new volume by Mr. W. S. Lilly, to be called 'The Great Enigma' (Murray), and dealing with agnosticism and the Christian synthesis—subjects upon which Mr. Lilly has written a good deal; a collection of Mr. Henry Irving's 'Addresses' (Heinemann), with a frontispiece portrait of Mr. Irving by Whistler; 'The Unseen Foundations of Society: An Examination of the Fallacies and Failures of Economic Science due to Neglected Elements,' by the Duke of Argyll, with especial attention to the theory of rent, and of the wages fund; a 'History of India,' from the earliest times down to the present day, by H. G. Keene, intended mainly for the use of students, and to be published in two volumes by W. H. Allen & Co.; and a 'Life of Gavarni,' the French caricaturist, by Frank T. Marzials, to be published by Sampson Low, Marston & Co.

Old favorites in a new dress still press upon us. Mr. Charles Dudley Warner's 'In the Levant' has seemed to his publishers (Houghton, Mifflin & Co.) to afford opportunity for the kind of illustration by photogravure exemplified in their holiday editions of Hawthorne's 'Our Old Home' and 'Marble Faun.' They have accordingly reproduced it in two handsome volumes of which the letter-press is really beyond the need of embellishment. There is a portrait of the author, and twenty-four plates of scenery and architecture, the least good being the panoramic. The binding is in red and green. From Harper & Bros. come Curtis's 'Prue and I' and Henry James's 'Daisy Miller,' the one in an elegant pea-green cover, the other in white and green stripes which somewhat obscure the gilt lettering. Mr. Albert Edward Sterner has furnished the designs for Mr. Curtis's idyll, and they are to be praised for their appropriateness and their decorative feeling; but he is properly a pen-and-ink artist, and his washed drawings compare unfavorably with the majority of his work. If we yield to the French fashion of breaking the squareness of the page by planting vignettes to one side, in the margin, in the corner, we must concede that 'Prue and I' is a very successful bit of typography, for the print is clear and beautiful. Mr. Harry McVickar, on the other hand, seems to us to have overdone the illustrations to 'Daisy Miller,' employing all the eccentricities just noted, with some peculiar to himself. His designs are too formal to be decorative as they stand, and they are not, taken together, equal to Mr. Sterner's. Finally, the criterion "Cherchez la femme" applies here, and Mr. McVickar has given us everything but the heroine. She turns her back to us in the colored frontispiece, and rightly, for her character is out of reach of the artist's imagination.

The first volume of the Dryburgh Edition of the Waverley Novels has been issued by Macmillan & Co., and ushers in a series of twenty-five. A popular sale is contemplated, and the price is really low for the solid and elegant workmanship. The print is generous and the size (octavo) dignified. The text followed is that of Scott's last revision, and Dr. Laing's notes are retained. Each volume contains an index and a glossary, and each will be illustrated by a different hand if we can base an inference on the list of artists given for fifteen of them. Mr. Charles Green's designs for 'Waverley,' the initial volume, are nine in number, and at their best are excellent, though his limitations are obvious. Without comparing the Dryburgh with the multitude of other editions, we can commend it unreservedly.

'Play in Provence,' by Joseph and Elizabeth Pennell, reprinted by the Century Co. from the *Century Magazine*, makes a charming little volume, prettily bound and clearly and elegantly printed on the highly glazed paper which is necessary for the proper effect of the cuts. The chatty text and the clever little drawings have lost none of their pleasantness.

Three fresh volumes continue the unpretentious uniform edition of William Black's novels, bound in green cloth, which the Harpers are issuing, viz.: 'The Maid of Killeena,' 'Green Pastures and Piccadilly,' and 'Macleod of Dare.' The first-named contains also 'The Marriage of Moira Fergus.'

The 'Beauties of Nature and the Wonders of the World We Live In' (Macmillan), by Sir John Lubbock, is a charming book, alike for the interest of its varied chapters and for its exemplification of the broad sympathies of its learned author. It is certainly delightful to see that a banker, a politician, and a close observer of the ways of ants should at the same time have an extended comprehension of many other natural fields. It must be noted that Lubbock includes under his title not only the graceful forms of mountain scenery and the delicacy of flower coloring, but the arrangement of river branches, and the rudimentary teeth of cows and hind legs of whales.

'The Geographical Distribution of Disease in Great Britain,' by Alfred Haviland (London: Sonnenschein), a second edition, is an extended statement of a former thesis, of which one of the chief elements is that death from cancer increases in regions of clayey soil liable to overflow by rivers, and that it is relatively rare in limestone regions. This is based upon English records apportioned by small geographical districts and then compared with the physical features of the region. Whatever element of truth there may be in the supposed relation, the present discussion does not sufficiently consider the other possible causes of variation; and until the cases are charted according to natural geological areas, the desired demonstration can hardly be reached. The book is not compactly written; the chapters on the structure and topography of the lake region, to which the most attention is given, are very diffuse; the results gained might be presented in much smaller volume. The subject of the book is, however, one on which increasing attention must be bestowed, and for this purpose better statistics are needed. We may join Dr. Haviland in condemning the British Registrar-General for allowing returns of deaths since 1870 without distinction of sex; for this is particularly unsatisfactory in the case of diseases which affect both sexes, but which are more common in one than in the other. A later volume will deal with the valley of the Thames.

Mr. Alfred Russel Wallace contributes an essay entitled 'Land Nationalization' to the Social Science Series (London: Sonnenschein; New York: Scribners). After stating many shocking but often insufficiently verified cases of oppression by landlords in Ireland, Scotland, and England, and praising once more the lot of the peasant proprietor on the Continent, Mr. Wallace contends that pauperism in Great Britain can be extinguished only by vesting the title to all land in the Government, which shall offer to every member of the community a small piece of land, subject to the payment of a quitrent, and on condition that it be not sublet or mortgaged beyond a certain amount. What is to be done with paupers who cannot take their allotments, or with tenants who become unable to pay their rent, we are not told; but as the scheme is rather utopian in character, it does not make much difference. It should be said that Mr. Wallace proposes no plunder of landlords, and that if a body of peasant proprietors can yet be created in England, it will probably be in some such way as he suggests.

A new book on Egypt is by Flinders Petrie, the veteran excavator and explorer who for several years acted under the auspices of the Egypt Exploration Fund, but more recently upon private account. It is a book in a popular form, in which he recounts his 'Ten Years Digging in Egypt, 1881-1891' (Revell), refraining purposely from minute details, dates, and figures which might serve the single purpose of confusing those who have not made a special study of the subject. Those familiar with the author's larger works will find little new here; for them the present work is not intended. But it is an interesting and at times almost a thrilling tale which he tells, and calculated to furnish considerable information to the general public, or that part of it which cares more for results than for methods. The

book contains many cuts, but some of them are so rough as to add nothing to its value.

The establishment of steamship routes from New York to the Mediterranean by both the Bremen and the Hamburg lines has brought Spain into special prominence as a winter resort for invalids and tourists. It is almost the only European country for which there is no Baedeker, and this may be taken as a compliment to the two standard guide-books to Spain—Ford's (the best of all the Murray guides), now in its seventh edition, and O'Shea's, of which the ninth edition, edited and revised by John Lomas, is just received (London: A. & C. Black; New York: Macmillan). Both of these books are so good that it is difficult to decide which to choose; the best way may be to buy them both. Perhaps Ford's general descriptions are the more interesting, while O'Shea has more special information for students of cathedrals. The new edition of O'Shea has more than 100 pages of general information, on forty different topics. The data seem to be fresh; but whereas the new Mediterranean lines from New York are referred to (p. 152) as well as the new railroad from Algeciras (Gibraltar) to Granada, we have found no mention of the equally important new railway which at last makes it possible to go to Gibraltar from Cadiz without taking a steamer except to cross the bay from Algeciras.

Of books of travel on Spain there is no lack, the latest addition to the list being 'Spanish Cities' (Scribners), by Charles Augustus Stoddard, author of 'Across Russia.' It is simply a journalist's record of a brief trip on the peninsula (with a chapter on Tangier), combining an unadorned description of what was seen, with free borrowing from the guide-books and other works on Spain. There are no new points of view, or new regions explored, but the average tourist will find the information thus brought together useful and entertaining. There are eighteen full-page illustrations.

Two notable literary events in Japan are (1) the completion and publication of J. H. Gubbins's 'Dictionary of Chinese-Japanese Words.' This three-volume work, clearly and beautifully printed, is indispensable to the student of contemporary Japanese, into the vocabulary of which the modern age has compelled the infusion of many thousand new terms unknown a generation ago. (2) Dr. J. C. Hepburn, the veteran medical missionary and translator, has completed his 'Bible Dictionary,' a handsome illustrated volume. Instead of being a mere translation, it is a scholarly condensation of the best cyclopædic literature with much original matter. It is in the style read by all classes. The mechanical portion of the work is wholly Japanese.

In the useful series, reprinted from *L'Art*, of "Les Artistes Célèbres" (Macmillan), M. Émil Michel takes up another of those Dutch families in which painting was pursued for several generations. This time it is the Van de Veldes whom he treats in his usual careful manner. In the same series M. F. Lhomme follows his study of Raffet by another of Raffet's master, Charlet.

We have received the prospectus of *Childhood*, "a monthly magazine of all that concerns the welfare of the child," to be launched next month under the editorial direction of Dr. George William Winterburn and Florence Hull. The publishers will be A. L. Chatterton & Co., in this city.

Mr. John P. Holland, to whom the *Cosmopolitan's* second prize of $100 has been awarded for an essay on aerial navigation, revives the very simple mechanism, suggested by Herschel years ago, of a pair of propeller wheels rotating rapidly in opposite directions on an axis of variable inclination. Spacious aeroplanes with an upward tilt are expected to help in overcoming gravity. Quite without doubt the plan may be put into successful operation—if the machine is able to lift and support itself in the air (which it is next to certain it could not); if it is incapable of capsizing (which it might be in a quiescent atmosphere); if the aeroplanes, their supports, and guys do not snap or undergo deformation (which, at low speeds, they perhaps would not); and if a benign Providence would only provide salvation for the aviator in case of accident. The other difficulties will occur to the inventor of the machine when he comes to try it.

Instead of "What We Really Know about Mars," the Director of the Lick Observatory might better have entitled his article in the November *Forum* "Speculations concerning Mars," or something of that sort, for the general reader would not then have been led to form the opinion that we really know next to nothing about that planet. The evidence as to the meaning of apparent surface conditions on Mars is rather ramblingly reviewed, but the natural expectation that such an article would have much to say of the observations of Mars during the past summer meets with almost entire disappointment. The sturdy defence of great telescopes is excellent and timely, and will doubtless do much toward silencing further idle detraction of the work of our great instrument-makers, the Clarks, and their European rivals.

The whole number of freshmen at Oxford this year is put at 694, as against 687 last year. Of these, as given in an incomplete list in the *Oxford Magazine*, 52 are non-collegiate; Balliol and University each have 41, and Merton 36. When the non-collegiate, or unattached, students—*non adscripti*, their technical name is—first came up to Oxford about twenty-five years ago, they were few in number, and were generally referred to in conversation as the *non descripti*. They appear to be on a better footing now.

—The November *Atlantic* offers little occasion for comment. Dr. Holmes writes his farewell verses for Whittier with that combination of strength and feeling in which he is most felicitous, and adds one more memorable poem to the sheaf of personal tributes that have been characteristic of the New England literary group. The analysis of the political principles of the two parties, by an anonymous hand, is a singularly fair statement, and would hardly invite criticism from either side on the point of impartial exposition. The papers of the Venetian ambassadors afford an episode of history pleasantly narrated, and the inexhaustible topic of the higher education of women is treated, with especial reference to enlarging their studies in the direction of sociology, by Samuel W. Dike. The serials, however, are the core of the number.

—*Harper's* opens with a series of illustrations of Mecca and Medina, after photographs taken by a Moslem officer, which give the first exact visual knowledge of these closely guarded shrines that the Western world has had. Mr. Warner furnishes a running text on the illustrations, deriving his material from the travels of Burckhardt and Burton. The work of Nathaniel J. Wyeth in Oregon, at the time of the struggle for its possession, is made the subject of a special paper. Mr. Child continues to write of Paris, and Mr. Ralph of the greatness of the West. The designers of the Fair are eulogized by Mr. Millet, and the death-masks of Mr. Hutton's collection are drawn on for a third article on a gruesome topic. Miss Wilkins is, perhaps, the most prominent interest in the number, as she is now suffering the process of exploitation, though in the page that can only be described as an inserted advertisement she is obliged to spare a corner to the claims of Mr. Davis. This is the first time, we believe, that the text has permitted the intrusion of the circular letter into its pages. It is on the whole more convenient not to be obliged to bind up the advertisements with the remainder of the magazine. Between the last words of Curtis and Mr. Warner's urbane sentences in the "Study," the intrusion is so glaring a violation of good taste that it cannot be overlooked.

—*Scribner's* "feature" for the month is a paper upon Victor Hugo, made up of extracts from notes of his conversations at Guernsey by his son. The original manuscripts of these, incredible as it seems, were discovered when his house there was renovated for new occupants, and went begging for a purchaser till some one was brave enough to give eight or ten shillings for the whole, and by so doing more than doubled his investment, selling the collection to Mr. Davey for a pound sterling or two. The notes are full, and the conversations are upon every subject; they are for the period of the five years after the *Coup d'État*. The selection here given from the mass of papers is mainly confined to anecdotes, and is, doubtless, only a foretaste of what will be published in the end. Mr. James writes of the Grand Canal, and Mr. Franklin MacVeagh shows how large a part in the expense of the Fair Chicago has undertaken, and reassures those who have entertained doubts in regard to the transportation and accommodation of visitors and to the quality of the water.

—The *Century* is more varied than its rivals of the month, but is not distinguished by any paper of greater importance than the rest. The suggestion that those who have closed the Fair on Sunday are now bound to see that that day, as one of rest, shall be put to its greatest profit, is well made, and attention is directed to ways of using the day not inconsistent with the customs and preference of our people. The Russian artist Répin, the composer Massenet, the Paris Commune and Brook Farm, scientific error in the Bible, and the traits of workingmen as seen by one of themselves, are topics which illustrate the breadth of interest in the number, of which the most valuable feature, possibly, is the series of letters between Gen. Sherman and Senator Sherman in the months before and after the outbreak of the civil war.

—Surgeon John S. Billings's colossal 'Index-Catalogue of the Library of the Surgeon-General's Office, U. S. A.,' has just been continued by a thirteenth volume which nearly takes in the remainder of the letter S from the preceding volume. It is noticeably full of outlandish names of authors, like the Russian Sutugin with which it closes. The general rubric Surgery falls to this instalment of the Catalogue, and fills 92 pages. Statistics fill 68, and there is a long and important list of vital statistics geographically arranged. A similar remark is to be made of Societies, occupying 57 pages. Of the parts of the body here comprehended, the Spine clearly gives the medical faculty the greatest occupation: it fills 95 pages, whereas the Stomach needs but 78, the Skin 64, the Spleen 20, the Sternum 4. Smallpox leads the ills (62 pages), while Strabismus

lags behind with 8 (besides 4 given to Spectacles), and Stammering with 4. Sleep, or the want of it, calls for a matter of 9 pages. Under Sneezing we observe several works touching the formulas so widely in vogue for turning this phenomenon to good account—a 'Disquisitio philologica de ritu salutandi sternutantes' (1704), and an essay 'De ritu sternutantibus bene precandi' (1741). In the materia medica, Strychnine is at the front with 8 pages, followed by Sodium with 7. But also the Spider and the Snail claim attention, the former for the virtues of its web as a febrifuge, etc., the latter for its efficacy (*ingéré vivant*) in affections of the lungs and larynx, in the case of hernia, and as a basis of pharmaceutical preparations as late as 1840. The old doctrine of Signatures may be seen here to go at least as far back as 1608. Jonn Snart, in 1817, in his 'Thesaurus of Horror,' touching burial alive, showed "by a number of awful facts that have transpired, as well as from philosophical inquiry, the reanimating power of fresh earth in cases of syncope," etc. The Siamese twins cut a pretty figure on page 1, in a literature ranging from 1829 to 1874, and embracing many discussions of the safety of severing their famous ligament.

—There is not much psychology visible in this multitude of titles. Socrates's demon is in question when one controversialist deprecatingly asks (1864), "Socrates était-il fou?" The quite modern Suggestion (supplementary here to Hypnotism in an earlier volume) is hardly ten years old, though there is a stray title dating back to 1862, if there be no mistake in the third figure. The unpromising title of Stumps furnishes several inquiries regarding the alleged liability, in persons who have undergone amputation, to experience sensations from or about the missing members —a curious subject; *e.g.*, "De sensuum mendaciis apud eos homines quibus membrum aliquod amputatum est" (1842), etc. H. Fabricius "ab Aquapendente" (Padua, 1603) discussed the speech of animals—'De brutorum loquela.' Somnambulism yields the title, possessing a local interest, 'Devotional Somnium; or a collection of prayers and exhortations uttered by a Miss Rachael Baker, in the city of New York, in the winter of 1815, during her abstracted and unconscious state, . . . together with a view of that faculty of the human mind which is intermediate between sleeping and waking. The facts attested by the most respectable divines, physicians, and literary gentlemen, and the discourses correctly noted by clerical stenographers.' An earlier narrative or edition will be found on p. 1,100 under the head 'Surprising (The) Case of Rachael Baker' (New York, 1814), the "clerical stenographer" being Charles Mais. Henry Stubbe, who flourished 1631-76, published at Oxford in 1666 'The Miraculous Conformist: or an account of severall marvailous cures performed by the stroaking of the hands of Mr. Valentine Greatarick [Greatorex?]'—a meaning of the word *conformist* not to be found in Dr. Murray's Dictionary, we think. Another work by the same author, printed in London in 1671, was entitled 'A Bacon-face No Beauty,' and this occurrence of the term *bacon-face* antedates Dr. Murray's earliest citation for it, from Otway, 1684, though *bacon-faced* he traces to 1600 or thereabouts.

—At the Congress of Americanists held at Huelva, Spain, in the early part of October, Mr. Ed. Seler of the Ethnographical Museum in Berlin made some interesting communications about the Maya manuscripts and the actual state of their deciphering. He began by saying that formerly the students of Maya hieroglyphs had been misled by the so-called Landa Alphabet, published by Bishop Landa in the sixteenth century in his 'Relaciones de Yucatan,' a standard work for Maya history. In Germany the deciphering of the manuscripts has lately been begun in another way, viz., by comparison. Prof. Foerstemann of Dresden was the first to discover by this method the system used by the ancient Maya people in writing their numbers. Shellhaas and Seler are both working in the same fashion. Seler found out that the first sign of the three by which every deity is accompanied indicates the action in which the deity is represented; so does the second sign frequently. Moreover, in the books of 'Chilam Balam' written in the Maya language, a fine copy of which he met with in the library of Prof. Brinton, he found a description of the thirteen "ahau katun" or periods of 20x360 days, with their names, the names of their tutelary deities, and their astrological importance. The same thirteen "ahau katun" are represented in the Perez Codex (MS. Mexicain No. 2, Bibliothèque Nationale, Paris). Thus he was enabled to identify certain deities and certain hieroglyphs of the Maya manuscripts. The contents of those ancient writings are, according to Dr. Seler, chiefly astrological and chronological.

MARKHAM'S COLUMBUS.

Life of Christopher Columbus. By Clements R. Markham. London: George Philip & Son. 1892.

EVERY historian has his pitfall, and his readers soon become conscious of it. It is some personal quality, implanted by nature or derived from experience. The purely literary man turned historian bends his narrative to secure picturesqueness or to give an artistic effect, no matter what the requirements of truth. The popular writer, knowing how the common mind yearns to be led, finds all complications of fact which perplex the circumspect student to vanish before his easy decisions. The defect of Mr. Markham, proficient student as he is in all these early American subjects, is his pride in the seaman's profession, and his unwillingness to believe that unworthy qualities can be conjoined with the essential merits of a great seaman.

It is a psychological study to watch him formulate the rules for making a maritime wonder: Call your hero a "genius" and put him beyond the pale of criticism. "Assume so able a man to be correct." If there is anything, for instance, awkward for Columbus's fame in Las Casas's abridgment of the Admiral's journal, do not hold the Admiral responsible. If there is a damaging discrepancy in one of two statements, decide that the most objectionable is "a careless copy," and if there is in the other something on record to interfere with your ideal, use the politician's art and call it a "slip of the pen." If there is an obvious difficulty in the way, as in Columbus's reference in his will to a woman whom he had wronged, lighten it by calling it "some ecclesiastical obstacle." Say that no one could have managed colonists better, but do not forget yourself and say in another place that another could have done better, in allowing that Bartholomew Columbus was "better fitted to deal" with such people. Profess that "every sentence written by the illustrious Genoese is valuable to posterity," and do not forget this when you come to speak of the oath which he prescribed on the coast of Cuba, for you may find yourself forced to maintain that the Admiral was delirious when he indited so foolish a thing, and presume that "passing whims of a vivid imagination account for the wildest vagaries." If the Admiral's writing takes the form of a falsification of his log, find it "fully justified by the circumstances." If Columbus says he never again saw his wife after deserting her, decide that he meant to say "hardly ever" instead of "never." If your hero seized poor Indians, say that he "detained" them; but when others do the same thing, say that the poor creatures were "kidnapped" or carried off "by force." Say that Columbus only forced into slavery prisoners of war, and forget that he outlined such a subjection for the Lucayans the moment he laid eye on them, as the first letter he wrote of his discovery shows.

It is impossible to suppose that a scholar of Mr. Markham's ripeness could have knowingly committed himself to such a rehabilitating process, and we must account for it solely by his being overmastered by his admiration for the magnates of a calling which he would have adorned had he remained in it. This overpowering ideal makes him forget what he must know, as when he says that Columbus reached Lisbon at a time when "the idea of sailing west had not entered into men's minds." How is it that Harrisse, then, can make his catalogue of tentative voyages for thirty or forty years before 1492? When Mr. Markham says that "assuredly the discovery of the New World was no accident," does not the dictionary on his table define an "accident" to be "an event proceeding from an unknown cause, or happening without design of the agent; an unforeseen event"? Assuredly Mr. Markham cannot contend that Columbus expected to discover America. When he wants to make it appear that Columbus believed he had seen a token of land in the mysterious light at ten o'clock, when he was approaching his goal, he says that "Columbus determined to keep the same course until daylight *under very easy sail.*" Who knew about this so well as Las Casas, with Columbus's journal before him, and he makes the Admiral say, "After sunset sailed twelve miles an hour till two hours after midnight." Irving calls this "a rapid rate," and there is no sign in it certainly of slackening speed. Would Mr. Markham call it a "slip of the pen" on Las Casas's part? Our biographer says that this light was "universally believed to be on land," to account for the claim which Columbus put in for the award of a prize. Las Casas represents Columbus as saying, "which *some* thought an indication of land." Another slip? Again Mr. Markham says: "The acquisition of gold took a very secondary place in the mind of this great man, whose unselfish thoughts were ever bent on the achievement of discoveries for the welfare of the human race." Again it is a pity that Las Casas made a slip of the pen when he wrote, "The Admiral thought and watched and worked for nothing more than to contrive that there might come income to the sovereigns"; and Columbus was a sharer in such income.

The book is a capital instance of the way in which an historian under such unconscious sway is controlled by his own wishes, as if they were proofs. He cannot bear to think that Bartholomew had been more of a pioneer than his brother, and so, without any ado, discredits the early writers who represent the future Adelantado to have been engaged in making charts in Lisbon when Christopher arrived there; simply because the notarial records of Genoa find Bartholomew in that town in 1480, six

years after his brother is known to have gone to Portugal. Is there any evidence to show that Bartholomew could not have visited Genoa after the sojourn in Spain which the early writers give him? Without the slightest evidence to support it, Mr. Markham assumes that Columbus must have had acquaintance with and been consulted by Martin Behaim in Portugal, when the correspondence of that cosmographer and Münzmeister on the subjects nearest to Columbus's consciousness contains strong indications that the German never heard of the Genoese. We may well ask for a single recorded circumstance that points to the conclusion that Columbus had ever heard of a western passage before he reached Portugal, or before Toscanelli impelled him to the belief; and yet Mr. Markham finds it meet to maintain that Columbus was in thoughts a discoverer before he left Savona.

Mr. Markham cannot even allow that John Cabot saw the Continent of North America before Columbus saw the Southern Continent. He acknowledges that very few facts about Cabot's voyages are known, believes that the land first seen was an inner corner of Cape Breton Island, and finds no mention of other land but islands; therefore, the Continent of America was not then discovered. He thus pays no regard to the distinct terms of Cabot's patent for a second voyage, which is a bit of positive evidence of what was then believed, when it speaks of "the land *and* isles of late found by the said John"; nor does Mr. Markham recognize the positive evidence of La Cosa, who used Cabot's results, when he placed the legend "Sea discovered by the English" along a continental shore.

It would seem, too, that he could not bear to have Columbus make advances for reconciliation with Fonseca, although such an advance would support his belief in Columbus being "utterly devoid of any vindictive theory." It happens that this "implacable enemy" of Columbus was advanced to the Bishopric of Placentia, and that after this event Columbus wrote to some one at the Court in terms of pleasantry, asking to have "the Bishop of Placentia" reminded of their mutual and early acquaintance and of Columbus's wish to lodge with him. Mr. Markham does not allow the slightest suspicion of doubt to rise when he asserts that it was of Deza, the bishop whom Fonseca succeeded, that Columbus spoke so kindly. It may be true that it was, and that Columbus, though in constant communication with the Court, had not heard of Deza's giving place to Fonseca in that episcopal station; but to fly in the face of chronology, without admitting a doubt, could better serve his purpose. The Catholic writers are glad to seize upon the incident as proving that lack of vindictiveness for which Mr. Markham contends.

We have said thus much to indicate how a ripe student can be swerved by unconscious predilections. If licenses like these be allowed, how can any historical character stand against the personal equation of the historian? With such a method it needs only adroitness to make a saint of any devil or a devil of any saint.

There is no Englishman who has acquired reputation in this field better able, from learning, than Mr. Markham to attack the difficult problems in it. He shows his skill when he elucidates the evidence upon the landfall of Columbus; but we hardly know how to account for his omission of the theory of Harrisse when he professes to mention all. There are not many, indeed there are few, slips in the book, where the personal character of Columbus is not concerned. It is, to be sure, strange to find Mr. Markham saying that Behaim's globe had no Antillia on it, when his own engraving of it gives evidence to the contrary. He makes a contention in regard to the Cantino map which, if it be conceded that he proves his point, not only knocks out the props of the alleged voyage of Vespucius in 1497, but also dispels some of the strongest arguments of Harrisse against that alleged expedition. He contends that what has been considered the point of Florida on that map is really the eastern cape at the entrance of Chesapeake Bay, and that the compiler of the map simply blundered in placing Cuba so near that Florida is the natural interpretation of that point. He does not seem to observe that by so doing he throws into the realm of hallucination a long series of maps following up the Cantino idea, including some of the most prominent monuments which we have of the cartography of that day, like the maps and globes of Stobnicza, Schöner, Reisch, and the recently discovered gores known by the names of Tross and Nordenskiöld. Mr. Markham has a task before him to rehabilitate this early geography if all these monuments are overthrown. The confused notions of Mr. Markham's simpleton who used the Cortereal cards in blundering on the Cantino map, can hardly have been adopted by some of these learned cosmographers.

CHILDREN'S BOOKS.

New types of books for the young we may not regularly expect with the recurring season of greatest productiveness, nor fine examples of imaginative creation. The class which is always with us, and which is not to be despised, is historical and geographical, and this is already fully represented on our table.

Col. T. W. Knox's 'The Boy Travellers in Central Europe' (Harpers) is the latest volume in a well-known series. It describes a summer's journey throug some of the more interesting parts of France, Switzerland, the Tyrol, and Austria. The author attempts, and not unsuccessfully, to impart some of the information which a guide-book contains in an entertaining way, by means of the conversations and extracts from the diaries and letters of the travellers. We are constrained to say, however, that his frequent attempts at humor and the foolish remarks of the mother of one of the boys do not make the book more attractive. Nor is he always happy in his choice of the topics upon which he writes. In his account of Paris, for instance, considerable space is given to a description of a reception at the French Academy and an evening at a noted salon, in which few young readers can take an interest, while places to which boys would naturally go are not mentioned. The volume is well illustrated, and has maps of the routes pursued conveniently placed on the inside of the covers. If it had an index, it might be useful as a book of reference, since it contains many valuable historical facts and short biographies of distinguished characters.

'Canoemates' (Harpers), by Kirk Munroe, is an entertaining story for boys, and will usefully enlarge their knowledge of our great Atlantic peninsula. Two boys make a trip in canoes from Key West along the Florida Reef to the western coast of the mainland, and from thence through the Everglades to the Atlantic. They have numerous adventures in terrible storms, with thieves, cowboys, wild animals, and huge fish, and especially with the Seminoles, of whom a very attractive account is given. There are excellent descriptions, also, of the peculiar scenery of the Keys and southern Florida, of the sponge-fishery, and of life in a light-house, on a key, in a station on the Atlantic coast, and in an Indian village. Much information is given about canoes, their construction and management.

The same region has attracted Mr. Charles F. Holder, whose 'Along the Florida Reef' (Appletons) purports to be a record of the experiences of several boys among the Florida Keys, with a story as a sort of thread upon which are strung numerous observations of the varied and remarkable fauna of that subtropical region. The story is of trifling importance, but the varied adventures of the boys, while sailing, hunting, and fishing, are sufficiently exciting to make a very readable book. The natural history is somewhat of the sensational order, and would probably have benefited by revision at the hands of some sober-minded biologist, and the illustrations in some cases have only a very remote connection with the text. Still, with all its faults, the book presents a picture of life in a quarter far removed from the experience of most boys, and they will doubtless welcome it for its novelty, while incidentally learning more or less about creatures not to be found in zoölogical gardens and which most of us hardly know even by name.

The scene of 'Four on an Island' (Cassell), by Mrs. L. T. Meade, is laid in Brazil, and the heroes of the story are four children—two boys and two girls, the eldest of whom is fourteen and the youngest nine—and a dog. They drift upon an uninhabited island, where they are obliged to stay for several weeks before they are rescued. During this time they build a hut and manage to live comfortably, having for food turtles, eggs, and fish. Their chief danger lies in the huge and voracious land-crabs with which the island abounds. The little folks for whom the story was written and who are not yet familiar with the 'Swiss Family Robinson,' will find it attractive enough.

'Englishman's Haven' (Appletons), by W. J. Gordon, tells of the two sieges of Louisbourg, in 1745 and 1758, and it would be difficult to find a more graphic account of the strange fate of this fortress. The colonial army under "Mr." Pepperrell, with its "mixture of reckless audacity, pious enthusiasm, and exuberant boyishness," and Boston under the double excitement of Whitefield's preaching and the preparation for the expedition, are described as if by an eye-witness. So, also, is the spirited account of the gallant defence of Annapolis Royal by Col. Mascarene against the French and Indians, and the capture of the two French men-of-war in the harbor of Louisbourg at the second siege. There is a somewhat tangled thread of romance running through the story, in which a mysterious Indian conjurer and his squaw play a prominent part. Among the noted characters introduced are Montcalm, Wolfe, and Capt. Cook. The author has very happily shown the spirit of the time of which he writes, its habits of thought and manner of speech, by making the hero of his tale, a Scotch lad, its narrator. He exhibits all the English colonist's bitterness of feeling against the French, heartily commending, for instance, the expatriation of the Acadians. The sketch of the infamous Abbé Le Loutre, we trust, is not in all points historically true, though it certainly corresponds to the reputation which he bore among his contemporaries. The illustrations are exceptionally good.

There is a quaint originality and life in Brander Matthews's 'Tom Paulding' (The Century Co.), a very enjoyable story. The scene is laid in the upper part of New York city, the days of the Revolution being skilfully linked with our own times. Three or four "real" boys, a girl, an adventure-loving Uncle Dick, the very model of what a boy would like in a bachelor uncle, are the principal actors, and the seeking a buried treasure is the main incident. The interest in the hero's quest is more than well-sustained, the last chapters being the best in the book. Tom himself is a manly, straightforward, unselfish fellow, devoted to his mother and sister—a boy, in a word, whose companionship is worth having, even though it be only in a story.

'The End of a Rainbow' (Scribners), by Rossiter Johnson, is an ingenious, but at times over-fanciful, story of the doings of some boys and girls in an inland town a few years before the Rebellion. Among other things, they search a mill-race for lost treasures, write prize stories for a newspaper, make an exploring expedition in a canal-boat, and "unhaunt" a haunted house. The story is supposed to be told by one of the number, and is for the most part humorous after a boyish fashion, but some of the fun is rather above childish heads. Nor will they be likely to understand the author's meaning in the closing chapters, which have a curiously despondent tone. The narrator comes back to his home, after a six years' absence in the heart of Java, to learn for the first time from a wounded playmate the story of the just-finished civil war.

The war is the theme of 'The Battle of New York' (Appletons), by William O. Stoddard. Two lads, one a Confederate, the other a Unionist, are the joint heroes. The former acts as a spy, carrying despatches between Gen. Lee and his New York allies. On his return from this city he witnesses the battle of Gettysburg. The other is a newsboy, and defends his house against an attack by the mob during the draft riots of 1863. The description of these terrible days and more awful nights is very animated, and is by far the best part of the book. The story, with this exception, is told in a somewhat confused and spasmodic way, which renders it difficult at times to keep the thread of the narrative. Some very improbable incidents are introduced, and there is also a tiresome imitation, by bad spelling, of street-talk, of which the less the better in this kind of literature.

The author, M. Louise Putnam, of 'The Children's Life of Abraham Lincoln' (Chicago: A. C. McClurg & Co.) disclaims any expectation of amusing the children for whom she has written. She hopes to interest them and instruct them, and we think she will succeed. But the children who will enjoy the chapters dealing with Lincoln's maturity must be older than those who will enjoy the first chapters. The book improves as it goes on, and there is some danger that those who would delight in the later chapters will be discouraged by the earlier. These are a little sentimental, and they give a decidedly rose-colored account of Lincoln's parents, while the sordid misery of his childhood and early youth would hardly be guessed from what is written. Consequently, no adequate sense is conveyed of that innate nobility which triumphed over the most unfavorable environment. A good feature of the book is its brief expositions here and there of the forms of government. The Electoral College is taken too seriously, and there is no indication of the difference of its present operation from the intention of its founders. In treating of the slavery question there is not a hint of any forces working for the destruction of slavery outside of the political parties. There is not even a word concerning the political anticipations of the Republican party in the Liberty and Free-Soil parties. Children will be apt to feel some disappointment at finding Lincoln so willing to save the Union without destroying slavery, while yet he was a good deal in advance of his party in his anti-slavery sentiments. It is a rhetorical exaggeration, aggravated by italics, to say that Lincoln's proclamation, "by a stroke of his pen, freed a whole race," as it did not affect the border States. There is no mention of the Constitutional Amendment finishing his work. The best feature of the book is the copious extracts from Lincoln's speeches and addresses. They will prove the most comprehensible parts of the story—"words so deep that a child can understand them," as Theodore Parker said of the teachings of Jesus.

"Mackay of Uganda" (A. C. Armstrong & Son) was a missionary, the story of whose stirring life cannot fail to stimulate the boys for whom it was written. He was singularly well-fitted for the work of a pioneer of Christian civilization in a barbarous country. Born in a Scottish manse, and educated partly in a university and partly in a machine shop, he joined the habits of thought and speech of a minister to the skill of a practical engineer. To these qualifications for a typical missionary should be added a sunny disposition, whole-souled devotion to his work, great tact in dealing with the natives, and a perfect fearlessness of death for a just cause. His life was crowded with interesting and exciting incidents. He was familiar not only with the perils of the African forests, deserts, and lakes, but with persecutions as fierce as those which raged in the first centuries of our era. Many lads whom he taught Christian truth while laboring at the forge or in the boat-yard, were dragged from his side to testify in the flames to their belief in Mackay's God. He himself escaped a hundred times, only because of his usefulness as a machinist to the savage king Mwanga. It is greatly to be regretted that his biographer, his sister, has so little faculty for telling his story in a manner attractive to the young. She lacks the essential power of graphically picturing the scenes in which her brother played so conspicuous and so heroic a part, and overburdens her book with frequent and long quotations from diaries and letters intended for older readers. Still, notwithstanding these defects, we believe that some boys will be led by the book to promote in some way "the moral and spiritual regeneration" of Africa.

'Mixed Pickles' (Thomas Y. Crowell & Co.), by Evelyn Raymond, is a very sprightly narrative of the doings of six cousins suddenly brought together in the farm-house of their Quaker grandmother. Their varied characters are well delineated, the plucky little Fritz and his bright sister Octave being made especially attractive. The account of the manner in which the boy invalid is cured, both morally and bodily, though marred a little by the improbable "mystery" of his great medical discovery, is certainly novel and interesting. A little romance is introduced by the marriage of the delightful German uncle to the rather sharp but lovable Quakeress aunt. The story is thoroughly wholesome and enjoyable, and at times not a little amusing.

BASTABLE'S PUBLIC FINANCE.

Public Finance. By C. F. Bastable, LL.D., Professor of Political Economy in the University of Dublin. Macmillan & Co. 1892.

THE subject of public finance, Prof. Bastable observes, has not been systematically treated in English since McCulloch wrote, well-nigh half a century ago, and the lack of a suitable manual has been especially felt by teachers. Upon the whole, we incline to think that this book will supply the want as satisfactorily as is possible. To say the truth, there is practically no science of finance, nor is there any approach to agreement as to the principles upon which such a science might be constructed. A very considerable number of people look upon government as an evil only tolerable because it prevents the worse evils of anarchy, and consider it essentially and permanently incapable of transacting any business in as efficient and economical a manner as its subjects. Upon their side, they claim, all experience is arrayed. A larger number, perhaps, regard government as a "fountain" of benefits, to use Blackstone's expression, and are for enlarging its functions, and therefore its expenditures, upon every opportunity. Upon their side is the passion for equality and the belief in human perfectibility. It might seem that the difference between these schools of thought related only to the amount of expenditure, but a little reflection shows that the methods of raising revenue are equally the cause of dispute. While the controversy between free-traders and protectionists continues, it is safe to say that there will be no common consent as to what is sound finance.

Were the protectionists disposed of, there would remain the prohibitionists and anti-tobacconists, who regard the taxation of the accursed thing as implying a league between Satan and the Government; the single-tax men, who would raise all revenue from rates upon land; the believers in an income tax, who would tax persons rather than things; and those who hold to taxing all property, real and personal. As a matter of fact, the Government obtains a revenue by disregarding all these theories in part and recognizing them to a greater or less extent. In this way an empirical system of taxation comes to exist in every country, which is scientific only because it is found to work. So long as it does produce revenue from subjects and does not produce rebellion among them, it satisfies the ordinary requirements of rulers, and improvements are likely to consist chiefly in modifications that increase revenue without increasing discontent. The financial system of England is a growth of this kind, and to be defended upon this ground. Prof. Bastable does not seem to us to be free from a certain insularity of view upon this subject. He evidently regards the English system of taxation as approximating the ideal, but if we examine his arguments, it will be found that they amount to maintaining that by combining a number of individually objectionable taxes a desirable compound will result. The truth is, that the burden of taxation in Great Britain is relatively very light, and no matter how bad a tax may be in theory, if it practically is not oppressive, it is likely to be retained.

Taxation is an institution like language. Philologists could easily construct a language which should be a far more perfect instrument for the expression of thought than any that now exists. The mere substitution of the symbols of the stenographer for our alphabet would

result in an enormous saving of time in both reading and writing, and even phonetic spelling would save a year's painful toil to those who have to acquire the English tongue. But not even the least of these reforms is practicable, because it is as impossible to change the customs of a whole people as it is to frame an indictment against them. Immediate inconvenience outweighs infinite future advantage. *Nolumus leges mutari* expresses the common feeling in regard to taxation. Men know the ills of established taxes, and would rather bear them than fly to others that they know not of. Hence a new tax is almost always odious, no matter what its abstract merits; and legislators and administrative officers will generally find it safer to follow the beaten paths than to incur the risks of adopting the most attractive innovations. The history of taxation, therefore, like that of language, is the record of adaptations of existing institutions to new demands. No change is made except of necessity, and its nature when made is determined by immediate expediency.

Nevertheless, a certain number of empirical rules have come to be recognized by financiers, and it is in the presentation of these that Prof. Bastable does his best work. Certain taxes have been found to be peculiarly odious and therefore unproductive. Hence they are to be discarded in favor of those that are less unpopular. Others are uncertain in their product or expensive in their collection, and these tend to be abandoned. The machinery of collection is from time to time improved, and the most productive rates are ascertained by experience, until it is possible to determine in a well-governed country like England just how much revenue may be expected from a tax and just how much it ought to cost to collect it. So, too, in the matter of borrowing, the methods have reached a high degree of perfection, and most governments, it may be added, have taken full advantage of this improvement.

We have spoken as if finance and taxation were the same thing, but Prof. Bastable observes that although taxation is the principal source of public revenue, it is not the only one. Formerly governments were large owners of property, and although revenue from this source is now relatively insignificant, it is intrinsically considerable. The German States especially undertake much business upon public account, and just at present there is a loud cry in England for municipal ownership of gas and water-works and street railways. Prof. Bastable shows that enterprises of this kind are not as a rule very profitable. A great many States own railways, but the kingdom of Prussia is the only one that makes them pay. Whether there may be other public benefits compensating for this financial loss is a different question. It may be contended that the Government should not aim to derive a profit from such services, but it is easy to see that where a profit is not the end of a business, a deficiency is likely to occur, which in the case of governments must be made up by taxation. Upon this point the practice of the post-offices of Great Britain and the United States may be contrasted.

Considering the multifarious information collected in this volume, it seems a grave error of judgment not to provide it with an index. It will, of course, be read through by some, but its value is as a book of reference, and as such it would naturally be consulted by a great many readers who must now turn to more available sources of information. It is a little surprising, we may add, that although Mr. D. A. Wells's report on taxation in New York is quoted, Prof. Bastable seems to be ignorant of his classical reports as Commissioner of Internal Revenue and of their results. Perhaps no documents more instructive for the financier are in existence, nor has any reform in methods of raising revenue comparable to that instituted by Mr. Wells taken place at any recent date. But in general Prof. Bastable displays a very thorough acquaintance with his subject, especially on its practical side, as well as with what has been written about it. His book will at once take its place as the standard English manual of finance, and its merits are such as to make it probable that it will hold this place for a long time to come.

LORD LOFTUS'S RECOLLECTIONS.

The Diplomatic Reminiscences of Lord Augustus Loftus, P.C., G.C.B. First Series. 1837-1862. 2 vols. Cassell Publishing Co. Pp. 428 and 343.

THESE reminiscences will extend over nearly fifty years of diplomatic service, the most important scenes of which were Vienna and Berlin. The style of the writer throughout is painfully like that of a protocol, and, when he speaks of the doings of royalty, it is in language as devotional as that of the column of Court News in the *Morning Post*. But beneath the ample folds of buckram, professional and social, we find a character not uninteresting or without value. It is that of a public man who has spent a long life, not in the service of a party, but in that of his Government and his country. You can see that he is always honestly doing his best to fulfil the good objects of his calling by preserving friendly relations, settling international differences, and keeping the world at peace. He is impassive, as his profession requires, and seldom allows his own opinion, still more seldom his own feelings, to appear. But you can see that his sympathies are liberal. His judgments of men are perfectly calm. Only in the case of "Albert the Goody," as some profane persons have called him, does the diplomatist feel impelled by his loyalty to work himself up to a strain of eulogy which reminds us of the singular monument in Hyde Park, where all the representatives of the world's genius are seen filing in humble procession round the feet of the Prince Consort.

On the other hand, those who look for diplomatic revelations or spicy anecdote will suffer the same disappointment here on a small scale which they suffered on a large scale in the Memoirs of Talleyrand. If Lord Augustus Loftus saw any secret springs of action, or was behind the curtain of any mystery, the reticence of the diplomatist has prevailed. One curious document he gives us. It was placed in his hands, he says, by a colleague who had come from Paris and who was intimate with the circle of the Emperor Napoleon III. It is without signature, date, or address, but purports to be an outline of the Emperor's policy, if not an instruction to one of his Ministers. As it is short, we may give it in Lord Augustus's own translation:

"Pending the duration of the war in Italy, it will be necessary to keep back and flatter England in order to obtain her inaction and to be assured of her neutrality.

"The war in Italy happily and victoriously terminated, the great operation in the East will commence in concert with Russia, and England will be attacked simultaneously on her coasts and her naval stations in the Mediterranean.

"As for Prussia, one laughs at her diplomatic measures, which aim at obtaining a guarantee from the Emperor not to attack Austria on her territory belonging to the German Confederation, and to preserve to the minor Italian Princes their respective territories. As for Germany, a certain esteem will be pretended for her organization, her civilization, her progress; and it will be given out at Frankfort that it is a mere question of the liberation of Italy, except making solemn promises never to attack German territory; but in reality the populations will be roused against the Governments, and Prussia and the Diet will be held in check by Russia."

Lord Augustus seems inclined to think that the paper is authentic; at least he remarks that it corresponds with the Emperor's habits of mind, and receives confirmation from subsequent events.

"The Emperor Napoleon," he says, "was apt to act under sudden impulses. He was easily impressed by those feelings for oppressed nationalities which he had imbibed in his early youth, and he was the more easily seduced by those feelings when they harmonized with his ambitious views of remodelling the map of Europe, without at the same time taking any decided resolution of carrying them into execution. . . . Thus it was that his policy often appeared tortuous and inconsistent, and his apparent want of sincerity was productive of disbelief and distrust.

"There were two currents in the direction of his foreign policy, viz., that of the ordinary official current through his accredited diplomacy, and that carried on through the medium of secret agents unknown to his Cabinet, the result of which was that the language of his ministers abroad was not always in harmony with the Emperor's views and with facts. Thus, while negotiating for the pacific settlement of the affairs of Italy, he had predetermined on war, and at the same time was negotiating with Count Cavour, through a secret agent, the arrangements for action."

Napoleon III. was a sort of visionary cracksman. His imagination, wandering from one of his neighbors' houses to the other, was always planning a nocturnal enterprise against some of them. Even while his legs were under your dinner-table, his eyes were dreamily looking for the easiest access to your strong-box. But he was irresolute, and if he found your locks and bars strong, he turned his inventive genius at once in another direction. His prison meditations had filled his mind with schemes of every kind, first for his own exaltation and afterwards for the reconstruction of the world. Nobody ever was safe in his hands. While he was concocting the *Coup d'État*, he was gratuitously prodigal of perfidious disclaimers, and professions of loyalty to the Republic. The alarm about his designs which gave birth to the Volunteer movement in England, seemed to many a senseless panic, but it appears that after his fall he made proposals to the German Emperor which prove the alarm to have been anything but groundless. His fancy generally ran in the track of the first Emperor's designs, and, had the Confederates obtained his aid, they would probably have been asked to pay for it by the surrender of Louisiana.

Another curious little trait of Napoleon III. is connected with the negotiations at Villafranca which closed the Italian war. It seems that he shrank from a personal interview with the Austrian Emperor, because, as he told Metternich, he felt sure that he should fall under Francis Joseph's personal influence. "J'ai eu bien raison d'avoir redouté l'entrevue avec sa Majesté votre souverain, car j'étais bien sûr qu'elle me subjugerait." It can hardly have been the intellectual influence of Francis Joseph that Napoleon dreaded; he must have felt that as a parvenu and a usurper he would succumb to the majesty of legitimate royalty. Probably he was conscious that he

was not only a parvenu and a usurper, but an impostor, and that there was no more of the Bonaparte in his true pedigree than there was in his head and face. It is curious that this open secret, though a perfectly open secret it was, practically did him so little harm. The recollection of the falsehoods that he had told while he was preparing to spring on Austria, may also have had something to do with his personal shyness in meeting Francis Joseph.

The views of Lord Augustus on the subject of the Crimean War and the relations between Great Britain and Russia are those which one would expect from a man of sense. He sees that the war ought never to have taken place, and that its results have come to nothing. Russia has regained possession of the territories ceded in Bessarabia, and the clauses limiting her naval forces and prohibiting her construction of fortresses on the Black Sea are a dead letter. Great Britain, Lord Augustus thinks, ought to place herself at once on a thoroughly good footing with Russia, the other great Asiatic Power. Reasonable Englishmen will agree with him in this. The Empire of Russia in Central Asia has grown from causes as natural as those by which the Empire of Great Britain has grown in Southern Asia, and there is no reason why the two Empires, each of them having reached its limits of extension and become coterminous with the other, should not rest side by side in peace. Russia's threats and her designs, if she really has any, of invading Hindustan, would probably pass away if Great Britain would withdraw the veto which, for reasons not easy to understand, she persists in putting on Russia's access to the Mediterranean, where the presence of Russia, so far as appears, would be no more dangerous to England than that of the other maritime Powers. The Crimean war was brought on mainly by the personal influence of three men, all of whom were bent on war from the beginning: Lord Palmerston, Lord Stratford de Redcliffe, and Louis Napoleon; the first two being actuated by that almost insane Russophobia which had before led Palmerston into the disastrous invasion of Afghanistan, the third by the desire of surrounding his upstart throne with a halo of military glory and of forcing his own way into the circle of legitimate monarchs. The overbearing temper of the Czar had no doubt furnished these intriguers with the occasion, but there was nothing which diplomacy would not have settled had they not been determined that settlement there should be none, and covertly worked together to prevent one. Had Lord Aberdeen been bold enough to recall Lord Stratford de Redcliffe from Constantinople, peace might have been preserved. But, unfortunately, Lord Aberdeen, a man of much less force than virtue, and the head of an ill-cemented coalition, was not master of his own Cabinet.

The anecdotes and personal touches in these volumes are very few. But here is an amusing little story of Brougham:

"The King [of Würtemberg] had a magnificent stud of Arab horses, which he procured at great expense from Syria, and of which he was very proud. When Lord Brougham visited Stuttgart, he was taken round the stables by the King's Master of the Horse. It was a bitterly cold day, and Lord Brougham, slightly clad, and with trousers scarcely reaching to his ankles, ran hastily through the stables, never looked at a horse, and on coming out merely observed to the Master of the Horse 'that the money spent on the stables would be more advantageously spent in building a suitable university for the education of the nobility.' The Master of the Horse, unaccustomed to receive any but loud encomiums of praise and admiration, was reduced to dumb silence."

Few are now alive who can remember those trousers scarcely reaching to the ankles, and can vividly represent to themselves how Brougham would scuttle through the stables, and with what play of face, especially of the incomparable nose, the observation which crushed the Master of the Horse would be delivered. Here is a story of Lord Westmorland, British Envoy at Berlin, also amusing in its way:

"On one occasion an English gentleman called to see Lord Westmorland on particular business. He was at breakfast, and, receiving him with his usual urbanity, asked the object of his visit. The gentleman said that he felt somewhat aggrieved that he had brought an official letter of introduction to him from the Foreign Office, and, having learnt that his Lordship had given a great dinner the night before, was surprised and hurt at receiving no invitation. Lord Westmorland exclaimed, with his usual heartiness, 'God bless me, sir, I am really quite distressed. I think I received the letter of which you speak. I will send for it.' Accordingly the letter was brought to him, and on reading it he said to the stranger, 'Ah! I thought so. There, sir, is the letter; but there is no mention of dinner in it,' on which the gentleman rose and backed out of the room in confusion."

Metternich and Bismarck appear in their usual aspect. Old Metternich said to Lord Augustus, when he told him that something would never happen, "Mon cher, il ne faut jamais dire 'jamais.'" Metternich's political memory, reaching back to the time before the French Revolution, gave plenty of point to the remark. Bismarck often said to Lord Augustus that "he gloried in having no principles, and he observed that when you wished to gain a certain object, your principles cross your path and defeat your aim." Bismarck's frankness is astounding. Perhaps it is calculated and used as the best cloak for his designs. At a dinner in London in 1861, he told Disraeli, then leader of the Opposition, that he should shortly be obliged to undertake the direction of the Prussian Government, that his first duty would be to reorganize the army, that he would then take the first pretext to declare war against Austria, to dissolve the Germanic Diet, to overpower the middle and smaller States, and to give a national unity to Germany under the leadership of Prussia. He added that he had come to say this to the Queen's Ministers. Disraeli's remark was, "Take care of that man; he means what he says."

The importance of the diplomatic profession has been greatly reduced by the change from personal to Parliamentary government. The most adroit of ambassadors can no longer serve his Government much by playing on the personal characters of kings or ministers, much less on that of kings' mistresses, as he might in former days. No diplomatic Walpole will ever again acquire a valuable connection for his country by visiting a Fleury in the hour of his temporary disgrace. Still, these men will have their value so long as anything of a personal element enters into international relations. Especially they will have their value where the foreign minister of their own country is not familiar with the national leaders and cannot well act by telegraph. This is particularly the case with regard to Washington, of the personalities of which a British foreign minister is totally ignorant, and where without a good informant on the spot he would be to a great extent negotiating in the dark.

The West from a Car Window. By Richard Harding Davis. Illustrated. New York: Harper & Bros. 1892.

THE only poor thing about this book is its title. It is not the West from a car window. It is the West from the inside, from among the sunflowers, the cacti, the mountain peaks. Mr. Davis is not only a practised and effective writer, but he is an acute and intelligent observer, who has the enviable faculty of understanding the most of what he sees, notwithstanding it may be novel; and when necessary, he can expose for the consideration of the thoughtful a serious subject, without burying it under solemnity or making it ridiculous by burlesque. If he could prospect for "mineral" with the keenness that he does for characteristics, a new bonanza might be developed any hour. Troopers on the field against Garza, Indians on a reservation, Creede, the settled and the barren West, the clubs and the architecture of Denver, and the amenities and the loneliness of a frontier post, ranch life, Oklahoma, and fifty other topics are treated with spirit, with accuracy, with intelligence. There is not a dull line in the book, but the United States soldier, commissioned and enlisted, and the American Indian alike have cause to be grateful for the fate that drew them into the line of vision of such a delineator. His occasional chapters give a truer view of both classes than half-a-dozen "military" romances.

Mr. Davis has enjoyed his excursion frankly, and those who follow him in spirit will enjoy it likewise. He offers only impressions, and not conclusions, but they are the impressions of a cultivated and liberal critic. He declines to draw morals for others, who may find their own; but it is quite obvious that he is like the man who would rather be a lamp-post in the streets of New York than live in wealth out of it. He doesn't say that, but he does say: "The West is a very wonderful, large, unfinished, and out-of-doors portion of our country, and a most delightful place to *visit*."

The book has many excellent illustrations, some by Remington.

Logarithmic and Other Mathematical Tables. By William J. Hussey, Professor of Astronomy in the Leland Stanford Junior University, etc. Ann Arbor: Register Publishing Co. 1892.

FOR the semi-occasional user of logarithms, collections like Köhler's are best. But a person who is destined to use up several books of tables by the wearing-down of the paper under his fingers—which commonly happens to expert mathematicians—will prefer to be provided with four-place, five-place, six-place, and seven-place tables, since the expenditure of time in working with these is in the ratios of 1:2:3:4, respectively. Can the tables before us be recommended as being about as good as others? They are printed upon paper fairly opaque and quite free from sheen, substantial but rather cottony to the touch and too white. A small page is a recognized advantage in tables of logarithms. These pages are taller than those of any five-place tables we know except Hoüel's. The ink is not quite so black as we could wish, and some pages are a little gray. Very many figures look as if printed from worn types. The fourth figure of log. 4092 comes from a wrong font. The alignment leaves much to be desired. The type is of the old pattern, which in our judgment is preferable to the Huttonian character (the pattern now common in ordinary printing, invented,

it is guessed, by Dr. Charles Hutton in 1783), but inferior to the Egyptian, which are all of one height but without hair-lines.

We may examine the arrangement of the table of logarithms of numbers. Each tenth value of the argument is printed in Huttonian type. This gives it sufficient prominence; the large black round-numbers of Babbage are unnecessary. The table is arranged in a Newtonian block, which we deem more convenient than the columnar form, especially since it brings twice as many numbers on each page. The table everywhere opens to exactly 1,000 logarithms, not counting those on the last line, which are a sort of catch, or rehearsal of the first line of the next page. This is a point of great superiority over Bowditch, Schlömilch, etc. The numbers in each tenth line are placed between horizontal rules, while the intervening nine lines are divided by leads into three sets of three. This is the plan of the highly approved tables of Bremiker; yet we prefer, with Schrön and others, the division by leads into sets of five. The first two figures of the five-figure logarithms are given only in the first column at the top of the page and where they change. Bremiker thus separates only one figure, while Bowditch gives all five in every column. The ten columns of the block are all separated by vertical rules, that after the fifth being extra heavy. This is the customary way, but we are fully persuaded that all these vertical lines are productive of error in following the horizontal lines with the eye. We consider the tables of Schlömilch, Oppolzer, J. M. Peirce, and others, which omit all but the line after the fifth column, as much the more comfortable.

The indication of a change of the figure in the last place of unrepeated decimals is by an asterisk prefixed to every logarithm affected. This is decidedly the best method. The proportional parts are exact to the sixth place. The practice of thus printing the proportional parts arose in consequence of Babbage, in his seven-place table, printing a dot under every terminal figure which had been increased. This he did on the ground that all information which could be given without disadvantage should be given—a good principle for seven-place tables, without doubt. Only, upon that principle, De Morgan's plan should be adopted of distinguishing the quarters of the last unit by means of the four ordinary punctuation marks, thus making the tables accurate to a fraction of the number entered equal to unity divided by a power of ten. However, Babbage's system was extensively adopted, and consequently it was necessary to give the proportional parts more accurately. Prof. Hussey prints a dash over every increased 5, whether it be terminal or not, and over no other increased numbers. It luckily happens that there is no case in the table of an increased 5 followed by three zeros, otherwise the system would break down. Now, we think a system illogical, and therefore inelegant, which can only be carried out by virtue of an accident. But what is the use of carrying the proportional parts to six places? Everybody must allow that it would be bad economy of time in computing to write down one's numbers alternately to five and to six places of decimals. Now, what difference does it make that we add the six-place numbers in our heads? A centimetre and a half at the bottom of each page of the table is devoted to giving the values of S and T, and that not unambiguously. This seems decidedly awkward.

There are trigonometrical tables, both logarithmic and natural, tables of addition and subtraction logarithms, etc. At the end of the book are given formulæ and constants. The latter are pretty carelessly collected and copied. The velocity of light is made to be 296,944 kilometres per second! Clarke's value of the metre in inches, 39.370432, is given, although its error has been known for many years. First Prof. Rogers and then Gen. Comstock made fairly concordant determinations, very different from Clarke's. In fact, his was merely the result of measuring copies of Bessel's toise in inches, and then deducing the length of 443.296 lines of the toise, this being the number of lines of the *toise de Pérou* intended to make the metre at the time of the construction of the latter. But recently M. Benoît of the International Bureau has shown that the metre so deduced from Bessel's toise is too long by its 74,000th part. So, correcting Clarke's determination, and combining it, reduced to a weight of ⅓, with the values obtained by Rogers and Comstock, we find:

	Inches.
Rogers	39.37027
Comstock	39.36985
Clarke, corr. by Benoît	39.36990
Weighted mean	39.37004

This makes 25.40003 millimetres in an inch. If we remember, then, that 39.37 and 25.4 should each be increased by one-millionth part of itself, we shall have the fact as accurately as it is known. We find this convenient rule used in the Yaryan Company's Tables. Prof. Hussey's book will do for easily contented computers.

Children's Rights: A Book of Nursery Logic. By Kate Douglas Wiggin. Boston: Houghton, Mifflin & Co.

Children: Their Models and Critics. By Auretta Roys Aldrich. Harper & Bros.

An Old World observer of our social traits would probably be inclined to smile at the title 'Children's Rights' on the cover of a volume addressed to an American public. Mrs. Wiggin, however, forestalls irony by eliminating at the outset any fond-mother interpretations of her theme. "A multitude of privileges, or rather indulgences," she very truly observes, "can exist with a total disregard of the child's rights." Translated into other terms, children's rights are parents' duties. A bird's-eye view of these duties is given in the first of the essays of which the volume is composed. A more than fair proportion of the nine remaining ones (three of which are by Mrs. Wiggin's sister, Miss Nora Smith) is devoted to a lively partisanship of the methods of Froebel, and to the desirability of sending children to learn of his disciples in the kindergarten.

In spite of the genuine sympathy of the collaborators for the little waifs and strays, as well as for the happier youngsters whose cause they have espoused, we do not think they have done justice to their subject. There is an unfortunate lack of sequence in the papers, and much repetition that might have been avoided. They are, moreover, composed in too disjointed a fashion to exercise on the reader the persuasion which is force. And, notwithstanding a probable and natural prepossession in favor of the biographer of the little hero Timothy, the "gentle" reader cannot fail to be repelled by such blatant slang as the following: "He does not realize that she [the American woman] not only has in hand the emancipation of the American woman, but the reformation of the American man and the education of the American child. If that triangular mission in life does not keep her out of mischief and make her the angel of the twentieth century, she is a hopeless case."

Mrs. Aldrich, fortunately, does not write in what our critics have dubbed Americanese. Her little book is modest and attractive in form and modest and attractive in expression. Though it makes no new contribution towards the philosophy of education or the government of children, it displays the happy balance of profound sense of responsibility and good common sense that has stood many an excellent mother in stead of philosophy. There is internal evidence that Mrs. Aldrich, too, writes of the kindergarten from personal experience. She, however, sees clearly that there may be need of reform within a reform, and her counsel of perfection is no less to the kindergartner than to the parent. The homely illustrations of the points to be pressed home are such as readily sink into the memory, and the book is, on the whole, one that may do serviceable work where more authoritative teachers would fail of a hearing.

A Dictionary of Botanical Terms. By A. A. Crozier. Henry Holt & Co. 1892. 8vo, pp. v, 202.

For the last twenty or thirty years botanical study has been so largely turned in the direction of anatomy and physiology that a host of new anatomical and physiological terms has been introduced, many words already in use have received new meanings, and not rarely different investigators have proposed the same term for very different ideas. All this new terminology has made a new botanical dictionary very desirable. This Dictionary is necessarily very much richer in words and definitions than any of its predecessors, and a brief examination of its pages shows that much labor has been bestowed upon the preparation of it. It would be impossible that such a work should be perfect, and one may easily point out deficiencies, and even an occasional insufficient or faulty definition. Such well-known terms as *Anadromous*, *Catadromous*, *Gemmiform*, *Glochidium*, and *Hypocraterimorphous* are lacking. Instead of the last of these is given the hybrid *Hypocrateriform*, an expression which Dr. Gray rejected even disdainfully. *Algology*, another hybrid, is honored with a definition—'the part of botany relating to algæ'—while *Phycology*, the preferable word linguistically, is given only as a synonym. *Octospore* is defined as 'an eight-fold tetraspore,' which it is not; to have said 'a definite group of eight spores' would have done very well. *Palmately-lobed* is wrongly defined, for it is the sinuses and not the "lobes" that "are directed towards the apex of the petiole."

The greatest defect of the book is the entire omission of derivations, for to know the etymology of a word is often a great help toward understanding its meaning. Botanists have been accused of fondness for sesquipedalian expressions, and the best reply to such accusation is naturally to show from its derivation the fitness of each technical word. No distinction is made between un-Anglicized Latin words, such as *Hortensis*, *Humilis*, and *Pumilus*, and such good English words as *Dwarf* and *Terrestrial*; and there is generally noticeable a sad neglect of Latin and Greek, the foundation-languages of scientific terminology.

Books of Permanent Importance.

STORY OF THE NATIONS.

A series of Historical Studies intended to present in graphic narratives the stories of the different nations that have attained prominence in history. In the story form the current of each national life is distinctly indicated, and its picturesque and noteworthy periods and episodes are presented to the reader in their philosophical relations to each other as well as to universal history. Each work is complete in one volume, profusely illustrated and beautifully printed. Cloth, $1.50; half leather, uncut edges, gilt top, $1.75.

The following volumes are now ready:

THE STORY OF

1. GREECE, by HARRISON.
2. ROME, by GILMAN.
3. THE JEWS, by HOSMER.
4. CHALDEA, by RAGOZIN.
5. GERMANY, by BARING-GOULD.
6. NORWAY, by BOYESEN.
7. SPAIN, by HALE.
8. HUNGARY, by VÁMBÉRY.
9. CARTHAGE, by CHURCH.
10. THE SARACENS, by GILMAN.
11. THE MOORS IN SPAIN, by LANE-POOLE.
12. THE NORMANS, by JEWETT.
13. PERSIA, by BENJAMIN.
14. ANCIENT EGYPT, by RAWLINSON.
15. ALEXANDER'S EMPIRE, by MAHAFFY.
16. ASSYRIA, by RAGOZIN.
17. IRELAND, by LAWLESS.
18. THE GOTHS, by BRADLEY.
19. TURKEY, by LANE-POOLE.
20. MEDIA AND BABYLON, by RAGOZIN.
21. MEDIÆVAL FRANCE, by MASSON.
22. HOLLAND, by ROGERS.
23. MEXICO, by HALE.
24. PHŒNICIA, by RAWLINSON.
25. THE HANSA TOWNS, by ZIMMERN.
26. EARLY BRITAIN, by CHURCH.
27. THE BARBARY CORSAIRS, by LANE-POOLE.
28. RUSSIA, by MORFILL.
29. THE JEWS UNDER ROME, by MORRISON.
30. SCOTLAND, by MACKINTOSCH.
31. SWITZERLAND, by STEAD and HUG.
32. PORTUGAL, by H. MORSE STEPHENS.
33. BYZANTINE EMPIRE, by C. W. C. OMAN.
34. ANCIENT SICILY, by E. A. FREEMAN.
35. TUSCAN REPUBLICS, by ISABELLA DUFFY.

HEROES OF THE NATIONS.

A series of biographical studies of the lives and works of certain representative historical characters, about whom have gathered the great traditions of the Nations to which they belonged, and who have been accepted, in many instances, as types of the several National ideals. Edited by Evelyn Abbott, M.A., Fellow of Balliol College, Oxford. Illustrated. Cloth extra, $1.50; half leather, uncut edges, gilt top, $1.75.

The following volumes have been issued:

NELSON, and the Naval Supremacy of England. By W. CLARK RUSSELL.
GUSTAVUS ADOLPHUS, and the Struggle of Protestantism for Existence. By C. R. L. FLETCHER, M. A.
PERICLES, and the Golden Age of Athens. By EVELYN ABBOTT, M.A.
THEODORIC THE GOTH, the Barbarian Champion of Civilization. By THOMAS HODGKIN.
SIR PHILIP SIDNEY, Type of English Chivalry in England. By H. R. FOX BOURNE.
JULIUS CÆSAR, and the Foundation of the Roman Imperial System. By W. WARDE FOWLER, M.A.
JOHN WYCLIF, Last of the Schoolmen and First of the English Reformers. By LEWIS SERGEANT.
NAPOLEON, Warrior and Ruler, and the Military Supremacy of Revolutionary France. By W. O'CONNOR MORRIS. (Nearly ready.)

The Leaders in Science Series.

By CHARLES F. HOLDER. Each, illustrated, 12mo, $1.50.

I. THE LIFE AND WORK OF CHARLES DARWIN.
II. THE LIFE AND WORK OF LOUIS AGASSIZ.

The Rail and Water Series.

Books for Boys. By KIRK MUNROE. Each, illustrated, 12mo, $1.25.

I. UNDER ORDERS. The Story of a Young Reporter.
II. PRINCE DUSTY. A Story of the Oil Regions.
III. CAB AND CABOOSE. The Story of a Railroad Boy.

Tales of Heroism.

By E. S. BROOKS. 8vo, illustrated, each, $2.00.

I. HISTORIC BOYS.
II. CHIVALRIC DAYS AND YOUTHFUL DEEDS.
III. HISTORIC GIRLS.
IV. HEROIC HAPPENINGS.

The Fairy Tales Series.

By JOSEPH JACOBS. Illustrated by JOHN BATTEN. 8vo, each, $1.75.

I. ENGLISH FAIRY TALES.
II. CELTIC FAIRY TALES.
III. INDIA FAIRY TALES.

Fourth Series of Literary Gems.

I. THE RIVALS. By SHERIDAN.—2. L'ALLEGRO. IL PENSEROSO. SONNETS. ODES. By MILTON.—3. RIP VAN WINKLE. WOLFERT'S ROOST. By IRVING.—4. CHARITY AND HUMOR. NIL NISI BONUM. By THACKERAY.—5. ELEGY IN A COUNTRY CHURCHYARD. ODES. By GRAY.—6. THANATOPSIS. FLOOD OF YEARS. LINES TO A WATER FOWL. LITTLE PEOPLE OF THE SNOW. By BRYANT. 12mo, with frontispiece, morocco, gilt top, each 75 cents.

A new impression of the three previous series has also been issued. A number of the Gems are also put up in *Special Holiday Edition*, daintily bound in white and gold, gilt tops. Put up in pairs in flat boxes, $1.00.

Knickerbocker Nuggets.

A selection of some of the World's Classics, uniquely and tastefully printed by the Knickerbocker Press, and offered as specimens as well of artistic typography as of the best literature. 32mo, gilt tops.

Forty-one volumes have thus far been published. The latest issues are: THE ILIADS OF HOMER. Translated from the Greek. By GEORGE CHAPMAN. With full series of illustrations from Flaxman's Designs, 3 vols., $3.75.—WHIST NUGGETS. Papers about Whist and Whist Players. Compiled by W. G. MCGUCKIN. $1.00.—THE WIT AND WISDOM OF CHARLES LAMB. Compiled by ERNEST DRESSEL NORTH. With portrait, $1.00. 150 copies are printed on large paper, with proof of the portrait. These will be bound in plain cloth, with uncut edges, each copy numbered, $3.75.—DEUTSCHE VOLKSLIEDER. A Selection from German Folk Songs. Printed in the original text. Compiled and edited by Professor HORATIO S. WHITE. Illustrated, $1.50.

A number of the Nuggets are put up in *Special Holiday Edition*, with new cover design, bound in white and gold, with gilt edges. Put up in pairs in flat boxes, $2.50.

The Ariel Shakespeare.

Each play in a separate volume. Size 3¼x5 inches, large, clear type, Howard's charming illustrations, text complete and unexpurgated, flexible leather binding. Volumes sold separately, 75 cents each (in box), and orders invited for the complete set.

The first group will comprise these plays: THE TEMPEST. A MIDSUMMER NIGHT'S DREAM. THE MERCHANT OF VENICE. AS YOU LIKE IT. MUCH ADO ABOUT NOTHING. TWELFTH NIGHT. THE WINTER'S TALE.

The Scriptures, Hebrew and

CHRISTIAN. Edited by the Rev. EDWARD T. BARTLETT, D.D., Dean of the Protestant Episcopal Divinity School of Philadelphia, and by the Rev. JOHN P. PETERS, Ph.D., formerly Professor of Old Testament History and Professor of Hebrew in the University of Pennsylvania. Complete in three volumes:

Vol. I. THE HEBREW STORY FROM THE CREATION TO THE EXILE. 12mo, red edges, $1.50.
Vol. II. HEBREW POETRY AND PROPHECY. Uniform with the above, $1.50.
Vol. III. COVERING THE NEW TESTAMENT. Uniform with the above, $2.00.

Japan in Art and Industry. With

a Glance at Japanese Manners and Customs. Translated from the French of Felix Régamy by M. French-Sheldon and Eli Lemon Sheldon. 12mo, fully illustrated, $1.75.

The Customs and Monuments of

PREHISTORIC PEOPLES. By the MARQUIS DE NADAILLAC, author of 'Prehistoric America,' etc. Translated, with the permission of the author, by Nancy Bell (N. D'Anvers). Fully illustrated, 8vo, $3.00.

The Initials. By BARONESS TAUTPHŒUS.

2 vols., 16mo, uniform with the Exmoor Edition of 'Lorna Doone.' $2.50.

Lorna Doone. *Exmoor Edition.* Au-

thorized American Edition. With new Preface for American readers. 3 vols. 16mo, $3.75; half calf, gilt top, $7.50.

Hygienic Measures, in Relation

TO INFECTIOUS DISEASES. By GEO. H. F. NUTTALL, M.D., Ph.D., Asst. Professor of Hygiene and Bacteriology in Johns Hopkins University and Hospital. 16mo, 75 cents.

Prof. NUTTALL'S volume presents in condensed form trustworthy information as to the cause and method of the spreading of certain diseases, the preventive measures to be resorted to, isolation, disinfection, etc.

Notes by a Naturalist. An Ac-

count of Observations made during the voyage of H. M. S. "Challenger" round the world in the years 1872-76, under command of Capt. Sir G. S. Nares and Capt. F. T. Thomson. By H. N. MOSELEY, M.A., F.R.S., late Fellow of Exeter College, Oxford. New and revised edition, with map, portrait, and woodcuts, and a brief memoir of the author. Buckram, uncut, 8vo, $2.50.

The New Exodus. A Study of

Israel in Russia. By HAROLD FREDERIC, author of 'The Young Emperor,' etc. 8vo, illustrated, $2.50.

The Memoirs of Talleyrand. Edit-

ed by LE DUC DE BROGLIE, with Introduction by Hon. Whitelaw Reid, U. S. Minister to France. With portraits and facsimiles. 8vo, 5 vols., each $2.50.

**** Illustrated Holiday Number of Notes on New Books, Illustrated Catalogue of Books for Young People, Prospectuses of the Story and Heroes of the Nations Series, and Knickerbocker Nuggets and Gem Series sent on application.*

*** *The postal service under the present Administration has been, in the experience of this journal, uniformly uncertain and steadily deteriorating. Of late its delays and miscarriages in the case of the* NATION'S *delivery to its subscribers have become so bad as to be intolerable. The Publisher, in a last effort to correct this injury, solicits prompt notification of failures and irregularities, by postal card or otherwise.*

The Week.

THE recent election seems to establish the fact that there is a twenty-year period of "tidal waves" in our Presidential contests. In 1832 Jackson, running for re-election, secured 219 electoral votes, to 49 for Clay, 11 for Floyd, and 7 for Wirt. In 1852 Pierce beat Scott "all to pieces," winning 254 electoral votes to Scott's 42. In 1872 Grant, as a candidate for a second term, swept the country, securing 286 out of 366 electoral votes. Finally, in 1892, Cleveland has been elected by from 267 to 290 out of 444 electoral votes. The only one of the revolutions just mentioned worthy to be compared with that of the present year is the overthrow of the Whig party in 1852. In 1848 Taylor had carried fifteen States, including Pennsylvania, and New York, which latter turned the scales in his favor, but in 1852 poor Scott saved only four of them—Vermont and Massachusetts in the North, and Kentucky and Tennessee in the South; Pennsylvania giving Pierce over 19,000 plurality, and New York 27,000. The dimensions of the Democratic victory this year are fully appreciated only when a few comparisons with 1888 are made. Four years ago Harrison carried all of the twenty-two Northern States except Connecticut and New Jersey. The number of Northern States has since been increased to twenty-eight, but Harrison has only fifteen (or sixteen, if he finally gets Ohio) out of the increased number. These are among the significant changes which the revolution has produced:

	1888. Rep. plurality.	1892. Dem. plurality.
New York	14,373	45,000
Ohio	19,599	Very close.
Indiana	2,348	10,000
Illinois	22,104	20,000
Wisconsin	21,321	15,000

It may be added that Ohio and Wisconsin have gone strongly Republican in every previous Presidential election since the party ran its first candidate in 1856, and Illinois in every one since 1860.

There was nothing in the late election more impressive than the conduct of the voters in Ohio. Outside the canvassing which was done by the Congressional candidates, neither of the great parties made more than a perfunctory campaign in the State. The Democrats paid little or no attention to it, conceding it to Harrison by from 20,000 to 25,000 majority. The Republicans felt so sure of it that they allowed all their best speakers, Sherman, McKinley, and Foraker, to go into other States to help carry them for Harrison. Yet all the time the Ohio voters were thinking over the issues at stake, and, when Election Day arrived, they went to the polls in silence and recorded such a verdict against McKinley that the expected Republican majority, which had not failed that party for thirty-six years, was almost wiped out. This quiet, uninfluenced proceeding is the most eloquent testimony adduced by the election as to the real meaning of the result. It shows that campaign agitation and campaign committees were merely the people's agents in recording the verdict, and that, had there been no campaign made, the people would have reached substantially the same conclusion that they did.

The loss of Ohio by the Republicans is the *coup de grâce* to the McKinley Bill. We do not wonder that McKinley himself refuses to be interviewed on the subject. Whether Ohio has gone for Cleveland or for Harrison, she has become a "doubtful" State, and has elected eleven Democratic Congressmen out of twenty-one. This last achievement shows how a gerrymander may serve to confound the gerrymanderers. The redistricting of the State was made with the confident expectation of returning only five Democrats to sixteen Republicans. Districts were carved in the most curious shapes. The most outrageous of all was the one cut out for Congressman Harter. This was the "shoestring" district of Ohio. If it had been carved in the State of Mississippi, it would have been pointed at by the Republicans as an example of total depravity and as a new argument for the Force Bill. This district begins with Knox County in the centre of the State, and runs northward to Lake Erie, embracing the counties of Knox, Morrow, Richland, Ashland, Huron, and Lorain. It has a normal Republican majority of 1,600. It has now elected Mr. Harter by about 2,000—a change of 3,600 in a single district. This is one of the most signal triumphs that have been achieved by any individual this year, in close touch with Mr. Cleveland's and Gov. Russell's. Mr. Harter has gained this victory, too, as the most pronounced anti-silver man in Congress of either party. Altogether Ohio comes out of this fight as the banner State, considering what she has been in the past, and that she has a "Napoleon" for Governor.

The election leaves Senator Sherman as a most impressive object-lesson in morals. He was the most prominent and the ablest of the old Republicans who gave their services to the party this year, and he sinned against light from his first speech to his last. Other Republican orators may have been self-deceived: we are willing to concede that there were streaks of honesty even in McKinley's egregious folly; but Mr. Sherman ate his own words and went in the teeth of his own convictions in the spirit of the basest trimmer and truckler. He is left without even the unworthy excuse that his recreancy to conviction was necessary to success. He says he believes Mr. Cleveland owes his victory to the tariff question, and that he is glad, since the Democrats have elected their President, that they will also be in full control of both houses of Congress, so that the entire burden of responsibility will fall on their shoulders. But he cannot resist dropping into demagogism when he adds that he "supposes they will carry out their ideas of tariff legislation, and that we will have an opportunity of testing practically the two systems of protection and free trade as applied to this country"—knowing perfectly well, as he does, that such a thing as free trade is quite impossible. What is possible, and what is expected by the country, is the adoption of a policy such as Senator Sherman himself so well outlined years ago when he said:

> "Every advance towards a free exchange in commodities is an advance in civilization. Every obstruction to a free exchange is born of the same narrow, despotic spirit which planted castles on the Rhine to plunder peaceful commerce. Every obstruction to commerce is a tax upon consumption. Every facility to a free exchange cheapens commodities, increases trade and production, and promotes civilization. Nothing is worse than sectionalism within a nation, and nothing is better for the peace of nations than unrestricted freedom of intercourse."

The Philadelphia *Press* publishes an interview with Senator Sherman in which he repeats his desire that the so-called Sherman Silver Law may be repealed, and says that he shall move its repeal in the Senate this winter. He thinks that a repealing bill will pass the Senate, and that the only obstacle it will encounter will be in the House. All the benefit that was expected from the bill, he says, has been realized, and there is no need of its further continuance. This latter saying is open to as many different interpretations as a Delphic oracle, but we presume it means that the bill was expected to hold the silver-producing States to the Republican party; but since three-fourths of them have voted against Harrison, there is nothing more to be expected from that quarter. We hope that Mr. Sherman will not allow himself to be deterred from the right course by his apprehensions of what the House

will do or will not do. It would be a great advantage to the incoming Administration to have the silver question settled by the present Congress, and this can be easily done, as we set forth in another column, by carrying into effect the seventh plank of the Democratic National platform.

The one thing which would round out the revenges of time so conspicuous in our recent politics, would be the passage of a free-wool bill by a Republican Senate. Just five years ago next month President Cleveland sent in his now historic message specifically demanding free wool. There is good reason for thinking that a Republican Senate would grant in December, 1892, what it jeered at in December, 1887. More than one Republican Senator from the West is prepared to "bow to the will of the people" on free wool, lest the people should bow him clean out of the Senate and public life. Even those portentous wool-growers, Delano and Lawrence, would not have the audacity to lift their voices in opposition, if, indeed, they ever get back their voices at all after the terrors they have passed through in their own beloved Ohio. We hope to see some Democratic Senator move early in the session that the Committee on Finance be discharged from further consideration of the House Free-Wool Bill now before it. Once fairly before the Senate, we believe the bill would pass without debate.

One of the thinkers of the Republican party who has not yet "had enough" is the editor of the Philadelphia *Press*, the Hon. Charles Emory Smith, President Harrison's Minister to Russia. He says in his paper of Friday that the "wide sweep of the disaster" can be interpreted in only one way. "It means a revolt against the party on the leading and central issue of the fight. It means a reaction against the Republican protective policy as the people understand it." He adds:

> "If this were an intelligent, reasoning, deliberate judgment, it would be conclusive, at least until experience had demonstrated the mistake, and it might be a finality. If the people had struck the blow with a clear comprehension of what they were doing, it would have a lasting significance. But, as a matter of fact, the blow was struck under the influence of the most shameless misrepresentations and of the most pitiable misunderstandings."

This is the old explanation of 1890. It was said then that the people had risen in revolt against the McKinley Bill because they did not understand it. Various periods of time were fixed by the Republican authorities in which the work of education was certain to be accomplished. Mr. McKinley said two years would be sufficient, and this was the favorite period of other authorities. Two years have passed, during which the education has been carried on under the leadership of McKinley in person, and at the close comes a revolt far more serious than the first. [illegible] intimates that he is satisfied. Two knock-downs are enough for him. Various other leaders take the same view. How long does the *Press* think the period should be before the verdict of the people could be called "deliberate"?

So far as the election teaches anything, it shows that the people were not at all alarmed by the dangers of wildcat currency. The only States in which the Republicans exhibited the wild cat with much apprehension of his teeth and claws were Illinois and Wisconsin. During the last two weeks of the campaign they dropped everything else. Here they circulated tens of thousands of photographs and woodcuts of old State bank-notes with the rate of discount on each, together with samples of Thompson's old counterfeit detector. They were glad enough to find something to talk about other than the McKinley tariff and the Force Bill. But the result shows that the people were not in the least alarmed by this scarecrow. It would not be correct to say that they endorsed by their votes a repeal of the tax on State bank-notes, still less that they endorsed wildcat currency. They simply ignored that as a vital issue of the campaign, or, if they took it into account at all, they relied upon Mr. Cleveland's letter of acceptance, which promised that there should be no bad money inflicted upon the people with his consent—a promise which stirred up our friend Mr. Henry C. Lea to an alarming extent, and led him to anticipate a smashing defeat of the Democratic party.

We are glad to say that the *Independent* was the only religious paper, as far as our observation has gone, which in this canvass issued a certificate of "Christian character" to a candidate. The gross impropriety of this practice had, we thought, been sufficiently demonstrated in 1884, and again in 1888, to put a stop to it, because several of the "Christian statesmen" of those years were subsequently found out and exposed. The abstract objections to it are obvious enough. Nobody should be elected to a responsible office simply because he has a "Christian character." A man who had no other equipment might ruin the country. Moreover, so full of pitfalls is politics that there is hardly any politician who can live up to a certificate of "Christian character," and if he fails after getting the certificate, he brings religious professions into disrepute among the worldlings. For all these reasons, and half-a-dozen others, it has been a matter of rejoicing to all intelligent men who care much for either religion or morals that the "old pastors" kept out of the last canvass, and that, as a rule, religious newspapers refrained from bolstering the candidates up by accounts of their piety. The *Independent*, after its experience with Wanamaker in 1888, ought to have been the last to prove an exception.

The *Bulletin* of the American Iron and Steel Association says: "Let us all hope for the best, even if our industrial enemies all the world over are to-day rejoicing with exceeding great joy." Our industrial enemies, whoever they may be, are in fact keeping a profound silence, except in Canada, where they are saying that if the United States goes for lower tariffs, Canada must do the same. The truth is, that the nations of the continent of Europe are dominated by protectionists. Instead of being rejoiced by the prospect of freer trade in this country, they are afraid of our example. Their governing classes are apprehensive that the people will compel them to follow suit and lower their tariffs also. For this reason they are exceedingly quiet, but are doing a great deal of thinking just the same. In England the manufacturers know perfectly well that the United States is their only prospective rival in the markets of the world. Joseph Chamberlain told the assembled Cobdenites this fact at their Ship Hotel dinner nearly ten years ago, and he said then that he should look not without apprehension on the adoption of free trade by the United States. Since that time, and even longer, the public opinion of Great Britain has been, on the whole, either indifferent to our tariffs or hopeful that we would continue to wear our self-imposed fetters. Of course, particular trades have been injured by the McKinley Bill, but British opinion in the large sense has not in recent years favored tariff reform in this country.

One result of the election, writ large enough for the dullest eye not to miss, is the perfect folly of supposing any longer that Federal office-holders are efficient electioneering agents. Never has the civil service been so openly used to further the election of a President as this present year. Nominated by office-holders, President Harrison was content to let his subordinates of every branch in the service neglect their duties and often violate the law in their strenuous efforts to keep themselves and him in office. All this served but to accelerate and emphasize his disastrous defeat. On the lowest partisan grounds, the victorious Democrats ought now to extend the civil-service laws as regards regulation both of appointment to office and political activity in it.

The Republicans save Minnesota, but the only thing that prevented the State from keeping company with Wisconsin, Illinois, and Indiana was the fact that the Republican candidate for Governor was an earnest and courageous tariff-reformer—so earnest and courageous that in the Fiftieth Congress he voted against his party for the Mills Bill. This is the platform which Mr. Nelson made for himself in explaining his position as Congressman in 1888, and which alone reconciled the

people of Minnesota to his election as Governor in 1892:

"In the face of the fact that so many of the barest necessaries of life are loaded down with the highest kind of tariff taxes, it makes me sick at heart to think that there are leading men on this side the Chamber who can find at this juncture, and under these circumstances, no other field for tax reduction than the internal-revenue taxes on spirits and tobacco. Surely these things are not the diet on which the poor laboring man keeps his family. Worthier, better, and juster, it seems to my mind, would it be to give our people—the toiling masses—cheaper food, cheaper fuel, cheaper clothing, and cheaper shelter; cheaper because released from the heavy and unnecessary bondage of high-tariff taxes. I will put free sugar, free coal, free salt, and free lumber against free whiskey and free tobacco under all circumstances, and so will the great mass of the American people."

The *Herald's* Valparaiso despatch says that there is "great rejoicing in Chili over the election of Cleveland," that "flags are flying from the residences of Americans," and that the general hope is expressed that "an American gentleman will be sent as Minister to Chili." It also reports rejoicing at Buenos Ayres, where it is maintained that "Harrison's defeat means a conciliatory policy towards the South American republics." Of course we know that all true patriots ought to hang their heads in shame and humiliation when foreign countries admire us, and still we think there are extenuating circumstances in the case of these South Americans. They have no intention of everlastingly ruining us by dumping their cheap goods on our shores; what they want to sell us is the raw materials which will enable us to do the dumping on other people. Moreover, the Republicans have cautiously admitted that we can trade with South America without being guilty of more than one or two of the seven deadly sins. Thus there is reason to hope that the present happiness of Chili and Argentina may be regarded by us with something less than that keen sense of abasement and alarm which we are bound to feel whenever our public acts are approved by any of our natural enemies.

M. de Varigny, a well-known French publicist, has an article in the last number of the *Revue des Deux Mondes* on "Political Life in the United States" which contains a great deal of interesting matter. But the most entertaining passage is that which gives an account of the part Dr. Burchard played in the campaign of 1884. After speaking of the enormous circulation of campaign documents which takes place in a Presidential canvass, he quotes the observations thereon of an "agent électoral expérimenté," who told him that the way in which for the most part the contents of these documents reached the voters was through the speeches of the stump orators, as people had not time to read them. "Of all these publications," he said, "the only ones which tell are those which in a brief, concise form sum up the arguments most easily understood by the masses." Then, says M. de Varigny:

"He cited as a model of this sort of document a card of which some millions of copies were printed in the last Presidential campaign. It was the work of the Reverend Burchard, and contained only three words—'*Rum Romanism Rebellion.*' It was profusely distributed on the Sunday before election, at the close of divine service; it was posted on the walls and slipped under all the doors. The election took place the following Tuesday, and this card, launched at the last moment by the Republican Committee presided over by Mr. Blaine, as it could not be answered for want of time, rallied to the Republican party a large number of electors who till then had not made up their minds, as it convinced them that the election of a Democratic candidate would result in an increased consumption of ardent spirits (*accroissement de la consommation des spiritueux*), the predominance of Catholicism, and a new war of secession. 'The Three Rs,' said one of the party chiefs, 'gave us the victory in the Puritan States.'"

The World's Fair directors on Friday adopted a resolution favoring the opening of the gates on Sunday provided the machinery be not run, and allowing every nation to hold within the grounds such religious services as it may desire. They say, with great force, that as all the nations of the earth have been invited to attend the Fair, it would be highly discourteous and inhospitable to inform them that they cannot do on Sunday what they would do were they at home. Furthermore, the resolution says: "The closing of the gates on Sunday means that thousands of artisans and mechanics, to whom the Exhibition will be of inestimable advantage, will not be able to attend it." The directors also point out the desirability of opening the gates on that day in order that visitors from different portions of the Union may meet socially at their State buildings. In order to accomplish all this, it will be necessary to rescind the action taken by Congress at its last session making the Government appropriation contingent on Sunday closing, and there ought to be no question that this will be done.

Especial interest is shown in the trial for heresy of Prof. H. P. Smith before the Presbytery of Cincinnati, for the reason that it is justly regarded as an incident of the more famous Briggs case, with all its momentous implications for the Presbyterian Church. Indeed, it is fair to infer that the Cincinnati Presbyterians design their trial to furnish at once an object-lesson and a rebuke to the Presbytery of New York. When the latter dismissed the case against Prof. Briggs a year ago, laments were nowhere more grievous than in Cincinnati, the leaders of the denomination in that city fairly groaning over the poor showing made by the New Yorkers, and plainly intimating that if they could only get their hands on the accused professor, they would make short work of him. Prof. Smith's heresies are believed to be of a mild character, consisting mostly of sympathy with Dr. Briggs, which he has so far defied the Cincinnati climate as to express, and of various intimations that possibly the critics know more than the ecclesiastics about the literary problems connected with the Old Testament. It is already clear, however, that he will be found guilty, the majority of the jury that is trying him having already decided that way in advance of the evidence, and the result will no doubt be hailed as a prophesy of the fate that awaits Prof. Briggs. Nor is there any doubt, we suppose, that, in the present temper of the Presbyterian Church, it would promptly decapitate the latter gentleman if it could immediately get his head on the block. But he has a far better chance than Prof. Smith to secure delay, and thus perhaps win a decision eventually on the merits of the case, not on ignorant prejudice. He has a better jury to argue before, a case that is in a better tactical position, and himself serves far heavier guns. It is understood that personally he is indifferent to the outcome, but feels it his duty to make the stoutest fight possible in the interest of the liberal party in his church. His contest is the main one, and Prof. Smith's case is only a skirmish.

The latest South American war scare has been traced to its source, and the result leaves the Associated Press in an unpleasant situation. The rumor of an alliance between Peru and Argentina for the purpose of an immediate attack on Chili seems first to have found mention in an irresponsible Chilian paper, from which it was copied into an English paper published in Chili, the *Western Courier*. When the latter reached Panama, its article was reproduced in the *Star and Herald* of November 3, and a copy of the latter paper was mailed to this city by the Panama agent of the Associated Press. It was immediately put on the wires for circulation, both in this country and in Europe. One result was shown in the reports of the London market for November 11: "Chilian bonds fell heavily, but recovered, closing ½ per cent. lower." Now, be it remembered that the rumor was at least eighteen days old when it reached this city, and that a cable is regularly working between this country and Chili, over which some hint of the affair would have been certain to come in the meantime, if there had been anything in it, and over which a ten-word despatch of inquiry would have demonstrated the falsity of the "news." But the Associated Press, with gross carelessness, swallowed the story, which was suspicious on its face, and without investigation lent itself to an attack on South American credit. We believe that this was done unwittingly, with no stock-jobbing purpose; but it was certainly done in a most reckless manner, and ought to serve as a fresh warning against the besetting sin of press associations, which is to get some bit of sensational news regardless of the authenticity of it.

THE THIRD STAGE OF OUR INDUSTRIAL ENFRANCHISEMENT.

If, as we believe, the elections of last week were not a revulsion—not a mere swinging of the pendulum—but a revolution, Mr. Cleveland's place in history is secure. The first revolution was that with which we associate the name and the fame of Washington as leader; the second was the abolition of slavery, for which Lincoln stands; and the third is that which gives us at last a prospect of attaining industrial and commercial freedom—and this we owe undeniably to the courage and self-abnegation of Mr. Harrison's predecessor and successor. These great tides have followed in a natural order: it was necessary that the British yoke should be thrown off before we could rise up against the tyranny of the Slave Power, and that contest had to be disposed of before the lesser tyranny of Protection could be attacked and brought to an end. We may, therefore, in our rejoicings over the defeat of the Republican party, properly bracket Lincoln with Cleveland as co-author of our present deliverance—the one unconscious, the other conscious. As John Stuart Mill said, at the London breakfast to Mr. Garrison in 1867:

"The other lesson which it appears to me important to enforce, amongst the many that may be drawn from our friend's life, is this: If you aim at something noble and succeed in it, you will generally find that you have succeeded not in that alone. A hundred other good and noble things which you never dreamed of will have been accomplished by the way, and the more certainly the sharper and more agonizing has been the struggle which preceded the victory. The heart and mind of a nation are never stirred from their foundations without manifold good fruits. In the case of the great American contest, these fruits have been already great, and are daily becoming greater. The prejudices which beset every form of society—and of which there was a plentiful crop in America—are rapidly melting away. The chains of proscription have been broken; it is not only the slave who has been freed—the mind of America has been emancipated. The whole intellect of the country has been set thinking about the fundamental questions of society and government; and the new problems which have to be solved, and the new difficulties which have to be encountered, are calling forth new activity of thought, and that great nation is saved, probably for a long time to come, from the most formidable danger of a completely settled state of society and opinion—intellectual and moral stagnation."

Let any one reflect upon these words, and then remember how, four years ago, the opponents of a protective tariff were held up as un-American and even treasonable, how the very flag of their common country was denied them by the Republicans, who seized it as their lawful badge, and how the autocracy of Speaker Reed, with the full assent of his party, suppressed debate, on the ground that the minority was sure to be outvoted in the end, and so had no rights which the majority was bound to respect. All this was in behalf of an "intellectual and moral stagnation" such as we long ago saw retributively overtake the protection State *par excellence*, and which was bound to spread over the entire Union if the Republican rule continued in force. It was precisely this stagnation which the Compromise of 1850 was intended to secure on the subject of slavery, and against which the Free Soil and Republican parties were a protest. Every abolitionist, even the most mealy-mouthed doubter of the divine right of slavery, was branded as a traitor, and had no protection from the flag of his country if he ventured into the domain of slavery. The Northern conscience was to be hushed, the freedom of speech and of the press to be extinguished. As far as it could bring about these conditions—by social ostracism and opprobrium, by insolent assumption of patriotism and philanthropy, and profuse charges of bribery by British gold—the Republican party became the direct heir of the Slave Power; while in the tariff it found an instrument of corruption not inferior to slavery itself, for the shaping of legislation to maintain its hold and that of the protected interests on the Government.

A hardly less curious paradox is that afforded by the affinity of latter-day Republicanism for the Jeffersonian variety. Each was at enmity with commerce, and Jefferson's Embargo and Madison's Non-Intercourse were effectually on a par with the McKinley Bill. In 1807 the planting interests of the West and South regarded the merchant with suspicion and contempt. In our day, the manufacturing interests have fastened the same odium upon him. The Home Market is but another name for the Embargo. By each, in the language of Josiah Quincy, a new writ was "executed upon a whole people—not, indeed, the old monarchical writ of *ne exeat regno*, but a new Republican writ, *ne exeat republica*." Our tariff laws have been framed on the assumption of essential dishonesty in the trading community; and the attempt to force citizens to buy only native products has logically led to the puerility of condemning those who have chosen to go abroad to satisfy their personal wants. The protectionist opposition to a copyright measure was, in the intellectual sphere, a revival of Non-Intercourse, with England in particular.

The three revolutions of which we began by speaking were all occasioned by restrictions upon industrial and commercial freedom. The author of the Stamp Act is reported to have told a visitor from the colonies that the object of it "was not merely revenue, 'but,' said he, 'you Americans have spread too much canvas upon the ocean.'" And Sabine says of the three-pence the pound duty on tea: "I must dissent from the common view of it. To me it was not, as it has been regarded, a question of *taxation*, but essentially, like all the others between the merchants and the Crown, one of *commerce*. The statements of Hutchinson, the debates in Parliament, and the State papers and the documents which I have examined, all go to prove that the object of the mother country was mainly to break up the contraband trade of the colonial merchants with Holland and her possessions, and to give to her own East India Company the supply of the colonial markets."

"There were," continues the same writer, "no less than twenty-nine laws which restricted and bound down colonial industry. Neither of these laws touched so much as the 'southwest side of a hair' of an 'abstraction,' and hardly one of them, until the passage of the Stamp Act, imposed a direct 'tax.' They were aimed at the North, and England lost the affection of the mercantile and maritime classes of the northern colonies full a generation before she alienated the South. They forbade the use of waterfalls, the erecting of machinery, of looms and spindles, and the working of wood and iron; they set the King's arrow upon trees that rotted in the forest; they shut out markets for boards and fish, and seized sugar and molasses and the vessels in which these articles were carried, and they defined the limitless ocean as but a narrow pathway to such of the lands that it embosoms as wore the British flag. To me, then, the great object of the Revolution was to release LABOR from these restrictions. . . . For a higher or holier purpose than this, men have never expended their money or poured out their life-blood in battle!"

This is a perfect picture of Protection, which, while it pretends to call industries into life, taxes others out of existence by the same act, forbids others to come into being, and then determines arbitrarily the direction of commerce and the spread of canvas upon the ocean. It is the Quays, the McKinleys, the Shermans, and the Reeds who have shaken in our faces the fetters of the British Navigation Act and the Laws of Trade, and called upon us to fall down and worship them as the only patriotic and American policy. Finally, the antagonism of slavery to industrial freedom is too obvious to need dwelling upon. So those three typical emancipators, Washington, Lincoln, and Cleveland, were all moving on one grand line—towards the perfection of individual liberty, self-government, and unshackled interchange with all the nations of the earth.

THE NEED OF PROMPT ACTION.

In the ordinary course of things, the Congress which was elected on Tuesday week would not meet until a year from next December. This is, even under ordinary circumstances, a defect in our system which has long been recognized. It is unfortunate that there should ever be a year of interval between the formal expression of the popular judgment on public affairs and its embodiment in legislation. This is true even when the majority in the new Congress is of the same political complexion as the old one. That the representative, or agent, after he has received his instructions, should get promptly to his work, is a good rule of politics no less than of busi-

ness, and is recognized as such in all constitutions but the Federal.

But the circumstances under which the Fifty-third Congress will meet are by no means ordinary. The electors have demanded a complete change in the fiscal policy of the country, and have emphasized the demand by making a complete change in all branches of the Government. The election of 1890 could hardly be called anything more than expression of disapproval of the McKinley Bill, because it left the Senate and the Presidency in the hands of the authors and promoters of the bill. But last week the voters did not confine themselves to rebuking the Republicans. They put the Democrats in their place, charging them with the power and responsibility of justifying in practice their criticisms of Republican policy. In other words, the duty is now imposed on the Democrats of revising the tariff in such a way as to promote and not to injure the industries of the country, and at the same time to put the necessaries and comforts of life within easier reach of the mass of the people. This means that they are not only pledged but ordered to make a great many changes in the duties imposed by the McKinley Bill. These changes being sure to come, it is of the last importance to the business world to know as soon as possible what they are to be, and when they are to take effect, in order to enable traders and manufacturers to make their plans for the future. Nothing could be more injurious to the industry and trade of the country, and nothing more injurious also to the Democratic party, than uncertainty, lasting from now to December, 1893, because uncertainty about the future in the commercial world means always great depression, and uncertainty caused by failure to legislate is just as serious as uncertainty caused by legislation. In fact, a Democratic Congress which met after keeping the business world in suspense for a year, would be discredited in the public eye from the outset.

We are speaking now on the assumption that the Senate will not between now and March 4, 1893, take in good part the warning which the elections have given, and pass the five tariff bills which were sent up from the House last spring, and which are now before them, namely—the bills putting wool on the free list, and reducing the duties on woollen goods; putting binding-twine, cotton ties, and cotton bagging,as also machinery for making cotton bagging, on the free list; repealing duties on silver-lead ore and tin plate. There was also a bill restricting the amount of wearing apparel which individuals may bring into the country to $100, which the House also sent up, but it seems to have been a concession to the Weaverites, rather than a serious proposal from serious statesmen. Measures of this sort, in which Custom-house officers are charged with the appraisal of the clothes in a citizen's trunk, to see whether he has more than the necessary covering for his nakedness, are worthier of ignorant fanatics like McKinley than sober-minded modern legislators. The Democratic financial policy should be in all such things large-minded, liberal, and modern, rather than petty, vexatious, and mediæval. The enlightened way to cut down the supply of clothing which people bring home from Europe is to make it no longer worth their while to get it abroad, by improving the quality of American goods. If American tailors want protection, the true way to get it is by insisting on cheap wool and good cloth, which is the result of cheap wool, and not by stripping their fellow-citizens on the wharf to see whether they have got ten dollars' worth more clothing than the American Republic can stand in the four-hundredth year of the discovery of the country.

If the majority of the Senate were wise, they would promptly bow to the popular will and pass these bills at once. Possibly they are wise enough, for the Republicans have a majority of only six, and it is by no means improbable that these six have been sufficiently impressed by the popular verdict to bow to it, and indicate their submission by doing promptly what they know will be done two or three months later by their successors. But whether they do or not, we hold that it is for the highest interest of the country, as well as of the Democratic party, that Mr. Cleveland should call a special session of the new Congress as soon as possible after his inauguration, and set them to work diligently on the tariff. They would be able to give their whole time to it, because they would have no appropriation bills to discuss or pass, or any other imperative business to attend to. If one-half what the Democratic orators and writers have been saying about the McKinley Bill be true, it is almost a crime to leave it untouched on the statute-book one week longer than is absolutely necessary. The Democratic party cannot afford to hang fire over it, now that it has got hold of it. Prompt repeal of it, or prompt modification of it, is what the business interests of the country call for, and in this we are sure Republican and Democratic business men are of one mind.

SILVER LEGISLATION.

AMONG the subjects calling for early attention in Congress is the everlasting silver question. Fortunately there is no longer any doubt what the initial step should be. The first clause of the silver resolution adopted by the Democratic National Convention calls for the repeal of the so-called Sherman Act of July 14, 1890. The resolution is in these words:

"Sec. 7. We denounce the Republican legislation known as the Sherman Act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal."

It cannot be affirmed that this resolution was passed without due consideration, since more time was spent on the silver question by the platform-makers than upon all other subjects together. If there ever was a mandate given clearly and unmistakably by a political party to its representatives in Congress, it is embraced in the words here quoted. It should be added, too, that while there was much difference of opinion on other branches of the money question at Chicago, there was none as to this so-called Sherman Law. Everybody was in favor of killing that the first thing, without benefit of clergy. What has happened since the Convention adjourned? The silver men of all degrees went over straightway to the Weaver faction. They separated themselves from both the other parties, and put electoral and State tickets in the field wherever they thought they had a chance to win, and in many places where they knew they had no chance. In our opinion, they are a good riddance to both parties. Their room is by far better than their company. They have the same rights as other people, of course. It is entirely proper that they should advocate the policies they prefer and get as many votes as they can. We would not curtail their political privileges in the smallest degree. But we consider it one of the most fortunate results of this campaign that the Populists will hereafter "flock by themselves," instead of exercising an influence out of all proportion to their importance upon both the other parties. We now know just what they amount to. They have mustered about 27 electoral votes out of 444, and this is really an overestimate of their strength, since they were helped to the greater part of these votes by the Democratic organization. A fairer estimate is furnished by their strength in the new Congress, where they will have 13 members in a total of 356.

We presume that the Republicans will now cease playing with edged tools in order to get the votes of the mining camps (which they brought prematurely into the Union), seeing how grievously they have been disappointed by them in the recent election. There is no reason on that side of the house why the Sherman Law should remain on the statute-book, especially since Mr. Sherman himself has declared his willingness, if not his wish, to have it repealed. Hereafter both parties are at liberty to look upon the purchase of seven tons of silver bullion per day as the share of protection awarded to the mine-owners—as an offset to the McKinley Bill. There is nothing else in it now; and since McKinleyism has been so badly knocked out that some of its most devoted advocates admit that the country has condemned it, there is no reason why this bounty to the silver-producers should be continued any longer.

It is clear, therefore, that there are no

political reasons for continuing to accumulate silver bullion. Not even the sentimental reasons clustering around the "dollar of the fathers" remain, since the coinage of these dollars has been stopped. The public mind is now in a mood, perhaps, to take a more comprehensive view than before of the economical bearings of the problem. The simple fact is that if we need more money, we can supply our deficiency with gold just as easily as with silver. Suppose that we take the present Sherman Law and substitute the word gold for silver wherever it occurs, making the proper change in the number of ounces purchased. The equivalent of 4,500,000 ounces of silver at our coinage ratio of 16 to 1 is approximately 281,000 ounces of gold. Now, if we amend the Sherman Law so as to provide that the Secretary of the Treasury shall purchase 281,000 ounces of gold each month, at a price not exceeding one dollar for 25 8-10 grains, of standard fineness, and to issue, in payment for such purchases of gold bullion, Treasury notes of the United States, which notes shall be redeemable on demand in coin at the Treasury of the United States or at the office of any assistant treasurer, and the said notes shall be legal tender for all debts, public and private, etc., such a law will give us everything in the way of additional currency that we get under the Sherman Silver Law. There is nobody so dull that he cannot see that. But such a law would do much more. It would restore confidence. It would remove every cloud from the business horizon. It would reestablish our credit abroad and turn the stream of capital once more in our direction, and this would accomplish more in the way of reviving business than anything else that Congress could possibly do. In addition to this it would remove the present embarrassment of the Treasury in redeeming its outstanding Treasury notes in gold, since the gold would be on hand all the time.

Simply stopping the purchase of silver bullion would have the same effect as making the suggested change in the phraseology of the law. Gold would flow in to the extent that it was needed, in obedience to an economic law older than any recorded history; and the mode of getting it into the form of paper currency would not be at all complicated. It would only be necessary to take it to the Treasury either as coin or as bullion, and ask for gold certificates. It is true that the law at present does not allow the issue of gold certificates smaller than $20. But that is only a mechanical difficulty. A law of ten lines authorizing the issue of gold certificates of the same denominations as silver certificates would cure that defect. Perhaps the public would not be able to see the operation of this natural law so readily as that of a statute law providing for the regular purchase of gold bullion and the issue of Treasury notes therefor. We hope that some member of Congress will move the repeal of the Sherman Law, or such an amendment of it as is here suggested, as soon as Congress meets.

SECRET VOTING.

CAREFUL observers in both parties are agreed in saying that a powerful factor in the political revolution of November 8 was the secret-ballot system. It had its first trial in a Presidential election in thirty-five States, including all those in which the most striking changes appeared—Ohio, Illinois, Wisconsin, New York, Indiana, Connecticut, and California. Of these seven States, New York and Connecticut have laws which are very defective applications of the Australian system, being filled with makeshift devices concocted by the enemies of a really secret ballot. The other five States have much better laws, which secure an absolutely secret ballot, free from the confusing annoyances caused by the separate ballots of the New York law and the envelope and other slipshod contrivances of the Connecticut law. But even the poorest of the laws gave a degree of secrecy to the voting which was sufficient to check, if it did not abolish completely, two practices which have heretofore had great influence in Presidential elections—bribery and intimidation.

In regard to the effect upon bribery, it is evident from complaints which have been heard since election that this will be more apparent in the future than it is at present. Open confession has been made in several States, including New York, Indiana, and Connecticut, by the men who offered the bribes, that the returns convince them that the men accepting the bribes did not keep their bargain when they got into the secret voting-booths. Capital is proverbially "sensitive," and it has always been timid about buying a pig in a poke. If the result this year has made it apparent that a bribed voter who marks his ballot in secret cannot be trusted to vote as he is bribed, investment of funds in that direction will be greatly diminished in the future. So high an authority as the most religious Republican editor in the world, Col. Elliott F. Shepard, has decreed that it is very wicked to buy votes which you are not certain will be delivered. Buying votes under the most favorable conditions has always been an expensive business, chiefly because so large a percentage of the money clings to the dirty fingers through which it must pass before it reaches the "floater" or other person whose vote it is to buy. If now, after he has been reached, he fails to keep his bargain, the business will soon be abandoned as utterly impracticable.

We are inclined to think that in the late election the failure of bribery had less influence on the result than the utter abolition of intimidation caused. On this point there is evidence from all quarters. An observer in Connecticut, in a recent letter to the *Evening Post*, gave some very interesting information about that State. He said that the canvasses taken in advance by the committees of both parties deceived both, chiefly because the employees in various kinds of manufactories gave false reports of their political inclinations. In one large shop the workmen assured the Republican pollman that every man of them would vote Republican, and they all marched in a Republican industrial parade on the Saturday before election, yet the returns show that at least three-fourths of them must have voted for Cleveland. Similar reports come from Illinois, Ohio, and Wisconsin. This is only one of the salutary effects of the secret system which were claimed for it in advance. Thousands of workmen in the protected industries of the country went to the polls for the first time this year as free men, able to cast their ballots as they wished to cast them, and not in obedience to the orders of their employers, whose agents stood at the polls to see that those orders were obeyed. Threats to deprive them of employment if they voted as their employers forbade were of no avail, for their employers could not discover how they voted.

Other voters who were made free by the new system were clerks who have hitherto feared their employers' disfavor in case of voting in opposition to them, and long-time party men who wished to break away from their associates, but dreaded the ridicule and obloquy which were certain to follow if they did so openly. The returns in Ohio, Illinois, and Wisconsin are eloquent evidence of the welcome shield which the new system afforded to thousands of weary Republicans in those States. They were the "silent voters" upon whom both parties placed so much hope, and whose defection gave the Republican party the shock from which it will not recover for many years, possibly not at all. As the workingmen of the land were relieved from the bondage of their employers by the secret ballot, so these men were delivered by it from the bondage of party.

These are great and beneficent triumphs for the new system, but there is another which in importance to the highest welfare of the republic easily surpasses them. By placing an additional and nearly insurmountable barrier to the effective use of money in elections, the new system goes a long way towards abolishing the raising of money in great sums for political purposes. We do not mean to say that entire abolition has been accomplished, and that no further legislation against it is necessary. On the contrary, we think corrupt-practices legislation of the most stringent character is the imperative need of the hour everywhere. But what the first trial of the new system in a Presidential election demonstrated was that great funds, such as the Republicans were known to have at their disposal, were powerless to save the

party from defeat in any State in which the effort was made. This failure of the money to accomplish the object for which it was contributed will make it extremely difficult to collect a large fund in the future. No contributor to this year's Republican fund can say, as the protected manufacturer of Connecticut said a few months ago, when asked if he intended to contribute as liberally in 1892 as he had done in 1888: "Well, why shouldn't I? I got back under the McKinley Bill every penny that I put in four years ago." There will be no McKinley reservoir of this kind to draw from to replenish the void created by this year's contributions, and that fact of itself will discourage future giving.

We are firmly convinced that the greatest menace which hung over the country from the use of enormous sums of money in elections passed away when the protective system met its doom last week. No such abundant source of "boodle" will ever be found again. If the Republicans do not invest large sums in the elections, for the simple reason that they can buy nothing more in them, it will not be necessary for the Democrats to raise large funds to counteract them, and both parties will henceforth rely less upon bribery, direct and indirect, to carry the day. Then, too, the breaking down of the Republican party in its greatest strongholds so increases the number of doubtful States that no campaign fund could ever be raised which would be adequate for the purchase of enough votes to secure success. At the same time, we ought to enact laws which will make all use of money for corrupt purposes as impossible here as it is in England. We ought not to rest content with lessening the evil, but ought to destroy it root and branch.

AN INSTRUCTIVE COMPARISON.

A VERY instructive article from the pen of Mr. Joseph Chamberlain appeared in the November *Forum* on "Municipal Institutions in America and England," but, owing to the absorption of the public mind in the canvass, has received far less attention than it merits. It was devoted to a comparison of the municipal government of Boston—probably, on the whole, the best governed of our American cities—with that of Birmingham, England, this last being a municipality which owes to Mr. Chamberlain a large part of its excellent administration. In June, 1890, Mr. Julian Ralph gave an account of this administration in *Harper's Monthly*, under the heading, "The Best Governed City in the World," and we noticed the article at the time. Mr. Chamberlain himself describes Birmingham of to-day as follows, and certainly no one who knows the city will accuse him of exaggeration:

"The corporation came into existence in 1838 and has only gradually attained its present importance. During little over half a century the town has been transformed and ennobled. Formerly it was badly lighted, imperfectly guarded, and only partially drained; there were few public buildings and few important streets. The paving was defective; the cleansing and watering imperfectly performed; no provision at all existed for the recreation or the culture of the artisan classes. Birmingham, in fact, was an overgrown village with the population of a great town. But now great public edifices not unworthy of the importance of a midland metropolis have risen on every side. Wide arteries of communication have been opened up. Rookeries and squalid courts have given way to fine streets and open places. The roads are well paved, well kept, well lighted, and well cleansed. The whole sewerage of the town has been remodelled, and the health of the people is cared for by efficient sanitary inspectors. Baths and wash-houses are provided at a nominal cost to the users. Free libraries and museums of art are open to all the inhabitants; free schools and a school of art, together with facilities for technical instruction, are provided for their education. Recreation is not forgotten, and not less than ten parks and recreation-grounds are now maintained by the Corporation. New Assize Courts and Courts of Justice have been built. The police force and fire brigade are kept in the highest state of efficiency; while the great monopolies of gas and water have passed into the hands of the representatives of the whole community, who have also acquired the tramways and have thus retained full control over the roads of the city."

The population of the two cities is about the same, Boston 448,000, Birmingham 430,000. For the purposes of a comparison of the cost of municipal administration, Mr. Chamberlain assumes that they are also on an equality in the matter of efficiency. The table in which he shows, item by item, what each city pays for municipal purposes, is too long for quotation. The result is that the expenditure of Boston for strictly municipal purposes, leaving out schools, poor relief, and in Birmingham schools, lunatic asylums, and Poor Law, is more than six times as great as that of Birmingham. That is, Boston spends over $10,194,000 and Birmingham $1,665,000. Going to the last census for reports of the expenditure of other American cities, he finds that the expenditure of Birmingham is little more than one-fourth of the average of one hundred American cities, small and great together. Taking these figures as a basis, it appears that while the average resident in one of the American great cities pays from 15 to 30 per cent. of his income in municipal taxation, the resident in average English cities pays only from 2½ to 5 per cent.

What is the reason of this difference? The answer which will rise most readily to American lips is that in American municipalities the suffrage is so widely extended that the taxing power is in the hands of a body of persons who either do not pay taxes, or think they do not, which amounts to very much the same thing. Mr. Chamberlain meets this by showing that Boston is no worse off in this respect than Birmingham. In Birmingham all rate payers, both male and female, vote at municipal elections, and in 1891 the number of registered voters there was 88,186, and in Boston the year before, with only a male franchise, it was 73,000; so that the Birmingham government has really a wider popular basis. Nor is it true that Birmingham government enjoys exemption from the influence of politics any more than Boston. He says the local elections are generally conducted on party lines and the offices filled with party men. But the elected municipal officers, except the Mayor, hardly ever receive salaries, and no property qualification is required for a seat in the Municipal Council, which contains several workingmen. He then makes the following statement, which we believe to be literally true not only of Birmingham but of all or nearly all English cities similarly governed, but which will be read with amazement and incredulity by a great many good people in New York, so far away from healthy municipal life have we drifted:

"Although, as has been stated, political considerations exercise great weight in determining the composition of the Council, they ought never to be allowed—and as a matter of fact they very seldom are allowed—to have the slightest force in the election of the permanent officials or the day workmen employed by the Corporation. For nearly sixty years the great majority of the Town Council of Birmingham have been Liberals and Radicals, and yet during the greater part of that time the majority of the high officials have been members of the Conservative party. All the higher officials are appointed by the Council itself. The minor officials are appointed by the Councillors of the several departments and confirmed by the Council; and the day workmen, either by the Councillors or more generally by the permanent heads of the departments. When a new official has to be elected, no questions are asked as to his political opinions, and no interference would afterwards be tolerated with his exercise of electoral privileges. It is an unwritten law that no paid official shall take an active part in political contests. He is expected to refrain from the platform and the press in relation to such controversial matters, but his private opinions and his votes are matters exclusively for his own discretion. Once chosen, if he discharges his duties well and faithfully, he remains in office for life, or till his resignation; with the probability that if he is disqualified by age or infirmities, he will receive a pension proportioned to his salary and the length of his service. In Birmingham, the town clerk receives a salary which, with allowances, amounts to £2,200 per annum, the city surveyor £1,400, the city treasurer £1,050, the chief of police £920, the medical officer of health £1,000, the engineers of the Gas Department have £1,200 and £1,050 respectively, the chief engineer of the Water Department £1,200, and the secretaries of the Gas and Water Departments £1,250 and £750 respectively. These gentlemen, with all the other permanent officials, are expected to give their whole working time to the corporation and not to engage in any other occupation. Some of them have been more than thirty years in its service. They have grown with its growth and remained at their posts while the composition of the Council has

changed many times, always enjoying the full confidence of their successive employers."

Were a reformer to suggest the adoption of such a system in New York, he would excite nearly as much merriment as if he were to suggest in a Sioux village the wearing of evening dress at supper in the tepees. He would be set apart as a dreamer or visionary, who ought to be treated kindly on account of the purity of his motives, but strictly forbidden to exercise any influence in municipal affairs, were he, like Mr. Chamberlain, to keep on saying, that

"the idea that paid municipal office should be the sport of successful politicians is utterly abhorrent. The personal honor, the trustworthiness, and the fidelity to their engagements of the permanent official service—whether in the departments of State or in the municipal administrations of the country—are a national possession, and a source of pride and satisfaction to all who are interested in the welfare of our institutions. To substitute for such a class—so distinguished, so faithful, and so absolutely honest and incorruptible—*a number of casual occupants of posts for which they have no sufficient qualification—political cadgers and hangers-on, with no real love for their work—with no ambition to distinguish themselves in it and only anxious to fill their pockets in the shortest possible time before they give place to a new swarm of the same breed*—would be a disastrous revolution, and would, in the opinion of every public man in this country, be the certain precursor of inefficiency, corruption, and extravagance in our national and local administration."

Mr. Chamberlain adds:

"If ever the principles of action should change—if the best men should be so occupied with their own fortunes that they should leave the care of the commonwealth to those who will see in this duty only an opportunity for plunder—if office is sought, not for the good which can be done, but for the political patronage it may afford—if paid officials lose their pride in their work and their loyalty to the public that employs them—if incapacity is overlooked and corruption is condoned—then, if these things happen, the dignity, the efficiency, and the economy of our public service will all disappear, and the institution of local government, so long our pride and our glory, will be discredited in the eyes of the people and will become a by-word and a reproach."

Now, this is exactly what has happened to us here. The institution of local government is a "by-word and a reproach" among us, but we do not seem to mind it a bit. Any foreigner who heard the current talk about our municipality in New York to-day might safely conclude that this was the kind of local government we liked, and that, like McKinley, whose greatness lies in being hated by the human race, we were never so municipally happy as when our municipal arrangements brought on us the scorn or pity of the civilized world.

MR. GLADSTONE'S OXFORD LECTURE.

OXFORD, October 29, 1892.

FOR the first time in ten years, the Oxford undergraduate has been allowed to monopolize the gallery of the Sheldonian Theatre without the taming interjection of "lady-proctors." The occasion was a memorable one for many reasons, quite apart from the seemly bearing of such undergraduates as were lucky enough to survive in the scramble for seats. Crowds began to obstruct the streets near the theatre as early as eleven o'clock on Monday last; Mr. Gladstone began his lecture on "Mediæval Universities" at half-past two. His magnificent voice cast its wonder-working spell upon his hearers from the very beginning, and, although the academic manner of his delivery kept his eye for the greater part of the time closely fixed upon his MS., the compelling power of his personality dominated the assembled University, even when a well-considered allusion to Lord Salisbury brought down the house. Before he began speaking, and when the lecture closed at the end of an hour and a half, there was unbounded enthusiasm and limitless applause, but the thrill of these moments was not so great as to prevent his auditors from perceiving upon him certain marks of flagging vigor which they forgot while listening to the "old man eloquent." In fact, at the moment when, dispensing with the tiresome formality of a vote of thanks, the Premier turned slowly and issued forth alone through the large doors thrown open directly behind him, it was difficult to remember that the Vice-Chancellor would shortly join him, for there was a sudden lull which hushed all plaudits while the picture of his departure seemed to prefigure what, in the course of nature, may happen to us with him any day.

That part of the lecture which dealt specifically with mediæval universities was unavoidably somewhat bare of the speaker's characteristic eloquence, for the very reason that he had been conscientious in his study of the technical points involved. This careful preparation was shown in his account of the meaning of "studium generale" and "universitas": the former "did not so much signify the extension of the studies pursued as the central and not merely local character of the establishment"; the latter "meant not a high teaching institute, but a union of persons for given purposes regularly organized—that is to say, a guild or corporation." When applied to what we now call a university, the proper sense of "universitas" was "the combination into one regulated body of the teachers and the scholars." Only a word or two was given to various Italian universities, to Charlemagne, and to Alfred. The beginnings of Oxford were definitively fixed not earlier than the twelfth century, a period when Paris easily held the "prior principalitas," which did not pass over to Oxford until the fourteenth century, although, as early as 1252, Oxford began to hold its own. In claiming for Oxford Alexander of Hales, the "Doctor irrefragabilis," Mr. Gladstone is believed by competent persons to have erred; but he certainly made rather too little than too much of the general superiority of his own University over that of Paris during the fourteenth century. No one will quarrel, however, with this understatement, for the lecturer was most acute and most lucid in pointing out the cause of Oxford's greatness at this period—the decisive and exceptional influence of that order whose founder, St. Francis, had done everything to hold himself and his followers aloof from academic life. Mr. Gladstone might have pointed out that Devorguilla, when in 1282 she organized Balliol College, made of it practically a Franciscan institution, and he might have quoted Father Ehrle to the effect that in the fourteenth century Oxford became the centre of resistance on the part of minorites and seculars to the Dominican attempt, disastrously triumphant elsewhere, to displace the Augustinized Plato of the fathers of the Church by putting in his stead the Christianized Aristotle of St. Thomas Aquinas. With the year 1400 closed this "golden age of Oxford," said the lecturer, "and there is no subsequent time at which we can consistently with historic fidelity claim on her behalf a position so commanding."

During the fifteenth century there was a falling off in material resources due to the greed of monasteries and the havocs of civil wars, and a hampering of the free traditions left by Ockham and his predecessors, which was due to stringent measures against Lollardism. Still, Erasmus was enthusiastic in praise of Oxford and Cambridge as he found them in 1500, and Oxford was then still superior to Cambridge, having to boast of Selling, Linacre, Colet, and Sir Thomas More. But in this and many other respects the sixteenth century marked an entire change. It was not an academic age, but such academic activity as its fierce polemics allowed was in Cambridge and not in Oxford. The Reformation belonged to Cambridge, "where it had its real commencement." At this point a characteristically phrased allusion was made to Cranmer, Ridley, and Latimer: "The three famous prelates who have been monumentally commemorated in Oxford for reasons other than academic, were Cambridge men." These words had, as they probably were intended to have, the effect of an anti-climax upon the audience, who expected either some moving allusion to the martyred bishops, or an utterance touching the recent refusal of a monument to Cardinal Newman in Oxford.

In the sixteenth century "the deepest and most vital influences within the two universities respectively were addressed at Oxford to the making of recusants, and at Cambridge to the production of Zwinglians and Calvinists." Oxford was on the losing side, and hence the Elizabethan bishops were for the most part Cambridge men. Many theologians were summoned from abroad, as if to give tangible proof of academical incompetency at home. The lecturer then sketched the quieter days of the seventeenth century, "the best which the universities had known since the time of Erasmus." Oxford founded the Royal Society, and Cambridge had its renowned school of Platonists, Whichcote, Cudworth, John Smith, and Henry More. The Anglican divines of this century were "probably to a man reared within the universities," but the larger and weightier work was done by Cambridge men. Taking the seventeenth and eighteenth centuries together, Cambridge confronts her ancient rival with Bacon, Milton, and Newton, "names before which we can only bow." Milton's name suggested that until the close of the last century, Oxford had made hardly an appreciable contribution "to the noble list of English poets." The paramount influence of an Oxford philosopher, John Locke, from the speaker's own college, was next dwelt upon, and then, passing to politics, Mr. Gladstone gave a new lease of life to those wonderfully vivacious squibs provoked by George I., when he simultaneously despatched a troop of horse to Oxford and a present of books to Cambridge. Mr. Gladstone was persuaded, but not too easily, to remind his hearers of Dr. Trapp's Oxonian version of this episode:

"The ing, regarding with impartial eyes
The want of both his universities,
To Oxford sent a troop of horse—and why

That learned body wanted loyalty:
To Cambridge books he sent, as well discerning
How much that loyal body wanted learning."

With still more effective hesitation, the lecturer then gave Sir William Browne's rejoinder for Cambridge:

"The King to Oxford sent a troop of horse,
For Tories own no argument but force;
With equal sense to Cambridge books he sent,
For Whigs admit no force but argument."

And then he added: "I think Oxford is excellent, but Cambridge, I confess, appears to me better still."

This stage situation was a marvellous example of skill in dealing with an audience. Neither of these epigrams was written down with the learned lecture, and there was a moment's hesitation as if the lecturer might not recall the lines. When they came, they were delivered off-hand, but in such a way that every intonation was well considered, and each turn of the head and hand was intentional. No more finished piece of by-play could be witnessed at the Comédie-Française.

The last third of the lecture was beyond the limits of the subject, but by no means less interesting on that account. Mr. Gladstone uttered his personal convictions in a remarkable eulogy of Bishop Butler as one of the "inheritors of unfulfilled renown," and then, passing to the consideration of the influence of the two universities upon the training of men of action, he spoke of Becket, Langton, Wolsey, and Laud as the five greatest ecclesiastics since the Norman conquest, and to these names he added Wycliffe and Newman. The first two of these came before Oxford was, though Becket was at the original Merton College; the other five were trained at Oxford. He described Laud as standing "upon the historic stage half-way between culprit and martyr," and said of Wycliffe that it was his singular destiny to produce in Bohemia results far wider and far more potent than in his own country. Newman's was a name that might still touch living memories; it was Newman who, "principally and in half a lifetime, set a mark upon the mind and inner spirit of the English Church which it is likely to carry through many generations." Returning to Laud, he made a wonderfully telling plea in extenuation against Macaulay's hard words. Macaulay praises Strafford, and yet Laud and Strafford "were the Pylades and Orestes of civil life, and it might be hard to show any single point of action or opinion on which they differed." Laud, first among English primates, was a tolerant theologian. He was powerful enough to make the Calvinistic Oxford which he found, an Anglican Oxford when he left. So Augustus found Rome brick and left it marble, "or, if the inverted form be preferred, Laud found Oxford marble and left it brick." The audience evidently regarded this last turn in the Premier's argument as a concession to his friend the "Nonconformist conscience," and accordingly greeted it with an hilarity which was not wholly displeasing to the speaker. His conclusion as to men of action was guardedly expressed, but to the effect that Oxford men shone superior to Cambridge men in action. Having multiplied instances to support this view in affairs ecclesiastical, he now addressed his remarks to political life. Every Chancellor of Oxford, from Lord North to Lord Salisbury, had been Premier, and this among many other facts justified, he thought, a belief in "some specially strong tendency of Oxford towards the exigencies of public life."

In closing, Mr. Gladstone adverted to various welcome innovations at the universities, each of which had, however, maintained its distinctive character. He protested against that theory of education, happily without foothold at Oxford or Cambridge, "which would have it to construct machines of so many horse-power, rather than to form characters to rear into true excellence that marvellous creature we call man—which gloats upon success in life instead of studying to secure that the man shall always be greater than his work, and never bounded by it, but that his eye shall boldly run, in the words of Wordsworth,

"'Along the line of limitless desires.'"

The thought behind these words is strikingly similar to that of our own Lowell at Harvard in 1886: "A university is a place where nothing useful is taught," and its highest office is "to distribute the true bread of life—the *pane degli angeli*, as Dante called it."

At the end Mr. Gladstone solemnly, though in rather cumbrous phrases, dwelt upon the beauties of theology and the loveliness of the Oxford University motto: "Dominus illuminatio mea." So ended the first Romanes lecture, given by that marvellous creature we call the right honorable gentleman, Mr. Gladstone, thrice Premier of England.

LOUIS DYER.

ON THE MORROW OF ST. BARTHOLOMEW.

PARIS, October 27, 1892.

THE names of La Mole and Coconas have been made very popular in France by an historical novel of Alexandre Dumas—'La Reine Margot,' one of the most amusing novels to be found. If Alexandre Dumas, senior, had worked harder, he might perhaps have written as good novels as Walter Scott. With all his levity, he still remains the only novelist of his generation whose novels have not been utterly forgotten.

I was struck some time ago by the title of a book, or rather the sub-title: "La Molle et Coconat." Why Coconat? Dumas wrote Coconas. It was evidently the same man, as over the sub-title I read: 'Le Parti des Politiques au lendemain de la Saint-Barthélemy,' and I knew that Coconas was one of the most active massacrers in that fatal night of Saint Bartholomew. The name of the author had suffered a change as well as the name of Coconas. M. Decrue wrote the life of Anne of Montmorency, Constable of France, a work in two octavo volumes which appeared in 1885. In 1892 he comes before us as M. De Crue. Though we are tolerably accustomed in France to these transformations of name, I confess that I felt a little surprised. M. De Crue belongs to the new historical school and is extremely particular about dates and names. He has corrected the name of La Mole, and changed it into La Molle; he has taken care to change the Coconas of Dumas into Coconat. He might have written Coconata, as this hero of Saint Bartholomew was a Piedmontese gentleman, who signed himself Coconata.

How was M. De Crue led to write the history of these two men, La Molle and Coconat, who inspired the celebrated author of 'La Reine Margot'? He found them among the followers of the Montmorencys, and he has called his theme 'Le Parti des Politiques,' inasmuch as the Montmorencys were at the head of the party of the "Politiques," who took a sort of middle position between the Catholics and the Protestants. The name "Politics" entered into current speech towards 1564; it was applied to those who worked for the peace of the country on the basis of the Edict of January, 1562, which gave the Huguenots, under some conditions, liberty of conscience and of worship. The three first civil wars were caused by the violation of this Edict of Tolerance. The massacre of the reformed Assembly of Vassy was the origin of the first. Condé and Coligny took arms and fought the battle of Dreux against François de Guise. After the death of Guise, before Orléans, the Constable of Montmorency dictated the articles of peace. Montmorency was the real head of the party of the "Politics"; after him, the chief of this faction became François d'Alençon, the favorite son of Marguerite de Médicis. In his memoirs, the Vicomte de Turenne describes the Duc d'Alençon as a man with a fine face spoiled by the smallpox, "haïssant le mal et les mauvais, aimant la cause de la Religion (réformée)." Turenne had been educated with him and knew him intimately. D'Alençon was the godchild of the Constable of Montmorency, and he expressed his ideas. He was ambitious. He took for his confidant La Molle, whom L'Estoile calls "le baladin de la cour." La Molle was dissolute, pious, very superstitious; he heard several masses every day. He was vain and had many enemies. He gave himself entirely, in the language of the day, to the Duc d'Alençon.

The children of Marguerite de Médicis all wanted to wear crowns. Henri d'Anjou was elected King of Poland; his brother Alençon wished to have a sovereignty in the Low Countries, and intrigued with the enemies of Spain. Charles IX. detested his brother Alençon, and twice gave the order to strangle La Molle. It is said that one day at the Louvre, with the Duc de Guise and some gentlemen who had ropes, he waited himself for La Molle, in a passage of the palace. La Molle was saved only because he entered the room of his mistress instead of Alençon's.

Montmorency, the eldest son of the Constable, retired to Chantilly in 1574. The whole kingdom was in a state of effervescence. The Duc d'Alençon was among the malcontents. La Molle, who was a great intriguer and a born conspirator, was wanting in personal courage; he found an associate and an instrument in a daring soldier, the Piedmontese Annibal Coconata. Coconata was born in 1534; he was a soldier of fortune, who had fought against the Turks and then taken service in France. He was an unbeliever, and did not care for Catholics or Protestants. On the night of the massacre of Saint Bartholomew he took part in the murder of Coligny. Charles IX. said of him: "Coconat was a valiant gentleman, but he was wicked; he was one of the wickedest men living in my kingdom. I remember having heard him say, among other things, when he vaunted his part in the Saint Bartholomew, that he had bought from the hands of the people thirty Huguenots, in order to have the satisfaction of killing them after his own pleasure, which was to make them first renounce their religion with a promise to save their lives. This being done, he killed them with his poniard, cruelly, with several cuts." This can be read in the 'Memoirs of L'Estoile,' who adds that Charles IX. used to say that, though he had ordered the massacre, he had never liked Coconat since, and had found him worthy of the end which he met.

La Molle was worthy of his companion; they were both secret agents of Spain. The Duc d'Alençon employed them in his intrigues. The malcontents placed him at their

head. Alençon was to fly from Paris with the King of Navarre, Turenne, and Coconat; at Villers-Cotterets he was to meet some other gentleman; an emissary of the Duc de Bouillon was to conduct the little troop to Sedan. Once at Sedan, Alençon was master of the situation; he could count on Ludwig of Nassau and his army, on Charles of Mansfeld; England, Germany, the Netherlands would give him money and soldiers. Alençon, at the head of an army, would give his help to the French Huguenots. Such was La Molle's plan. Turenne, however, who despised him, refused to work with him. A last meeting took place at the house of a man called La Nocle La Fin, or more commonly La Fin. Alençon presided; besides him, there were present La Fin, La Molle, Coconat, and five others. The departure for Sedan was decided on.

The conspirators did not suspect that the Queen mother was advised day by day of all their doings. Alençon was shadowed by the Italian Cosimo Ruggieri, an astrologer and a necromancer who had given lessons in Italian to François d'Alençon and lived on intimate terms with him. The Queen had other spies. The Duke of Montmorency himself, whom Alençon had tried to bring over to his cause, went to see the Queen and gave her a letter which his guards had found in the hands of a valet. In this letter one of the conspirators asked his wife to send him horses to Saint-Maur for the expedition to Sedan. The Queen lost no time; she prepared her dispositions, doubled the guard of the Louvre, had the doors shut, kept Alençon and Henry of Navarre prisoners. Seizures began. La Molle was arrested as well as Coconat, whom a great lady had concealed in an Augustine convent. Thus ended a movement which was headed at first by the "Politiques," but in reality was not countenanced by Montmorency, the chief of the party, and could therefore not succeed, though two princes of the blood were at the head of it.

The trial was conducted by De Thou, who was an enemy of the Politiques. La Molle was considered the chief of the conspiracy; Coconat as only one of his instruments. La Molle was the lover of Marguerite of Navarre; Coconat counted among his many mistresses the Duchess of Nevers and the Maréchale de Retz. It may therefore be imagined how eagerly all the details of the trial were followed not only in Paris, but in foreign courts. Alençon and Navarre were not prosecuted. The former was obliged to perform some royal functions in the place of his brother. Navarre was allowed to take walks in the park. Both of them were really prisoners and surrounded with guards.

After the fashion of the time, La Molle was subjected to torture. He kept silent for a long time, and finally denounced as his accomplices Turenne, Coconat, Bouillon, Condé, La Nocle, and a few others. He did not breathe the name of Alençon. Coconat was not so reticent; he spoke of Alençon and of Montmorency. He exclaimed, after the torture: "You see, gentlemen, the little ones are punished, and the great ones, who committed the fault, remain unpunished. You ought to attack Montmorency, Bouillon, and Turenne." In vain did Alençon and the Queen of Navarre implore the pardon of La Molle; all they could obtain was that he should not have a public execution. It was too late; the bearer of the Queen's despatch, on arriving at Paris, found the gates shut. De Thou hastened the execution; La Molle and his accomplice were carried from the Conciergerie to the Place de Grève and beheaded. A poet of the time composed this epigram for La Molle:

"Mollis vita fuit, mollior interitus."

Pasquier wrote a poem in Latin on his death, beginning:

"Vos ego, Veneres Cupidinesque,
Vos ego, Charites venustiores," etc.

Little did La Molle deserve to be celebrated in verse, in the style of Catullus. The Queen of Navarre and the Duchess of Nevers, if we believe Brantôme, made great professions of despair. It seems certain that they disinterred secretly the bodies, and had them interred in the Chapel of Saint-Martin at Montmartre. It was said, also, that they kept the heads of their lovers embalmed. Such details show us in the court of the last of the Valois a singular mixture of devotion and of gallantry. The sons of Catherine were perverted almost to madness, and the Court had, as usual, taken the manners of the King and of the Princes.

Correspondence.

NEW NATIONAL BANKNOTE GUARANTEES.

To the Editor of The Nation:

Sir: The current discussion in regard to the future of our national banknote system promises to be fruitful of good results provided it can be conducted as a scientific and practical financial question and kept clear of party politics. One very encouraging feature is that the more sober writers are discarding what used to be the almost universal assumption that it was out of the question that any other security than U. S. Government bonds could form the basis of a national currency. I am glad to see that, in your article on the subject in to-day's *Nation*, you not only say that the national system is the best we have ever had and probably the best we ever can have, but also intimate that some other security may be found to take the place of the bonds, and that if thus the system could be continued, it would be better than any State system. In this you are in accord with the plan suggested by Congressman Harter two months ago, when he proposed that certain classes of bonds should be accepted as security, and went into some detail as to the restrictions and safeguards which should surround them. I think his plan, as then elaborated, can be supplemented by one additional provision which, if adopted, would make the national system perpetual and elastic, and would render the repeal of the 10 per cent. tax unnecessary.

On several memorable occasions the Clearing-House Association of this city has prevented or mitigated monetary panics by stepping in to assist banks which were amply solvent, but which would have been pushed to the wall if required to liquidate their liabilities on demand; similar action was taken by the leading London bankers to save the house of Baring from bankruptcy. These precedents show that in the world of finance, as elsewhere, in union there is strength. The same sound principles which were acted upon exceptionally in the instances referred to would, if erected into a permanent system, provide a stable banknote currency. What I would propose in order to carry out this idea is as follows. Let the Comptroller of the Currency issue national banknotes against proper securities, not to individual banks, but to the associations of national banks in the various States, cities, or counties, as the case may be. For instance, in the city of New York, the Clearing-House Association would be the medium of communication between the banks composing it and the Department at Washington; the association would receive the banknotes and distribute them among its members, in proportion to the securities that each of them had deposited for transmission to Washington; the association would be responsible to the holder of the note; that is, if any one bank failed to redeem its notes on demand, the holder could demand payment of any other bank belonging to the same association, and the bank so redeeming these notes could, on surrendering them to the Department (through the association), receive the securities deposited by the issuing bank and thus save itself from loss. In this way it would be the interest of the association to see to it that only unexceptionable securities were sent to Washington, and that each individual bank maintained a proper reserve. A currency secured and protected in this way would enjoy so great a measure of public confidence that a panic among note-holders would be among the remotest of contingencies.

Perhaps some one will object that the larger and more conservative banks will not be willing to stand as sponsors for their weaker brethren. Bankers, however, are our most enlightened and broad-minded business men, and will readily understand how much it is to their interest to have a sound and controllable currency, and one which will pass at par in all parts of the country.

I beg leave to dissent from your view (expressed in your article of October 6) that State notes would not get into circulation if they were not fully as good as national banknotes. I do not think that anybody who has a practical knowledge of the keen competition among merchants and bankers will agree with you. New York merchants nominally sell their goods for New York funds; nevertheless, the very largest and richest firms accept from their far Western and Southern customers checks on their local banks on which the actual loss in collection is from one-eighth to one-half per cent. It is true that in most cases they do not suffer the loss themselves, but pass it on to their banks, who receive such checks on deposit at par. They do it for fear of losing business. The same thing would occur with banknotes. If a large customer in Alabama or Nebraska sent a batch of depreciated banknotes to a dry-goods jobber in New York, the latter would not have the backbone to refuse them, and would deposit them at par in his bank, which in its turn would have no more backbone than he had, because it knows that a dozen other banks would be only too glad to take the account on the same terms. Before the war, when all kinds of banknotes were at all kinds of discount, the Metropolitan Bank built up a very large business in a very short time by announcing that it would receive country notes on deposit at par. Competition among banks at that time was not as strenuous as it is to-day. It was then unheard of that a bank president, or even a bank director, should go about among the merchants of his acquaintance "soliciting" accounts; it has become a common practice now. There is one bank on Broadway which last year appointed a so-called "Vice-President," whose whole business it is to go up and down the streets "drumming for trade," like any itinerant vender.

Under such conditions, which all banks understand very well, it is to the manifest interest of all conservative banks to avert a re-

turn to the State-bank system. It would benefit nobody who has anything to lose, and I am at a loss to know why anybody should advocate it as long as there is any way to maintain our present system on a safe basis. As for the opinion of Senator Sherman, quoted by you, "that the popular will has been expressed adversely to the continuance of the national system beyond the existence of the national bonds," one is tempted to say that the Senator, like Capt. Jack Bunsby, is "a man of mind and a man as can give an opinion," but that is all there is of it. I have never met with any such expression of "the popular will." Have you? A. T.

NEW YORK, November 10, 1892.

THE NILE CORVÉE.

TO THE EDITOR OF THE NATION:

SIR: In his recent book, 'Egypt To-day,' Mr. Frazer Rae states that, "in December, 1889, the *corvée* was totally abolished in Egypt, for the first time, probably, in all the thousands of years of Egyptian history" (page 177). Mr. Frazer Rae refers to me in such kind terms that I have every interest in maintaining his accuracy. He took infinite pains to arrive at the truth, and if he did not always attain the goal, the obstacles were such as would deceive, if it were possible, the very elect.

No more exact date is given on which the Egyptian serf emerged from the long bondage into the liberty enjoyed by every peasant of Europe. No "Emancipation Proclamation," no "Decree of the Council of Ministers," no "Statute of the Legislative Council" is cited. Mr. Frazer Rae gives as his authority the N. Y. *Nation*, April 21, 1892, p. 299. In a letter from Mr. Woodruff, of whose painstaking efforts to estimate at its fair value the influence of the English occupation of Egypt I was personally cognizant, it is said that the English set about to abolish the *corvée* as a part of their task. The Dual Control of Egypt had long exercised a power which rendered the abuse of the *corvée* impossible without the knowledge, and therefore acquiescence, of Major Baring. In 1882 the entire control passed into the hands of England. In 1884, M. Rousseau having been dismissed, Sir C. C. Scott-Moncrieff was made Under-Secretary of State for Public Works. He held office until July, 1892. In the (London) *World*, October 19, 1892, Sir C. C. Scott-Moncrieff informs its representative that he had instituted many humane and useful reforms.

"For instance, he abolished the *corvée*, a system of State unpaid, forced labor, which pressed most grievously upon the people, and constituted one of their great grievances. The *corvée* was employed to repair the banks of the canals, to clear the canals of silt deposit and to assist in the works of irrigation; but, as the only remuneration received was meted out in blows and stripes, the effect of this employment may be easily imagined."

This is a correct account of the *corvée;* but when was it abolished, in law or in fact? The Law of January 25, 1881, was modified by Arabi Pasha, on March 12, 1882, in favor of the Bedouins. A ministerial order was issued on March 1, 1887, signed by Sir C. C. Scott-Moncrieff, allowing "the tenants of the Pashas" the privilege of redeeming themselves. On January 29, 1888, a decree of the Council of Ministers extended this right of redemption, at forty piastres ($2.00) per man, to the peasants of *certain* provinces. In 1889 the *corvée* was in force in eight provinces, for the clearance of silt, and winter work. "The works were most thoroughly kept in order by the money of the *corvée* ransom, the *corvée* relief, and the *corvée* themselves." (Report, p. 60, §112, Cairo, 1890.) In 1891—nine years after the British occupation—her Majesty's Government published a Report by Sir E. Baring, in which he says, "The *corvée* has been wholly abolished." (Egypt, No. 3, March 29, 1891, p. 38.) Sir C. C. Scott-Moncrieff had made the same statement in *Nature*, and Sir E. Baring adopts it with the context almost without verbal change.

Thus Mr. Woodruff and Mr. Frazer Rae might appeal to authorities of the highest repute to sustain them in their position. Nevertheless, it is untenable. The *corvée* has never been abolished. It was called out within a month after Sir E. Baring had said that it had ceased to exist, in April, 1891, to fight the locusts, under the direction of Mr. Wallace of the College of Agriculture. It is in full operation at the present moment. On October 5, 1892, the *Journal Officiel* published (in English) that "Major Brown, Inspector-General of Irrigation for Upper Egypt, is still much dissatisfied with the work of the Kenah *corvée*." On October 8, "Major Brown specially praises the Mudir [Governor] of Beni-Suef, Mustapha Wahbi, for the very excellent arrangements he has made and the way in which the *corvée* has been worked."

Nor are the numbers of these forced, unfed, and unpaid laborers insignificant. In Gharbieh, three thousand peasants were requisitioned from other districts to work in the district of Chirbin. The Governor of Menufieh moves about his province, accompanied by a gang of 500 workmen. In Minieh, seventeen thousand five hundred and thirteen *corvéables* were reported as under orders on October 10. In Behera, 1,350 laborers were employed at a single point. In Menufieh, 1,200 men were at work on one bank. These facts are taken from the official organ of the Egyptian Government, pp. 1208 and 1209.

Fine and imprisonment are the legal penalties for disobedience. The law provides, however, for its own suspension, and remits the case to a Commission, formed, like the Lynch tribunals, out of a group of the neighbors, without a magistrate, who must decide, on the demand of the engineer, within twenty-four hours. There is a picturesque account, too long to quote, of a peasant, Abd el-Aty el-Sarry, who appealed to the Khedive in person in behalf of his father. "The old man" had been beaten, in spite of his obedience to the summons. The village-chief admitted that he had inflicted blows. He was "invited" not to repeat this form of compulsion on the bodies of those under his orders (*Journal Officiel*, September 29, 1892, p. 1203).

There is an ancient tale in which the little boy alleged that he was provided with a large number of first cousins, although his father had never had brother or sister and his mother had been an only child. The sole explanation necessarily imputed to the lad a disregard of truth. I recommend the moral to those who, like myself, can find no other explanation of the contradictions I have cited.

COPE WHITEHOUSE.

LONDON, October 24, 1892.

THE WASHINGTON GENEALOGY.

TO THE EDITOR OF THE NATION:

SIR: I have just found a piece of evidence that is interesting, and will, I think, prove of high value in determining this vexed question of the Washington family. In October, 1891, I sent you a letter from John Washington, in which he made mention of "Aunt Howard, who died about a year and a half ago" (*i. e.*, 1697 or 1698). In February, 1892, I sent an extract from a letter of George Washington, in which he said: "Mrs. Hayward must have been a daughter of the *first Lawrence*, and thence becomes a cousin of the second Lawrence and John." I hazarded the conjecture that Aunt Howard and Mrs. Hayward were one and the same person, and that she probably belonged to a generation previous to that assigned her by Washington. An attested copy of the will of Mrs. Martha Hayward was accidentally discovered by me last week in the Washington MSS. in the Department of State, and is as follows:

In the name of God Amen I Martha Hayward of the County of Stafford being sick and weak of body but of perfect sence and memory, thanks be given to God therefor Doe make and ordaine this my last Will & Testament

Impr^s I give and bequeath my Soul to God and my body to the Earth to be buryed in Christianlike and Decent manner att the disposition of my Exec^rs hereafter named and as for what worldly Estate it hath pleased God to bless me w^th all I give devise and dispose of in the following manner & forme

Item I give and bequeath unto my two cousins John and Augustine the sons of my coz^n Lawrence Washington of Westmoreland County one negroe woman named Anne and her future increase and in case of their deaths before they come of age then I give the s^d negroe to the afores^d Lawrence Washington & his heirs forever.

Item I give unto my cozen Lawrence Washington son of M^r John Washington of Westmoreland County one mallatto girle named Suka to him and his heirs forever.

Item I give and bequeath unto my cozen John Washington son of the said John Washington of Westmoreland county one mallatto Girle named Kate to him and his heirs forever.

Item I give and bequeath my cozen Nathaniel Washington, son of the said John Washington one Negroe boy named John to him & his heirs forever.

Item I give and bequeath unto my Coz^n Hen: Washington son of the said John Washington one negroe boy named George William to him & his heirs for ever.

Item I give and bequeath unto my kinsman M^r John Washington of Stafford County one negroe woman named Petty and her future Increase to him & his heirs forever.

Item I give and bequeath unto my kinsman M^r Rich^d Ffoot two thousands pn^ds Tobbacco to him & his heirs for ever.

Item it is my will & desire that my Ex^trs w^th all conven^t speed after my decease doe procure and purchase for each of my two sisters in Law viz^t Mary King and Sarah Todd a servant man or woman as they or either [of] them shall both like haveing att least four or five years to serve w^ch I doe give to them and their heirs forever.

Item I give and bequeath to my afores^d cozins the sons of my two coz^ns Lawrence and John Washington of Westmoreland County to Each of them a feather bedd and furniture to them and their heirs forever.

Item it is my will and desire that my Exec^trs with all Conven^t speed send to England to my Eldest sister M^rs Elizabeth Rumbold a Tunne of good weight of Tobacco, & the same I give to her and her heirs forever.

Item it is my desire that my said Executors Doe likewise take freight send for England to my other sister M^rs Marg^t Galbut [Talbut?] a Tonne of good weight of Tobbacco which I give to her and her and her [*sic*] heirs forever.

Item I give and bequeath unto M^r W^m Pruckner [?] of the County of York my gold signett.

Item I give and bequeath unto Ca^pt Law: Washington and his wife, M^r John Washington of Stafford County and his wife, M^r John Washington of Westmoreland County and his wife, Mary King, Sarah Todd and Mary Wheatley, each of them a gold of twenty shillings piece To be procured with all Conven^t speed after my decease.

Item I give and bequeath unto Samuel Todd son of Wm. Todd a heiffer about three years old

Lastly after all my just Debts are p^d all the

rest of my Estate whatsoever and wheresoever I doe give and bequeath unto Cap[t] Lawrence Washington, M[r] John Washington of Westmoreland County, & M[r] John Washington of Stafford County to be Equall[y] Divided between them and I doe hereby [ ] Constitute and ordaine the afores[d] Lawrence Washington & John Washington of Westmoreland County Execut[s] of this my last will & Testament. In Witnesse whereof I have hereunto sett my hand & ffixed my Seale this 6th day of May annoq[e] Domi 1697.

MARTHA HAYWARD.

Signed, sealed and delivered in the presence of us: Geo. Weedon, Sarah Kelly, Sarah ⋈ Powell, her marke, John Pike.

Proved and Recorded the 8[th] of December, 1697.

Vera copia Teste.

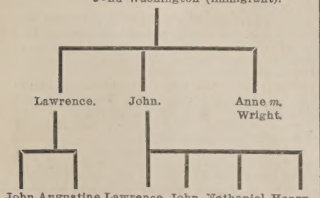
J. Perry

D. C. Cur. Com. Stafford.

From this will we establish the fact that Martha (the sister of the emigrants John and Lawrence), for whose journey to this country provision was made by John in his will, did cross the ocean and become Mrs. Hayward. The date of the will and the sentence in John's letter mentioning the death of Aunt Howard point to the same person. She moved to Stafford County, and was probably the wife of the Nicholas Hayward who obtained a grant of land there in 1689. The terms of her will would indicate that no children were given to her. The two sisters-in-law, Mary King and Sarah Todd, were probably of the Hayward connection.

We also learn of an entirely new family on the Westmoreland side—that of John of Westmoreland. The immigrant John had two sons, Lawrence and John. From Lawrence was descended the President, but of the second son nothing has been known except a rough note on the Heard table—"from whom are descended Henry of Chotank and John of Machotock." Mrs. Hayward's will gives the names of four sons of this John: Lawrence, John, Nathaniel, and Henry. We are justified in concluding that some of these sons, receiving Stafford property under this will, removed to Stafford. What is more probable than that the will of Henry Washington of Stafford County, executed in 1747, was the will of this son of John? Mr. Horace Edwin Hayden, who first printed the will, was led to believe that this Henry belonged to the line of the emigrant Lawrence, but I think Mrs. Hayward's bequests determine where Henry belongs.

So much for the light thrown upon the American family, which may be made clearer by the following table:



The will also gives us two facts hitherto unknown: the married names of the two sisters of John and Lawrence (emigrants) who remained in England. Elizabeth, who was baptized at Tring in 1636, became Mrs. Rumbold, and her sister Margaret married a Galbut or Talbut; and they were both supposed to be living when the will was made. Mr. Waters gives us additional evidence. Margaret Talbott was a witness to the will of Samuel Thornton (1666), who married an aunt of the emigrants, and so it is probable that Talbot is the married name of this sister. A sister of Mrs. Thornton, Elizabeth (Washington) Mewce, in her will (1676), left a legacy to her niece, Mrs. Elizabeth Rumball. With these additional clues to work upon, Mr. Waters ought to be able to report something of interest from the other side.

From curiosity, I should like to know if the use of the word "cozen" to denote a nephew was common at that day.

WORTHINGTON C. FORD.

BROOKLYN, November 8, 1892.

THE STEEL-WIRE-BINDING NUISANCE.

TO THE EDITOR OF THE NATION:

SIR: An English paper, speaking of our American periodicals the other day, said that one had to use a sardine can-opener before one could read them. Would that any form of can-opener known to me could suffice! I usually have five minutes' work with a knife-blade (which almost always gets notched in the process) and two pairs of pliers, one for cutting and one for pulling, before I can read any of our more serious reviews, like the *Forum*, the *Arena*, or the *Journal of Psychology*. The pages next the cover are hurt, of course, in the process, and the leaves, having no longer any connection with each other, easily get crumpled and eventually lost. It is but fair to say of the lighter monthlies, like the *Century* and *Scribner's*, that the wires are inserted nearer the back, so that, by strongly bending open the sheets and pounding the inner angle with some heavy object, the magazine sometimes will open sufficiently to be read without springing to, although held in only one hand. More commonly, however, both hands must be actively used to keep even these magazines open enough for reading. Bookbinders inform me that the wires are, if anything, a greater curse to them than to the readers.

The last straw which has broken the camel's back of my patient American disposition, and elicited this public protest, is the sudden appearance of that admirable journal the *Philosophical Review*, hitherto decently stitched and openable, with its back pinched up in a spick-and-span suit of steel wires on which I have just notched another knife-blade. Now, even in our non-resistant land, cannot some protest be made which may shame the publishers? In no other land that I know do they venture so to count on the tameness of the consumer, although in other lands the prize of a cent and a fraction saved on each copy must be equally inviting.

The worst of it is, that in this, as in so many larger matters, the universality of an abuse is bringing up an entire generation in ignorance of any better practice. In a few years none of us will remember that there ever were stitched-backed magazines, and our souls will be resigned to steel wires as to overheated cars and concert-halls and blizzards. But before that time comes, cannot the newspapers say a single helpful word? Or, better still, cannot a handful of readers whose spirit is not yet entirely broken organize a boycott which may have some effect? When the *International Journal of Ethics* first appeared, it was in steel wires. A lively letter to the editor from a single subscriber brought about its reform, and it has been stitched and readable ever since. Other editors may have less power; but if even a small number of subscribers to a review were to address the publisher, stopping their subscriptions as long as steel wires should continue to bar the way, they *might* produce a change of heart. Will not some readers of these lines adopt the suggestion?—Truly yours, WILLIAM JAMES.

FLORENCE, October 27, 1892.

THE TEACHING OF SPELLING.

TO THE EDITOR OF THE NATION:

SIR: Ever since your article "English at Harvard, and Elsewhere" appeared, I have been looking for a discussion of our irrational way of teaching how to spell and for proposals toward a radical reform. Indeed, I have often wondered why it is that we should cling to a method so fundamentally wrong, and why more rational methods should not be adopted. The faults of method, as I conceive them, are these:

(1.) Spelling is taught in utter neglect of the one great law of memorizing, the law of association. To remember a thing by itself and without joining it in some way to a thing already known, is always a difficult matter. But just this is what the child is expected to do: he must remember how a given word is spelled when he has nothing to remember it by. To illustrate: The two words "there" and "their" are continually confounded; yet where is there a teacher who would employ such a simple device as this?—Write on the board the two words "there" and "their." Take the first of these words, draw a line between the *t* and the *h*, and say that when the *t* is dropped, we have "here." The words "here" and "there" are readily remembered as going together, and the pronoun "their" will not be brought in. Again, the words "two" and "too" are continually confounded throughout the grammar school and the high school. Yet what can be more simple than a radical cure like this?—Write the word "twice," which no body misspells, and call attention to the fact that "twice," meaning *two* times, has the letter *w* in it, just as has the numeral *two* from which it is derived.

I am fully aware that the great multitude of teachers at once object to such a plan as taking too much time. This is a grievous mistake on their part. Of course not every word in the language requires such treatment; it is true, however, that all the common and ever-recurring mistakes in spelling can be thus eradicated by very simple means. Nor is this an untried opinion, and any teacher of spelling who will devote a little attention (and inventive power) to the subject, will find all the common mistakes vanish as if by magic.

(2.) Our scholars are required to learn the spelling of words with which they are altogether unacquainted and which convey to them no meaning. This amounts to an absurdity. I was once present at an old-fashioned spelling-match held at a teachers' institute. The word "syzygy" was given out to spell, and Mr. Schmidt was called on to spell it. "I do not know the meaning of the word," said he; whereupon there was a burst of laughter at so foolish an excuse.

Why does not some industrious schoolmaster win laurels by writing (say) a 'Magic Speller' upon the plan indicated? Here is a fine field for the display of inventiveness and of wit and wisdom. And what a blessing it would be to see all the common mistakes banished!—Respectfully,

WERNER A. STILLE.

ST. LOUIS, November 5, 1892.

COLLEGE ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: As a contribution to the discussion of "English as she is wrote in our colleges," I en-

close a clipping from the "Agricultural Department" of the *Ariel*, the weekly paper published by the students of the University of Minnesota. CORNELIUS.

ST. PAUL, November 9, 1892.

With this edition of the ARIEL the present editor of this department, having a very generous feeling for my fellow students, and not wishing to see any of them miss the advantage to receive the benefit that is always desired from a good honorable position, and having held the position for over one year, could not conscientiously hold it any longer, thereby standing in the way of some fellow student, therefore I resign, and have the pleasure of introducing to the readers of the ARIEL Mr. Thomas A. Haigh, a bright and energetic young man of the class of '94, who no doubt will fill the position better than it has been for the past year. We all wish him success in his new work. ED. AGR. DEPT.

Notes.

WARD, LOCK, BOWDEN & Co. will publish directly a 'History of the English Parliament, together with an Account of the Parliaments of Scotland and Ireland,' by G. Barnett Smith, in two octavo volumes, with facsimiles of documents pertinent to the theme, and the full text of Magna Charta, the Bill of Rights, etc.

Charles H. Sergel & Co., Chicago, have undertaken an edition of Voltaire's works in English, in forty volumes, by way of commemorating the two-hundredth anniversary of his birth. They will also add to their Medallion Series three books by Alfred de Musset—'The Confession of a Child of the Century,' 'The Beauty Spot, and Other Stories,' and 'Barberine, and Other Comedies.' 'Chile,' in their Latin-American Republics Series, will be by Anson Uriel Hancock, and 'Mexico' probably by Gen. Lew Wallace.

Worthington Co. announce for immediate publication 'Intellectual Pursuits; or, Culture by Self-Help,' by Robert Waters, author of the 'Life of Cobbett.'

J. B. Lippincott Co. announce 'Mother and Child,' a book for domestic use, by Drs. E. P. Davis and John M. Keating.

The Appalachian Mountain Club will publish this week, through W. B. Clarke & Co., Boston, a beautifully illustrated work entitled 'The Land of the Cliff-Dwellers,' by Frederick H. Chapin, author of 'Mountaineering in Colorado.' As the title suggests, the work deals principally with natural scenery and archæology, yet a succinct presentation of the history of the settlement of the Southwest forms the introduction. The 180 pages of text are interspersed with some 60 full-page illustrations, phototypes and half-tones, made from the unusually fine set of photographs taken by the author, chiefly in the San Juan Mountains and in the labyrinth of cañons that cut the strange Mesa Verde of southwestern Colorado.

The letters of Heine to various members of his family, the publication of which we have already announced, are 122 in number, and are said to throw much light—much needed light, one might say—on a tender side of Heine's character. They will also add to what is known at present about the poet's marriage. Mme. Charlotte Embden, Heine's sister, who publishes the letters, is now ninety-two years old.

The Harpers publish in a dainty little volume 'The Desire of Beauty,' by the late Theodore Child. There is nothing especially new in the book, but it is pleasantly written and sound in doctrine, and in this sort of general criticism the author is at his best, being unhampered by that lack of specific knowledge of art which we have heretofore commented upon.

'Emma,' in two volumes, is the latest issue in Mr. Brimley Johnson's careful and elegant little edition of Jane Austen's novels (London: J. M. Dent & Co.; New York: Macmillan). The series is one to which we might wish there were no end.

There is very little art, but there is something of nature, in Zulma DeLacy Steele's charcoal landscape illustrations to Mrs. J. C. R. Dorr's verses, 'The Fallow Field.' The poem invites rather a purely decorative treatment, for only a *tour de force* could keep the pictorial treatment of a fallow field, in black and white, from being monotonous.

The Messrs. Putnam have struck an excellent vein in their annual holiday reproductions of Irving, and this year's "Agapida Edition" of the 'Chronicle of the Conquest of Granada,' in two volumes, seems to us the best of the series. The text is framed in a constantly diversified border of an arabesque pattern in red and pale olive, and the thirty photogravure illustrations embrace not only scenery and architecture, but also portraits, historic paintings, and antiquities. They are of very even merit and a real help to the reader. The cover is elaborately wrought in white, gold, and color. Altogether, here is a gift-book well devised.

Mr. Garrett's illustrations hardly furnish a ground for preferring to the English edition of Matthew Arnold's selected 'Poems of Wordsworth' the one now brought out by T. Y. Crowell & Co. They are unimportant in themselves, if once or twice graceful, and the typography does not approach the English in openness or beauty, while the volume is swelled and weighted by over-thick paper.

When it first appeared, a few years ago, Mr. Fitzgerald Molloy's 'Life and Adventures of Peg Woffington' was shown to be a readable compilation of careless gossip, put together with little regard for accuracy. A new edition has now been published by Dodd, Mead & Co., admirably printed, and illustrated by some three-score "process" plates, mostly portraits and views, and neither skilfully chosen nor carefully reproduced. The best portraits of contemporary actors and actresses have not been selected, and those selected have been processed rather muddily, often from inferior impressions. The theatrical portrait-gallery of the end of the last century is extraordinarily rich in beautiful mezzotint engravings, many of which could be reduced and reproduced inexpensively and very effectively. As it is, these two seemly volumes look as though they had just left the hands of one of the professional "extra-illustrators" who do cheap work in London for export to New York.

Charles Scribner's Sons have now published in a beautifully printed volume the 'Three Plays,' by W. E. Henley and R. L. Stevenson, of which we made mention a few weeks ago. The three plays are "Deacon Brodie," "Beau Austin," and "Admiral Guinea." To the two former are prefixed the names of the actors who performed in them during their brief career upon the stage; the third has not yet been tried by the light of the lamps. All three are interesting experiments, written with curious care, like all of Mr. Stevenson's work, and yet not convincingly dramatic. Perhaps the scene most likely to be effective in the theatre is the final one of "Admiral Guinea"; but it may be doubted whether this play would find quicker popular appreciation than its fellows. We may note that the authors had already printed "Deacon Brodie" privately twice, and that both of these versions differ more or less from that here presented. In conjunction with Mr. Henley, Mr. Stevenson has also written a fourth play, a version of "Robert Macaire," and he has also printed for his friends still a fifth play, written in collaboration with Mrs. Stevenson.

"C. de Hurst," author of a little manual, 'How Women Should Ride' (Harpers), is a *nom de guerre* suggestive of Long Island and of the dangerous cross-country riding which is indulged in by members of the hunting set. Hence, perhaps, an inconsistency by which, on the one hand, women's riding to hounds is countenanced, and, on the other, parents are warned not to allow girls under sixteen to ride at all. It would be easy to obtain the very best medical testimony in favor of allowing girls to ride in moderation at any age, even when a leading-rein is an indispensable safeguard, while experience seems to be constantly strengthening the case against female cross-country riders. With this exception, the author's suggestions and illustrations are excellent, the book is pleasantly written, and it will doubtless prove very useful to young riders.

In his 'Descriptive List of Novels and Tales dealing with Life in Russia' (Cambridge, Mass.), Mr. W. M. Griswold can enumerate only about 100, and these, with the selected notices of critical journals, fill only twenty-one pages. What is striking is the fact, now readily discernible, that Russian fiction began to be presented to English readers a great many years ago. There was as early as 1831 a translation of Thaddeus Bulgarin's 'Ivan Vejeeghan' put on the London market, and pirated here the next year. In 1850 two attempts are recorded; in 1853 Turgeneff's' 'Annals of a Sportsman' appeared in Edinburgh, and an abridgment was borrowed by *Graham's Magazine* in 1854. Even Tolstoi's 'Childhood and Youth' found a London publisher as far back as 1862. With Eugene Schuyler's version of 'Fathers and Sons' in 1867, the tide began to rise steadily.

The Russian bibliographer Pavlenkoff, in a review of the book production in his native country for 1891, gives, among others, the following figures. During the past year there appeared in Russia, excluding Finland, 9,053 books and pamphlets in about 29,000,000 copies; of these, 6,588, in 23,000,000 copies, were in the Russian language, 840 in the Polish, 393 in German, 380 in Hebrew, and 219 in Lettisch. One of the most popular forms of literature in the Czar's land seems to be calendars, of which 229 were published, many of them in editions of over half a million. The most notable event in the Russian book world during this period was the expiration of the copyright of Lermontoff's works, in consequence of which ninety-two editions of them appeared in over a million copies. It is perhaps not wholly without significance that the largest class of publications was that of educational works, to the number of 574, exceeding belles-lettres by 65. The third largest number was medical. More than a third of the total number of publications appeared in St. Petersburg.

The Board of Women Managers of the State of New York for the Chicago Exposition have put forth a tentative 'List of Books and Articles by Women Native or Residents' of the State, which makes a creditable appearance. Notice of errors or omissions is desired to be sent to Mrs. Florence C. Ives, Assembly Parlors, Albany.

Miss Lucy M. Salmon, Professor of History in Vassar College, publishes a "Statistical Inquiry concerning Domestic Service" begun by her in 1888, the returns being collated by the

Massachusetts Labor Bureau. The paper also appears among the publications of the American Statistical Association. Some 5,000 circulars addressed to employers were distributed, over 1,000 of which were answered. About 700 replies were received to the circulars issued to servants, but an employment bureau in Boston added information as to the wages paid in some 3,000 cases. From these returns it appears that more than half the persons engaged in domestic service are of foreign birth, and that more than half of these were born in Ireland. The average weekly wages are figured at $3.23. Miss Salmon argues that, considering the board and lodging furnished to servants, they are better off financially than ordinary working-women, and are able to save as much as teachers in the public schools. Many opinions were obtained as to the relations between mistress and maid, but we do not observe that any fruitful generalizations are derivable from them.

In the new Department for the Graduate Instruction of Women at the University of Pennsylvania, whose formal opening was noticed in these columns last May, there are thirty students. Some are doing special work in chemistry, biology, metallurgy, and history; but the majority are studying for the regular Ph. D. degree. A Philadelphia correspondent writes "that the success of these women students has been so great as to cause the serious consideration of changing the name and scope of the Department so as to permit women students to enter the undergraduate as well as the graduate schools of 'Old Penn,' making it possible for them to secure a majority of the degrees awarded by the University." Those friends of higher education who, from the first, hoped that this new departure of the University of Pennsylvania would prove the entering wedge which should eventually open all departments, but particularly the Medical, to women, can evidently cheer themselves by recalling the statements frankly made by the University authorities in the spring, that while they deemed it "inexpedient to admit women to any but the post-graduate courses," they believed that full co-education could be "safely and effectually conducted."

We have received the first number of the *Kansas University Quarterly*, published by the State University. Its five papers have for subject, "Universal Curves by Method of Inversion," "Foreign Settlements in Kansas," with a map, "The Great Spirit Spring Mound," "On Pascal's Limaçon and the Cardioid," and "Dialect Word-List."

The *Pennsylvania Magazine of American History* for October opens with a paper on the ancestry and earlier life of Washington, by the Rev. E. D. Neill, which is accompanied by a photo-engraving of the sketch for the first portrait of Washington, made in May, 1772, by Charles Willson Peale. It is now owned by the Historical Society of Pennsylvania.

F. Lhomme makes in *L'Art* for October 1 a forcible protest against the proposed statue to Baudelaire, which he suggests should be placed at the outlet of a sewer if erected at all. He calls it "awarding to this dirty jester the same honors as to Corneille, Molière, Lamartine—to those who have strengthened, delighted, and consoled mankind." In the same number is given a sketch of the statue of Alfred de Musset, from Georges Veyrat's recent work, 'Les Statues de l'Hôtel de Ville'; and two caricatures from life by the same poet, representing the Princess Belgiojoso ("Elle était belle, si la Nuit"), from the Vicomtesse de Janzé's 'Étude et Récits sur A. de Musset.'

Petermann's Mitteilungen for September contains the results of a series of observations of the northern lights made between September, 1882, and the following April, by Sophus Tromholt. After a description of the station, a Lapp village in the extreme north of Norway, and of the methods pursued by him, he gives numerous tables showing the intensity, height, extent, form, motion, etc., of the appearances. In the same number is the map of Emin Pasha's route during his recent expedition to the west of the Victoria and Albert Nyanzas. From this it appears that he was able to get within 150 kilometres of Wadelai, his former seat of government in the Equatorial Province, but that he did not succeed in pushing his explorations to the westward in the great forest. The country between the Albert and Albert Edward Lakes is mapped in considerable detail, but the course of the river uniting them is still left undetermined.

'The International Date Line,' by Henry Collins (Syracuse: Bardeen), is an instructive little pamphlet concerning the change of date commonly made on the Pacific Ocean. It is shown that the meridian of 180 degrees has not in this respect the importance generally attributed to it. In consequence of the curved course of the date line, varying its longitude between 117 degrees E. and 168 degrees W., the duration of any date, as January first, extends over 53 hours. Therefore, during five hours in the forenoon of New Year's Day with us, certain islands in the mid-Pacific are already in January 2, while the Philippine islands are still finishing December 31.

The Görlitz and the Rügenwalde sheets of Vogel's Map of the German Empire (Gotha: Perthes; New York: Westermann) have just been issued, and now of the twenty-seven squares into which the map has been divided, only one remains blank that does not touch a finished square.

—The Washington-Madison Papers (McGuire collection), to be sold in Philadelphia early next month, make the most important collection of historical MSS. ever sold in this country at public auction. The remarkable series of letters from leading Virginians are of high value as autographs, being fine specimens, but are of far greater interest from their contents. The Washingtons alone, upwards of seventy in number, written in the fullest confidence to Joseph Jones and James Madison, are unequalled; the only collection that can be compared to this is the Washington letters to Joseph Reed, sold in 1875. For a single letter of the Madison number the late James Lenox offered what was a fabulous price at the time, for it contained the first hints for a farewell address—the hints that four years later were developed into the address as issued. Apart from the Washingtons, the collection must stand unique in its series of letters from Joseph Jones (122), Edmund Pendleton (135), Edmund Randolph (132), John Armstrong (85), and Jonathan Dayton (17)—all to Madison, with more than 200 from Madison in return. It is impossible even to hint at the contents of these letters, but they are of exceeding interest. The sale is absolute: the Washingtons will be disposed of piece by piece—the others in series or lots. In the latter part of the catalogue are some letters of Washington to Tilghman, sold at auction before, but bid in by the family; some remarkable Revolutionary letters, and a unique Duché—a copy in his own hand of his famous letter to Washington. It is a striking evidence of the value of the greater part of this collection that the merit is at once seen in spite of the vagaries of the cataloguer, who has missed his vocation, and should be the writer of headlines on a twopenny dreadful. His misstatements are too numerous and glaring to require criticism, yet one calls for notice. Lot 90 is the *Journal* of the Constitutional Convention, not the *Debates*.

—The McGuire collection has twice been placed at the disposal of the Government, and offers a good illustration of the indifference of our officials to historical material. At the time Congress purchased the Madison Papers, it was due to the carelessness of its agent that these letters—the cream of the Madison collection—were not included. After they had honestly come into the possession of Mr. McGuire, the Government sought to establish a claim, but its own Attorney-General, Caleb Cushing, decided in favor of Mr. McGuire. Four years ago the attention of Mr. Bayard, then Secretary of State, was called to the possibility of purchasing them, and he once opened a negotiation, which remained inactive through the neglect of Congress. A part of the Joseph Jones letters were printed, by Mr. Bayard's instructions, to show their historical value, but without exciting any intention on the part of Congress to seize the opportunity. The result is that the Government holds the so-called Madison Papers, while the more valuable, though smaller, portion of what the Government did not get, is to be scattered beyond recall. It may be added that three of the great collections of historical MSS. in the Department of State are in this curious position, viz.: the Jefferson, the Madison, and the Monroe papers, for in each case the Government holds but a part, and the descendants or representatives of these Presidents the rest. The neglect is the more shameful as copies of the McGuire could have been secured at no cost to the Department.

—A new edition of Herndon's 'Life of Abraham Lincoln,' revised and enlarged, has just been published in two attractive volumes by D. Appleton & Co. Among the new matter are an introduction by Horace White, a description of the Lincoln-Douglas campaign of 1858 by the same writer, who was Mr. Lincoln's travelling companion during the greater part of that celebrated contest, and an important chapter on Mr. Lincoln's speaking campaign in Massachusetts in 1848, which has been neglected by previous biographers. This chapter, and the excellent revision of the whole, are due to Mr. J. W. Weik, Mr. Herndon's fellow-worker in the preparation of the first edition. Some matter in the first edition which was objected to on the score of good taste, but was not essential to a true biography, has been omitted and the illustrations have been sifted and reëngraved. The three portraits of Lincoln are the best that exist, and not the least characteristic of these, the Lincoln of the Douglas debates, has never before been engraved. When this book first appeared, we said:

"Mr. Herndon's personal recollections of Lincoln will doubtless remain the most authentic and trustworthy source of information concerning the great man in the period prior to his elevation to the Presidency. His real subject is the growth and development of Lincoln's powers and character. From many other sources we may get fuller material for the part of Lincoln's career which properly belongs to history; but Herndon's narrative gives, as nothing else is likely to give, the material from which we may form a true picture of the man from infancy to maturity."

An examination of the work in its new dress and of the additions made to it confirms this

view. The publishers are to be congratulated on the improved appearance of the volumes.

—A small volume just issued from the French press of Arthur Rousseau, Paris, must be taken as a significant sign of the times. 'The Political Condition of Women' (*Essai sur la Condition Politique de la Femme*, by Louis Frank, Docteur de la Faculté de Droit de Bologne, et Avocat à la Cour de Bruxelles), is the Rossi prize thesis in constitutional law for 1891. This prize is offered by the Law Department of the University of Paris, and the subject appointed for last year's competition was, "The Condition of Women with respect to the exercise of public duties and political rights: a comparative study of legislation." The thesis is an exhaustive study of the political rights of women, and a refutation of the accepted arguments against the recognition of such rights; its conclusion is, that the age of the subjection of women is rapidly passing away, and that in the new conditions we shall lose nothing and gain much. Those who dread the effect on women of a general acceptance of their rights and personality, may feel comforted by Dr. Frank's assurance that not even equality in political privileges will prevent women from devoting themselves with their habitual ardor to please the so-called superior sex. A supplement gives a full collection of laws and documents which set forth the present political rights of women in all civilized countries. From such accurate data it appears that, while the foundations of society are not thereby in any appreciable way disturbed, women have to-day full suffrage in Wyoming, Nova Scotia, the Isle of Man, Chili, Ecuador, and in five provinces of Austria. They have municipal suffrage in Austria-Hungary and Croatia, in Prussia, Saxony, and Brunswick; in the majority of the Scandinavian countries, *i.e.*, Sweden, Finland, and Iceland; in Russia, in England and Scotland, in all the English colonies from Cape Colony to New Zealand, and from Australia to Canada, and in the State of Kansas. In twenty-one of our States they have school suffrage.

—The latest grant of a "fair field and no favor" to women comes from the University of Edinburgh, which (in exercise of the discretion conferred by Ordinance 18 of the Scottish Universities Commissioners) on Wednesday, October 19, opened its Arts class-rooms to women students on the same terms as men. The Scotch lads thus brought face to face for the first time with coeducation promptly endorsed the decision of the University authorities for mixed classes, and "cordially cheered the new arrivals as they entered, accompanied by the Association for the University Education of Women." While numerous women students appeared in the classes in history, geology, logic, moral philosophy, mathematics, Latin, and in the Senior Greek Class, the "pressure" from the new contingent of University students was focussed in the class-room of Prof. Masson, a stanch friend of women, and a popular lecturer with "Tennyson" for his subject. His audience (640 men and 80 women) proving too large for the ordinary class-room, was adjourned naturally and without comment to a hall of more generous proportions. This final assimilation of the women's classes (conducted strictly on University lines of study, by University professors) with the University of Edinburgh finds six women waiting for their degrees, and one hundred and twenty in mid career for that honor, having already passed in several of the "sacred seven" subjects required by the orthodox curriculum. With this new departure of mixed classes, the University gives to all students a wider choice of subjects qualifying for a degree, and the results of such latitude in its effects on study and "honors" will be closely watched by Scotch educators. Although women, like the Irish, are being rapidly deprived of their traditional grievances, as in the case of the Irish also each fresh sop merely whets their appetite for more—the more in the case of the University of Edinburgh being that the grace now granted to women Arts students shall be extended to women Medical students, as has been done at the University of Glasgow.

—The October number of *Free Russia* gives some account of a little book just published by H. Georg, at Geneva, which will be of special interest. It contains, besides various political matters, the letters that passed between Herzen and Turgeneff from 1849 to 1869. These letters throw a good deal of new light upon the personal attitude of Turgeneff towards the revolutionary movement in Russia, as well as upon his relations with Herzen and his journal, the *Kolokol*. It appears that about 1860-61 Turgeneff took a very considerable part in editing that journal, both furnishing and inspiring articles denunciatory of the Government, some of which went so far as to attack personally the Czar himself. In 1862 a difference arose between him and Herzen. Turgeneff wished to begin an agitation for a representative assembly of deputies gathered from all the provinces. Herzen disliked constitutionalism, and the difference widened till the two men severed all relations with each other. The final breach was caused (according to Prof. Dragomanoff, the editor of the volume) by personal weakness on the part of Turgeneff. What sort of personal weakness is meant we are not told, but any one familiar with the story of Turgeneff's proposed duel with Tolstoi may perhaps guess it. The book has an appendix containing an account of the relations of Turgeneff with Dostoyevsky, and some personal details about Turgeneff contributed by the editor. Unhappily for most readers, the book is published in Russian; it should be put into English, or French, as doubtless it will be.

—In the latest fascicule of the *Giornale Storico della Letteratura Italiana*, Renier and Luzio bring forward supplementary evidence of a new character to demonstrate that the 'Questio de aqua et terra,' so long attributed to Dante, is a sixteenth-century forgery. Unknown to the early biographers of and commentators on Dante, the 'Questio' first came to light in 1508, when it was published at Venice by Fra Benedetto Moncetti da Castiglione Aretino, who took the liberty of correcting Dante's handiwork "diligenter et accurate," according to the taste of the period. Little attention was paid to it at the time, and not until recently has it been reprinted with Dante's other works. As to its authenticity, scholars have been divided. Some, and with them a geologist of note, have maintained that Dante, upholding the proposition that the earth is everywhere higher than the surface of the sea, had so far penetrated into the secrets of nature as to divine several of the discoveries of later science—that of planetary attraction, among others; the opposing party finds that several of these revelations of genius were common to older writers, Brunetto Latini and Ristoro d'Arezzo, and that others are best accounted for by supposing that the 'Questio,' of which no manuscript is known to exist, was written shortly before its publication. As to the internal evidence, Renier and Luzio withhold their opinion, contenting themselves with publishing letters to and from Moncetti, and facts about him, that go far to make it antecedently probable that he would never have hesitated an instant to forge any document helpful to his ambitious projects. He was, it seems, greedy for high and lucrative church offices, which he eventually secured, and to obtain which he made a lavish use of dedicatory and congratulatory epistles. The 'Questio' is elaborately dedicated to Cardinal Ippolito d'Este, and is followed by numerous flattering poems of a certain Gavardi, his friend (and perhaps his sometime master), among them an epithalamium for the marriage of Alfonso d'Este with Lucrezia Borgia, whom he styles *sponsa pudica*. The accumulative evidence of trickery and wily flattery is not of course conclusive to prove the inauthenticity of the treatise, but it at least makes us resolve not to give Moncetti the benefit of many doubts in the trial by internal evidence.

STEPHENS'S ORATORS OF THE FRENCH REVOLUTION.

The Principal Speeches of the Statesmen and Orators of the French Revolution, 1789-1795. Edited with introductions, etc., by H. Morse Stephens. 2 vols. Oxford: Clarendon Press; New York: Macmillan. 1892.

WHAT is the essential difference between the Revolutionary eloquence of France and the Parliamentary speaking of England? This is a question raised and answered by the admirable treatise on French oratory which Mr. Morse Stephens has written as an introduction to his collection of orations delivered by Revolutionary leaders. The inquiry is, both from a literary and from an historical point of view, well worth consideration. The aim of this article is to set forth the answer either directly raised or immediately suggested by Mr. Morse Stephens's luminous analysis of the characteristics which marked the rhetoric or eloquence of France towards the end of the last century.

French eloquence is essentially a part of French literature:

> "The French people have as much cause to be proud of their orators as of their actors; for the qualities which make them preëminent on the stage are likewise indispensable to the statesman in the tribune and the preacher in the pulpit. . . . . A natural aptitude for speaking in public is supplemented by the use of a language peculiarly fitted for the turns and tropes of oratory, and by the systematic cultivation of the study of rhetoric. . . . Rhetoric as an art has always been sedulously cultivated in French schools and universities, and, while it has dropped out of the curriculum in most European countries, it has maintained its position in France as one of the most important branches of education."

These words of our author's, taken from a passage too long for complete quotation, but every line whereof is worth reading, contain the solution of the problem before us. The speeches published by Mr. Morse Stephens are nearly all of them elaborate literary productions; they differ in merit according to the varying talent of the different speakers, but they all belong rather to the world of letters than of politics. They were most of them read rather than spoken; they were written for publication; they are the work of the pen, not of the tongue; they tell of the closet and the lamp; they bear comparatively small traces of the readiness in repartee which belongs to debate, or of the cut and thrust which marks Parliamentary warfare. Still less are they

infected by that quarter-sessions style which gives an air of commonplace dulness to the debates recorded in Hansard.

Many circumstances tended to give to French eloquence a tone which was always rhetorical and frequently theatrical. But our author has called attention to one fact of supreme importance which has hitherto, as far as we are aware, not received among English critics of the Revolution anything like due attention. The statesmen or the Revolutionists who came to the front in the States-General, in the Legislative Assembly, or in the Convention were many of them endowed with the highest oratorical gifts; but, whatever their natural talents, they had before them no native models of political oratory. Since the reign of Louis XIV., the Ministers who governed France, the men really acquainted with the art of administration, had not studied, because they had no temptation to study, the art of addressing or of leading a popular assembly. Real administrative ability, or skilfulness in intrigue, might raise a man of talent to power; but, under Louis XIV. and his successors, political office was not gained by eloquence. In the pulpit, on the bench, at the bar, in the literary academies which were scattered over France, or on the stage, eloquence might lead to fame and riches. Hence French oratory was either the oratory of the pulpit, the oratory of the judgment-seat, or the oratory of the Academy or the theatre. The inevitable result of this condition of things was that the speakers who sought to guide or charm Revolutionary assemblies which had suddenly become possessed of supreme power, spoke like preachers, like magistrates, like advocates, like Academicians, or like actors, but, except where individual genius, as in the case of Danton, broke through the trammels of literary tradition, hardly ever spoke like debaters or statesmen. To this must be added the consideration that, just because statesmanship or administrative ability was not allied with knowledge of affairs or capacity for conducting either Parliamentary or, indeed, any other kind of government, the actual business of conducting France through a period of unexampled peril fell into the hands of committees who addressed the ruling assembly through lengthy reports.

Mr. Morse Stephens has not been able to lighten the infamy which has made the name of Barère a by-word for meanness and faithlessness. He has, however, explained how it happened that the most worthless of a gang of villains should exercise the influence undoubtedly possessed by the Gascon liar and traitor. The explanation is, that the fluent pen of a ready writer, who could at any moment express, in a style which met the taste of the day, the wishes of whatever party happened to be in power, was a necessity for administrators who were forced to communicate with an assembly by means of written documents. Barère wrote reports, just as some scoundrels write leaders, with absolute indifference to the morality or the expediency of the policy of which he was for the day the advocate. Here again we come round to the fact from which we started, that French eloquence, during the height of the Revolution, was a portion of French literature. No doubt at the time when Barère played a leading part, French letters, in common with French eloquence, were under a cloud. When the policy of the nation is determined by an appeal not to argument but to the guillotine, it is impossible that men should reason forcibly either in writing or in speech. Still, Barère's position shows how important was in his time literary as compared with rhetorical ability. Except in the press, Barère, or a man like Barère, but of ten-fold his ability, would have been useless either to Pitt or to Fox. Parliamentary statesmen are themselves the guides of Parliament. They do not need, in Parliament at least, the services of a fluent and a bombastic rhetorician.

Let us, however, remember that French eloquence has gained as well as lost by its predominantly literary character. The speeches edited by Mr. Morse Stephens are, like almost all orations, written or spoken, dull reading. An address composed to influence hearers can hardly ever be well suited to the taste of readers. It is common knowledge that the words of men who sway, and rightly sway, the passions or judgment of popular assemblies, when put down in writing neither excite the feelings nor convince the reason of readers. Still, the Revolutionary oratory of France reads better than one might expect, and, to do French speakers justice, we must recollect that the whole taste of the eighteenth century was rhetorical. Much of the declamation which Mr. Morse Stephens repeats, sounds nowadays stilted and absurd. It is hardly possible for the reader to understand how Louvet's indictment against Robespierre produced the immense effect which critics who heard it attribute to it. We can, however, partly understand Louvet's immediate success when we reflect that the charges he brought against Robespierre were, as the event proved, substantially true, and that the effect of declamation depends upon the way in which it is delivered. It is easy enough to believe that the rhetoric of Louvet and the eloquence of Vergniaud derived at least half their force from the mode of delivery. Declamatory harangues are not easy reading; still, the speeches of the French orators are speeches which, in the mouth of a great rhetorician, might, conceivably at least, produce a grand oratorical effect. Robespierre is a preacher, and a dreary preacher, but even his painful sermons are not always deficient in at any rate the possibilities of rhetorical power. Can any one say as much for nine-tenths of the speeches which load with their heaviness the unread and unreadable pages of Hansard?

The Parliamentary oratory of England, if, indeed, it can be called oratory, is, both in its defects and in its merits, the exact antithesis to the eloquence of France. It is deficient in anything of literary character. Let any one, for example, try to read passages from the speeches of Peel, of Lord Russell, or of Palmerston. He may find in them a good deal of historical interest; he may, if he reads between the lines, see in them marks of debating power; but no one would dream of considering the speeches of these statesmen as in any sense contributions to the literature of England. Names, no doubt, occur to one of here and there an orator who has left behind him spoken words of literary merit. There are speeches of Burke's which will be read as long as the English tongue endures; but then Burke, with all his immense genius, was not preëminently successful as a speaker. His speeches are read partly for the very reasons which, when the speeches were delivered, made them comparatively ineffective as orations. It may well be doubted whether of recent times any speaker, except John Bright, has produced speeches which will be found permanently readable. On the other hand, English oratory, with all its literary faults, has the virtues inherent in its Parliamentary character. Speeches which read badly enough as compositions are often, as any intelligent critic can see, admirably suited for their purpose. The purpose of a Parliamentary speaker is to be effective in debate. It may be true, as Mr. Morse Stephens more than once asserts, that a speech in Parliament never changes a vote, though we suspect the statement to be to a certain extent exaggerated. It is certainly true that speeches, both in Parliament and out of Parliament, do indirectly, if not directly, affect the power and position of political parties. No doubt success in debate does not mean the same thing as success on a division; but debating talent would not be cultivated if it were worthless. If a new Cromwell were to close the doors of Parliament and, unlike the Protector, keep them permanently closed, capacity for arguing before a Parliamentary audience would soon die out in England.

This capacity for debate is no trifle; it means something more than mere rhetorical deftness. It means a certain knowledge of human nature and a power of dealing with men, or at lowest with men of a certain class. A glance or two at Danton's speeches will show that Danton was a born debater. Place Danton's terse reply to Roland's report side by side with Robespierre's lengthy answer to Louvet's indictment. They both in substance deal with the same thing. Neither Danton nor Robespierre can really get rid of the terrible responsibility for the massacres of September. Still, Danton's answer appeals to feelings sure to weigh, and to a certain extent rightly, with every assembly. It would have been as effective, if delivered under like circumstances, at Westminster as it was at Paris. Robespierre's speech contains some effective points, and one or two of them are so unlike the ordinary manner of the speaker that it is impossible not to conjecture they may have been suggested by Danton. But, on the whole, Robespierre's apology is as weak as it is lengthy. It was apparently effective at Paris. It is hard even now to understand how the maudlin hypocrisy of his rhetorical tears over the fate of the "one" innocent man who may have perished in the massacres of September, failed to excite irrepressible indignation. Was it, after all, the force of Robespierre's arguments or the power of the Parisian mob which induced the Convention to pass to the order of the day?

The capacity for debate which is as undoubtedly possessed by many English Parliamentary speakers as it was undoubtedly wanting in most of the Revolutionary orators, does not relieve the reader of Hansard from a sense of unutterable weariness. If he wishes to do justice to English Parliamentary speaking, he must note its real merit, which has absolutely nothing to do with literary ability. The speeches which English Parliamentary leaders deliver are spoken by men who, as a rule, are more or less versed in business. Their language is the language of politicians who have been in office or who expect to gain office. Many, again, of the audience are persons versed in local business or in commercial affairs. Quarter sessions or a counting-house are not schools of oratory; but a great deal is learned there of which the members of the Revolutionary assemblies were ignorant. The essential difference, in short, between the eloquent rhetoric of the Revolutionary era and the humdrum speechifying of the House of Commons is that the one was the outcome of French literary training, the other is the product of Parliamentary habits. A Revolutionary style produces a Revolutionary tone of thought; a Par-

liamentary style produces a Parliamentary tone of feeling.

There is a very close connection between the oratory and the policy of the Revolution. At some future day we may point out to our readers some of the historical inferences suggested by Mr. Morse Stephens's book. It is a piece of excellent workmanship; it never should be out of the hands of any one who is studying the annals of the Revolution. On the present occasion it is enough to look at Mr. Morse Stephens's introduction as an essay on French eloquence. It is a charming essay in itself, and is specially interesting to any one who cares to work out the fundamental contrast between the French and the English type of character.

OLD ITALIAN MASTERS.

Old Italian Masters. Engraved by Timothy Cole. With historical notes by W. J. Stillman and brief comments by the engraver. The Century Co. 1892.

THIS reprint, in book form, of Mr. Cole's wonderful engravings from the old masters which appeared originally in the *Century Magazine*, makes a most interesting volume. It is interesting not only as the latest attempt at an elaborate series of renderings by engraving of the masterpieces of the Renaissance, but as the best that has been made, and as, perhaps, the last that is likely to be made. The very causes, apart from Mr. Cole's own talent, that have rendered such fidelity in copying possible are likely, henceforth, to render such copying superfluous.

Of Mr. Cole's talent or of the merit of these copies there can be no doubt. Mr. Cole is, in many qualities of his art, and those precisely the qualities most needful for the task he has undertaken, the first wood-engraver that ever lived. In delicacy, refinement, accuracy, subtlety of light and shade, beauty of tone, he has no equal. There have been engravers of more original force and vigor—engravers capable of a bolder and freer interpretation of nature or art—but never was an engraver so fitted by temperament and skill for the close and infinitely delicate copying of a work of art. To produce this work, however, it needed not only the man but the tool. The condition of the work was the development of modern wood-engraving, which, in its turn, is conditioned upon the development of photography. In Taine's phrase, "the *milieu* and the moment" were favorable to the production of the work. They are already beginning to be unfavorable to the production of such another.

Many of the older engravers upon copper and steel were artists of great power, but they had not been trained by photography to understand an accuracy of rendering essentially unfitted to their material, and they treated the pictures they engraved much as the earlier wood-engravers treated the drawing on the block, as material for the evolution of an independent work of art. As engraving much of their work is admirable, but as an aid to the study of the originals it is quite useless. Photography came and instructed the world, and a demand grew up for such reproduction of works of art as should give not only the composition of the original but its very touch. From this demand grew the modern art of wood-engraving, and wood-engraving as Mr. Cole practises it was, for a time, better than photography itself. Photography had very serious faults: yellow took black, and blue took white, and often the whole scheme of light and shade of a picture was thus completely disorganized. Photography had taught us to value accuracy of reproduction, but it was not itself accurate enough to supply the demand it had excited. This was the "moment" for such a work as Mr. Cole's. His engravings, at their best, are not only much more like their originals than any engravings that had ever been made, but they are, in some ways, more like than any ordinary photographs. Compare, for instance, his plate of the head of Botticelli's "Primavera" with the common photograph of the same head, and you will see at once the superiority of the former in light and the effect of color.

Wonderful as an interpretation may be, however, it is still an interpretation, and the student will prefer to use his own eyes and will distrust another's. We prefer, when we may, to read our art, like our literature, in the original. Even a bad photograph has this great advantage, that it has no personal equation; the page may be torn and blotted and hard to read, but it is not a translation; the statue may be mutilated, but it is not "restored." And photography has not stopped in its development. Within the last few years the orthochromatic process has been perfected, and photographs are now taken as marvellous in their rendering of tone and color-value as the first photographs were in their rendering of form, and as much beyond any hope of human rivalry. The day of the reproductive engraver is passing. Henceforth the sun will do our copying for us, and man cannot contend with Phœbus Apollo. The engraver must become an independent artist if he is to exist much longer. Therefore it is that we believe this book to be not only the best piece of work ever produced in its line, but to be the last very important piece of work in this line ever likely to be produced unless by the same hand.

Mr. Stillman's "Notes" are, of course, able and careful from the point of view of the archæologist and historian. As a critic his views are obviously colored by his extreme idealistic theories. He not only believes that the spirit is more than the form, and that imagination is better than naturalistic power, but he seems reluctant to find imagination in any work possessing anything like technical perfection. He has not only, in common with us all, an almost unbounded admiration for Giotto, but also a most hearty admiration for the smaller men that succeeded him. Orcagna he apparently places at the summit of art, "like Saul, head and shoulders above the crowd—great in all the great qualities of art." With Masaccio a marked coldness begins and increases to the end. Leonardo he thinks a realist, and considers him "the most luminous proof in the history of art that the really scientific and the completely artistic faculty do not coexist in one mind." Michelangelo he cannot help admiring, but he seems to do it grudgingly and to wish that the master had confined himself to sculpture, while he overlooks the most personal qualities of that artist, even as a sculptor, by calling the Pietà in St. Peter's "the most perfect of all his works." Raphael he finds "full of the graces that demoralize art," and he expresses his personal preference for "the earliest stage of his evolution" as shown in the "Madonna del Granduca." The great naturalistic schools naturally suffer still more. There is no word of praise for Titian except in the one phrase "the greatest of colorists," and no such word at all for Giorgione, while Veronese is only "the greatest of the decorative painters of the sixteenth century, *judged as decorator simply*," and Correggio meets with denunciation rather than praise.

Mr. Stillman maintains that there was no "return to nature" in the work of either Cimabue or Giotto, though his argument only tends to prove that they did not paint directly from nature, and not at all that they did not try to get more nature into their work than was to be found in Byzantine art. On the other hand, he can see in Masaccio only the initiator of that period of scientific and naturalistic research which followed him, and seems to miss altogether his peculiar merit, that of the man who, a hundred years before Raphael, prophesied the grand synthetizing style of that master. He seizes upon Dürer's remark that Bellini was still the best painter of Venice—Giorgione being dead and Titian more than forty-five years old—as a justification of his own judgment that Bellini "held the position in the school of Venice that Phidias did in that of Greece," without noting that Dürer's nature and training rendered him the most biassed of judges, and one who would inevitably decide in favor of the clear and finished work of Bellini as against the broader method of his successors.

"Later," says Mr. Stillman, "Giorgione and Titian revel in a far more complete abandonment to the fascinations of art and in the pursuit of 'art for art's sake,' just as in the Greek school Praxiteles and Scopas carried the triumphs of art, if not its refinements, to a stage beyond the Phidian. We give an intellectual adhesion to the preëminence of the Elgin marbles, but, in my opinion, every artist who is honest with himself says to himself that he enjoys the Hermes and the Venus of Milo more than the pediment of the Parthenon, just as he prefers the 'Sacred and Profane Love' to a masterpiece of Giovanni Bellini."

We have quoted this passage in full because it seems to us to show, more than anything in the volume, the errors into which a critic may be led by adherence to a theory; for almost any serious sculptor will tell us that he does *not* enjoy the Hermes more than the Parthenon marbles, and that precisely one of the things he most enjoys in the latter is the combination of ideal power with a magnificent *realism* (we insist upon the word) which is unequalled in any work, earlier or later, and which makes the Hermes, when compared with the Ilissus, look like a man of clay compared with a man of flesh and blood.

It is this same combination which marks the giants of the Renaissance, and Mr. Stillman's dislike of realism in any form blinds him to their noble ideal power and leads him to misjudge them. He will not allow that all progress in art has been made through the careful and *scientific* study of nature. Realism as an end is bad, but as a means it is invaluable. Genius is incommunicable, but when it comes, the better the tool it finds to its hand, the better the result. When the highest genius uses as its tool the most perfect technique, the true masterpiece is born, but there are always some who cannot see the genius for the very perfection of the technique, and who cry out for the work that seems to have greater meaning because it certainly has little else.

We will touch on a minor point or two. Mr. Stillman denies that Titian was a "pupil" of Giorgione, and, in the strict sense of that word, he is probably right; but we think he goes too far in denying any considerable influence of one upon the other, and in maintaining that everything characteristic of their art is derivable directly from Bellini. In this contention he seems to ignore the technical manner of painting. Either Giorgione or Titian,

or both of them, invented the modern method of painting, with heavy masses of color, called impasto. Bellini painted thinly to the end. The probability seems to be that Giorgione was the more precocious genius of the two, and first broke with the traditions of the school of Bellini and initiated the new method, and that the tradition is right that makes Titian his follower, if not, strictly speaking, his pupil. A misprint on page 216 makes Mr. Stillman put Perugino's death a hundred years too early, while a strange slip of the pen makes him speak of Louis XIV. as reigning in 1563 or thereabout. It is a pity that the generally chronological arrangement of the Notes should be disregarded in several instances, most unaccountably in that of the notice of Carpaccio, which is placed immediately after those of Lorenzo Lotto and Luini. To the careless reader this is likely to prove a stumbling-block. In the life of Veronese it is stated that when he came to Venice, in 1555, Tintoretto was "absorbed in his great undertaking at the School of St. Rochus"; yet in the life of the latter the date of the first competition for that work is given as 1560, and Veronese himself is stated to have been one of his competitors.

The "Notes by the Engraver" are full of a naïve charm, and, while not free from the vice of reading profound meanings into the blunders of early painters, often show a deeper sympathy with the artist discussed, not to say a truer insight into his methods, than do Mr. Stillman's more formal criticisms. In conclusion a word should be spoken for the wonderfully perfect printing of the blocks by Mr. De-Vinne, which is much in advance of what was always possible in the *Century*, and almost doubles the value of the work.

Favorite Flies and their Histories. By Mary Orvis Marbury. With many replies from practical anglers to inquiries concerning how, when, and where to use them. Boston: Houghton, Mifflin & Co.

MRS. MARBURY is a daughter of Mr. Orvis, a dealer in artificial flies, and the illustrations with which the book abounds are copies, lithographed in colors, of his handiwork. This and the constant references to the Orvis factory are likely to make a carping reader think the work was intended chiefly as an advertisement of the goods of this especial brand. There is, however, much of interest in the book, and Mrs. Marbury, when she writes herself, shows a familiarity with entomology and a love of nature that make one wish she had contributed more largely to the volume, and not confined herself to 50 or 60 pages. The other 400 and odd are chiefly made up of letters written to Mr. Orvis, in response to inquiries made by him, from anglers in all parts of this country, with regard to the kinds of flies used in the localities where they fished. As may be imagined, this disconnected mass of letters, though instructive to a limited extent, is not at all fascinating reading. Of the colored plates of flies there are about 300, which will give an idea of what a man should have to be thoroughly equipped for angling from the natural Orvis standpoint, assuming, of course, that the fly-book should contain an assortment of sizes of each kind. The fact is, that this great multitude of flies for any kind of fishing is the most arrant nonsense, as certainly two-thirds of them are so nearly alike that no trout, bass, or salmon could tell the difference. Pennell perhaps goes to the other extreme in claiming that half a dozen are sufficient, but his outfit on the whole would be about as satisfactory as, and infinitely cheaper than, the other.

BOOKS OF THE WEEK.

Adams, W. H. D. Warriors of the Crescent. Appletons.
Austen, Frances V. Elfie's Visit to Cloudland and the Moon. Boston: Estes & Lauriat. $1.25.
Baker, Sarah S. Our Elder Brother: Thoughts for Every Sunday in the Year. Randolph. $1.50.
Barrie, J. M. A Holiday in Bed, and Other Sketches. New York Publishing Co.
Clark, Imogen. The Las' Day. Randolph. 60 cents.
Deland, Mrs. Margaret. The Story of a Child. Boston: Houghton, Mifflin & Co. $1.
Endlich, F. M. Manual of Qualitative Blowpipe Analysis and Determinative Mineralogy. Scientific Publishing Co. $4.
Farrar, Capt. C. A. J. Through the Wilds: A Record of Sport and Adventure in the Forests of New Hampshire and Maine. Boston: Estes & Lauriat. $2.50.
Griffis, Rev. W. E. Japan in History, Folk Lore and Art. [Riverside Library for Young People.] Boston: Houghton, Mifflin & Co. 75 cents.
Hale, Lucretia P. Stories for Children. Leach, Shewell & Sanborn. 40 cents.
Little One's Annual. Boston: Estes & Lauriat. $1.75.
Molesworth, Mrs. The Girls and I. Macmillan. $1.
Our Little Men and Women. Boston: D. Lothrop Co. $1.25.
Palmer, Fanny P. A Dead Level, and Other Episodes. Buffalo: C. W. Moulton.
Ryle, Prof. H. E. The Early Narratives of Genesis. Macmillan.
Scannell, Florence and Edith. Christmas in Many Lands. 4 vols. Boston: Estes & Lauriat. $2.

HENRY HOLT & CO., N. Y.

JOKES in prose and verse wanted for publication in a society journal. Tone must be clean, literary style good. J. REDDING, Editor, THE ART INTERCHANGE, 9 Desbrosses St., N. Y. City.

The TRAVELERS' BUREAUS of the News Series (Herkimer, N. Y., office) will send trustworthy information about winter resorts.

A MOST excellent book for personal or domestic practice is **Stepping Stone to Homœopathy and Health.** 256 pages. 12mo, cloth, $1 00, post free. A good book for the family. Published by
BOERICKE & TAFEL,
1011 Arch Street, Philadelphia, Pa.,
Homœopatic Pharmacists and Publishers.
Book Catalogue mailed free.

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travelers' Credits, available in all parts of the world.
Brown Brothers & Co, Bankers,
NO. 59 WALL STREET, NEW YORK.

YALE MIXTURE
The choicest Smoking Tobacco experience can produce or that money can buy. MARBURG BROS.

SPECIAL BRAIN FOOD & NERVE TONIC.
CROSBY'S VITALIZED PHOSPHITES.
Composed of the Phosphoid Principle of the Ox Brain and Wheat Germ.
The very elements which produce vital force, increase brain power, sustain in vigor all the functions, prevent mental and nervous debility.
It is a *vital nutrient* phosphite, not a laboratory or acid phosphate. Formula on each label. Pamphlet with full information free on application to
56 West 25th Street, N. Y.
For sale by leading druggists. *F. Crosby Co.*

Dyspepsia
Dr. T. H. Andrews, Jefferson Medical College, Philadelphia, says of
Horsford's Acid Phosphate.
"A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."
It reaches various forms of Dyspepsia that no other medicine seems to touch, assisting the weakened stomach, and making the process of digestion natural and easy.
Descriptive pamphlet free on application to *Rumford Chemical Works, Providence, R. I.*
Beware of Substitutes and Imitations.
For sale by all Druggists.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 24, 1892.

The Week.

OUR esteemed contemporary the *Times*, which at first opposed any extra session at all, but now sees some possible advantage in calling one in September or October, has overlooked one noteworthy fact. The McKinleyites, when they determined on their last attack on the consumers and taxpayers of the country, did not say, "We must not do this in the spring, and we cannot sit over it in the hot weather, and had we not better wait until the fall?" They held that for the kind of work they had in hand all seasons were good and no session too long. Accordingly they began to hatch their bill in January, 1890, and they introduced it April 16, opened the debate on it May 7, and passed it in the House May 21 (that is, in about twelve working days), passed it in the Senate September 10, and got it approved October 1. Not only did they sit waiting for it through the long heat of a Washington summer, but they got their Speaker to suspend the deliberative functions of the House, and convert himself into a prime minister charged with the carriage of party legislation. Now, if we are to have any reform in the system of fiscal oppression which these men have fastened on the country, we must be as prompt and courageous and determined in doing good as they were in doing evil. We must not fear either heat or cold any more than they did. We must not scorn delights and live laborious days any less than they did. We must not go into summer quarters, and let them refill their magazines and strengthen their defences at their leisure. If the McKinley Bill could be concocted in April and passed in May, so might the repeal or modification of the McKinley Bill. But we anticipate no such reckless haste as characterized the action of Reed's Congress. The necessary changes must be made decently and in order, and after proper deliberation—for, thank God, the House *is* still a deliberative body, Mr. Reed to the contrary notwithstanding. The *Dry Goods Economist* well observes on this point:

> "In point of fact, from three to six months would be inevitably consumed in formulating and discussing a new bill, if the details of the work are to be done by Congress; and even after the legislation had taken final shape, a further period of several months would be allowed to elapse before it would be put in force. In view of this fact, which any one familiar with the process of Federal legislation will confirm, there should obviously be no unnecessary delays in getting at the work."

Even supposing a complete revision of the tariff could not be made in the spring, consider what might be done in the way of commending tariff reform to the country, and restoring hope and confidence to industry in general by simply taking the duty off one article—wool. This would at once start one of our most important industries, the woollen industry, which has long been languishing, into renewed activity. Clothing, blankets, carpets—all prime necessaries of life—would promptly feel the effect of it. The shoddy mills would shut up with much cursing and execration of free-traders, but the poor man would get a coat whose cheapness and durability would, far from making him a "cheap man," increase his self-respect as well as his temperature, and he would go to sleep under a real woollen blanket, and not a McKinley cotton or shoddy simulacrum. The fraud of the McKinley Bill on the poor through their blankets alone contains moral guilt enough to fill one of the biggest penitentiaries in the country with malefactors. Now suppose the public had this experience of what tariff reform meant between April and December, who can doubt the encouragement it would give to the work of tariff reform when the ordinary session of Congress began, and the extent to which it would strengthen the confidence of the country in the Democratic party and in the new Administration? If this be true of wool, it would be, *à fortiori*, true of binding-twine and tin plate, the duties on which the Democratic House of the present Congress has tried to repeal. In short, three or four such bills, which could be readily passed in extra session, and which need no additional inquiry or consideration, would, as samples of the whole work to be done later, have an excellent effect on public opinion, besides giving sensible and immediate relief to interests which are suffering seriously from McKinleyism.

The wool and woollen schedule of the Mills Bill made wool free and woollen goods dutiable at 40 per cent. ad valorem. This was a higher rate of "compensatory" duty than the manufacturers themselves asked for when the tariff of 1867 was adopted. The rates in the McKinley Bill range from 50 to 150 per cent., which of course includes what is called compensation for the duties on wool. There is one thing certain in coming tariff legislation, and that is free wool. The Democratic party long since ceased to be frightened by the jack-o'-lantern of the political shepherds, and since they have practically lost Ohio in an election where the wool tariff was the most important issue, they have become a laughing-stock for the whole country. There is one reason why the wool tariff should be repealed at as early a day as possible. The price of wool in the London market has been greatly depressed since the passage of the McKinley Bill, and in consequence the foreign manufacturer of woollens has got his raw material at very low rates. This condition of things now prevails. The foreign manufacturer knows that there will be free wool and lower duties on woollens in this country within a measurable period of time. He knows, too, that when the wool duties are repealed and American manufacturers appear in the wool market on equal terms with himself, the price of wool will go up in consequence of the new demand for it. Obviously it is for the interest of the foreign manufacturer to accumulate as much wool and make as much cloth as possible in the interval, to be sent to this country when the tariff is lowered. The longer the change is postponed, the more advantage the foreigner will gain. If the Republicans want to save the woollen-manufacturers from this artificial and temporary disadvantage, they will do well to pass the Springer Bill, which is now in the keeping of the Senate Committee on Finance.

Secretary Rusk's annual report was evidently drawn up before the election, and has all the old cobwebs on it. He views imports with alarm, especially imports of raw materials that go to the building up of great industries. Overhauling the Custom-house returns, he finds "$40,000,000 worth of animal products, $67,000,000 worth of fibres, $27,000,000 worth of hides, $30,000,000 worth of fruits and wines, and $25,000,000 worth of raw silk"—all which articles could, he thinks, "with proper encouragement, be produced in our own country." One great blessing brought about by the result of the election is the fact that it is no longer necessary to treat such rubbish seriously. "Uncle Jerry" came back from Wisconsin in bitterness of spirit, confessing that "we were cleaned out." His report was among the things most thoroughly cleaned out, and will find its way to the paper-mills with rather greater celerity than its predecessors.

One looks in vain in the election returns for any trace of the effect which several great issues were counted upon to produce in the popular mind. There were Peck and his wonderful statistics, for example—what evidence can be found in the Republican vote that he induced anybody to turn to Harrison and Reid? Then there is the enormous pension expenditure by the Republican party, designed solely to consolidate the "soldiers' vote" for the party's ticket. Where are the traces of the "soldier vote" in the returns? Then there is the "American hog" issue. That was counted upon to win votes in the Western States; yet the two chief hog-raising and hog-packing States in the Union, Illinois and Ohio, went back completely on the Republican party, giving it the worst blows it received

anywhere. Finally, there were the "great Constitutional arguments" in defence of McKinley protection by George Ticknor Curtis. Is it possible that no man's vote was won by these? No trace of one can be found, but there are abundant evidences of thousands of votes repelled by some mysterious and all-powerful force, and it may be that Mr. Curtis supplied it.

We invite the attention of our Republican friends to the recent advance in wages in cotton-manufacturing at Lowell and elsewhere. The three following announcements have all been made since the election:

"At a meeting of the agents of the Lowell cotton-mills to-day it was decided to grant an increase, not to exceed 7 per cent., in the wages of the operatives, to take effect December 4."

"The Lonsdale Company and the firm of B. B. & R. Knight of Providence notified their employees to-day of an increase in wages, to go into effect December 5. The amount is not given out. This action will doubtless be followed by the other cotton-manufacturers in the State."

"The Blackstone Manufacturing Company, cotton manufacturers of Blackstone, Mass., will advance wages December 5. Prices have not yet been made known."

Now that the election is over and wages have begun to advance, the ears of some people may be open to the fact that cotton-manufacturing began in this country and prospered greatly before there was any such thing as a protective tariff. Samuel Slater began spinning cotton at Pawtucket, R. I., in 1790. The hundredth anniversary of his enterprise was celebrated at that place with much *éclat* two years ago. Under high tariff, under low tariff, and under no tariff has this mill gone on without interruption or cessation. And now, in the one hundred and second year of the industry, just after an election that was to bring bankruptcy on owners and misery on operatives if Cleveland should be elected, there is an advance in wages of 5 to 7 per cent. Is it not astonishing? Well, not very. The astonishing thing is that there should be so many people who read but one side of any political question, and yet think they know all about it. Such people will be equally surprised to read the following Associated Press despatch of November 17:

"The Stewart wire plant in South Easton, which recently passed into the hands of the reorganized Stewart Wire Company, will next week start up on double shift, employing twice as many hands as it did a year ago. The number of wire machines has been increased from 100 to 150. A large building, idle for many years, has been taken by the company and made a part of its plant."

The question of wages, we are constrained to add, is one of very great complexity. It was a common saying, during the last campaign and during several previous ones, that a reduction of the tariff would bring wages down to the European level. But what is the European level? We all know that English wages are generally higher than Continental wages, yet that does not prevent England from competing successfully with the Continent in manufacturing. It does not prevent French, German, and Russian manufacturers from begging their governments for protection against England. But suppose we leave England out altogether, and ask what is the level of Continental wages to which we must subject our workingmen if we do not protect their employers by tariffs. In 1887 our State Department made some investigations into the subject of Emigration and Immigration, and published a book of over 700 pages under that title. By way of showing what were the impelling causes of European emigration, inquiries were made as to the rates of wages, and the fact was brought out that wages differ in Prussia, for example, by as much as 100 per cent. in places not far removed from each other and where there is entire freedom of personal movement. We quote from page 35 of this report:

"Not only do east and northwest Germany differ from each other up to 150 per cent. (compare, for instance, Oppeln and Stade), but the average wages of even the little Thuringian capital exceed those of the neighboring mountain village by 100 per cent., and one town often exceeds the next by so much. Froessen and Goerkwitz, for instance, two villages in the principality of Reuss (Younger Line) differ by precisely 100 per cent. in the day wages for female laborers. To construct a 'normal rate of wages' which should satisfy 'them of Froessen' as well as 'them of Goerkwitz' is probably beyond the skill of any social-democratic conjurer."

It is an odd coincidence, and a sarcastic reflection on the wages-tariff argument in this country, that the German manufacturer asks for protection against the *higher* wages paid in Great Britain. He says: "How can we compete with the Englishman when he can afford to pay 25 or 50 per cent. more wages than we do?" With the high wages, the Englishman obtains the services of a superior class of workmen, and so undersells his German competitor; and this rule holds good all over the world, and always will.

When the tariff-reforming begins, whether at once with the help of repentant Republicans or after the 4th of next March without that help, we hope that one of the things that will be "reformed altogether" is the tariff upon works of art. The tariff on wool and the tariff on tin are barbarous and unenlightened enough, but neither the one nor the other is so utterly savage as the tariff on art. Even McKinley admitted that that tax ought to come off, but the Republican Senate could not agree with the Republican House as to one of the few good things which that House proposed to do, and so our citizens are still paying 15 per cent. ad valorem for the privilege of helping in the education and civilization of their countrymen. The last three Presidents of the United States have recommended the abolition of this tax, a Democratic and a Republican Ways and Means Committee have each proposed the abolition of it, the artists of the country have again and again demanded it, but there the silly thing still is. Now that the country has proclaimed its intention to have a reformed tariff, and proclaimed it loudly enough for all to hear, may we not hope that at last the most stupid tax upon the list will be cleared away, and that we may cease to blush for it before the world?

McKinley's international reputation is now entering upon a new phase, which raises a serious question for all patriotic Americans. When he was hated and feared among all civilized nations, it was our obvious duty, of course, to bow before him as a miracle of wisdom and benevolence, and let him walk over us to his heart's content. But now he has become an object of world-wide and inextinguishable laughter. Whenever anybody starts up with some mad economic proposal, like Mr. Lowther's crazy plan to revive the Corn Laws in England, he is told that he is posing as a McKinley—that is to say, as a solemn charlatan who is fated to complete exposure and repudiation. In fact, the name of McKinley is now the occasion for the most ribald and brutal ridicule among foreigners. What obligation does this devolve upon us? There must be some urgent duty for Americans to be inferred from this pronounced sentiment of other nations. What ought a man's compatriots to do when the whole world is making fun of him? We refer the question to Mr. Depew, who ought to be a great authority on victims of general scorn and mockery.

The Homestead strike is formally declared "off" by the Amalgamated Association, which is the organization responsible for starting it. There had been so many breaks in the ranks of the men that the leaders could no longer hold them, and the decision was forced upon them. The men have lost wages to an amount estimated at $2,500,000, and many of them have lost their old places besides. They have also strengthened the public distrust of all labor organizations, and thus given a blow to the cause of "labor" which they professed to have at heart.

The lawless and barbarous treatment of the steerage passengers on the steamship *Weimar* at Baltimore by the Treasury authorities continues. Of all the belongings of the present discredited Administration, the Treasury Department is the most discredited. Mr. Foster's branch of the service is more so than Mr. Wanamaker's because its capacity for mischief is greater. It omits few opportunities to make itself odious, but in no case has it behaved with greater contempt for the law, or greater indifference to the sufferings of innocent people, than here. If there were any society for the protection of immigrants as vigilant as the Indian

Rights Association, Mr. Foster and his subordinates would have been sued as individuals before this time for their high-handed proceedings. We suppose that the North German Lloyd Company is deterred from bringing suit by the power that these officials have to work them injury in other ways and places between now and the end of their little brief authority. That fact, however, need not intimidate them longer than the 4th of March. Every person owes it to the community to assert his own rights when they are trampled on, so as to deter other officials from repeating the offences. A judgment for damages against Foster, Spaulding, and their subordinates would be a wholesome warning to their successors in years to come.

It is only because we have got so used to the spectacle in this city of gross and conspicuous unfitness in office, that the proposal to send Mr. Edward Murphy to the United States Senate has had as much success as has thus far attended it. How it is that Mr. Richard Croker, who has of late displayed a certain shrewdness touching the standing of Tammany Hall in the Democratic party, and has the reputation of being a good, kind "boss," should have allowed Murphy to be "slated"—for even United States Senators in this State are now "slated," not elected—for the Senatorship, is one of the mysteries of Tammany politics which we do not profess to be able to solve. Nothing could well be more damaging to Tammany's reputation with the country at large than the appearance of Mr. Murphy in the Senate from Mr. Cleveland's own State. An odder way of "supporting Cleveland" could hardly be hit upon. The Senator from New York, elected immediately after the Presidential election by the victorious party, ought to be the President's right-hand man, his mouthpiece in the Senate and organ of communication with the leading committees. He ought to share the President's views, be able to expound his policy and defend his acts, or, in other words, be a man of weight, influence, and authority wherever he makes his appearance, and especially a man agreeable to the President, and on friendly if not intimate terms with him. We will say nothing here of what the Senators from New York have been and ought to be, if the influence of the State, as the richest and most populous in the country, is to be maintained in Washington, and especially if its great business interests, commercial and industrial, are to be properly looked after in Congress. We are now looking at the matter solely from the party standpoint. Tammany found out at Chicago last June how the country at large feels towards it, and it can hardly, after its experience there, flatter itself that its position will be improved by sending a Murphy to Washington to reinforce a Hill. To examine Mr. Murphy's qualifications for the place would be a waste of labor. He would doubtless himself consider an analysis of them an elaborate joke. One Senator of the type is surely enough to satisfy the worst enemy of State pride and respectability. Two would seem to be wasteful and ridiculous excess.

A movement has been started in Kansas for the division of the State into two new commonwealths by a north-and-south line. It finds its chief support in the fact that the east and west parts of Kansas are opposed to each other politically, the east being in the control of the Populists and the west of the Republicans; but it is also urged that the interests and wants of the two sections are so different that one Government cannot satisfy both. In area Kansas is a good deal larger than the whole of New England, but its population is not much greater than the combined populations of Maine, New Hampshire, and Vermont. It is growing steadily, however, and each of two new States in its present territory would probably have a million people early in the next century. It is not at all likely, however, that the present talk about division will come to anything. The Constitution provides that "no new State shall be formed or erected within the jurisdiction of any other State without the consent of the Legislature of the State concerned, as well as of the Congress." It will, therefore, be necessary to secure a majority in favor of the scheme not only in the Kansas Legislature, but in each branch of Congress, and it remains to be seen whether its advocates can carry even the Legislature.

The announcement that the present English Government regards the International Monetary Conference as purely "a deliberative body," with no power to bind any country represented to any action whatever, is no news to anybody, but serves as a fresh indication, coming on the eve of the Conference, that it will simply go over the old dreary debate again without arriving at any agreement. The English case, and, indeed, the case of the leading nations in Europe, is powerfully stated in an article in the last number of the *Investors' Review*. One of its strongest points is that "the whole world is at present the debtor of England, France, Germany, Holland, Belgium, and most of all the debtor of England and France." By what possible process of mystification could those countries be led to take payment of their just dues in bad money? The writer of the article asks a question which goes to the vitals of the whole business when he inquires: "In sober earnest, can these bimetallists point to a single country at this present hour which, able to pay for more currency, wants it, or to one which, lacking what it needs, is able to pay for it?" He accurately reflects, no doubt, the common English opinion of the Conference when he says:

> "The innocent metal silver is to be made to bear the odium of all our woes in many a sounding harangue and declamatory appeal. And yet we look down on the Israelites because they worshipped the golden calf! Well, at least their calf was gold. They did not bow the head and bend the knee to the baser silver cow and call on it to save them, when bereft of the brick-making industry."

The general election in England has been productive of some ten or eleven election petitions, several of which are now on trial before judges of the High Court. In each case the trial takes place in the constituency concerned, witnesses are called on both sides, and the procedure is like that of an ordinary Assize Court trial, except that there is no prisoner in the dock. The member whose seat is assailed is in the position of the defendant, and has to rebut the case which is brought against him by his political opponent. There seems to be no petition in which a Tory is claiming a Gladstonian Liberal seat. All the claimants are defeated Liberals who, on various grounds, allege that their defeats were brought about by unfair methods. It is doubtful whether there has ever been a general election which was not followed by several petitions in connection with cathedral constituencies. Cathedral constituencies still have the reputation of being corrupt, and if the allegations which are being made against the return of Tory members for Rochester and Lichfield are substantiated, this reputation will continue to attach to the smaller cathedral cities. The loss of the seat at Rochester in July was an unlooked-for reverse to the Gladstonians, as it was one of the seats which they had carried at the bye-elections. At Lichfield, Sir John Swinburne, Mr. Richard Chamberlain's father-in-law, was defeated by only five votes in a poll of over 12,000. In this case the slender majority had much to do with the petition.

The despatches from France show that the Government has determined to have a thorough judicial inquiry into the scandals connected with the collapse of the Panama Canal Company. Before the extraordinary scene in the House on Monday it was felt that the Cabinet must do something to divert public attention from its embarrassments in connection with labor troubles and anarchistic threatenings, with the Swiss treaty, and with colonial matters. After M. Delahaye's startlingly direct if impersonal charges, there was nothing left but to make a rigid investigation into the whole Panama swindle. The first legal step to be taken is prosecution of prominent administrators of the Company, including Count de Lesseps himself, and many if not all of the contractors, for malversation and fraud. It will be sought to prove that millions of francs were given to newspapers and politicians, and that the contractors were allowed to steal right and left.

MR. CLEVELAND AND TAMMANY.

THE Brooklyn *Eagle* has done the public a genuine service by a piece of indiscretion. It has blurted out what passed at that famous dinner at which Mr. Cleveland met the Tammany chiefs, and at which, according to his enemies, he sold himself body and soul to "the organization" in return for a pledge of support at the Presidential election. We have no hesitation in saying that the belief in this story cost him fully 10,000 votes in this city, besides causing many disgusted Republicans who voted for him a good many pangs of conscience. There are, too, among the lewd Democrats of the baser sort, many who confidently believe that as soon as Mr. Cleveland takes office he will, in accordance with his pledges, hand over the Post-office and Custom-house in this city to Mr. Richard Croker, to be disposed of according to Tammany rules of distribution.

The true version of what passed between Mr. Cleveland and the Tammany leaders has long been known to us. We have known all along that the revelation of what passed at that dinner would reflect increased credit on Mr. Cleveland's character. We have never thought it necessary to reveal it, however, even if we had felt at liberty to do so. To have made it the basis of an attack on Tammany we should also, we admit, have considered very injudicious on the eve of an election, because we have never been able to assimilate the great doctrine, which the Republicans formulated after Mr. Blaine's defeat, that bad men should not be allowed to support a good ticket. We believe, on the contrary, that the worse a man is, the more desirable it is to get him, by honorable means, to do a good thing. In a democracy it is impossible to obtain references as to character from voters, or to make up parties composed solely of the pure and good. A political party is not a church or social club. People have to be let into it without references. The one duty a good party man owes to a bad one is not to bribe or mislead him, and not to chase him away from the polls by insult or abuse.

But the main reason for keeping silent about Mr. Cleveland's alleged pledges to Tammany was that a defence of him against such a charge, by any one who respects him as much as we do, would inevitably have the air of an imputation, on the well-known principle that excuses are accusations. Mr. Cleveland has in his career, and especially in his tariff message and silver letter, *a priori* protection of the strongest kind against all accusations of bargain-making in order to obtain the Presidency. He has already furnished the strongest possible proof of his unwillingness to seek the Presidency in any way. The two acts of his life which, in the opinion of all politicians, did most to make his renomination and reëlection difficult or impossible, were not forced on him. They were voluntary acts. The notion that a man who committed them, with his eyes open to their probable consequences, would subsequently sit down and, in order to obtain the prize which these acts had put away from him, make pledges which would degrade him for ever in the eyes of all who had ever honored and admired him, was, in our eyes, too absurd to need refutation.

To the question why did Tammany then support Mr. Cleveland so enthusiastically, if it was not to get the kind of reward which Tammany most values—namely, offices and power, particularly after it had so strenuously opposed his nomination—the answer is very easy. Those who ask it apparently class Tammany with the Barnburners or the Conscience Whigs, who bolted under the solemn obligation of patriotic conviction. Tammany opposed Mr. Cleveland at Chicago because it did not like him, but it supported him because its present managers are far shrewder men and take longer views than John Kelly. They want to maintain their standing in the Democratic party, and get a hearing and have some influence in future national conventions, particularly now that New York is ceasing to be a pivotal State. This would be impossible if they kept on "knifing" or defeating every candidate who, against their opposition, had secured the required majority in the Convention. If, after what happened in 1888, another Democratic nominee had been overthrown through their treachery, they would have had very great difficulty indeed in getting a chance to be heard and to vote at Presidential conventions hereafter, and any such exclusion from the national party councils could not but tell on the power and permanency of the organization in this State and city.

It is as certain as anything of the kind can be that Mr. Cleveland takes office with fewer pledges, with less sense of obligation, to any person or society or club, than any President who has entered the White House within the memory of living men. He will decide on his own policy and select his own advisers and do his own thinking without outside assistance, and put up with such honest criticism as all this may call forth. But we are quite sure he would be the last man to suppress, even if he had the power, the innocent journalistic amusement of making Cabinets and distributing great offices of state, which usually goes on between the election and the 4th of March. During this period large numbers of our fellow-citizens live in an ideal world, and award honors of every description in accordance with their own ideas of abstract justice and eternal fitness, and we feel satisfied that they are all the better prepared to meet the stern realities of life by this little excursion into Elfland.

THE OBJECTIONS TO AN EXTRA SESSION.

THE plan of an extra session of Congress in April, to make a beginning of the business called for, or, in truth, commanded by, the late election, has received more or less discussion during the past week, and has, on the whole, been favorably received by the press. On looking through the papers to find what are the objections to it, we really find only one that merits serious consideration, and that is that an extra session is very unusual, and is viewed by members of Congress with disfavor, inasmuch as it carries them to Washington for what seems extra work, for which they get no additional pay.

The answer to this is, that the long interval between the election and the meeting of Congress, in the first year of the Presidential term especially, is an acknowledged defect in our system. The most unusual thing in our whole governmental machine is the length of this interval. No other representative government exhibits such an anomaly. In every one of our States the newly elected Legislature meets almost immediately after the election, ordinarily within two months. In England, France, Germany, Austria, Italy, the same rule is followed, and it is a rule based on principles both of business and of human nature. The time for legislators to begin work which the constituencies have declared to be necessary, is as soon as possible, and the situation of legislators in this respect is the same as that of all other trustees, agents, and employees. We venture to assert that the members of the American House of Representatives are the only paid agents in the world who get their appointment one year, and draw their salaries for nine months, before they do any work. Moreover, of all trustees the political trustee is the one who, from the very nature of his task, is most firmly held to prompt action. The exact things he has to do cannot be put down in black and white in any mandate or commission. He has to have great freedom of hand, great largeness of discretion, because he has to act in concert with a great many other men, representing different localities, and has to put into shape hopes, desires, and aspirations which his constituents can communicate to him only in a vague and nebulous form, or roughly in the shape of general principles. It is therefore of the last importance that he should go to work fresh from his intercourse with them, fresh from the discussions which have roused their ardor and formulated their grievances.

Bearing all these things in mind, it will be most unfortunate if no attempt to embody in legislation the great change of policy ordered by the people a fortnight ago can be made until December, 1893. For in that interval all the arts of persuasion through which the protectionists have been successful during the last twenty-five years, in luring on Congress after Congress to raise the tariff higher and higher, until it culminated in the McKinley monstrosity, will be brought to bear on the Con-

gressmen whom we have just elected. They will be cajoled, intimidated, confused, if not worse. The manufacturers will fill the air with rumors of industrial disaster, actual or impending. They will close fictitious mills and foundries, and dismiss bogus workmen by the dozen every month in all their newspapers. Every bankrupt will swear that his failure was due to Cleveland's election, and every drone and incapable driven out of business by the fear of healthy competition will ascribe his breakdown to the same cause. The worst of it is, too, that these wailings and predictions will derive an air of plausibility from the business depression or inactivity which is sure to accompany a long period of uncertainty, and the final result will be that when Congress meets in December, 1893, it will find itself an already distrusted if not discredited body. The memory of the great victory of 1892 will have grown dim, and the confidence of the members in the judgment then formed will have grown weaker, and possibly the attention of the public will, by some unexpected occurrence, have been drawn away temporarily from the tariff altogether.

The extra session is a remedy provided by the Constitution for any danger or inconvenience that may arise from the great length of the Congressional recess. The power of calling one is intended to be used on "extraordinary occasions." No more "extraordinary occasion" has arisen since the war than this recent reversal of our tariff policy. It behooves us to deal with it promptly; and since the ordinary session of a new Congress does not begin when all sensible men acknowledge that it ought to begin, we must use the extra session to meet the emergency. That Congressmen do not like extra sessions is, as we have said, natural enough. Salary without work is sweet to the best of us; but the nation is entitled, if necessary, not simply to six months per annum of the Congressman's time, but to the whole year if the public business requires it, so that the objection of inconvenience is really as futile as the argument of unusualness.

It only remains to notice the argument that we ought not to have an extra session because we ought not to "act hastily" in so serious a matter as the reform of the tariff, and because various Republican politicians and newspapers are urging us to have it called. The first of these is based on the assumption that in order to avoid acting hastily, we must not act at all, or, in other words, that there is no way of escaping over-exertion but sitting still. The truth is, that it is because hasty action is objectionable that we ought to begin work as soon as possible. We need all the time there is in order to revise the tariff properly, and, therefore, to pass nine months in sheer idleness, or in distributing offices, would look like criminal waste.

The second, that we must not do what the *Tribune* and Mr. Depew would like, or say they would like, to have us do, is a relic of that immense silliness of the McKinley economists under which we were to see what the foreign newspapers wished us to do in our domestic affairs, and then do the exact opposite. This, of course, would in practice be tantamount to allowing foreigners to control our policy. The foreigners are not such dunderheads as not to discover our system easily, and then they would simply have to preach against what they desired of us, in order to get us to supply it to them. To be guided in one's political or business conduct by finding out what course some foolish person, who dislikes us, and whom we dislike, would wish us to follow, and then *not* follow it, no matter how much it may commend itself to our judgment, has an air of the kindergarten about it which really exempts grown men from any elaborate discussion of it. The Reids, Depews, and Lodges naturally desire an extra session because they feel confident that the Democrats will blunder over the tariff in any session whatever, extra or ordinary, and, believing this, they naturally wish the blundering to begin as soon as possible. But the majority of the voters evidently do not agree with these gentlemen. They think the Democrats will not blunder, and for this reason wish them to begin reforming as soon as possible.

WHO ARE "GOOD AMERICANS"?

THE Republican orators and writers all over the country are, with one or two exceptions, such as Senator Hawley, taking their defeat in a very sensible manner. They seem to have at last waked up to the fact that no man is "a good American" who believes that more than one-half of the voters are so ignorant or so depraved that their triumph at the polls would mean the industrial and political ruin of the country; that the Constitution of the Union is so frail a thing that, like the Napoleonic Constitution in France, only one party can be trusted to maintain and defend it, and that among 65,000,000 of people nobody understands finance and taxation and the conditions of national prosperity except a handful of manufacturers and the handful of Congressmen from whom they procure protective legislation. All these amazing propositions have, however, during the past ten years formed the basis of the Republican claim to a continued hold on the Administration. The Republican contention in 1884 was that the election of a Democratic President would in some mysterious manner, and with the consent and approbation of the majority which elected him, result not only in the closing of all the mills and furnaces, but in literally looting the Treasury by the payment of sums on account of "rebel claims" amounting, according to the *Tribune*, to more than $3,000,000,000, or about the cost of the late war. The contention in 1888, after Mr. Cleveland's first term, was that, although it had to be admitted that he had refrained from paying the Southern claims and the rebel debt, yet he would certainly have closed the mills and furnaces if he had not been prevented by a Republican Senate; and this, combined with more or less "soap," was undoubtedly instrumental in causing his defeat in that year.

During the last four years this view of the probable consequence of a Democratic triumph has been put forward with renewed emphasis, but with the addition that not only do the Democrats know nothing about finance, or taxation, or the conditions of national prosperity, but the bulk of the Republican voters know nothing either. The McKinley Bill was defended on the stump in 1890 by all the Republican chiefs on this very ground. They said that the reason it was disliked, even by Republicans, was that the people did not understand it, and would not understand it for about two years; or, in other words, that the McKinleys, Reeds, and Lodges were so much wiser than the masses of American citizens that the latter had to take from them, blindly and on trust, measures seriously affecting all their material interests, their trade, industry, and domestic consumption. So that, what with Democratic ignorance and wickedness and Republican ignorance and simplicity, there seemed to be nobody left fit to conduct the American Government except a small group of gentlemen who had never given any proofs of extraordinary ability of any description except in the electioneering field. Before the McKinley Bill, nobody had ever heard of Messrs Harrison or Reed or McKinley or Lodge as economists and financiers of such commanding and conspicuous talent that whatever they said about commerce or industry would be questioned only by fools or knaves. This was, however, substantially the position taken by Speaker Reed when he abolished the deliberative functions of the House and converted it into an executive chamber, charged simply with the passage as quickly as possible of bills drafted by himself and his cronies in a committee room.

The election of 1890 was a solemn warning to this little clique that the American people were not disposed to acquiesce in the claims of these gentlemen to quasi-supernatural wisdom, and that they had better give others some credit for knowledge and patriotism. But they did not heed the warning in the least, and went on the stump this year with a full assortment of the horrors that would follow inattention to their opinions. No more melancholy account of the prospects of any country on the eve of a peaceful election was ever given than their account of the prospects of the American Republic in case Mr. Cleveland was elected, *i. e.*, in case the majority of the American people refused to take their advice. Senator Hawley, for instance, "plunged us into chaos on all questions of tariff and currency," "without compass or North

Star." Mr. Whitelaw Reid "overshadowed the land with disaster and unhappiness," and Mr. Chauncey Depew not only accused us of "consummate folly" if we elected Mr. Cleveland, but threatened us with "ruin" and "paralysis of business."

Now, the lesson of the day which we are glad to see these wise men are taking to heart—for they are one by one admitting that their wails were all what the boys call "poppycock"—is that talk of this kind is talk in which no man calling himself a "good American" ought to indulge. No man who really loves his country and believes in her future, and in the capacity of her people for self-government, ought to give forth such pictures as these of her condition to the world at large. No popular government, based on universal suffrage, could last many years which was in danger of "ruin," "chaos," and "paralysis" whenever the body of the people refused to listen to the advice of a small knot of wealthy gentlemen of, as far as the world can see, very moderate abilities. These amazingly vain and foolish predictions ought to be left to barroom politicians. They ought not to be produced on the stump by legislators and candidates for high office. They lower the country in the eyes of foreigners—a consideration which surely ought to appeal to people who ask us in every canvass to see what the London *Times*, and the *Economist*, and the Liverpool *Echo*, and the Cobden Club say before we cast our votes. The country, as a political corporation, is composed in the main of sensible business men. The majority who voted for Cleveland is not made up, as Mr. Henry C. Lea would have us believe, of knaves and dupes in equal proportions. If it were so, the outlook for the human race would be sorrowful indeed. Democrats do not live by fraud or robbery or on bananas and yams any more than Republicans. They live either by American wages or American capital. They are interested as much as Republicans in the success of American investments and in the productiveness of American labor. The notion that either through ignorance or wickedness they are likely to embark on courses that will "overshadow the land with disaster and unhappiness," if honestly held, would indicate a want of faith in democracy which it would be difficult to discover nowadays anywhere outside the palace of the Sultan or of the Czar.

THE PROBLEM OF SECTARIAN SCHOOLS

It was expected that the "school question" would play a decisive part in the elections in Wisconsin and Illinois this year, but the anti-protection wave rose to such an unexpected height in both those States that no one can say the Republicans might have carried them but for the Lutheran disaffection. Secretary Rusk and Senator Cullom have had to admit that the attitude of their party in the matter of parochial schools accounts only in part for its defeat. Yet there can be no question that the school controversy in the States mentioned took on an important political bearing, and this fact, together with the apparent breakdown of Archbishop Ireland's compromise plan at Faribault, and the recent meeting of the Catholic Archbishops with a messenger of the Pope's in this city principally to discuss the relation of parochial schools to the State, makes a review of the situation a matter of present interest.

It has been somewhat hastily assumed by the *Educational Review* that the main offence of the Bennett Law in Wisconsin, and the corresponding statute in Illinois, was the provision for compulsory instruction in English. It says: "The question at issue with these German-speaking Catholics and Lutherans is, whether the American commonwealths shall or shall not pass and enforce a law that every child must receive an elementary education in the English language." Doubtless there has been and still is a great reluctance on the part of some Lutheran parents and pastors to see their children learning English speech and American ways, and so tending to escape from the control of their church. But it was not this which made them so bitter against the Bennett Law. There had previously been statutes making attendance on public schools compulsory, and also teaching in English compulsory. But section 2 of the Bennett Law practically put parochial schools under the control of local school-boards and county superintendents, and this it was which aroused both Lutherans and Catholics to resent what they thought an unwarrantable interference of the State with the rights of parents and churches. So that the question, after all, is only a part of the larger one of the general relations of the State to sectarian schools.

If the recent political history of Wisconsin and Illinois shows that the supporters of parochial schools will fight against State control, it is just as stubborn a fact that the majority of the people in the country as a whole, and in every State, will, on the other hand, oppose State aid to these schools. This is a fact which those Catholics who are coming more and more openly to demand, as a right, a part of the State school fund for their parish schools, may as well make up their minds they have to reckon with. They may say that it is all an unreasoning prejudice, but they must admit that it is a most tangible and formidable prejudice, one which is certain to endure for many years to come, and to block any attempt they may make to secure State grants for their church schools. We freely admit that, from their point of view, there is much to be said for their contention that they are suffering injustice. We have read many of the addresses and appeals which they have put forth on the subject, and have been struck by the sincerity and thorough conviction with which they argue against being taxed to support institutions which they regard as dangerous to the eternal welfare of their children. Nor are we insensible to the almost incredible and heroic self-denial with which they, in their poverty, have endeavored to provide, independent of the State, a Catholic education for their youth. But, when all is said, there is no reason to expect that they will ever succeed in getting the State to support their schools.

Nor is there any good reason to desire that they should succeed. We believe the principle of entire separation of Church and State to be the only wise and safe one for this country to adopt. If it has been violated in the interest of Protestants, that is a reason for putting a stop to such violation, not for encouraging another one in the interest of Catholics. If one sect is to get favors from the State, so must another, and soon all government would be nothing but a confused and endless sectarian warring. For this reason it is a matter of congratulation that an effort has been made to break up an alliance between the Federal Government and the denominational Indian schools. The Methodist Church was the first, we believe, to pronounce against the policy of grants from the National Treasury for such schools, and to declare its intention of taking no more. A similar determination, we understand, was arrived at in the recent Episcopal Convention. This is most encouraging, and marks, we hope, a reviving sense of the fundamental place and value in our system of the independence of Church and State.

What, then, is to be done with the parochial schools? And is there no way by which the Catholics can be reconciled to the public-school system? It is precisely because the Catholics are so tenacious of their present position, and the people so stubborn in defence of the system of public schools as it is, that we have considered Archbishop Ireland's plan of establishing a *modus vivendi* between the two as really statesmanlike. In its application at Faribault it appears to have received a temporary check through a union between extreme Catholics and extreme Protestants, though this is by no means certain: the new School Board may not, after all, undo what has been done. Certainly the plan worked well for a time, if we may believe what Mr. John Conway, the editor of the Catholic *Northwestern Chronicle*, wrote of it in the October *Educational Review*. He said:

"It is sustained by a splendid public opinion in the town of Faribault itself. No clergymen of any denomination in that town are opposed to it; Faribault's three newspapers support it; the teachers in the school like it; the parents are pleased with the progress made by the pupils; the members of the School Board are enthusiastic over the arrangement. A most intelligent member of the School Board told the

writer that the children made greater progress in secular branches during the past year than ever before in the same period."

This plan, moreover, has the immense advantage of meeting the approval of the Propaganda at Rome. The famous decision *tolerari potest* is only the canonical way of saying "fully allowed." It is, by implication, an acknowledgment by the Holy See of the right of the State to control education, while it furnishes a working basis of agreement between Protestants and Catholics. We cannot believe so broad and statesmanlike a plan, with such high ecclesiastical sanction, will be allowed to fail for lack of further trials. It has in it the promise of satisfying both parties to the controversy, provided they are willing to make unimportant concessions, and of leading to a permanent conciliatory arrangement which will take a troublesome question out of public discussion. The resolutions adopted by the Archbishops, given out on Saturday last, certainly look like a guarded endorsement of Archbishop Ireland's plan, and a willingness to see it extended.

HENRI DE VIRIEU.

PARIS, November 10, 1892.

THE Marquis Costa de Beauregard has published already several volumes relating to the history of his own family, an old family of Savoy, long devoted to the Dukes of Savoy, and which has become French since the annexation of that province to France after the battle of Solferino. 'Un Homme d'autrefois' was the dramatic history of the grandfather of the present Marquis. 'La Jeunesse du Roi Charles-Albert' and 'Les Dernières Années du Roi Charles-Albert' gave the whole biography of the father of Victor Emmanuel. 'Le Roman d'un Royaliste sous la Révolution' is the history, not of a Costa, but of Comte de Virieu, one of the men who, after having first espoused the cause of the French Revolution, became its victims. The name of Virieu is chiefly known in France since the time when Lamartine became the intimate friend of a Virieu and dedicated to him some of his immortal poems. The book of the Marquis Costa is dedicated to the present Marchioness of Virieu, who is a daughter of the Duc de Noailles.

The family of Virieu is a very ancient family of Dauphiné. Henri de Virieu was born on the 5th of April, 1754. His father died when he was four years old; his mother was living in Paris while he was brought up in Dauphiné on the family estate at Pupetières. His mother died suddenly; her friend, the Duchess of Rohan, promised to replace her with her son. She sent for him, and had him placed in the Collège d'Harcourt, which was at the time the school of the children of the highest nobility. The Duchess of Rohan was a D'Uzès; she was a person of strict principles, a friend of the sisters of Louis XV., a severe critic of the dissolute manners of the Court of Louis XV. She was very aristocratic, and did not much favor the philosophers. It is certainly a curious instance of the *esprit de corps* of the French nobility to see how completely she adopted young Virieu, though he was no relation of hers.

The young man had the enthusiastic ideas of his generation about nature and man; he was, consciously or unconsciously, under the influence of Rousseau's 'Émile.' At the age of nineteen he wrote to Mme. de Rohan: "You know, madame, I detest Paris. . . I will never consent to take out a patent of servitude. What should I do near the Princes—I, who feel a certain stiffness of character which does not allow me to bear the sight of vile people and of their tortuous actions?" Mme. de Rohan, severe as she was on the score of morality, lived in the world and at court. She wrote very sensible letters in answer to this virtuous provincialism of Virieu's. "Believe me, my dear child, you dream of the life of a beneficent country gentleman. But, in order to feel the charm of such a life, you must have felt the inconvenience of the life of the world and of Paris. At nineteen you don't know much about it. Your sensibility persuades you that it is only virtue you are seeking for in a provincial life. Be not deceived; there is as much *amour-propre* as sentiment in this taste for seclusion. *Amour-propre* takes many disguises. You prefer to shut yourself up in a small circle, where you think you can easily secure admiration, rather than take the needful care to obtain the esteem of more distinguished persons." Virieu was not quite convinced; he gave himself up entirely to the ideas of Rousseau; he was not contented with being a philosopher, he became a Freemason. It was the fashion of the time; many princes became Masons. I have in my collection of engravings a curious one which was made to commemorate the nomination of the Duc d'Orléans (the father of Louis Philippe) as a high dignitary of the order.

After the death of Louis XV., the Duchess of Rohan, who belonged to the virtuous section of the court, became very powerful, and by her influence Virieu received, at the age of twenty-five, a commission as colonel. He married Mlle. de Digeon, the daughter of a *chef d'escadre* in the royal navy, an orphan, who was very charming, as is proved by the portrait which Mme. Lebrun made of her. Mlle. de Digeon was a Protestant and changed her religion. The contract was signed by the King on January 21, 1781, a date which may be noticed, as it was on the 21st of January, 1793, that Louis XVI. was beheaded. The young people lived in the Hôtel de Rohan, in the Rue de Varenne. A child was born to them in 1785, and the Duchess placed in the cradle the lace which the Duchesse de Bourgogne used to wear when she left her bed after a confinement. This lace had been given by the Duchesse de Bourgogne herself to the Duchesse d'Uzès, born La Rochefoucauld. It is magnificent, and is still preserved as a relic at Pupetières.

Virieu was sent as a delegate of the French Freemasons to a great Congress of Masons held in 1782 at Wilhelmsbad, by the order of Weisbaupt. He seems to have come back disappointed; he said to a friend on his return, "I cannot reveal to you what passed at Wilhelmsbad; all I can say is, that a conspiracy has been formed against the monarchy and the Church which is truly formidable." The great necklace trial became a source of no little agitation in the Hôtel de Rohan. The feelings of the Duchess were very mixed; the Cardinal who had played such a scandalous part in the affair was a Rohan, but she did not approve of Marie Antoinette's levity and her contempt for the old etiquette; she was a little of a *frondeuse* at all times. In 1786, Virieu was sent with his regiment (Royal Limousin) to Corsica. The Corsicans were, like the Americans, the objects of universal enthusiasm and admiration. They had freed themselves from tyranny. Henri de Virieu was a lover of liberty; he was in Corsica when he heard the news of the Convocation of the Notables. He was enraptured. Soon afterwards the provincial diets were summoned. Virieu, who was a Dauphinese, remembered that the treaty which gave Dauphiné to France had a clause which gave the Dauphinese the right to have their own diet. "My province," he writes to the Duchess of Rohan, "emerges from a gloomy despotism." The Duchess was less provincial, less particularist. Virieu, on leaving Corsica, rejoined his wife at Pupetières; he made the acquaintance of the Liberals in Dauphiné, particularly of the lawyer Mounier. He was sent to Paris as bearer of a memoir concerning the Parlement of Grenoble, with two of his friends, in 1788.

The Province of Dauphiné was the first to rise against the edicts of Loménie against the provincial diets. The Diet of Dauphiné met at Vizille, in the old château of Lesdiguières. At the first sitting it passed resolutions favoring the eligibility of all Frenchmen to all functions, the double representation of the *Tiers*, taxation by the Diet, etc. The Assembly of Vizille gave the programme of the famous year 1789. Necker became Minister amid general acclamation, and the States-General were summoned. Virieu was elected; he was then thirty-four years old. The procession of the members of the States-General at Versailles on the first day of their meeting was witnessed from one of the windows of the Petites Écuries by the Duchess of Rohan and the Comtesse de Virieu. The Deputies from Dauphiné excited great enthusiasm in the crowd. Among them was Virieu in the costume of a Deputy of the nobility—a hat with white feathers, a mantle of embroidered silk; a very brilliant costume compared with the black mantles of the gentlemen of the *Tiers*.

Madame de Virieu, between the Duchess of Rohan and her husband, was between the hammer and the anvil. The Duchess, who disliked Marie Antoinette and her favorites, was pleased with the silence of the people when she arrived. The formula, "The silence of the people is the lesson of kings," had not yet been invented, but Madame de Rohan, as well as the Queen, understood what it meant. Madame de Virieu felt that it was a bad omen; she had a dim vision of the future. She loved her husband, but had none of his illusions. The Duchess herself became very angry with Virieu when he went to the Jeu de Paume notwithstanding the orders of the King—when he joined the *Tiers*, with some other Deputies of the nobility. The Duchess was a stern person, she was willing to criticise Marie Antoinette's manners, but she did not forget who she was. Virieu wrote her letters to explain his conduct; she refused even to read them. She had seen at a glance that everything was lost, and she would have nothing to do with the men who were preparing the Revolution, consciously or unconsciously. Some great ladies, Mesdames de Simiane, de Tessé, de Coigny, were courting the Revolution; she disdained to do so. She broke completely with Virieu after a little while, when he took his place among the members who urged the King to dismiss the troops, and who forced him to call back Necker, whom he had dismissed. Between his second mother—his best friend—and himself there was now an abyss. Virieu left the Hôtel de Rohan and

lived at Versailles. As soon as the King had sent away his guards, he was besieged in his palace at Versailles and dragged to Paris as a prisoner by the multitude. Virieu was among the Deputies who were chosen to accompany him. What a journey! And how inane seem now the words of Bailly, the Mayor of Paris, when he received the King: "Sir, Henry IV. reconquered his people; today the people reconquers its King."

Virieu was still under the charm; the crimes which took place the next day, the murder of Berthier and Lally, opened his eyes; he suddenly had a vision of what was coming. He persisted, however, in his attitude and took part in the famous night of the 10th of August, when the nobility abandoned all its feudal rights. He heard soon afterwards that the peasants of Dauphiné, understanding the Revolution in their own way, had entered his château of Pupetières, ransacked it, pillaged the chapel, destroyed the archives, and drunk all the wine in his cellars. Madame de Rohan had taken a resolution to emigrate; the Prince de Condé, the Comte d'Artois, Madame de Polignac had set the example. One morning she entered the room of Madame de Virieu. "We must go, my child; it will not be for long; . . . all this cannot last." M. de Virieu remained; he was a Deputy. He found Madame de Rohan on the point of starting in a post-chaise, and giving her last orders. He wanted to kiss her hand; she refused it. "You are going to stay. . . . Is it irrevocable?" Virieu did not answer. She then denounced his conduct with great violence: he was a traitor to the King, whom he sacrificed to his own ambition. Madame de Virieu entered and threw herself at the feet of the Duchess, and offered to accompany her. "No," said she, "you owe yourself to your husband. Remain in this house. I intend that it shall always be yours." And away she went. The Duc de Rohan was already in Burgundy, waiting for her at the house of Madame de Jaucourt.

Correspondence.

THE PENNSYLVANIA BALLOT.

To the Editor of The Nation:

Sir: The Baker Ballot Law bears upon its face the innocence of a dove, but is within infected with the guile of a serpent. The press of this State generally speak of it in terms of approval. It is true that it has one good feature—but only one. The ward-heelers' occupation is gone in so far as they were able impertinently to thrust ballots into the faces of voters. But, alas, this Ballot Law was prepared with an eye single to forcing Republicans and Democrats to vote the straight party ticket. When a Harrison supporter was urged to vote for an anti-Quay legislative candidate, he simply "winked the other eye," and said: "Do you think I am fool enough to split my ticket and run the risk of having my vote thrown out?"

I placed an X after the word "Democratic" at the head of the column and placed another X after the name of the candidate for Supreme Judge in the same column, not observing that the Presidential electors and judge were in the same group. The "watchers" at my voting precinct told me it would be counted. I went to a precinct in another ward and the "watchers" there told me it would be thrown out. I understand that this diversity of view prevailed to such an extent that at one precinct alone in this city seventeen ballots were thrown out for irregularity. This was about one-third of the total vote cast at that precinct. Indeed, it seems that each set of election officers made a law unto themselves in their construction of the Ballot Law.

It is also expressly provided in this law (section 27) that if a man sells his vote he can call his vendee into the voting-booth in order actually to witness the delivery of the "goods." The ballot is then (section 23) numbered (convict-like) for the purpose of giving the election-officers a chance to keep a tally of the politics of the voter.

Before the election all Republican voters were carefully and systematically warned against the danger in splitting their ticket, and so frightened that it was almost impossible to induce any of them to make an X outside of the Republican column. Democratic voters were also warned in the same way by a circular marked "Confidential." In this manner the lock-step ballot served its purpose, and candidate Harrison was made to drag the Quay candidates into the Legislature.

C. P. R.

Pittsburgh, November 14, 1892.

THE CHOOSING OF ELECTORS BY DISTRICTS.

To the Editor of The Nation:

Sir: Before the ineffective Miner Law of Michigan is dismissed to political limbo, it may be worth while to note that not only the choice of Presidential electors by the people in Congressional districts, but also the employment of this method of choice by a party accidentally in possession of the legislative power in a State as a legally unassailable device to defeat, at least in part, the anticipated majority of its opponents at an approaching Presidential election, is by no means a new idea. On the contrary, this, the characteristic feature of the Miner Law, was first suggested in a letter addressed by Alexander Hamilton to Gov. John Jay of New York on the 7th of May, 1800. Supposing that the Federalists would not control the newly elected Legislature, Hamilton wrote: "The moral certainty, therefore, is that there will be an anti-Federal majority in the ensuing Legislature; and the very high probability that this will bring Jefferson into the chief magistracy, unless it be prevented by the measure which I shall now submit to your consideration, namely, the immediate calling together of the existing Legislature. I am aware that there are objections to the measure, but the reasons for it appear to outweigh the objections. . . . The calling of the Legislature will have for its object the choosing of electors by the people in districts; this (as Pennsylvania will do nothing) will ensure a majority of votes in the United States for a Federal candidate." (8 Hamilton's Writings, ed. Lodge, p. 549.) Jay endorsed the letter as "proposing a measure for party purposes which it would not become me to adopt" (1 Jay's Life, by William Jay, p. 414), and apparently made no reply to Hamilton. H.

Ithaca, N. Y., November 12, 1892.

ENGLISH IN THE PREPARATORY SCHOOLS.

To the Editor of The Nation:

Sir: I received yesterday, from the Committee on English Composition and Rhetoric (of which you are a member), its Report to the Harvard Overseers to which you called attention editorially on October 20, and again on October 27. No part of the public can be more grateful to your Committee for the demonstration, upon conclusive evidence, of the inefficiency of most pupils, and the deplorable neglect of most schools, in the matter of English composition, than those teachers of English whose enthusiasm and intelligence are seriously devoted to the accomplishment of the ends which you desire. The Committee, however, pass summary judgment on the methods and aims of certain schools, and print, partly in facsimile, specimens of student work which the public interpret as justifying that judgment. Now, on this point, in justice to the general reader and the better schools, you should also call attention to the method adopted by the Committee in selecting those specimens. "All names have been omitted, as the printing them seemed calculated to draw discussion away from the facts to personal controversy," the Committee says, more commendably in spirit than in English. Now, I write neither in a spirit of "personal controversy" nor with any desire to belittle the great educational value of the *facts* gathered by the Committee; but to protest, in behalf of the schools, that the Committee's absurd, illogical conclusions put the better schools, at least, in a false light before the public.

The report "is intended to operate directly upon the preparatory schools, with a view to elevating the standard and, if possible, changing radically the methods of instruction." "This result," the Committee says, "may best be obtained by showing what is now done in each and all," and then proceeds to enlist the sympathy of the schools by printing, for purposes of illustration, "*the poorest papers only of those handed in.*" "This was necessary to accomplish the object of the Committee," the report says; and you say (*Nation*, 1426, p. 320) that the report "was calculated to raise a blush on the cheek of every principal who reads it." Now, if the object really was to show just what poor stuff could be collected, just how little time is devoted to intelligent instruction in most schools, and what an incubus of poor material "freshman English" has to carry, the method of investigation could not have been happier; and the conclusions, if confined to showing the failure of school methods and aims to produce creditable results *in the cases adduced*, could not have been gainsaid. But I submit that to ask college students to describe their "preparation in English" at a time when the worst features of it are freshest in their minds, and under conditions which would not naturally suggest to them that the careful English work which, in many cases, had been exacted of them in their laboratory notes, historical theses, mathematical demonstrations, and translations, oral and written, was not only a necessary part of that other work, but also their best "preparation for English A"; that to accept these descriptions alone "as sufficiently setting forth" the "systems and aims" of the schools from which they come, and then to give the public "only the poorest of the papers handed in"—is to endeavor to get at "what is now done in each and all" of the schools in a way which, "though it make the unskilful laugh, cannot but make the judicious grieve." In the case of one school, at least, the testimony of one-third of its representatives wasn't taken at all; four of them had been ambitious and proficient enough to do the work of English A before entering college, and were therefore in sophomore English when the evidence of

the "methods and aims" of their school was taken.

As a matter of fact, there are some schools that for five years at least have been asking the College for protection against misrepresentation by the very class of students which, to their utter amazement, are in this report allowed to be their only public spokesmen. Almost every good school in any close touch with Harvard College at times finds its "final" class encumbered by material upon which, through no lack of strenuous effort, its aims and methods have failed to make satisfactory impression; raw students from inferior schools recommended to it for a final year of "polish"; or students who, from devotion to athletics and from allied causes, fail to keep up to the standard of the school, and whom, therefore, the school would like to hold over in order to make them do the very work recommended by your Committee; or unfortunate fellows who, from inheritance, disposition, or lack of home training, rarely thrive under any system. By refusing certificates of proficiency, the school can prevent such students from presenting themselves for preliminary examination; but upon presentation of a certificate of moral character (which the school cannot fairly deny them), they are accepted by the college for final examination, and often are admitted in spite of their school record. Does not the College, by accepting the test of one examination, and by ignoring the teachers' estimates of the students' ability to pass the final examination based upon a series of examinations and upon personal knowledge, forfeit its right in such cases to throw the responsibility of bad preparation wholly upon the schools?

The schools that have any reputation to lose are not disposed to shirk their responsibilities; they accept, with chagrin, perhaps, but without demur, the testimony of the "poorest papers" as to the meagre results that appear in many cases. They protest, however, with indignation, against the use of that testimony alone to set forth in any adequate measure the "methods and aims" of their whole work. Any one who has even a slight acquaintance with the actual working of the good schools, has a pretty clear idea of the fairness and conclusiveness of an investigation that could warrant such preposterous observations as these: "that in not more than two instances do the preparatory schools the methods of which have been described in the papers submitted to the Committee, seem to have adopted the ordinary and apparently obvious practice of causing the students to do two things at once—that is, to translate their Greek and Latin and learn to write English simultaneously" (p. 152); and "that in America, under the educational systems prevailing in the preparatory schools, no attention whatever is paid to the rendering of Greek or Latin into concise written English"! (p. 153). Part of its work the report does effectively; but, like the familar *reductio ad absurdum* in Hill's 'Rhetoric,' "it proves too much."

***

NOVEMBER 3, 1892.

[The writer of the foregoing communication has been led by his feelings to take a wholly wrong view of the plan and purpose of the Committee's report. In publishing facsimiles of about 10 per cent. of the papers of students submitted to them, the members of the Committee did not for a moment propose to present a fair average specimen of the whole, as our correspondent seems to imply they should have done. On the contrary, they quoted in the beginning of their report an extract from a letter of one of the instructors of the English Department of the College, in which the statement was made that "from one-seventh to one-fifth of the entire number of men taking English A" came to college so badly prepared in the matter of writing English that they "drag down the grade of instruction in the class, and, at best, they simply scrape through the course." To illustrate what that statement meant, the Committee printed facsimiles of 10 per cent. of the papers submitted to them. These necessarily were the poorest. Our correspondent appears to think that some of the better papers should also have been reproduced in facsimile. How, we would ask him, would reproducing the better papers throw light on the character of the worse, of which alone complaint was made?

Some 40 out of 440 papers were reproduced in facsimile, as part of the report. Of the 400 remaining papers, between 40 and 50—good, bad, and indifferent—were printed in full in the body of the report. Space did not admit of more. The remainder were carefully examined by the Committee, and compared with a body of examination papers, specimens of which, also, were included in the report. From that large body of evidence, the Committee, after careful conference with the college instructors, drew those inferences in the report which our correspondent characterizes as "illogical," "absurd," and "preposterous."

Neither, we are compelled to add, were the papers by students prepared for Harvard at the particular school referred to by our correspondent especially creditable to its methods, or, as a whole, among the best of those submitted. In the printed prospectus of this school, sent to us by our correspondent, under the title "Greek," it is stated, "Original, free, idiomatic English insisted upon in all translations." The following is an extract from the examination paper in "Advanced Greek" of one of the candidates for admission to college, who last June presented himself from this school:

"Him, the best of the Achæans upon their ships will hand, and who accomplished this to him will come glory. The swift ships are guarded even as formerly they were, or they (*i. e.*, Achæans) overcome beneath our hands plan flight among themselves: Nor do they wish to keep guard through the night, being overcome by dreadful woe."

Here is another specimen of "original, free, idiomatic English," such as seems to be "insisted on":

"Now the mighty sun had penetrated into the heavenly orbs, and the soft moon was dissapearing in its golden car, and Aurora was scattering the shades of darkness with her rosy hairs: The pastor turned his flocks from the stables to the well-known pasture and sought the lofty summit of the mighty mountain, where pasture covered the surrounding hills."

We have space for but one more specimen of this sort of rendering Latin and Greek into English, and will merely add that all the papers by the candidates from this school are of about the same grade:

"Neither did Hector allow the lordly Trogans to sleep: but at this very time he was calling upon all the best men, as many as were leaders and rulers of the Trogans. And, when he had called them together, he opened the crowded council. 'Who will do a great deed if he be promised a great gift? His reward (pay) will be sure. For I will give him a chariot and two horses with graceful necks, which are the best beside the hollow ships of the Achæans. Renown must be won by him whosoever dares to go near the swift going ships and dares to learn whether the ships are guarded as is the custom or whether (the Greeks) conquered by our hands, are planing flight among themselves and are not willing to watch during the night, because they are worn out by dreadful slaughter.'".

What inference would our correspondent have even novices like those composing the Committee who prepared the report draw from such results as these? Had these young men of nineteen ever made a written translation from Greek or Latin into English before? If so, could the translation have been accepted as made into that "free, idiomatic English" which the programme of this school assures us is "insisted upon in all translations"?—ED. NATION.]

MISDIRECTED ENERGY IN THE FITTING-SCHOOLS.

TO THE EDITOR OF THE NATION:

SIR: The undue crowding of the work of the last two years of the fitting-school is an evil that needs redress, in the interest of both teacher and pupil. From the fact that so many different subjects must be kept in hand for the examinations, the tax on the pupil's time and strength is too great, and much of his endeavor is misdirected. For the sole purpose of passing the examinations with credit, a prominent place is given to reviewing ground previously covered—a practice which tends to produce in the mind of the pupil the feeling that for him no knowledge is of account except that likely to be called in question by the entrance-examination papers.

In a case coming under my observation, the pupil's energies are this year divided among the following studies: Greek, Latin, French, German, algebra, astronomy, the history of Rome, the history of Greece, and English. In working for the final examinations next year the same pupil will be obliged to study geometry, astronomy, physics, Greek, German, and English. Such a programme as this demands an almost continuous succession of recitations in school and many weary hours of application at home. The nerves and eyes are under a constant strain. If the colleges will help to do away with this state of things, they will receive their students technically as well fitted as at present, and the students themselves will have the advantage of better eyesight as well as a more liberal spirit and a deeper enthusiasm.

The examinations for admission to Harvard College (and I believe the same is true of all colleges requiring examinations for admission) may be divided between June and September of the same year, or they may be taken in June in two successive years. There is no provision for a division into three or four parts. An arrangement for such a division would, I am convinced from experience, make the conditions for work in the preparatory schools much more satisfactory, by relieving

t e present congestion during the last two years of the course, by allowing advanced work to take the place of tedious reviews, and by sooner bringing the pupils into relations with the college.

If a boy at the close of his second year in the fitting-school, where the course is five years, should be allowed to take examinations under the auspices of the college in one or two subjects, such as algebra, French, or history, he would better realize that his year's work was directly telling upon the completion of his preparation, and he would assuredly go on with renewed vigor and pride, for he would know that the seal of the higher institution was set upon a portion of his work. At the close of his third year such a boy could easily succeed in passing in algebra, geometry, one of the modern languages, and history. This would leave for the last two years physics, Latin, German or French, Greek (or advanced electives in mathematics or science), English, and two advanced electives in language, mathematics, or science, giving at most four subjects to each year.

The advantages arising from such a division as this are many. The choice would be open between Greek (now often taken with reluctance merely as a *pis-aller*, in the belief that it saves time), and the elective work in mathematics and science, which can be completed easily and well in the last two years. Time would be saved from drill-work for a more adequate study of English, which is too often deferred for a hasty "cram" during the last year—a practice which completely subverts the purpose of the college in providing that the examinations in English shall be taken at the finals only. Vacant hours would be found for the study of the history of other countries than of those prescribed for the examinations and for lectures on art and literature; all coming thus at the period when the young spirit is most sensitive to noble influences, and when it is possible, by a soulless grind, to harden it to such influences. The college examinations would assume their true proportions in the school economy, and would, by their frequency, be robbed of half their terrors. With the motto "Divide et impera," the pupil would see each year's work break down a part of the barrier between him and the college. The work of the earlier years, too, would be done more satisfactorily if carried on with a view to the demands of the college.

Is it too much to hope that in the near future Harvard College at least will, by allowing such a division as has been outlined, help to remove from the fitting-school the reproach that much of its work is but a cramming process of the most utilitarian character, which keeps in view only the baser purpose of passing certain examinations? G. H. M.

CAMBRIDGE, November 14, 1892.

STEEL-WIRE BINDING.

To the Editor of The Nation:

SIR: In your issue of the 17th inst. I find a letter from Prof. William James, dated Florence, October 27, in which there is a general denunciation of the method of binding magazines by means of steel wires. Prof. James gives the occasioning cause of his letter in the following words:

"The last straw which has broken the camel's back of my patient American disposition, and elicited this public protest, is the sudden appearance of that admirable journal, the *Philosophical Review*, hitherto decently stitched and openable, with its back pinched up in a spick-and-span suit of steel wires on which I have just notched another knife-blade."

I am glad that Prof. James entertains a good opinion of the contents of the *Philosophical Review*, and it has been my constant endeavor to have the paper, print, and binding on a par with the articles; but, by some mischance, which I greatly regret and which I am unable to explain, wire was used instead of thread in binding our September number. That it was an accident, and that there was no intention of continuing the new departure, is clear from the fact that the November number, which was ready before Prof. James wrote his letter, was stitched like the numbers for January, March, May, and July. It will be clear, therefore, to Prof. James and to the public that no protest on the part of subscribers will be necessary in order to secure the publication of the *Review* in the form most convenient for readers.

Respectfully yours, J. G. SCHURMAN.

CORNELL UNIVERSITY, November 19, 892.

COUSIN DENOTING NEPHEW.

To the Editor of The Nation:

SIR: Your correspondent, Mr. Worthington C. Ford, makes inquiry, in his letter in this week's number of your journal, concerning the use of the word "cozen" as denoting a nephew; such use having been found by him in the Martha Hayward will of 1697. It is probably familiar to Mr. Ford that the word itself appears in early modern English in many forms —as *cozin*, *cozen*, *cosin*, *coosin*, *coosen*, *cosyn*, etc. But as to the use of the word as designative of one standing in the relation of nephew, it may be sufficient to mention an example or two—one from a testamentary document like his own illustration, and one from literature.

In the will of Mr. John Hooker of Marfield, Leicester, England (a brother of Rev. Thomas Hooker, founder of the Connecticut Colony), dated January 1, 1654-'5, he makes two bequests—one to his "Cousin Samuel Hooker, student in New England," and the other to his "Cousin John Hooker, student in Oxford." These were nephews, sons of Rev. Thomas Hooker, then dead at Hartford; Samuel, soon after minister at Farmington, and John, who went back to England, and, after studying at Oxford, became a clergyman of the English Church at Leckhampstead in Bucks.

In "Romeo and Juliet," III, i., *Lady Capulet* exclaims:

"Tybalt, my cousin! O my brother's child!
O prince! O husband! O the blood is spilled
Of my dear kinsman! Prince, as thou art true,
For blood of ours shed blood of Montague.
O cousin, cousin!"

GEORGE LEON WALKER.

HARTFORD, November 17, 1892.

To the Editor of The Nation:

SIR: An American example of the use of "cousin" to denote a nephew may be found in a letter of Franklin to his nephew Jonathan Williams, jr., in which Franklin addresses him as "Dear Cousin," and subscribes himself as "Your affectionate uncle." This letter is printed in Bigelow's Franklin, vol. vi, p. 306; but the words "uncle" and "cousin" are there transposed by some oversight. M.

NEW YORK, November 18, 1892.

To the Editor of The Nation:

SIR: A large general acquaintance with the records of Lower Norfolk, Norfolk, and Princess Anne Counties, Virginia, enables me to answer the question asked by Mr. Worthington C. Ford, in his article on the Washington genealogy in the *Nation* of the 17th of this month. The word "cozen" (cousin) almost invariably meant nephew or niece.

Very respectfully, EDWARD W. JAMES.

No. 34 FENCHURCH STREET,
NORFOLK, VA., November 20, 1892.

THE ABANDONED FARM.

To the Editor of The Nation:

SIR: It will be generally conceded that the term "abandoned farm" readily captivates the eye of the common reader. Doubtless this may be attributed in part to the notoriety which the subject has gained during the past few years, through the publications, in more or less glowing language, of commissioners who have been deputed to relieve their several States of acres which have from various causes fallen into disrepute. There would seem, however, to be a more potent cause for the interest thus so widely manifested. May it not be found in the appellation "abandoned," which at once implies *undervaluation*—a condition readily seized upon by the great majority of men and not always to their advantage? However it may be, these commissioners have done good work for their employers, although their success has not always been commensurate with their labors.

In the issue of the *Nation* for September 4, 1890, was published an article entitled "One Abandoned Farm Less in New Hampshire." Granting that your readers are still interested in the general subject, they may be pleased to learn how far the experience of the three past summers has met the expectations therein held out at the time of purchase. But before giving this information it may be well to recall some of the motives, conditions, and circumstances which governed that purchase, and which were considered as requisite on the part of the purchaser. The situation should be among mountains; it should be directly upon the shores of a large lake, with every facility for bathing and sailing; it should be retired, but at comparatively easy access to store and post-office, and not more than a half day's journey from the metropolis of New England. The surroundings should be attractive and beautiful, and free from all detractions caused by disreputable neighbors, or by the presence of some undesirable manufactory or business centre; the extent of domain to be sufficient to create in the owner that sense of freedom and Robinson-Crusoe lordship which is in itself a delight. There should be fine forests and a sufficient amount of arable land. The buildings should be in fair repair, affording at least a more substantial shelter than had hitherto been offered under canvas during the summer outings. The supply of water from well or aqueduct should be abundant, and free from any suspicion as regards its sanitary condition.

Fortunately, after a few days of agreeable search in the month of June, all these requirements were happily filled, and the premises, which were occupied by a very respectable family, were vacated and possession given within a week. The exact situation of the farm was not given, for satisfactory reasons, in the article to which attention has been called, nor was it there intimated that it was an "abandoned" one in the true sense of the word. Its location shall now be more definitely revealed.

On the eastern boundary of that lovely lake, the Winnepesaukee, extends for several miles, with a width of two miles or more, a peninsula whose irregular shores are indented by nu-

merous coves. In one of the most spacious of these, protected at either extremity by jutting wooded points, and bordered by a dense forest of pine and hemlock, stretches for the entire length a beach of clean white sand, as closely compacted as if rolled by the mighty waves of the Atlantic. Several contiguous wooded islands make the seclusion still more complete, while the openings between these afford glimpses of the distant passing steamers—sufficient evidence of the life of the busy world beyond. In the rear of the beach, the land gradually rises until it attains a height of perhaps a hundred feet above the lake, when it spreads out, forming a nearly level plateau of sixty acres of cultivated land. Upon the western border of this plateau, and within convenient proximity to the water, stands the low, long, one-story-and-a-half farmhouse with its spacious barn. The storms of more than a century have only added to its picturesque appearance, while the capacious chimney rising from its midst has defied their destructive powers. From the upper portions of this elevated plain Mt. Washington, at the distance of sixty miles, rises in all its noble proportions. Nearer, the Sandwich range, as seen through the forest openings, stretches across the northern boundary, while the Ossipees shut in the eastern horizon. Across the lake westward extend the foothills of the Franconia Mountains, among which lie hidden the sparkling waters of Asquam. The stately forms of the Gilford range complete the widely extended view on the south. The prospect thus presented, always grand and impressive, varies with the season and even with the hour of the day, so that the eye is never weary with gazing at the ever-changing scene.

As the investment was made for summer saunterings, the determination made at the outset that the soil should remain undisturbed beyond the cultivation of a few flowers immediately about the house, that no agricultural experiments should be attempted, and that Nature should be installed as foreman, under slight supervision, has been strictly adopted; so that the farm, in one sense at least, may with propriety be called an "abandoned" one. The days are all too short for the many ways of spending them. In addition to the usual household avocations, delightful walks in every direction, bathing, fishing, sailing, and reading, serve to fill up any vacant spaces. Nor must the drives to remarkable places in the immediate vicinity, noted not only for great natural beauty, but for the interest imparted by legend and poetry, be forgotten. Space will allow of but a brief description of two of these.

Midway of the heights of the Ossipee, that wild and mountainous tract which skirts the northeastern borders of Winnepesaukee, and deep within its forest recesses, runs a crystal stream, which, taking its rise in a secluded ravine from a remarkable spring that boils up from unknown depths through a clear, sanded bottom, pursues its erratic course for a long distance. Now it glides demurely along in open spaces over its pebbly bed, now it bends abruptly and slides more swiftly, over a shelving, rocky ledge; again it hurries, an angry brook, foaming and fretting itself in numerous cascades, until at last, hampered and shut in by perpendicular adamantine walls, it makes one precipitous leap of eighty feet into the dark pool beneath, causing the delicate ferns and moisture-loving plants which grow upon the banks to glisten and wave before the spray and breeze of its maddened plunge. There is no more romantic spot among the Hills of New Hampshire. Legendary lore also adds interest to the locality.

The second drive is to a farm on Asquam Lake. Around the base of Red Hill, an outlying and dismembered branch of the great Sandwich range, run two roads, one on either side, presenting every diversity of scenery. On the eastern, the broad extent of undulating country is bounded by densely wooded mountain ridges, terminating in the proud, defiant peak of Chocorua, while, on the western, Winnepesaukee and smaller bodies of water occupy, together with extensive farms, the foreground. These roads detouch upon the Sandwich highway; and about midway between them, and occupying the mountain slopes, is a farm the position of which is one of surprising natural beauty. The small cottage stands just on the summit of a gentle eminence by the roadside, and commands an exceptional view to the southwest of "mountain-girdled" Asquam, whose praises have been so often sung in prose and poetry that further eulogy is here needless. In the rear of the cottage, and high above the mountainous pastures, clothed with a luxuriant vegetation, well-watered by springs and by a much prized trout-brook, rises a bold, precipitous, craggy peak, crowned with stately pines. At the base of this peak, which forms the northwestern buttress of Red Hill, are shown the most convincing evidences of glacial action, the sharp projections and neighboring ledges of the reddened syenite having been rounded, grooved, and polished by this mighty agency. This unique feature of the farm is a most striking and picturesque object, whether seen immediately from the public road below, or from a greater distance, and recalls vividly many similar scenes among the valleys of Switzerland. An additional interest is given to it from the fact that the peak is the undisturbed home of the bald-headed eagle, which in the season may be seen soaring majestically in perfect security above this almost inaccessible locality. Language cannot describe the charming and varied beauty of the prospect offered from the adjacent slopes. Mountains, lakes, forests, cultivated fields, villages, and scattered homesteads are spread out in every direction. By no means an "abandoned" farm, strangers are constantly attracted, as we have been, by the superlative beauties of this situation, which is destined in the near future to become the delightful home of many summer residents.

Such is the experience of the three years of our possession. All are more than satisfied with the investment.

DANIEL DENISON SLADE.

CHESTNUT HILL, MASS.

Notes.

T. Y. CROWELL & Co. have arranged to bring out a series of volumes forming a "Library of Economics and Politics," with these three works at the front: 'The Independent Treasury System of the United States,' by David Kinley, of the University of Wisconsin; 'American Charities,' by Prof. Amos G. Warner, of Leland Stanford Junior University; and 'Repudiation of State Debts in the United States,' by Prof. William A. Scott, of the University of Wisconsin.

'In Arctic Seas,' a narrative of the voyage of the *Kite* with the Peary expedition to North Greenland, by Robert N. Keeley, jr., M.D., surgeon to the expedition, and G. G. Davis, is in the press of Rufus C. Hartranft, Philadelphia.

Houghton, Mifflin & Co. announce 'Uncle Remus and His Friends,' by Joel Chandler Harris, the last of the series; Mr. Lowell's lectures on 'The Old English Dramatists'; and 'Aladdin in London,' a story by Fergus Hume.

D. Appleton & Co. have nearly ready 'Three Centuries of English Love Songs,' edited by Ralph Caine; and 'In Gold and Silver,' by George H. Ellwanger, with notable illustrations.

'The Chemical Basis of the Animal Body' is the title of a work, by A. Sheridan Lea, which Macmillan & Co. will publish as a supplement to Foster's 'Text-book of Physiology.'

The Bowen-Merrill Co., Indianapolis, will issue in December 'Green Fields and Running Brooks,' a new book of verse by James Whitcomb Riley.

'Truth in Fiction,' twelve tales with a moral, by Paul Carus, is the holiday venture of the Open Court Publishing Co., Chicago.

Under the auspices of the Royal Society of Sciences at Göttingen, a collected edition of the works of the eminent physicist, the late Wilhelm Weber, will be published in six volumes, of which the first two have just been issued by Springer in Berlin. The first volume treats of acoustics, mechanics, optics, and the doctrine of heat, and the second of magnetism. The subjects to be discussed in the remaining four volumes, which are to appear early in 1893, are galvanism, electrodynamics, the undulatory theory, and the mechanics of human instruments of locomotion (*Gehwerkzeuge*). The earliest of these treatises dates from 1825, and as Weber died in June, 1891, they cover a period of sixty-six years, and give a remarkably full survey of the evolution of physical science from the time when Chladni and Oersted made their epochal experiments and discoveries in acoustics and electromagnetism, to the present day.

We resume our notice of holiday editions of standard works, beginning with William Ware's 'Zenobia,' which has been revived by Estes & Lauriat, Boston, printed in bold type by the University Press, and illustrated with numerous photo-engravings, chiefly from views of the temples of Palmyra and of Baalbec. The literary taste of two generations might be curiously gauged by comparing this once celebrated work with Gen. Wallace's 'Ben Hur.' More dainty is Lamb's 'Tales from Shakspere,' with Ainger's introduction, and with designs reproduced, in part at least, from Boydell's 'Shakspere' (Philadelphia: Porter & Coates). The binding also is to be commended. Some of Mr. W. L. Taylor's designs for Tennyson's 'Holy Grail' (D. Lothrop Co.) have a melodramatic force, and some in which landscape and architecture are involved, a trace of poetic feeling. But the single characters and the groups are feeble in expression and drawing. The print is excellent. Another centre-table folio comes from the same firm, 'A Lost Winter,' by Elizabeth Stuart Phelps, illustrated by Mary Cecilia Spaulding. The drawings are suggestions of Florida, and have this justification, but their art is only amateurish.

Mrs. Oliphant's 'Makers of Venice' (Macmillan) has taken strong hold on popular favor, having in five years passed through three editions besides reissues. The latest is called the "extra-illustrated," for besides the numerous woodcuts in the text or on separate leaves, thirty photographic plates of churches, monuments, and palaces in particular have been inserted, and very much enhance the

richness of the collection. Some of these views are necessarily hackneyed, but they cannot well be spared in illustrating an historical work. The publishers have left themselves little room for improvement hereafter, except to provide an index and to correct a few discrepancies between the titles in the list of plates and those affixed to the plates. The volume as we now have it is a solid octavo of about 400 numbered pages and perhaps 250 leaves, handsomely printed with broad margins, and bound in white canvas with wine-colored sides, simply and elegantly stamped in gilt.

One of the woodcuts in Mrs. Oliphant's work is a much reduced representation of Marco Polo's departure from Venice, from a MS. in the Bodleian Library. This scene, in which more than one existing landmark of the city is plainly recognizable, is beautifully copied in color, after the illuminated original, in the first volume of the new illustrated edition of Green's 'Short History of the English People,' just published by the Harpers. Twenty-six pages of this admirable specimen of book-making are devoted to an enumeration of the illustrations (there must be between three and four hundred of them) and to notes upon them and the sources from which they were derived. Several of the plates are colored; there are numerous maps, colored and plain; there is a facsimile of the Great Charter; and the plentiful cuts embrace views of scenery and buildings, portraits, coins and seals, personal ornaments, sailing craft, vehicles, customs, etc., etc. Here are actual specimens of old Norse ships, Norse chessmen, the fauna of Ireland from a thirteenth-century MS., pictures of the common life of the laboring class in the fields and in the mechanic arts, the baker drawn to the pillory with his short loaf hung about his neck, the makers of wattled enclosures at work, and the builders of abbeys. Not one illustration is worthless or superfluous, and nearly all are here published for the first time. The lamented author's fine face once more serves as frontispiece. It is not likely that the present season will witness the production of any book more handsome as well as serviceable, or more desirable to own or to make a gift of.

The Harpers also publish 'The Fraise of Paris,' by the late Theodore Child, a series of articles gathered from the pages of *Harper's Magazine*. Mr. Child spent most of his life in Paris and knew it well; a clever writer and gatherer of facts, he has succeeded in importing into his pages much of the charm of that city, besides giving a good deal of more or less interesting and valuable information. The text has the air, occasionally, of having been "written up to" the illustrations, some of which, especially those by Renouard and Lepère, are very good. M. Lepère is an engraver, and his views of Paris, drawn and engraved by himself, are extremely clever, and are in the line of original work which we believe wood-engraving must largely follow for the future.

Text and illustrations of 'The New England Country' (Boston: Lee & Shepard) are stated on the title-page to be by Clifton Johnson. Much the greater number of the illustrations, however, are process reproductions of photographs from nature. Many of the views are well chosen, and the photographs are excellent as such, and so far Mr. Johnson deserves credit, but they do not make very good book illustrations. Photographs from nature look thin, gray, and unaccented when printed on the page, and do not "spot" well, while the figure subjects look set and posed. The snow scenes here suffer the least, as they have more vigor of contrast than the others, but even they are not satisfactory. Illustration is a form of decoration, and, like other forms, needs the artist. Mr. Johnson gives us a few drawings, but he has not mastery enough to make them very interesting. The wide page, with its long, thin lines of print broken by little vignettes, across which the eye has to jump with much uncertainty of landing in the right place, makes the text very difficult to read, and, what is of more importance, very unpleasant to look at. For the book is primarily a picture-book, and the text is of no great importance in itself and only needs to look well. "January" and "March," among the full-page illustrations, and the meadow-scene in sunlight on p. 77, may be mentioned as among the most successful plates and as beautiful photographs, but the impression of the whole book is rather an unpleasant one.

'J. B. Greuze,' in the series of "Artistes Célèbres," reprinted from *L'Art* (Macmillan), is by Ch. Normand. It is as rich in illustration and as careful in detail as others of the set, and is, besides, an admirable piece of criticism. A clearer idea of the merits, faults, and limitations of the artist could hardly be conveyed by words.

The late Prof. Freeman left corrected the proofs of a smaller 'History of Sicily,' which has recently been issued in the "Story of the Nations" Series (Putnams). In this work of moderate size he brings the history of Sicily down to the ninth century after Christ—to the beginnings of the Saracen invasions. It was evidently his purpose to describe in another volume the Norman Conquest and the great reign of Frederick II., "the Wonder of the World," that most interesting period in the career of Sicily, which has never yet been adequately narrated. The present work is the best, to our knowledge, on the subject, because it gives succinctly the results of Freeman's indefatigable and almost endless exploration of Sicilian history—a field in which he has had no peer—and is free from the mass of conjectures and archæological dissertation which encumber his larger work. He was a writer who, when following his own inclination, knew not always where to stop; but when, as in the present case, or in the case of his sketch of William the Conqueror, the bounds were set for him, he could succeed in condensing his stores of knowledge into the required space. This volume is furnished with a map and with many process illustrations which, despite their lack of delicacy, add to its interest and value. Of the interest of the story of Sicily itself we need not speak, for the island may be said to have been, from the earliest historic times, the battle field of races, and the stage on which in miniature the chief processes of civilization were rehearsed.

Prof. Sumner has made an abridgment of his work 'The Financier and the Finances of the American Revolution,' under the title 'Robert Morris,' and it is presented to the public by Dodd, Mead & Co., in their "Makers of America" Series. There is hardly sufficient personality in this epitome to arouse interest in Morris as a man, but it brings out in clear relief the financial methods, both public and private, that prevailed during our Revolutionary period.

A translation of Bluntschli's 'Theory of the Modern State' has been undertaken by three very competent Oxford Fellows, Messrs. D. G. Ritchie, P. E. Matheson, and R. Lodge, and the first part, entitled 'The Theory of the State,' is now published by the Clarendon Press (New York: Macmillan). Two other parts remain to be translated, and if the work is completed in as scholarly a way as it is begun, it will be a useful manual for students of political science.

Prof. James Geikie of the University of Edinburgh, a leading representative of energetic investigation of the glacial period in Great Britain for the past twenty years, has lately issued a paper on the "Glacial Succession in Europe," in the Transactions of the Royal Society of Edinburgh, in which he contends for the multiple division of the glacial time into several epochs, separated by intervals of milder climate. His evidence of successive ice advances deserves the careful consideration of those of our geologists who can find the record of only one ice advance in the complicated series of drift deposits in our upper Mississippi Valley.

Prof. E. Reyer of Vienna has published two pamphlets (Leipzig: Engelmann) on 'Geological and Geographical Experiments'; the first concerning deformation and mountain building, in which Favre, Cadell, and Willis have already made much progress; the second concerning volcanic and massive eruptions, practically an untouched field of study in geological laboratories. A later pamphlet will give an account of Reyer's method of experimentation.

The November issue of the *Princeton College Bulletin* contains a paper of decided literary interest, being a transcription of Coleridge's marginalia in his pocket edition of Horace (1637). His notes are critical (in a poetic sense), emendatory and explanatory, with many an apt idiomatic rendering.

We have received the prospectus of the *American Athenæum* set down for immediate launching in this city at 830 Broadway—"a high-class monthly journal devoted to the interests of the book-buying and reading public of the United States and Canada."

—The October issue of the Harvard *Quarterly Journal of Economics* contains two important contributions to the currency discussion, which, now that the time for campaign debate is past, should receive the attention due to their judicial tone and solid character. The first is by Prof. Bernard Moses, of the University of California, on the Legal Tender Notes in California. The failure of the greenbacks to enter into circulation in California during our period of depreciation from 1862 to 1879, is a curious and important chapter in monetary history. It was a case in which Gresham's law did not work: the worse currency, even though a legal tender, did not drive out the better. California conducted her business on a gold basis throughout the period of inconvertible greenbacks. The episode has never received the attention it deserves, and Prof. Moses's paper fills a gap in economic literature. His account shows that the maintenance of a specie currency in California was due in part to State legislation, by which contracts in "a specified kind of money"—in practice, this meant gold—were made enforceable in that kind of money. But clearly the most important factor was the opposition of the entire community to the use of paper money in any form; an opposition which had already expressed itself, before the war, in a section of the State Constitution prohibiting the issue of any banknote or paper to circulate as money. When greenbacks began to appear, the recalcitrant debtor who offered them in payment of his debts, was posted in the newspapers. The legal-tender quality of the greenbacks availed nothing in face of a public sentiment of this sort. Prof. Moses's paper

may give aid and comfort to those who contend that the repeal of the tax on State banknotes would not be followed by that flood of depreciated paper which the Republicans have been predicting; for certainly he makes it clear that there are conditions under which a bad currency cannot succeed in making its way into circulation.

—On the other hand, Prof. Dunbar's paper on the Banknote Question points out the dangers which must be faced by those who propose the repeal of the tax on State issues without making sure that those issues are adequately protected against depreciation. The simple repeal of the ten per cent. tax would "indisputably open the door to the evils which were rife only a generation ago"; and considering the temper of some of our Western and Southern communities, it is idle to expect that any general public sentiment would prevent the issue of notes under conditions that might easily lead to depreciation. Prof. Dunbar admits that there is need of a change of some sort in our currency legislation, and especially of provision for the ready issue of sound banknotes, convertible at once and without question into specie or its equivalent. He points to the growth of banking, and especially of small local banks, in some of the Western States, as strong evidence of a need for more widely ramifying banking facilities. But that need should not be met without guarding against the dangers of overissue and depreciation; and no adequate security against these dangers can be found, in Prof. Dunbar's opinion, without uniform action and Federal control.

—In a recent number (October 15) of the *Revue Internationale de l'Enseignement*, M. E. Dreyfus-Brisac discusses the authorship, so much disputed, of the 'Rapport sur l'Instruction publique,' ascribed to Talleyrand; the 'Travail sur l'Éducation,' published by Cabanis after Mirabeau's death; and the anonymous volume, 'De l'Éducation publique,' which appeared in 1793. He does not really solve any one of the three problems, nor does it appear likely that the authorship of any one of the three works can be conclusively settled. M. Dreyfus-Brisac is, however, of opinion that Talleyrand wrote the 'Rapport' and that Mirabeau is clearly the author of the 'Travail'; while, as regards the third volume, he claims it for Diderot, supporting his view by testimony drawn from the encyclopædist's other works. In the same number M. Louis Fargues has an interesting article on the steady increase in the numbers of students attending colleges and schools under clerical management in France. From the statistics he gives, drawn from M. Ch. Dupuy's report on the educational budget, it appears that from 1887 to 1892 the attendance of students in the national lycées and colleges slowly but steadily decreased, but that during the present year there has been a slight improvement. On the other hand, the clerical establishments have steadily gained and in a larger ratio. This means that the great private schools, controlled neither by the Government nor by the Church, are rapidly being driven to the wall. If they disappear completely, and the proportion between the Government and the Church schools is maintained, the former will have only four per cent. more of students than the latter. In other words, France would be in danger of falling under clerical rule.

—It seems unjust to cease speaking of the memorials which the death of Tennyson evoked without a word about the admirable appreciation of the poet which appeared on October 7 in the *Temps*. It was a brief article, hardly a column in length, charmingly written, and giving its judgment upon Tennyson's work kindly, as befitted the occasion, but also justly, both in what was said and what was left unsaid. It was not silent as to some of the poet's defects, but it handled them in quite another fashion than the hard and mechanical manner of M. Taine; and where the writer had praise to give he gave it heartily, as thus:

"Nowhere is the grace of his brush more magical, the harmony of his verse more enchanting, than in the 'Idylls of the King.' Nowhere has the chivalric Middle Age been restored more lovingly. Nowhere has the Tennysonian type of the woman-heroine—that type which Anglo-Saxon art has always cherished with so passionate a predilection, the type of the Imogens and the Cordelias, the Élaines and the Énids—been realized with a chaster and more delightful perfection. And yet, at the same time, these poems, so finished in form, wherein glide like light shadows those figures of virginal grace—these poems, in which there was risk of weakening the rude and healthy inspiration of the first makers of the great legend of the Round Table—are all animate with a breath heroic at once and modern, and seem to sound the charge of the great social conflicts and of the high enterprises of our nineteenth century."

The article is signed with the initials "F. de P.," which we suppose may be taken as those of M. Francis de Fressensé. It is in curious contrast with the scant half-column in the *Figaro* of the same date, from the editorial pen of Jacques St. Cère. This speaks of Tennyson's "chromolithographic poems," says that he met the taste for "home," for tea, and for ethereal poetry "which rests in the bosom of every Englishwoman past forty," and that "the official English world will shed tears over his grave, but poetry will perhaps not suffer too much by his departure." The notice in the *Écho de Paris* was written by M. Stéphane Mallarmé, and is to be read with the interest which all the scanty work of this very modern writer excites. Tennyson recalls to him Coppée and Leconte de Lisle, but he finds it more exact to liken the poet to Puvis de Chavannes. England, he says, will not be slow to feel that with Tennyson "quelque chose de grand et de glorieux s'en est allé."

—It is not very often that the French Academy receives such a blow as is given by the deaths of three of its members within three successive weeks. But Camille Rousset, the historian, has lately followed Marmier and Renan, and now three academical chairs are vacant. Rousset was born in Paris in 1821, and in his earlier life was Professor of History at Grenoble, and afterwards at Paris; first at the Collège Bourbon and later at the Lycée Bonaparte. In 1864 he was appointed historiographer and librarian at the Ministry of War, holding the place till the office was suppressed in 1876. His first historical work, the 'Histoire de Louvois,' which obtained for three years running the Gobert prize, opened the doors of the Academy to him, and in 1871 he succeeded (being the last of Guizot's candidates) to the chair of the unhappy and lamented Prévost-Paradol. In the Academy he was a member, as Renan and Marmier also were, of the Committee on the Dictionary. Rousset's special field of work lay in the military history of France. His chief books, besides the 'Histoire de Louvois,' are his later volumes, 'L'Histoire de la Guerre de Crimée,' and the 'Conquête de l'Algérie.' Of somewhat less importance, perhaps, are his 'Volontaires de 1791-1794,' which cost him his place of historiographer, his 'Grande Armée de 1813,' and several other books. Rousset was a careful and deliberate worker, who made thorough preparation before he wrote; he was to a large extent free from prejudices and "tendencies"; he pronounced few "historical judgments," and came, we suppose, as near to being a scientific historian of the modern sort as any man could who was seventy-odd years old and who began to write fifty years ago.

—Columbus, and no end! The prize of 30,000 pesetas offered by the Spanish Government for the best history of Columbus and his voyages, to be written in connection with the centenary celebrations, has not been awarded. A gratification of 1,000 pesetas has been given to a Belgian, and one of 800 pesetas to a Spaniard, who competed for the first prize, but both unsuccessfully. Numerous works on the same theme have recently been published in Spain. Of these the best is reputed to be that by Don José María Asensio of Toledo, President of the Academy of Seville, and a gentleman of independent fortune, living in that city. Señor Asensio did not compete for the prize above referred to, but merely wrote his book *con amore*. It is handsomely illustrated. Written, as it is, however, in the Spanish language, its contents must remain a sealed book to most English-speaking persons until an English or American publisher can be induced to circulate the work in the vulgar tongue. The Royal Theatre of Munich, Bavaria, celebrated the fourth centenary of the discovery of America on October 12 by a representation of Hermann von Schmid's "Columbus," a tragedy in five acts, which was first put on the stage nearly forty years ago and then very favorably received. To-day the play is hardly less antiquated as a drama than is the caravel, in which Columbus made his first voyage, as a specimen of naval architecture. It is an historical-psychological piece, romantic in character, rather rhetorical in color, and evidently based upon Irving's biography of the famous navigator. The German literary weekly *Blätter für literarische Unterhaltung* (Leipzig: Brockhaus), in its issue of October 13, takes note of the same anniversary by the publication of two articles entitled "Zur Jubelfeier der Entdeckung Amerikas," a critical survey of the most recent works on the subject by Sophus Ruge, and "Vom alten Amerika," a review of John Fiske's 'The Discovery of America' by E. P. Evans. Prof. Ruge, a well known authority, characterizes Winsor's 'Christopher Columbus' as "the best work that North America has contributed to the celebration of the jubilee." Finally, the trustees of the Lenox Library in this city have just issued a volume containing the four oldest Latin versions of Columbus's letter announcing the discovery of the New World, from the original editions owned by the Library. Of these, the rarest, the pictorial edition in ten leaves, is reproduced in facsimile and accompanied by a literal translation. A useful bibliographical introduction by Mr. Wilberforce Eames, assistant librarian, enumerates all the other known editions, and shows how many of these, in the original or in facsimile, are accessible in the Lenox Library. Besides a limited choice edition, there is an all-sufficient popular edition of this volume, from the De Vinne Press, which the Trustees offer bound for the nominal price of 50 cents. We hope they have but begun their good work of sharing their treasures in this way with the public.

ADAMS'S MASSACHUSETTS EPISODES.

Three Episodes of Massachusetts History: The Settlement of Boston Bay; The Antinomian Controversy; A Study of Church and Town Government. By Charles Francis Adams. 2 volumes. Boston: Houghton, Mifflin & Co. 1892.

THOUGH each of the "Episodes" comprised in these volumes is distinct enough to have a unity of its own, it may be said with equal truth that the three episodes, collectively considered, are sufficiently related in their subject-matter to resolve themselves into a sort of historical trilogy, because they have a close mutual relation to each other and form together the age and body of a common epoch. The centre of the historic movement is taken by Mr. Adams from the church and town of Quincy, or perhaps we should say it is taken from Mount Wollaston, the inhabitants of which were erected in 1639 and 1640 into the church and town of Braintree. Until 1708 the Church of Braintree was conterminous with the town of Braintree, but after that date the original settlement became the "North Precinct," and this North Precinct in 1792 was set off from the rest of the town and became the town of Quincy. As Quincy is a suburb of Boston, it was natural that the history of the former should be told in connection with the early settlement of the latter. And as the so-called Antinomian Controversy of 1637 found the two foci of its irregular orbit in Mistress Anne Hutchinson of Boston and in the Rev. John Wheelwright of Mount Wollaston, it is obvious that the whole strain of this episodical history does but come to its highest note in the harsh discords of that tragic chorus. Much of verbal repetition is necessarily incident to the detailed rehearsal of episodes which have a common basis in history, but much of vividness and of distinctness is also gained by lifting each stage of the story into its separate relief.

As Mr. Mellick has shown that a wide tract of our colonial and Revolutionary history can be surveyed from the narrow boundaries of an 'Old Farm' in New Jersey, so Mr. Adams has shown that, in the course of the first 190 years of their municipal life, the towns of Braintree and of Quincy were called to deal in a practical way with almost every one of those questions which, on a larger scale, are wont to perplex statesmen.

"Religious heresies, land-titles, internal improvements and means of communication, education, temperance, pauperism, and the care of the insane; public lands, currency, taxation, and municipal debt—all these presented themselves, and the people assembled in town-meeting had to, and did in some fashion, work out a solution of them. . . . They [the townsmen] were hammering out their destiny in their own way on the hard anvil of commonplace current events; and they paid for their experience as they went along. Their so doing marked an epoch in history."

It is in the towns and town records of Massachusetts, says Mr. Adams, that "the American historical unit is to be sought." He adds:

"The political philosopher can there study the slow development of a system as it grew from the germ up. The details are trivial, monotonous, and not easy to clothe with interest; yet the volumes which contain them are the most precious of archives. Upon their tattered and yellow pages the hardly legible letters of the ill-spelled words are written in ink grown pale with age, but they are all we have left to tell us of the first stages of a political growth which has since ripened into the dominant influence of the New World; nor is it too much to imagine that when the idea of full human self-government, first slowly welded into practical form in the New England towns, and as yet far from perfected, shall have permeated the civilized world and assumed final shape, then these town records will be accepted as second in historical importance to no other description of archives."

Questions of land-titles and of parochial division in Braintree, as here discussed, are seen to have formed, in miniature, the training-school in whose horn-book disciplines the Conscript Fathers of a later day were taught how to deal with local and with continental problems as they arose in the wider field of colonial and Federal politics. "The village theatre of 1700," says Mr. Adams, "was exactly like the national theatre of 1850, excepting only that it was not so large." There were times of battle and "overt acts of secession" which stirred the Quincy community to its lowest depths, long before South Carolina lifted the standard of rebellion and fired on the flag of Fort Sumter. Sometimes the imminent deadly breach was opened by a municipal battle over the apportionment of the minister's salary, and the souls of men were sure to be tried whenever, as the result of ecclesiastical feud, a colony of the saints moved out from one congregation to form another and to raise the frame of a new meeting-house. So true is it, as Bagehot has said in his 'Physics and Politics,' that a national character is but the successful parish character "writ large." And if the debates and customs of the New England town were "monotonous," we have but to remember again, with Bagehot, that "the ages of monotony had their use because they trained men for ages when they need not be monotonous." Mr. Doyle, as we all know, and as Mr. Adams reminds us, has made this latter saying the keynote of his treatise on the 'Puritan Colonies.'

The Massachusetts reader who is familiar with the topography of Boston and its surroundings, especially if he is born to the manner of that metropolis, will naturally find his most vivid interest in the opening Episode of these volumes. The student of politics, especially if he be one who concerns himself with the problems of municipal administration, will find instruction in almost every page of the careful study which Mr. Adams has bestowed on the church and town government of Quincy. But perhaps the general reader, as well inside as outside of Massachusetts, will turn with the most curious interest to the moving story, as here recorded, of that "old unhappy far-off thing," the so-called Antinomian Controversy, and of the "battle long ago" which was once fought over the head of Mistress Anne Hutchinson. The story of "that erroneous gentlewoman," as Cotton Mather called her, has been often told, but never so dramatically and so pathetically as it is recited by Mr. Adams. Cotton Mather, we know, refused even to write out her name in his 'Magnalia,' because of its evil omen, and because she had left behind her so many worthy and useful relations who must needs share in her disgrace if her name were pilloried in his annals. It is true that he hints her real name to us under the cloudy compellation of "the None-Sutch"—that being, he says, the way in which her wedded name was anagrammatized by either her admiring adherents or by her embittered persecutors, according as the former gave her a good, and the latter a bad, eminence. The anagram is useful to-day only for the light it sheds on the rude orthography of the times, as showing that the patronymic of her husband was sometimes spelled "Hutcenson" in the illiterate script of the common people.

The Antinomian Controversy is interesting to-day not only for its dramatic incidents, but also for the lurid light in which it sets the inanity of theological debate among the members of a narrow-minded community, who, from the nature of the case, could have none of that breadth of view which springs from the larger culture wherever men, as Matthew Arnold phrases it, can bring the forces of comprehensive thought and of history to "play around" a given question. The controversy has, besides, an historic significance, because, in some small sense, it marks a distinct step in the evolution of religious thought in New England, where the religious thought of the American mind has moved through a wider arc of oscillation than in any other part of the country. Though Anne Hutchinson was cut off, root and branch, from the fellowship of the Boston church, and though John Wheelwright was sent from Boston to find a "chapel of ease" at Mount Wollaston, until at length he was sent into the outer darkness of a remoter exile, Mr. Adams tells us that in subsequent years the "North Precinct" of Braintree—both as such and as the town of Quincy—"always showed a marked leaning towards a liberal theology, the more noticeable from the contrast in this respect offered to the rigid orthodoxy which ever characterized the South Precinct, still retaining the original name."

Mr. Adams sees very clearly and justly, in his common-sense view of the theological controversy of 1637, that it was nothing more, in its essence, than "a struggle for civil power and ecclesiastical supremacy in a small village community." As such, he adds, "it naturally resulted in a display of the worst qualities of those engaged in it, and illustrated with singular force the malign influence apt to be exercised by the priest and the woman as active elements in political life." At the close of his detailed narrative Mr. Adams sums up the whole controversy in terms so graphic and concise that we cannot do better than quote his own analysis of the whole drama in which Mrs. Hutchinson was called to play her melancholy rôle.

"Stirred by an access of ill-considered popular enthusiasm, the body of the freemen had, at the election of 1636, put a slight upon the time-honored magistrates of the colony, by placing the boyish Vane over their heads in the office of Governor. An ambitious woman, with her head full of Deborahs and the like, and with a genius for making trouble, had then sought to drive from his pulpit in the chief town its long-settled pastor, in order to install her own favorite preacher in his place, with her kinsman [John Wheelwright] as that preacher's associate and successor. In her day-dreams she herself probably occupied in the new order of things she proposed to bring about the position of a prophetess, the real guiding spirit of the whole, with her husband possibly in the Judge's seat. Altogether it was an exhilarating vision—such a vision as self-conscious and usually unappreciated natures have in every time and most places been wont to revel in. But it did so chance that Mrs. Hutchinson fell into just that combination of circumstances which enabled her to succeed up to a certain point. Her success was indeed marvellous, and it turned her head. Presently she became reckless. She put wanton affronts on the pastor, and, when his brethren rallied to his support, she did not hesitate to assail them also. She made enemies of the whole body of the clergy. Vane sympathized with her; Winthrop with them.

"The contest over the possession of civil offices came first, and resulted in an easy conservative triumph. Vane made the best fight he could, but the odds were too heavy, and he went helplessly down. Winthrop was reinstated in his old place, and practically the struggle was then over. . . . Unfortunately there was a woman in the case, and the implacable spirit of theological hate had been aroused. The priesthood demanded a victim, and the victim met the priesthood at least half way. . . . At the hands of an historian

whose intelligence is not mastered by his sympathies, she and her friends, including Gov. Vane, are entitled to no consideration. They went on a fool's errand, and they brought great principles into lasting odium. On the other hand, the way in which the adherents of Vane and Mrs. Hutchinson were suppressed cannot be defended without including in the defence the whole system of religious and political intolerance of that time. But why should it be defended? It is impossible to ignore the fact, and worse than useless to deny it, that the New England Puritans were essentially a persecuting race. They could not be otherwise. They believed that they were God's chosen people. As such they were right; all others were wrong."

It is perhaps hardly fair to ascribe to "theological hate" all the grim judgments that were pronounced on Anne Hutchinson after the Indians set upon her in her exile near the mouth of the Hudson, and slew her with all her family, save one daughter who was carried into captivity. It was common in that day, as well outside the pulpit as inside it, to regard such calamities as the "judgments of God." The still-born and misshapen growths to which she and Mary Dyer are said to have given birth after they had passed through their great fight of afflictions, instead of being ascribed to the natural causes which in their cases were surely quite sufficient to explain them, were, in like manner, supposed to show the visible seals of divine wrath set upon reprobate children of the devil. The Teacher of Galilee found this same invidious form of superstition rife among the Jews in his day, and marked it with his signal condemnation in the case of the "sinners" on whom the tower in Siloam had fallen. His followers in the seventeenth century had not yet learned the charitable lesson of their Master, and his followers in this nineteenth century did not fully learn the charitable lesson until the misjudgments in which they had been suckled were slowly outworn by the teachings and the method of natural science, to which the obligations of true religion are seen to be so great, however parsimonious may sometimes be the acknowledgments of an obscurantist theology.

Mr. Adams could have easily shown, if it had entered into the purposes of his narrative, that the religious and social phenomena of the whole Antinomian controversy of 1637, after due allowance made for changes in their form corresponding to changes of time and place, were but the outcroppings of a mental and religious unrest which is sure to generate similar convulsions wherever that unrest is confined within a narrow sphere and moves in minds of only a limited culture. The controversy moved in religion because religion was the chief concern of the New England Puritan. Through no other medium would it have been possible for Anne Hutchinson to make the "infant commonwealth throb through its whole being." A Church Father has reminded us that the vulgar tradespeople of Byzantium were once distraught by similar disputings over the ineffable mysteries of Christianity. Streams of blood flowed as the result. The schism was here caused, as Hegel explains it in his philosophy of history, by the fact that the Christian dogmatics of Byzantium were rendered powerless for good because they fell into the hands of a people whose culture was too rude to assimilate Christian doctrine into spiritual life and ethical habit.

To the modern mind the issue that was joined in Massachusetts in 1637 over the Covenant of Works and the Covenant of Grace seems sufficiently elusive. The very dialect in which the controversy was carried on has become a meaningless jargon to the men of the present generation. But we are not to infer that the theological speech of 1637 was as wholly unintelligible to the Puritans of Massachusetts as to us. "Rabble-charming words," says Dr. South, "may often have a sort of wildfire wrapped in them," and the "wildfire" wrapped in Anne Hutchinson's mystical terminology may have sometimes lighted the female heresiarch, as well as her partisans and opponents, to some dim sense of what they were all beating the air about. Yet Mr. Adams thinks that it is stating the case none too strongly to say that "all the disputants—ministers, magistrates, elders, and female transcendentalist—were hopelessly lost in a thick fog of indefinable ideas and meaningless phrases; but while all groped their way angrily, numbers and the clatter of tongues were wholly on one side."

It is justly remarked by Mr. Adams that we cannot measure by modern standards the horrors with which excommunication and banishment came to Anne Hutchinson and her family in 1638. Milo, in his exile at Massilia, could still set the table in a roar as he cracked jokes over the bearded mullets about which he wrote so pleasantly to Cicero; and Ovid, in his banishment at the mouth of the Danube, could at least find a solace for his solitude in writing the 'Tristia.' But banishment into the "howling wilderness" of New England in 1638 meant desolation, or famine, or death by the tomahawk, or captivity to Indian enemies, worse than all other woes combined.

The author refuses to accept any of the stock excuses which are commonly interposed for the defence of religious persecution as inflicted by the Puritan forefathers. In the treatment of doubtful historical points there are few things, he thinks, more to be guarded against than "patriotism or filial piety." He thinks it juster, as well as more in accord with the immutable principles of historical criticism, to say, after all due allowances made for the ignorances of the time, that "the Puritans persecuted because they believed to fanaticism, and therefore persecuted as a part of their faith." They could honestly believe that the right to persecute inhered in them alone, because they honestly believed that they alone among their contemporaries were "God's chosen people." Fanaticism has been defined by a German philosopher as "an enthusiasm for something abstract," for any abstract thought or rule which sustains a negative position and a destructive relation to the order of things adverse to it. The Puritans were serious because they took themselves seriously in the presence of any and all obstructions. By their dealings alike with Indians and with heretics they showed, says Mr. Adams, that they were not in advance of their time. "That they were not was again an element of their strength, for they were essentially practical men and not idealists. As such, being of the seventeenth century, they objected to persecution chiefly as applied to themselves."

We regret that we have left ourselves no space in which to discuss Mr. Adams's history and analysis of the New England "town," considered as the historical unit of American polity. Minute as is the dissection to which he subjects that institute, we believe he makes no reference to what Gershom Bulkeley, so early as 1692, instanced as among the fruits of the New England democracy, to wit: "a levelling principle and spirit," which had in his day, so Bulkeley says, "a tang of the Fifth Monarchy"; and this, he adds, is "a very churlish drug." Long after the "churlish drug" of the Fifth Monarchy had ceased to infect the politics of New England, we find constant references to this so-called "levelling spirit" in the writings of John Adams, the letters of Gen. Washington, and the speeches of Elbridge Gerry. This "levelling spirit" is supposed to have come to a head in Shays's Rebellion, and though Mr. Adams makes a detailed reference to that outbreak of popular sedition, he nowhere traces the deeper roots from which it was held at the time to have sprung. The Rebellion is discussed in its salient features and proximate causes, rather than in its remoter antecedents. We miss, too, any allusion to the glowing tribute which Thomas Jefferson paid to the New England towns as factors in practical politics during the Embargo period, doubtless because that tribute is a commonplace of history; but how the town government has broken down under the pressure of modern civilization, with the complexity of its interests and the scientific method required by its instrumentalities, is here expounded at length with great clearness and force. As Napoleon said of financiers adequate to meet the demands of the Empire in his day, the race of capable municipal administrators "remains to be created" in this country.

THE WORK OF BURNE-JONES.

Edward Burne-Jones: A Record and Review. By Malcolm Bell. London: George Bell & Sons; New York: Macmillan. 1892.

THIS is essentially a holiday book—one of which the illustrations are by far the most important part. It is a book of reproductions of Mr. Burne-Jones's works, to which a text has been added because a text of some sort is generally thought necessary to a book. This text consists of five chapters, entitled respectively, "Introductory," "His Birth and Education," "Year by Year," "His Decorative Work," and "His Art and His Critics," besides a "Chronological List of Finished Pictures," and a "List of Cartoons for Stained Glass Windows," as appendices, and an index. The first chapter is a little jubilation over the position Mr. Burne-Jones at present occupies, and the prices fetched by some of his pictures at recent sales; the second gives a few facts about his birth and his art training, or, rather, lack of training; the two following are a bare record of the dates of his works and their exhibition, with little else; the last concerns itself with a defence of the artist against some of the commoner criticisms upon his work, in which the writer, as we shall see, seems to have missed the point.

It is, then, the seventy or eighty photogravures and process cuts after Mr. Burne-Jones's works which make the interest of the book; and as they give a very adequate measure of the talent, in everything but color, of one of the most remarkable creative artists of the day, that interest is very great. That that talent should have been misunderstood and denied was natural enough, and by no means a proof of such denseness of stupidity on the part of public and critics as Mr. Bell imagines. When an original artist has at last mastered his public and compelled recognition, we are all likely to cry out against the ignorance or malice that has delayed the recognition; but we are usually wrong. The world is not so unready to recognize good work when it is once done, but it is natural and necessary that it should require some definite proof that the work is good. Certainly Mr. Burne-Jones has had little to complain of. If he was ridiculed for some of his mannerisms and

peculiarities, he found patrons from the first and was the object of as much enthusiastic admiration as ridicule. Much of the criticism on his earlier work was entirely deserved, and even in his best and most mature productions there are weaknesses and mannerisms which it is perfectly right and natural to point out. Nay, a critic is not necessarily either foolish or malicious because he finds these peculiarities so offensive to his taste as to overbalance his enjoyment of the merits which few would deny. He simply occupies one of the two positions one or other of which every one instinctively takes towards every novelty.

Burne-Jones's earliest pictures were painted under the influence of Rossetti and, by Rossetti's advice, without previous study of any sort; and they show all the imitative tendency and technical weakness that might be expected from such a beginning. The drawing is often childish in the extreme, the execution labored and painful, and the imitation of Rossetti's types and manner very marked. Gradually the imitation becomes less noticeable, and the artist's own style disengages itself; while, by dint of long and serious study, the drawing becomes elegant and refined and the workmanship, though remaining elaborate and detailed in the extreme, becomes broader and more assured. With the "Chant d'Amour," the "Wine of Circe," and other pictures painted in the sixties, he becomes definitely the artist as we know him. Since then he has become steadily more accomplished, and has also accented more and more that tendency to archaism which is so strongly marked in him and which has given offence to his critics.

He had not publicly exhibited for many years when the Grosvenor Gallery was opened in 1877 and the "Angels of Creation," the "Mirror of Venus," the "Beguiling of Merlin," and several minor or unfinished works were shown. Works of so much power and so different from the general run of painting naturally excited much discussion, and it is impossible to deny that there were faults enough to justify the scoffers. *Punch*'s description of the figure of Vivien as "at least twelve heads high" is somewhat of an exaggeration, but she certainly is preternaturally tall, and both her figure and that of Merlin are, or appear, impossibly posed and curiously drawn. Neither could a woman well get her gown into such folds as Vivien's, or walk in it if she did. From the naturalistic, which is the natural, point of view, the picture is absurd enough. But there were also merits of a high and rare kind. There was a great power in the arrangement of lines and great feeling for the beauty and quality of the line in itself, endless invention in intricate and charming detail, a strange mastery of expression, always the same but always interesting. The same type of head, constantly recurring, with the same wistful, wide-eyed, melancholy look, reminds one of the "waters wan" that appear at such brief intervals in the verse of Burne-Jones's great friend, William Morris.

The "Angels of Creation" shows our painter, perhaps, at his very best. The mastery of composition revealed in the constantly varying treatment of the same simple motive, the gradual crowding of the narrow panel as figure after figure is added without the harmony of line or mass ever being disturbed for a moment, the curious invention of plaited fold and woven wings that make his angels seem like strange feathered creatures to whom flying is more natural than walking—all this is wonderful and inimitable. True, the graceful hands and feet are unnaturally long and slender and somewhat boneless; true, that light and shade are absent and the figures are immersed in water rather than in air, so clear and unatmospheric is the effect; true, the sentiment is somewhat lackadaisical and sickly-sweet—true, in a word, that this is art of a highly artificial kind, unrobust and stifling, and that one feels in it as in a hot-house filled with flowers, and longs for a breath of "caller air"; but it *is* art, and art of singular power and perfection within its limits, and its qualities are precisely those ordinarily lacking in the naturalistic and wholly picturesque art of to-day. No wonder that the French, with their legion of good painters who seem not to know what to do with the marvellous realistic power acquired through generations of research, felt that here was something new and different, and worthy of study and of all respect. If Burne-Jones had stopped here, there would be little but praise to give him; but in later works his archaistic tendencies have carried him much farther, with, as we think, regrettable results.

And here is the place to recur to Mr. Bell's defence of the artist against his critics—a defence in which, as we have said, we conceive that he has missed the point of the criticism. It is mainly concerned with charges of "insincerity," affectation, and imitation, and also with the charge that Mr. Burne-Jones is a "literary painter." On this last count of the indictment we acquit at once. Mr. Burne-Jones is always pictorial. He is fond of elaborate allegory and a certain mysticism of thought and under-intention, but artistic expression is always his main aim. As Leigh Hunt, we think it was, said of 'The Faery Queen,' "the allegory will not bite you," and if the work of art is beautiful, we can perhaps forgive the artist for having a meaning. But for the other charges there seems to be more foundation. An unnamed critic has said of "The Annunciation," "The Angel Gabriel . . . is clad in insincere draperies, copied from we know not what quaint mediæval work," and repeats in various forms the charge of imitation. Mr. Bell's defence is that Mr. Burne-Jones's draperies are not copied directly from any original, and that if any one says so he should point out the original. Also, that numerous and careful studies exist for all his works, and that many of these have been exhibited, and that they show that his work is done from nature and not copied from any other artist. All of which is true, but does not in the least affect the point at issue. Mr. Burne-Jones is not accused, as we understand it, of plagiarism, but of *pastiche*, which is a very different thing. One may work from nature with the intention of imitating the style of another artist, and it is this which it seems to us Mr. Burne-Jones has done very often. Nor is it very difficult to name the sources of some of his mannerisms. At first the style of his draperies is only vaguely Italian and fifteenth-century. Then there is a very pronounced imitation of Mantegna. The draperies of the Vivien and others of that type show most distinctly the influence of the Mantuan master. Later, more particularly in his designs for stained glass (the initial on page 23 is a good example), and in the figure of the Angel Gabriel in the picture under discussion, the treatment is inspired by Gothic sculpture. Still later, as in the "Dies Domini," and in the mosaics which he did for the Church of the Holy Trinity at Rome, and, partly, in the "Sponsa di Libano," he has gone back to the Byzantines for his inspiration. Now all this may be justifiable enough, but it certainly gives some cause, if not reason, for criticism. In the case of the mosaics it is certainly largely justifiable, though we cannot help thinking that the imitation is pushed unnecessarily far, and the archaic little angels, with their pointed toes, hanging down from the centre of the dome, are decidedly ridiculous, while the Christ might be as severely decorative and impressive without his curiously ruffled-looking gown. In the "Dies Domini," again, the peculiar pose of the feet, with the ankles drawn together and the toes turned out, and the bad foreshortening, seems to us little less than deliberate affectation without any gain whatever. In this figure, as in the "Sponsa di Libano," the drapery, too, might have had all the composition of line without such rigidity of fold and lack of modelling. The imitation of Byzantine stiffness is pushed to an extreme in the figures of angels from the window in St. Peter's Church, Vere Street, London, where the whole figure is stretched out into impossible length and straightness, the draperies are subdivided into innumerable rigid lines, and the wings are not only unnatural in form but positively ugly and undecorative as well. The drawing of the legs of Mars in one of the designs representing the Seasons is equally meaninglessly archaic.

But when all is said—when one has fully admitted that Burne-Jones is imitative and mannered, that his figures are wonderfully long and thin, that his heads habitually lean forward at nearly a right angle with the spine, that his lack of early training makes his drawing of the nude feebly round and unaccented, that his repetitions of hungry eyes and hollow cheeks and prominent chins are somewhat wearisome, that his types, both of men and women, are epicene—Burne-Jones remains, what we have called him, one of the most remarkable creative artists of the day, and a man of great and undoubted power and originality of design.

We are accustomed to think that the art of stained glass is better understood in this country to-day than elsewhere. Mr. Burne-Jones has executed a large number of designs for glass, and to look at his cartoons gives us pause. In design his windows are as incontestably superior to most of those made in this country as, in color and quality of the material itself, Mr. La Farge's glass is superior to that of Mr. Morris. If design of a power comparable to that of Mr. Burne-Jones could be combined with a color-sense and feeling for the material equal to that of Mr. La Farge, the result would be truly admirable.

There is nothing but praise to give to the reproductions and to the printing and general get up of the book.

RECENT NOVELS.

An Earthly Paragon. By Eva Wilder McGlasson. Harper & Bros.

Prince Serebryani. By Count Alexis Tolstoi. Translated from the Russian by Jeremiah Curtin. Dodd, Mead & Co.

Nemrod & Cie. Par Georges Ohnet. B. Westermann & Co. (*Nimrod & Co.* Cassell.)

La Terre Promise. Par Paul Bourget. B. Westermann & Co.

'AN EARTHLY PARAGON' is the engaging title of a story clever beyond the average. The title seems, however, to belong to some other novel, since it certainly has nothing to do with this one, and thereby is fostered an agreeable hope that another book may be forthcoming

by the same author. The present story is one of Casey County, Kentucky, without being in the main local literature. The dismalness of the Knob country and the benighted manners and customs of Chamouni, Kentucky, are depicted with rare skill, in swift, masterly touches, yet made accessory to the story of Sylvia Byland's love affairs with a tact deeply satisfying to the sense of proportion. Miss Sylvia's adventures are interesting, and her character not commonplace, although her estimate of herself as "a thin and insufficient person" is justified with great adroitness. She begins by charging herself with forgetting, as she is leaving her old home, that her father lies there in the graveyard; she decides later on that she is "tired of having to form the literary taste of every man she meets"; she ends by saying to the old love, as she is vanishing with the new, "People are happy in marriage in proportion as they are too stupid to find each other out, or clever enough to keep up prenuptial illusions." Such a young woman, it is plainly to be seen, is, in Casey County parlance, "a good entertainer," whatever may be thought of her conclusions. Her uncle, the Captain, is a racy spirit; and her landlady, Mrs. Lichens, is a creation whose pronounced piety is never allowed to interfere with her thoughtful care of herself as a hotel-keeper. "Don't put nare 'nother scrap of lard in thet pan! I keep a hotel, Selesty. Ef folks wants home comferts, let 'em go whar home comferts is." The sauce which she uses to make palatable the fact that her lover is a dolt is the following bit of philosophy: "My Maker's will is mine. So long ez He makes male critters the way He does, all I say is, what suits Him suits me. I don't ast for a man with wings. It's hard enough to keep track of 'em when they walk on legs. God knows whar they'd be ef they could fly!" The main pity of the book is its indirection of style. It contributes at first sight to the subtlety of the thought, but the ideas are really too good to need such artificial aid, and it would be higher art to conceal the art better.

In all the range of Russian literature, there is no work of fiction which so perfectly depicts the life and spirit in the old Tzardom of Muscovy as 'Prince Serebryani.' The chief difficulty with Russian historical novels consists in the superabundance of historical material, more or less misunderstood or "arranged" according to the writer's ideas of patriotism, and in the discouraging lack of literary qualities. Although 'Prince Serebryani' was Count Alexis Tolstoi's first work, and remained his sole attempt at writing in the form of a novel, it satisfies the critic from every point of view. The author possessed himself thoroughly of the prejudices, superstitions, and atmosphere of the days of Ivan the Terrible, in his later and worst stage, the stage of the Oprítchina. In the warring opinions of historians as to the character of Ivan and of his immediate adherents and favorites, the Count has chosen the most popular, which is the worst, and has placed it before the reader with all the dash and movement demanded by sensational writing, without in the least marring the sentimental interest or the highest demands of style. His language is idiomatic and characteristic of his nation and the age of which he writes, in a high degree. For this reason, if for no other, Mr. Curtin's new translation deserves a welcome. The book is not unknown to the English-reading public, having been published in London, in 1874, in a translation from the pen of the Princess Galitzine. The Princess's rendering was extremely polished and refined; it gave the substance, but frequently skipped whole phrases if they did not fit in with the style which she thought adapted to the subject. She omitted the characteristic oaths altogether, partly, no doubt, from the difficulty she found in getting their equivalents, and partly, also, from that peculiar sense of propriety which is not unknown in America, and which induced the publisher of Gogol's 'Taras Bulba' to insist that that rugged hero should be made to say "Satan!" or "The Evil One!" instead of ripping out the original and impregnably Scriptural word "The Devil!" Mr. Curtin suffers from no such absurd qualms of conscience; but he does suffer from an inability to translate idioms, whether they be oaths or ordinary expressions. For example, the favorite ejaculation of Prince Serebryani's faithful squire, Mibeich, is, "Tetka ikh podkoratina." Mr. Curtin dodged the difficulty, at first, by omitting it altogether, *à la* Galitzine. Later on, finding it recur incessantly, it became evident to him that this procedure would not answer; he accordingly presents it to us as, "Their aunt is a chicken!" The true sense is contained in the old English objurgation, "A murrain on them!" He makes a similar mistake in another frequently repeated expression, "Old horseradish," which should read, "Old dotard." He always fails to translate "gubnoi starosta," evidently because he does not know the meaning.

It cannot be said, in sweeping generalities, that the book is badly translated, but it can be said that the work is very hasty and ill-digested, and that the reader will have great difficulty in grasping the author's meaning at times, because of too literal renderings as well as because of absolute errors in the Russian or the English. As instances of the manner in which the translator fails to get out of the text all there is in it of characteristic or delicate shading, we may cite the following: "Servants" given instead of "bondmen"; "dance," instead of "choral dance," the survival among the peasants of the ancient Greek dances; "eagle" as contrasted with falcons, instead of "gentle" or "gerfalcon"; "velvet," instead of "brocade," the old Russian brocades being a specialty, interwoven with gold and silver, which "velvet" fails to indicate; "building," instead of "log-building," which is all that existed at that date, with very few exceptions; "leggings," instead of "foot cloths." What can the reader make of the following too-literal idioms? "I beat to thee with the forehead," meaning, "I bow my head to the earth before thee in supplication"; "and the ransom equal between us," instead of "we'll go shares on the ransom;" "with a half voice," instead of "in a low tone"; "gave Morozoff with his head," etc., instead of "placed Morozoff's life at Godunoff's absolute disposal"; "we have cooked kasha," instead of "we have made a mess of it"; "hard work for thee to get out," instead of, "we've had a hard time to get you out," and so on, *ad libitum*. Admitting the difficulty which a translator is under, of keeping his own language in his head while contending with foreign idioms, "ye art" and other slips of the same sort must be regarded as grave defects.

In spite of all defects, however, it was worth while to make a new translation of this fascinating book, and it is worth while to read it, though the public will find it rather hard work in places like those of which we have given specimens. Mr. Curtin has furnished a very interesting introduction, setting forth the historical antecedents of Moscow and Ivan the Terrible, and stating the conditions, political and otherwise, at the time shown in the novel. He incorporates some rather remarkable statements on the principles which governed the accession to the throne of Kieff, and to the thrones of the lesser principalities, in the days of the appanage princes. The uninitiated seeker after knowledge would certainly conclude, from what is here said, that these appanage princes packed up their crowns and sceptres when the Grand Prince of Kieff died, and walked on to the next higher principality which legally fell to them, with the utmost courtesy and decorum. As a matter of fact, what happened on the demise of the Grand Prince resembled a game of "stage-coach," with swords thrown in. It was rare that a single prince could be found among them who was occupying the right throne, and his tenure was very insecure, even after he had consigned all competitors, including his nearest relatives, to damp mother earth. That this was the case is proved by one of Mr. Curtin's paragraphs, which is correct, to the effect that, in the course of 170 years, 293 princes struggled for the Kieff or for other principalities, and that there were eighty-three civil wars, in some of which the whole country took part.

Aristocrats, of course, are the heroes and heroines of Obnet's latest vapid novel. The subject is a commonplace love intrigue; the characters, the situations, and some of the descriptions are a rehash of Halévy's Abbé Constantin, Balzac's Baron Hulot, and Daudet's Numa Roumestan, done up into an imitation of Feuillet's Maxime Odiot, Marquis de Champcey d'Hauterive. The author is wholly wrong in his conception of an impoverished noble living in the province, and while he desires to have his readers look upon Clément as a consistent, high-toned gentleman, he merely succeeds in presenting to them a very inconsistent cad. Of character-drawing, of analysis, there is properly none; the French is mostly bastard, largely interlarded with English words, and the drift of the book is anti-Semitic. But it will have readers, and abundance of them, for platitudes are apt to command a large audience.

Far different is Bourget's book; not, perhaps, his masterpiece as novelist, it is unquestionably a marvellous piece of analysis—an analysis of feelings, of thoughts, of contradictions carried so far, indeed, that it ends by causing positive pain to the reader. After a few pages one feels as if he were present at the dissection of a dead body: then as if it were his own body—senseless, it is true; but before long it is vivisection, and the nerves are well-nigh agonized by the high tension at which Bourget keeps them. It is a triumph for the writer, though not an enviable one; it is downright misery for the reader to be compelled to follow, to suffer, this minute and pitiless work of the scalpel. To a certain extent the novel is after the pattern of the plays of Dumas *fils*: it discusses a problem arising from that immorality so readily condoned, nay, approved, by Bourget and most French novelists. The hero is a weak man, with a strong tendency to self-torture by self-inquisition. He loves, and is engaged to, a lovely, innocent girl, a figure such as one does not too often find in Bourget; but he has a complication, of course, in a former *liaison* with a married woman, a *liaison* broken off by him, in a fit of jealous rage, some eight or ten years earlier. They meet again in the same hotel where the hero and his *fiancée* are staying, and the former acts much like a fool on discovering that his former mistress is a widow with an only child. He persuades himself that the child is his—hence the problem: Is he to devote his life to his prospective bride or to the

child? Logically enough, he is shipwrecked between the two alternatives, and the only sympathy one can accord him is that springing from the community of suffering under Bourget's remorseless, tireless analysis of moods and thoughts and motives.

The curious thing is, that on a subject which would generally be called immoral, Bourget has written a novel which conveys a deeply moral lesson, more simply inculcated in the words, "Be sure your sin will find you out." But the hero, such as he is, suffers apparently not because of his real sin, but because he has assumed that a woman who betrays a husband for a lover may also desert the latter for a third man. This is evidently Francis Nayrac's crime, in Bourget's eyes, and it is for this that he is condemned to the loss of that *Terre Promise* of earthly happiness of which he had caught t o brief a glimpse. Of the literary art with which the story is told, of the skill with which the changes in the lives of the personages are shown, of the exquisite poetical beauty of the descriptions of natural scenery, it need only be said that they are in Bourget's best vein; but, excellent as they are, they do not lessen, rather they heighten, the repulsive features which have been hinted at, and confirm the fast-growing opinion that Bourget as a critic is vastly superior to Bourget as a novelist.

The New Life of Dante Alighieri. Translated by Charles Eliot Norton. Boston: Houghton, Mifflin & Co. 1892.

PROF. NORTON has done well to bring out, in uniform style with his translation of the 'Divine Comedy,' his well-known translation of 'The New Life.' It was in 1859 that the latter first appeared in the *Atlantic Monthly*, and was subsequently reissued in a small edition. Since then Mr. Norton has thoroughly revised it, the revision extending not merely to word and phrase, but to the whole structure of the translation, for whereas this was originally accompanied by a running commentary, the translation is now printed separately, and the commentary is placed in short essays and notes at the end of the volume. That this is the preferable arrangement no one can question; for no reader cares to be interrupted at every paragraph by the explanations of even the most sympathetic of expounders. That the 'New Life' requires expounding, at least for the majority of readers, is equally certain. In it are crystallized the dominant qualities not only of Dante himself, but also of his age; the modern turns in wonder from the unrivalled beauty of its poetry to the hard, dogmatic syllogizing of its prose, and he can but doubt whether poems so fresh and spontaneous were really begotten in the mechanical way Dante describes. But this, we repeat, is one of the paradoxes of Dante and his time, both of which are made clearer in Mr. Norton's elucidating essays and notes.

Of the verbal changes which Mr. Norton has made in this latest revision it is not necessary to speak in detail; they indicate, of course, the maturing of his taste, and in most cases they are improvements on the early version. How excellent his translation of the poems—the incomparable poems—is, can best be appreciated by readers familiar with the difficulty of putting them into English with any adherence to the compactness of the originals. Even Rossetti does not, it seems to us, equal Mr. Norton as a translator of many of these poems. Compare, for instance, their respective versions of the sonnet "Tanto gentile e tanto onesta pare," which Rossetti renders thus:

"My lady looks so gentle and so pure
When yielding salutation by the way,
That the tongue trembles and has naught to say,
And the eyes, which fain would see, may not endure.
And still, amid the praise she hears, secure
She walks, with humbleness for her array;
Seeming a creature sent from Heaven to stay
On earth, and show a miracle made sure.
She is so pleasant in the eyes of men
That through the sight the inmost heart doth gain
A sweetness which needs proof to know it by:
And from between her lips there seems to move
A soothing essence that is full of love,
Saying forever to the spirit, 'Sigh!'"

Norton's version is:

"So gentle and so modest doth appear
My lady when she giveth her salute,
That every tongue tecometh, trembling, mute;
Nor do the eyes to look upon her dare.
Although she hears her praises, she doth go
Benignly vested with humility;
And like a thing come down, she seems to be,
From heaven to earth, a miracle to show.
So pleaseth she whoever cometh nigh,
She gives the heart a sweetness through the eyes,
Which none can understand who doth not prove.
And from her countenance there seems to move
A spirit sweet and in Love's very guise,
Who to the soul, in going, sayeth: Sigh!"

This is not only closer to the letter and spirit of the Italian, but also, it seems to us, more melodious than Rossetti's. The 'New Life' is to the 'Divine Comedy' what the Sonnets are to Shakspere's chief plays; and we can but rejoice that through a translation so excellent a new generation of readers are to become acquainted with Dante's own story of his youth and passion.

A French Ambassador at the Court of Charles the Second (le Comte de Cominges). From his unpublished correspondence. By J. J. Jusserand, Conseiller d'Ambassade. With portraits. London: T. Fisher Unwin; New York: G. P. Putnam's Sons. 1892.

THE title of this book seemed to promise entertainment for the lovers of historical gossip, perhaps for the lovers of scandal. But the promise is not fulfilled. Indeed, if we except some nice portraits—one, particularly, of the Countess of Grammont, from the picture by Lely—it is difficult to say what there is in it new or important. It throws no fresh light, so far as we can see, on diplomatic relations. The Comte de Cominges, the Ambassador on whose correspondence it is based, was an observer as well as a diplomatist, and he may have had a good deal to tell about England and its court; but it is not reproduced in this notice. The murderous and disgraceful battle for precedence fought in the streets of London between the trains of the French and Spanish Ambassadors took place in the time of D'Estrades, the predecessor of De Cominges. It was already known to us from Pepys, and all that we now learn is that this piece of barbarism had the perfect approval of that demigod of grand manners, Louis XIV.

Here and there we pick up something of interest. De Cominges knew not a word of English, whence it appears that French was already established as the language of diplomacy and of courts. Hobbes was recognized and pensioned, or set down for a pension, by the French King as *assertor regum*, which he was in a certain sense, but not by any means in Louis's sense; for the 'Leviathan,' instead of being the embodiment, was the very negation, of divine right. It is rather pleasant to know that Charles II., with all his Castlemaines and Nell Gwyns, was really afflicted by the dangerous illness of his queen. But the license, not of polygamy but of polygyny, was completely established in the case of kings, and the open installation of a mistress or of half-a-dozen mistresses was deemed perfectly compatible with conjugal duty to the official wife. So respectable a person as Arthur Young asks, "Who, in the name of common sense, would find fault with a king for amusing himself with a mistress?" Cominges studied English institutions and sent a report on them to his master, who, of course, found in it a warning. The Ambassador is much impressed by the British Navy. We get in this book some account of the Great Plague from a fresh point of view. But the portraits seem to us the best of it.

The Story of Uganda and the Victoria Nyanza Mission. By Sarah G. Stock. With fifteen illustrations. F. H. Revell Co.

THE strongest impression made by this book is as to the superiority of the people of Uganda over the other native African races. This is shown not only in their houses, their clothing, their army, their organized government, their skill in metal-working, but also in their eagerness to learn to read and the steadfastness with which they held to their faith when once they had accepted Christianity. Their country is the geographical centre of the continent, and, though lying directly upon the equator, is so elevated that it has a particularly healthy climate, "the temperature rising but little above 80 degrees Fahr., and seldom sinking below 60 degrees at night." Considering the importance of its position, the fertility of its soil, and the character of its inhabitants, there can be no question that, when once safe and easy communication with the coast is secured, it will become a rich and powerful State. Its history may be said to begin with the arrival, in 1877, of the first missionaries in response to King Mtesa's appeal made through Mr. Stanley, and for the next ten years the efforts to Christianize Uganda constitute nearly all of its history which is of general interest. The share of the English mission in this work is all that our author undertakes to relate, though in the number of their converts the French priests, who came in 1879, were by far the most successful. Her story in many respects is very similar to that of missions in other parts of the heathen world. The dangers, discouragements, superstitions to be overcome, the self-denying toil, the patient waiting—it was five years before a native was baptized—and the final success, are common to all alike. The main points of difference are the fact of the eagerness of the ruling caste to be instructed in Christian doctrine, and that, in the fierce persecution with which it was sought to stamp out the new faith, many who suffered were very young. The first victims were three boys, "one aged fifteen, the youngest only eleven or twelve," who were first mutilated and then burned. It is to be regretted that some of the numerous extracts from diaries and letters had not been omitted in order to make room for a fuller account of the events of the past three years—the revolutions, the civil war between the Catholics and Protestants, and the action of the officials of the British East African Company. In this way, and by a less frequent use of Biblical language and metaphor on the author's part, the value of her book would have been increased and a wider range of readers secured. It is also to be regretted that the

excellent map in the English edition has been omitted by the American publishers.

The Battles of Frederick the Great, abstracted from Thomas Carlyle's biography of Frederick the Great. Edited by Cyril Ransome, M. A. Charles Scribner's Sons. 12mo, pp. 237, with maps and illustrations.

MILITARY men who have read Carlyle's 'Frederick' have been struck with the clear grasp of the military situations and the strong and accurate presentation of both strategy and grand tactics in the battle stories. It need not be said that Carlyle's word pictures are vivid in the highest degree; but it is one of the best proofs of the sincerity of his literary work that he mastered the topography of Frederick's campaigns and analyzed his movements, so that this portion of the biography is no whit inferior to the rest in exhaustive study of the best authorities, and a trustworthy statement of the facts. It was, therefore, a happy thought of his publishers to separate these war pictures from the many-volumed work, and to give in a single little book a series of battle descriptions which it would be hard to match. Frederick's wars are classic material for the military student of the present day, and such a one may here find the means to understand them clearly and to feel them as if he were present. In little things and in peaceful events, Carlyle is often extravagant to the verge of grotesqueness; but the din of battle seems to call for such a seer to describe it. His dramatic power is here at its best, his Titanic epithets fit the scene, and his masterful and rugged manner makes us willing listeners.

Prof. Ransome furnishes introductory statements, connecting the chapters by brief but sufficient outlines of the current history of the campaigns, so that the relation of events to each other may not be missed. The maps are reduced from the standard English edition of Carlyle's works, and, besides the general chart, comprise fourteen maps of battle-fields. The illustrations, as to uniforms and equipments, are taken from the Menzel drawings in the German Imperial edition of Frederick's works. In every way, therefore, the inexpensive volume is unusually attractive.

Barbara Fritchie: A Study. By Caroline H. Dall. Boston: Roberts Bros.

THOUGH Mrs. Dall yields to none in admiration for Whittier, she has undeniably provided opportunity for the caviller in this study, which she characterizes as a leaf dropped into an open grave. All the testimony contained in the volume goes to prove that of the persons of note who have come to be associated with the memory of the well-to-do glover's widow, the only one who does not fill the measure of poetic ideals is no other than the poet himself. Mrs. Dall has had printed, as a sort of corollary to the study, with the "assertions that are mistaken" italicized, the ballad which more than a score of years ago made the name of Barbara Fritchie a household word in Northern homes. Of the thirty rhymed couplets of which it consists, no less than six are wholly in italics, while in five others the accusatory lettering is conspicuous. As these mistakes falsify not only local history but also the tone and temper of a brave contemporary of Whittier's, who gave his life for his political convictions, the poet's truest admirers will be the first to join in the regret he is here recorded to have quite lately expressed—regret at having written this the only poem for the truth of which he could not vouch.

There is little besides this paradoxical feature to criticise in a timely and interesting contribution to the growing files of Americana. In spite of the various attempts to deny her patriotism and even her identity, there can be no doubt that in the year 1862 there did live in the border town of Frederick, in Maryland, this dauntless old patriot of German descent but American birth, in whom loyalty amounted to a passion, and who expressed her passion with a simple fervor that reached its climax and made her a heroine when she was ninety-five years old. Though the challenge to the Confederate soldiers that has heated the imagination of youth is apocryphal, though her flagstaff was struck by no bullet, but at most loosened from its support in the window, and though Stonewall Jackson's memory is as unscathed as was she herself by the ignoble firing, the picture of the brave old woman standing in the face of danger beside the flag she loved, in the early September dawn, is one that the annals of patriotism will not willingly let fade. It is pleasant to learn as a sequel that she shared with another country-loving nonagenarian, the Rev. Joseph Trapnell, the tribute of a ringing cheer from Gen. Reno and his men, as, flag in hand, she stood at her door when the Union troops entered Frederick a few days after the memorable 6th.

The question upon which the authenticity of the central episode of the study turns is chiefly one of topography. Mrs. Dall has given a drawing of the locality of Barbara's house—unhappily destroyed in 1868 by a corporation that had not learned the value to a town of its landmarks—as well as a print of the house and one of Barbara herself, both taken from photographs. The local sketch shows the route of the brief but eventful détour made by Gen. Jackson from the head of his troops on the morning of the firing. The pleasant description of Frederick and its surroundings, added to the painstaking collocation of evidence, leaves nothing to be desired save the testimony of possible living witnesses, into whose hands it is to be hoped the monograph may fall.

BOOKS OF THE WEEK.

Albee, John. Prose Idyls. Boston: Houghton, Mifflin & Co. $1.25.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

187 PICCADILLY, LONDON W.

A MOST excellent book for personal or domestic practice is **Stepping Stone to Homœopathy and Health.** 256 pages. 12mo, cloth, $1 00, post free. A good book for the family. Published by

BOERICKE & TAFEL,
1011 Arch Street, Philadelphia, Pa.,
Homœopatic Pharmacists and Publishers.
Book Catalogue mailed free.

The TRAVELERS' BUREAUS of the News Series (Herkimer, N. Y., office) will send trustworthy information about winter resorts.

Dyspepsia

Dr. T. H. Andrews, Jefferson Medical College, Philadelphia, says of

Horsford's Acid Phosphate.

"A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

It reaches various forms of Dyspepsia that no other medicine seems to touch, assisting the weakened stomach, and making the process of digestion natural and easy.

Descriptive pamphlet free on application to

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

The Nation.

NEW YORK, THURSDAY, DECEMBER 1, 1892.

The Week.

THE annual report of the Treasurer of the United States is as clear as a Chinese puzzle. It has been "submitted to Secretary Charles Foster," and it will remain for that lucid financier to reconcile its statements with his own official reports. For example, Treasurer Nebeker reports the revenue of the Government for the last fiscal year at $354,937,784, and the expenditures at $345,023,320; from Secretary Foster's office the figures had been given out as $356,933,302 and $361,348,669 respectively. The difference appears to be due to the fact that Mr. Nebeker has calmly left out the Treasury transactions on the score of the national-bank deposit and redemption funds — on which there was a net deficit of about $13,500,000 for the year—and thus transformed a general and actual deficit of $4,500,000 into an apparent but fictitious surplus of $9,000,000. But he is not consistent even in this misleading method, since, if he had followed it in his comparison of this year's expenditures with last, he would have found the decrease not, as he says, $10,349,354, but $20,750,575. It is waste of time to discuss seriously such juggling figures.

Towards the close of last summer's gold-export movement the outlook for the Federal Treasury's gold reserve became a question of grave concern. In the later weeks of August the Treasury's gold surplus, in excess of the $100,000,000 reserve, had sunk to little more than $10,000,000. There seemed to be some reason for fearing the total wiping out of this surplus, and the Micawber-like cheerfulness of Secretary Foster did little service in dispelling misgivings. The turn came, however, at the moment when the outlook was darkest. Up to that date the Treasury had been paying out gold to specie exporters in exchange for United States notes and Treasury notes. This had necessarily drawn down the surplus gold reserve with great rapidity. In September precisely the reverse movement took place. The New York banks needed currency and legal-tenders to supply the needs of the Western harvest season. This currency could be obtained only from the Treasury, and in exchange for it the banks were forced to pay out gold. Under this operation, $15,000,000 additional gold was added to the Treasury's "free surplus," which on November 9 reached its maximum of $25,500,000 over the hundred-million reserve. But, the harvest season ended, this source of mechanical supply was stopped. For the last three weeks the gold reserve at Washington has been slowly but steadily falling, and the resumption of gold exports, at so very unusual a period in the year, brings the question once more to public attention. This is the more necessary in that the month of January, even without an export of specie, is always marked by a diminishing specie reserve. The Treasurer's report is careful to point this out. There are many elements rising to present notice in our Government finance which point without exception to the checking of the source of all this monetary confusion. The plea for the immediate repeal of the Sherman Act of 1890 cannot at any rate lack unmistakable arguments.

The plan for dealing with the silver question proposed by Mr. Alfred de Rothschild in the Brussels Conference has a touch of opéra-bouffe beyond anything in the suggestions of modern finance, unless the subtreasury scheme of the Farmers' Alliance may be deemed the more amusing of the two. We are not at all surprised that the American delegates are "thoroughly satisfied with the turn of events." Anything which draws attention away from them and turns the laugh on somebody else would naturally be considered a good thing. He proposes that the United States shall continue to buy 54,000,000 ounces of silver per year, and that all the other nations together shall buy $25,000,000 worth per year for five years — this by way of palliating the crisis which he believes will come if the United States, in a fit of desperation, begins to sell her hoard of silver. If silver reaches 43d. per ounce at any time, the buying is to stop. Why so? At 43d. per ounce our precious silver dollar would be worth only 75 cents. Why should we consent to a stoppage short of par? Why should Mr. Jones, as President of the Nevada Mining and Milling Company, consent to such a shave? And nothing is said about the situation five years hence. Since there are mines in Colorado that can turn out silver in large quantities at 26 to 30 cents per ounce, *i. e.*, at one-third of Mr. Rothschild's maximum, it is a safe bet that they will continue to furnish it as long as any syndicate of nations stands ready to take it at 90 cents and upwards. They will be as well prepared in the year 1897 as they are now, and meanwhile, perhaps, new mines will be discovered in America or Australia that may add their quota to the present gayety and the coming gloom. For it may be expected that in 1897 the situation will be as much worse than it is now as the holdings of silver will be larger then than they are now.

Republican prophets of trouble between Mr. Cleveland and the office-seekers of his party are having hard luck with their prognostications. They had a grand time for a week or more after election with predictions about the terms of the bargain that he had made with Croker, Sheehan, and Murphy at that celebrated Victoria Hotel dinner. Croker was put in charge of the Custom-house, "Paddy" Divver was assigned to the New York Post-office, and "Barney" Martin was about to be "slated" for the English Mission, when the Brooklyn *Eagle* ruined the entire industry by publishing the fact that no bargain had been made and no pledges of any kind given. The prophets died very hard on this issue, but they finally abandoned it by turning upon their sad and dejected ally, the *Sun*, and demanding fiercely why it had thus lied to them about it. No response came from that cave of gloom save some incoherent mutterings about Mugwumps. On Saturday a new source of trouble for Mr. Cleveland was discovered in a rumor that Senator Gorman had called a conference of Democrats, which was to decide upon a plan for "steering Cleveland" in his party policy, including the distribution of offices. This was worked with great success on Sunday and again on Monday, but it has been destroyed for further use by the announcement from Senator Gorman that he has no knowledge of such a conference, and never heard of it till he saw the news of it in the papers. Other Democratic statesmen who were assigned to leading parts in the conference, hasten to say that they have no knowledge of it. There seems to be, in fact, a disposition among Democratic statesmen to avoid the appearance of offering themselves as "steerers" for Mr. Cleveland, the not unnatural impression being that he is quite able to steer himself.

The complete calm which has followed Mr. Cleveland's farewell address to the office-seekers, issued on the eve of his departure for the South, is a fresh demonstration of the great value of courage in politics. No previous President-elect ventured to issue such an address, no matter how unbearable may have been the torture to which he was subjected. Now that it has been done, everybody is able to see the wisdom of it. The politicians and newspapers together would soon have had the new President involved in such a furious scramble for office that he would not have had a moment's time for anything else. Furthermore, the fury of the onslaught would have increased with every day's progress, so that by the time the 4th of March arrived, the Democratic party would have been in much the same condition that the Republican party was in when Garfield was inaugurated. By stopping the business when he did, and in the unmistakable manner that he did, Mr. Cleveland has saved his party from the danger of a rup-

ture before it succeeded to power, and has done a great deal towards quieting permanently the craze for office throughout the country. The descent of office-seekers upon Washington after the inauguration will be much smaller than it would have been had the address not been issued, and will be much smaller than it was four years ago, after President Harrison had announced in his inaugural that efforts would be made to give all applicants something. Mr. Cleveland is evidently in a much less approachable temper than Mr. Harrison was, and we trust he will continue in it after March 4. In the meantime, he has done the country a great service in not merely "scaring off" the office-seekers, but in silencing also the newspapers which were doing their utmost to excite the hungry to greater fury.

Senator Vest of Missouri opposes the idea of an extra session, on the ground that "the first few months of Mr. Cleveland's Administration will be taken up by the work of organization and filling the offices with new appointees." Of course a new President of the United States encounters at the outset "the work of organization," just as a new Prime Minister in England does. But it is not a work which need consume much time after the inauguration, for the President-elect is expected to have the members of his Cabinet picked out before he goes to Washington, and such other nominations for important offices as require to be made immediately ready for submission to the Senate within two or three weeks after the 4th of March. When this has been done, the new Administration will be organized and ready to carry out the policy which it was elected to introduce. As Mr. Vest himself repeatedly pointed out during the canvass, the election was to decide between two policies of government, and the business of the successful candidate would be to carry out the policy which the people approved—just as the election in Great Britain a few months ago was to decide whether the home-rule policy should be adopted, and the business of Gladstone, if successful, would be to carry out that policy. Only a few changes in office are required in either country to effect the change of policy decreed by the voters. In Great Britain the new appointments made by Gladstone did not exceed thirty, and yet that small number of changes sufficed to reverse the whole policy of the Government.

As for "filling the offices with new appointees"—meaning thereby the tens of thousands of post-offices and other such places—the idea of a prime minister's wasting his time and the nation's time in such mean employment is so absurd that no intelligent Englishman could endure it. Nor would any intelligent American have any patience with the suggestion that Gladstone should fritter away his strength in this way. But it is not a whit more absurd that Gladstone should bother himself over the claims of a host of applicants for every post-office than that Cleveland should do the same thing. Everybody recognizes that there ought to be a number of changes in the chief executive offices in order to carry out the policy of the new Administration; but it will not take long to make these necessary changes, and the notion that Mr. Cleveland's time for "the first few months" after March 4 next will be, or ought to be, taken up with the filling of the run of offices throughout the country with new appointees, is preposterous.

The correspondence between Secretary Charles Foster and Congressman Fitch on the subject of John I. Davenport's accounts puts the former in the extremely mortifying position of not knowing the practice of his own department. Mr. Foster had undertaken to read a lecture to Mr. Fitch, in a rather high key, on that particular subject. Consequently he has put himself in a very glaring light. The gist of the Secretary's letter is that the law makes the certificate of the Judge of the Circuit Court conclusive upon the officers of the Treasury in settling and adjusting the accounts of the Chief Supervisor of Elections, and hence that the Treasury Department cannot suspend payment or exercise any discretion thereon. Mr. Fitch shows by repeated decisions of both courts and the Treasury that this idea is altogether erroneous, and that the Department has cut down Mr. Davenport's certified accounts in two instances since Mr. Foster himself has been the Secretary. In fact, the fundamental idea upon which the Treasury Department was organized was the idea of subjecting every claim upon the public funds to an examination and adjustment before payment. The Comptroller is the last officer who examines them, and he is just as much bound to pass judgment upon the accounts that bear the certificate of a judge as those that bear the certificate of a postmaster or a light-house keeper. The judges who pass upon the Supervisor's accounts know this, and hence they consider their own duties merely perfunctory. Mr. Foster, a short time since, gave us a running account of the duties of the several bureaus of his department. If he should have occasion to repeat that exercise, he would know more after reading Mr. Fitch's letter about the duties of the Comptrollers than he did when he last addressed our Chamber of Commerce.

The official figures on the Presidential ticket in this State, as published by the *World* on November 23, show the remarkable fact that the total vote of New York this year is more than 25,000 short of the total four years ago. The population is gaining at the rate of nearly 2 per cent. a year, so that, in the natural course of things, the Presidential poll in 1892 should have been about 7 per cent. larger than in 1888—or fully 1,400,000, instead of not quite 1,300,000, as was actually the case. There was a larger labor vote this year than four years ago, but as the Prohibitionists lost several thousands, the total vote for other candidates than Cleveland and Harrison was about the same in the two years. For the two leading candidates the votes in the two contests were as follows:

	1888.	1892.
Cleveland	635,965	653,900
Harrison	650,338	608,230

It will be observed that Cleveland gained nearly 18,000, while Harrison lost more than 42,000. This is the first time since the Republican party was formed that its vote in New York at any Presidential election has been smaller than it was at the previous election. The following table of the votes shows how terrible was the shock which the party suffered this year:

1856—Frémont	276,007
1860—Lincoln	362,646
1864—Lincoln	368,735
1868—Grant	419,888
1872—Grant	440,736
1876—Hayes	489,207
1880—Garfield	555,544
1884—Blaine	562,005
1888—Harrison	650,338
1892—Harrison	608,230

The rebuke to the Harrison Administration was most humiliating in Indiana. In his own State, as in New York, Harrison's second candidacy reduced the Republican vote below what it had been in the previous Presidential contest for the first time since the party was formed, as the following table shows:

1856—Frémont	94,375
1860—Lincoln	139,033
1864—Lincoln	150,422
1868—Grant	176,548
1872—Grant	186,147
1876—Hayes	208,011
1880—Garfield	232,164
1884—Blaine	238,463
1888—Harrison	263,361
1892—Harrison	256,681

The People's party vote was much larger in Indiana this year than the Labor vote in 1888, and the greater part of it came from the Democrats; nevertheless, Cleveland received 1,705 more votes in 1892 than in 1888, and has a plurality of 6,037 now, against a plurality of 2,348 for Harrison then.

Mayor Grant's announcement that he shall not make any further appointments for office during the remaining weeks of his term is most welcome intelligence. His reasons for not making any give a curious and instructive view of the workings of his mind. He says he believes that "when the outgoing Mayor is in sympathy with the political views of the incoming Mayor, he should not, in the closing weeks of his term, appoint officials who will necessarily take part in the administration of the new incumbent. Were the Mayor elect of a different political faith than myself, then I think there might be some doubt about my taking such a course." The practice of the outgoing Mayor's appointing officials to hold office usually during the entire term of

his successor has been one of the most vicious in our municipal system, for it has very often led to the putting into office of some of the very worst persons with whom the city has ever been afflicted. The new Mayor has often found himself so hopelessly handicapped in this way that he has been nearly powerless throughout his term to accomplish reforms which he had in mind. This was the case when Mayor Edson, on the last day of his term, appointed Squire Commissioner of Public Works. Of course, if the new Mayor be of opposite political faith to his predecessor, this handicap is all the more deadly. Yet Mayor Grant says he should probably place it on him were that the case in this instance; his idea of the Mayoralty being that its first duty is to secure the offices for the organization. But, however Tammanyite the Mayor's reasoning may be, everybody will be glad that the city is to have no more appointments from him.

The Census Office has just issued its complete report on the mineral industries of the country, which contains a section on tin that is amusing or disgraceful, according as one looks at it. It begins with the frank statement: "Tin-mining in the United States presents the exceptional condition of an industry giving employment to many persons, but which at the end of the census year had not reached the stage of producing commercial tin." That being the case, a census conducted on ordinary principles would conclude that it had better stop right there. "Commercial tin" is all it has any business to concern itself with, and political tin, tin which is good enough until after election, speculative tin, prospectus tin, and all the moonshine varieties of the article, should be freely and entirely turned over to McKinley and his fellow-campaigners. But Census Commissioner Porter knows that he is a politician or nothing, and so has put in the chapter on the statistics of political tin. There is an American section of eight pages, four of which are taken up with a "List of Tin Claims in the Black Hills," and then follow nine pages on "Foreign Production of Tin." What right the latter subject has in a census of the United States, it might be hard to decide; but we are not disposed to blame the compiler, since, after fooling around with mythical and political tin, as he was forced to do, it must have become a positive mental necessity for him to get hold of real tin somewhere. The report naturally booms the famous Harney Peak tin mines, and its appearance is thus very happily timed to coincide with the complete and crushing exposure of that "gigantic fiasco," as a London trade journal of November 4 calls it, which has just been made. The same paper asserts that "the prospects for the future" of that paper tin-mine "are hopeless," and as this is quoted without comment by the *Bulletin* of the American Iron and Steel Association, we suppose it must be taken as final.

A little experience promises to accomplish more than a vast deal of argument in the matter of the bill to prohibit trading in futures. This bill went through the House at the last session in deference to a supposed demand for its passage from the agricultural interests, and it now looks as though it would be rejected by the Senate in response to an evident demand from the same interests for its defeat. The rise in the price of cotton has wrought the change. Three months ago it was selling in Charleston, S. C., at 7½ cents a pound; on Friday it touched 9¾ and 10 cents. Of course, one chief reason for the advance is the discovery that the crop is a short one, but the price would not have gone anywhere near so high as it now is if dealers had been unable to trade in options. In other words, the South Carolina planter could not get the price now offered him in cash for his cotton if Congress had been able to prevent the buyer from purchasing for future delivery. The Southern planters begin to see the point, and they are numerously signing petitions to the Senate to reject the pending bill.

What has become of that "thorough investigation" into the official conduct of Minister Egan and Consul McCreery which was promised by the State Department last May? A Congressional investigation was then threatened, but was suspended out of "courtesy" to the Department, which, it was said, ought to have the first chance to pass upon the acts of its subordinates. But delay has followed delay, and nothing has been done, so far as the public has been permitted to know. McCreery came home, went to Washington, and thence to Michigan, intimating that Chili had no further charms for him. Was he dismissed or allowed to resign? Egan retired to Nebraska, immediately after the election had demonstrated his wonderful hold on the Irish vote, and shows no intention of rejoining his dear Chilians. Has he resigned "under fire"? Has anything at all been done by the Department of State about his case? We hope to see these questions answered in the forthcoming reports of the Executive to Congress, or, if they are not, some suitable action taken by the House in the premises.

The Presbyterian Church prides itself, and justly, on the elaborate safeguards thrown around its ministry to prevent them from suffering by hasty ecclesiastical condemnation, but it begins to look as if some of the prosecutors of Prof. Briggs would soon be in favor of substituting the short, sharp, and decisive methods of the Inquisition for their own slow-going legal process. Prof. Briggs is wholly within his right, and is doubtless acting also from a sense of duty, in making the technical fight he does on the preliminaries of his trial. His argument of Monday seems to have made further serious holes in the charges brought by his prosecutors —so much so that they asked time to haul off for repairs. They appear, in common with the rest of the Presbytery, to have been especially appalled at one of his points, which was as follows:

> "Have you considered what will be required of you if you consent to this proposal of the prosecution? It will be necessary for you to employ a reader to read to you all the contents of the Standards of the Church, all of Holy Scripture, the entire Inaugural Address, and all of my writings referred to therein. You are required by law to have all the proposed evidence before you."

If this point is well taken, as it seems to be, we think it safe to say that that "proposal" will be dropped. Meanwhile, the Presbytery are getting some inkling of the comprehensive nature of Prof. Briggs's defence on the main question, as they see him thus acute and pertinacious in arguing on mere preliminaries.

The resignation of the French Ministry brings to a close an unusually (for France) long period of parliamentary quiet and regularity. M. Loubet has gone down under the weight of the Panama scandal. It is doubtful whether any one who succeeds him will do any better. The trouble is that if the inquiry is pushed home, the revelations of corruption on the part both of legislators and journalists will be very great, and, after these are made, the Ministry will be expected to take some action about them, but what action it ought to be no one is prepared to say. No Ministry will wish to enter on a job of wholesale punishment, perhaps of friends, almost certainly of acquaintances. The Paris press is about the most corrupt in the world, and levies toll on everybody who desires publicity or editorial support, but it is also the most powerful press in the world, and the Minister who undertook to collar it and bring it to justice would have to take his courage in both his hands. What will happen now nobody knows. At every such crisis the Monarchists and Clericals announce the failure of the Republic, and the necessity of trying some other form of government, but the excitement will probably decline as the difficulty of getting any proof becomes more manifest. M. Brisson, who is a good deal of a political purist, is talked of as M. Loubet's successor, but the work of forming a Ministry as good as himself will be formidable. What with the Socialist difficulty, the Anarchist difficulty, the Clerical difficulty, and the German terror, the place is one from which any man might well shrink, because in no country could they be met successfully without unflinching party support in the Chamber, and this Frenchmen are not trained to give. The Germans will, however, find some comfort in the situation.

PLATFORMS AND PRINCIPLES.

BEFORE the echoes of the campaign die away, the public ear ought to be filled once more with the note sounded by ex-Speaker Reed on the very eve of the election. "I am not," he said here in New York, "in favor of the Republican party on account of its principles, but on account of itself. I believe that principles do not make parties, but that parties make principles." This profession was generally esteemed worthy of the statesman who looks upon legislatures not as deliberative, but merely as voting, bodies, and it was indeed a fair measure of his own scrupulousness as well as of the decay of that "best crowd" which, having once found, he has ever since belonged to and means indefinitely to keep belonging to. Still, it had in it an element of truth; for if it is certain that parties do not originate without principles—that is, without common ideas and aims—it is equally certain that the mere habit of working together tends to prolong the existence of a party beyond the time when its original principles have been carried, defeated, or simply outlived. Moreover, it is natural for men who seriously regard themselves as saviours of society in one particular to end by assuming that rôle in all particulars. They alone can be depended upon to promote the cause of temperance, establish a sound currency, purify the civil service, extend the suffrage to women, fulfil the aspirations of workingmen, protect the farmer against the railroad monopoly, and the manufacturer against the pauper labor of Europe, and the silver miner against the world's market, and the freedman against his white enemies—and so on to the end of the chapter. Even if they did not suffer from this illusion, they would be led on to constant enlargement of their programme by the desire to gain votes through timely concession to the novel demands of public opinion, real or imaginary.

Parties thus in their superannuation come to resemble feeble parties in their small beginnings, which think themselves unable to obtain a footing unless they tack on to their prime motive for existing a goodly number of attractive but more or less irrelevant issues. The Liberty party, for instance, professed to be merely giving practical effect to the objects of the American Anti-Slavery Society, of which it was the outgrowth, and whose sole concern was with the institution of slavery. In its very first platform, however, in 1840, the new party dropped an anchor to windward by averring that, in addition to the paramount question just named, "we by no means lose sight of numerous other questions in which all who are to be affected, directly or indirectly, by our Government are deeply interested"—questions which the Massachusetts wing specified under the heads Corn Laws, Emigration from Foreign Countries, Home Manufactures and Tariff, The Banking System, Cotton Manufactures, Reciprocity in Trade, Economy in Expenditures, etc. In 1844 it explicitly declared that "the Liberty party has not been organized merely for the overthrow of slavery"; "it will also carry out the principle of equal rights into all its practical consequences and applications, and support every just measure conducive to individual and social freedom." The party died before it could name or help give effect to these measures.

Its successor in 1848 inscribed on its banner "Free Soil, Free Speech, Free Labor, and Free Men," but held it "due not only to this occasion, but to the whole people of the United States, that we should declare ourselves on certain other questions of national policy," to wit: cheap postage, economy in expenditures and patronage, election (in place of executive appointment) of civil officers, river and harbor improvements, homestead grants, and payment of the national debt by a tariff for revenue only. In 1852 the Free-Soil party added to the foregoing a cordial welcome to "emigrants and exiles from the Old World," a proclamation of the duty of the American Government to intervene in behalf of Hungary, a recommendation of arbitration in international disputes. Though more spread out than in its inception, this party also died without achieving anything—without even maintaining its strength at the polls. Its successor, the Republican party, conscious of the revolution wrought by the Kansas-Nebraska Bill, introduced but two extraneous topics into its platform, viz., river and harbor improvements and a Pacific railroad to be built by Government aid. In this very restraint the Slave Power might have read the formidableness of its new antagonist.

It is not our object to follow the Republican party through its shifting phases from its commencement to the present moment, when it has, for the second time, been emphatically repudiated as the saviour of society from the horrors of competition with pauper labor. Nor shall we attempt to forecast the items of its next national platform, if there is to be one. We wish to remark, returning to Mr. Reed, that the making of principles by parties, alias the new piecing of platforms from ad-captandum motives, has brought these manifestoes into general contempt as grounds of party association. Not only do men vote for a good candidate in spite of a bad platform, but good candidates themselves feel free to make a mental reservation in accepting the platform along with the nomination. The reason is, partly, that these "principles" are recognized as manufactured articles, and as bearing the impress either of the fears of demagogues or of the interests of private parties. In time clamor, and sophistry, and misrepresentation may produce an appearance of genuine popular sentiment behind the "principles"—as we have seen, to our cost, in the case of greenbacks, the dollar of the fathers, anti-Chinese legislation, pensions, and, we will venture to add, the tariff. But nobody is greatly disturbed, and intelligent observers are not surprised, when these idols are overthrown, for it is then discovered what a handful of priests maintained the shrine.

This overthrow would come sooner if the artificers of the "principles"—what we may call the platform lobby—were known to the public; just as the fate of the protective tariff would have been settled years ago if the pulling and hauling and grabbing and bribing by which each new measure was given its final shape upon the statute-book could have stood revealed. The platform would also regain its reputableness if it were possible to provide it with a sponsor for the execution of it. There is at present no more guarantee of this than there is that protected manufacturers will raise wages as their profits rise. In fact, no sooner does the party convention dissolve than the platform is already discarded. We saw in the late canvass Mr. Blaine offering a select little platform, of his own making, as a substitute for the Minneapolis creation; the silver issue practically abandoned; the tariff issue urged apologetically and defensively; and ridiculous stress laid upon the unpartisan State-bank plank in the Democratic platform. On the other hand, Mr. Cleveland's weight of character and personal sacrifice four years ago determined the real issue of the canvass. He did not invent a principle for his party, but he constrained that party to live up to its highest profession, and no more encouraging spectacle has been witnessed in our politics in this generation. Grant that Mr. Cleveland, like Mr. Reed, has chosen his "crowd," he is resolved not to lapse with it into hypocrisy or corruption, but will do what in him lies to make it "the best crowd," judged not by its membership alone, but by its actual conduct of the Government. Twice he has given his party the choice between standing by him and deserting him—on the question of the tariff and on the question of honest money; and twice have his countrymen

> "seen the obedient sphere
> By bravery's simple gravitation drawn."

REPEAL THE SILVER-PURCHASE ACT.

THE public have been led to believe by several communications and interviews in the newspapers that Senator Sherman will introduce and press a bill this winter to repeal the act of July 14, 1890, or so much of it as calls for the purchase of 4,500,000 ounces of silver bullion per month, and the issue of Treasury notes therefor. The idea has gone abroad that the effect of such repeal would be to revive the Bland-Allison Act of 1878, which provided for the purchase and coinage of $2,000,000 worth of silver bullion per month, and Mr. Sherman has accordingly taken pains to say to the correspondent of the New York *Commercial Bulletin* that he desires to stop the purchase of silver al-

together. It may be worth while to mention that section 11 of the Revised Statutes provides that "whenever an act is repealed which repealed a former act, such former act shall not thereby be revived, unless it shall be expressly so provided." Therefore the repeal of the so-called Sherman Act of 1890 would *ipso facto* accomplish just what the Senator now desires.

Mr. Sherman was asked by the same correspondent whether he had formulated any plan for supplying the country with currency in preference to the present system of silver purchases and Treasury-note issues. He replied that he did not care to say anything about that at present, since legislation on the subject must depend somewhat on the outcome of the Brussels Monetary Conference.

The question what shall take the place of the Silver-Purchase Act is the one most commonly asked by those who discuss the subject at all. Very few persons reflect that if *nothing* takes the place of the Silver-Purchase Act, gold will fill the vacuum naturally and inevitably. It is perhaps too much to expect that a people who have witnessed the monthly purchase of silver and the issue of paper currency thereon for fourteen years should now remember that there is any other way to provide the community with money. It is very natural that they should think that, with a cessation of this process, there would soon be no money, or insufficient money, to transact their daily business with. It is thus that the people have been wrongly educated by Congress until they have got into a frame of mind in which even the wisest Congressmen hesitate to adopt right measures lest they lose their seats at the hands of voters whom they have themselves misled.

Despite the prevailing misinformation, and whatever may be the consequences politically, the time has come to stop fooling with silver. Almost any other fooling would be better than that, because the buying of silver does cause the exportation of gold. Although a great many people fail to see how silver merely displaces gold under the present law (making the amount of money no larger, but only changing its character and changing it for the worse), yet all feel instinctively that an exportation of gold, setting in at this time of the year, when the balance of trade is usually in our favor and the movement of that metal is commonly westward, is something ominous. Certainly we should all like to see an importation rather than an exportation of it at this time.

Our Government is now buying 54,000,000 ounces per year of one of the products of the country—an article of merchandise which would otherwise be exported and would enter into our balance of trade with the world. At eighty-five cents per ounce, this represents $46,000,000 per annum. Our balance of foreign trade is $46,000,000 less than it would otherwise be, and this vacuum must be filled with gold or with something equally good. If the country were making any use of this purchased silver, the case would not be so bad. But it is making no use of it at all: it does not even use it to redeem its notes with. On the contrary, it is incurring expense all the time in taking care of it. Worse still, we are getting a bad name and getting into bad credit abroad by having it on hand. Foreigners who do not see or appreciate the bad education that has been going on among us these fourteen years, and who suppose that our finances are conducted, as theirs are, by the wisest men in the country, naturally think that we are fools and that their money is unsafe here. So they gradually call it in. This withdrawal of foreign capital checks the spirit of enterprise, and if it does not actually produce hard times, it prevents us from obtaining the degree of prosperity that we might otherwise reach. It should be borne in mind too—the fact should never be lost sight of—that in the present nervous condition of the money market any accident, like a partial crop failure or another Baring crisis, would almost certainly result in panic and disaster. The United States ought to be the strongest country in the world financially, not excepting England, and would be so but for this dread of silver, which weighs upon the holders of capital, both here and abroad, like a nightmare.

The Brussels Monetary Conference has now fairly entered upon its labors. It would be entirely proper, and it might even be helpful, for the United States to stop the purchase of silver while the Conference is deliberating. If it be true, as some people believe, that Europe (and especially England) is suffering from the decline in the price of silver, it might be useful to let it drop a few more points. At all events, there is no reason why the whole weight of the burden should rest on our shoulders. The news from the Conference is not particularly encouraging. It is true the English delegates have declared their adhesion to the American resolution which recites that "it is desirable that some measures should be found for increasing the use of silver in the currency system of the nations." This is an expression of sentiment, a sort of "pious opinion," consistent with the maintenance of the single gold standard by Great Britain. On the other hand, the German and Austrian delegates have announced that their Governments cannot change their monetary systems, while those of Russia, Italy, Rumania, Switzerland, and Greece have notified the Conference that under their instructions they are not permitted to vote on the resolution at all. The despatches say that the American delegates are gratified at the prospect of an earnest and sympathetic discussion of the question. If they find a sympathetic feeling for silver at Brussels, we hope they will cultivate it sedulously, and get it extended to tin and pig-iron and all other depressed metals. Meanwhile we hope that Senator Sherman, who is under no illusions respecting the Brussels Conference, and under no political stress of weather, will promptly introduce and press his bill to repeal the act of 1890.

POLITICS AND CURRENCY.

THERE is one defect, in our position before the International Monetary Conference, which of itself would be fatal to any agreement between the United States and European countries, although no mention has as yet been made of it. We mean the fact that our standard of value is "in politics," and is one of the issues submitted to the popular vote at every Federal election. This condition of things is unknown in any of the countries from which we are seeking joint action in establishing a common bimetallic standard. In all of them the regulation of currency is left wholly in the hands of scientific experts and financiers. The opinion of the voters is not asked on it, and the voters do not seek to express any opinion on it. It is assumed in the politics of all these countries that all, high and low, rich and poor, are interested in having a stable medium of exchange, and the decision of the question what this medium shall be is given up to men who have made this subject a special study. The only approach to popular interference with the currency in Great Britain, within the present century, has been in the discussions over the powers which should be given to banks in the matter of issuing notes, and the security which should be exacted for the redemption of the notes in coin. But the question in what sort of coin the notes should be redeemed has never come anywhere near the polls on election day.

As a general rule, the history of currency in the countries now represented at the Conference, since the French Revolution, has been that of a series of changes from silver to gold and from gold to silver, caused by changes in the comparative value of the metals; but the time and mode of these changes and the necessity of them have been left to scientific men, charged by public opinion with the single duty of seeing that the money in which the community made its contracts and sales, continued from year to year to have, as nearly as circumstances would permit, the same purchasing power. No signs of popular affection for one metal as a child of misfortune, or of distrust of another metal as the companion of the rich, has ever appeared in any of them. If, for instance, it had been proposed by the Gladstonians at the last election to take a vote on the question of bimetallism, it would probably have created a financial panic of the worst kind in London, as a sign that the party had gone crazy, and would, if it got into power, ruin the country.

This was our happy condition also down to 1873. Silver was demonetized in that year, under the influences which had

regulated our coinage ever since the foundation of the Government—that is, the opinion of experts. The people at large concerned themselves very little more about the matter than about the Coast Survey or the Nautical Almanac, and would undoubtedly have continued to do so but for the poison infused into our politics by the issue of the legal-tender paper during the war. This prepared the popular mind to look on currency as a proper subject of party politics, and a few politicians had no difficulty in bringing the question of silver into the political arena, and there it has remained ever since, the football of the two parties, and probably the cause of more raging folly than all the other bodies known to chemistry.

Now, it would be childish to suppose that foreign financiers have not followed with close attention the course of our currency mania. They are probably more minutely acquainted with it, as seeing it with clearer eyes, than any of the American delegates, every one of whom has had so much politics mixed with his currency during the past ten years that he hardly knows the taste of one from the taste of the other. The foreigners know very well that we are in a bad fix and desire their help to get out of it, but they know also that the opinions and desires of a rich nation of 65,000,000 about currency questions must always be listened to with respect and attention. There is hardly a doubt that they would all eagerly accept our aid, not in relieving a distressed metal, but in making the standard of value of the civilized world more stable, did we give them a chance. But they have not overlooked the fact that our currency is still in politics—that is, is voted on or liable to be voted on every two years at the election of members of Congress—and that the enormous store of silver we have now in the Treasury vaults has been accumulated not under the influence of financial, but of political considerations, not because our experts recommended it, but because a large body of voters who know little or nothing about the matter demanded it, and in spite of the warnings and protests of nearly every instructed person in the country. We have only to state these facts to show that an international agreement with regard to the coinage which depended for its maintenance and success on the fidelity of every one of the parties to it, would practically put the currency of every country which adhered to it into the American political arena, and compel it to watch our elections with the utmost anxiety, lest the result of the vote should break up the compact. To suppose that France, Germany, and England are going to expose their standard of value to a risk of this sort is to suppose that their business men have lost all their sagacity. It is, in fact, a ridiculous supposition.

The lesson of the situation is, that we shall never be able to come to any agreement about currency with foreign nations until we shall have put currency questions back again into the hands of our experts, with but one mandate—to give us as stable a standard of value as the nature of metals and the nature of the human mind will permit, and to spare no expense for that purpose. When that is done, and their scientific men have nobody to convince or persuade but our scientific men, international currency agreements may be possible. They will not be possible as long as the length of our yardstick and the size of our quart pots may be changed at any election

THE GLORIFICATION OF ATHLETICS.

THERE is no doubt that the college athletic year just closed brought certain features of intercollegiate sports to a prominence never before witnessed. The professional spirit in these contests has been displayed in an unprecedented degree, both in the unwonted length and severity of preliminary training, and more particularly in the charges of foul play and one-sided umpiring openly and freely made, with what justice we cannot say. So, too, has the gambling mania attached itself to college athletics with an excess and extravagance not seen earlier. Of course, the crowds and enthusiasm, the glory of the victors and the shame of the vanquished, the vulgarity and lawlessness of a lot of boys let loose in a great city, have all been greater than ever before. Greater, too, we would add, has been the swamping throughout the entire year of all other undergraduate ideals by the one predominant and overmastering athletic ideal.

To our mind this is the greatest evil which the modern development of college athletics has brought in its train. The other incidental evils, often enough remarked upon, may perhaps be fairly said to find a set-off in the undoubted improvement in health and in morale which has come in with the new attention to physical training. But we know of no compensating advantage to put over against the distorted conception of life, and particularly of college life, the false standard of individual and college distinction, and the evident retarding of young men in arriving at serious and worthy ideals, all of which have been involved in the increasing glorification of college athletics. For it must be understood that the absorption of our educated young men in contests of physical strength and skill is no longer confined to their four undergraduate years; it reaches back to the fitting-schools and further, until it is literally a fact that sturdy boys just out of their kilts are taught to look forward to getting "on the team" as the noblest thing to strive for. Who will deny that when thousands of boys from that age up to graduation are giving the athletic ideal the highest place, the most grave consequences to character are involved?

It is a frequent remark of observant foreigners that the American young man of eighteen to twenty-five years is a singularly uninteresting being. It is not that they are particularly struck in him with the immaturity which is perhaps unavoidable in that cartilaginous period. Such immaturity they have been familiar with in the young men of their own countries, but with it they have been accustomed to associate a fine abandon in the avowal and pursuit of artistic or literary or scientific or political ideals. These they find to be conspicuous by their absence in the generality of American youth, and some of them have thought they saw an explanation of the fact in the too exclusive devotion to physical prowess. We believe it to be true that young men are later than they were one or two generations ago in arriving at that conception of life which is finally to enlist their enthusiasm and their powers. This may be in part due to those changed economic conditions which have brought about the retardation of marriage, for example; but we think that at least a plausible case could be made out for the theory that the modern supremacy of the athletic ideal is to be held partly accountable for it.

Color is at any rate given to that theory by observing how the thing works in the case of some of the most famous of college athletes. Meaning to be entirely impersonal, we believe it to be the fact that, as a rule, the men who have run glorious athletic careers at college, are considerably slower than their fellows in settling down to the serious work of life. The old fascination is still upon them. They gravitate, as by second nature, back to the football field, as amateurs, as paid coachers, as passed-masters in the game. In the same reluctance to be gone they linger at the baseball games and hang about the rowing-tank. This is but natural. After developing a pair of shoulders and a biceps which have brought him four years of purest glory, it is hard for a man to realize that he has come to a point where he no longer compels the huzzas of the crowd. So, in too many cases, the result is that most melancholy one of a graduate returning to the scenes of his sweetest triumphs; going for a year or two, with the laurels yet green upon his brows, and getting the old heart-filling "hep! hep!" from the undergraduates; then figuring as a sage adviser, and finally sinking to the humiliation of being pointed out as an "old-timer," a "back number," one whom the development of the game and the flight of years have left high and dry.

We think it fair to infer that the harmful effects of the glorification of athletics thus distinctly traceable in individual cases pass over to many others in as baneful, if not in as conspicuous, a manner. The Greeks knew something about gymnastics and the consequences of a high degree of physical culture, and Plato saw the necessity of putting some limitations upon their pursuit in his ideal republic. He considered the "mere athlete" as little

better than a "savage," and distinctly declared the effect of gymnastic training carried to great lengths to be to make the mind "dull and feeble." We do not know how much weight Plato carries with the undergraduate mind of to-day, but we can reinforce his authority with one which no young man will lightly set at defiance—none other than that of some of the brightest and, what is more, prettiest among the girls. Many of them we have heard to admit in private, and some to declare with vigor in public, that college boys are getting to be a stupid set, having nothing to talk about but "in-shoots" and "recovers" and "touch-downs." Such young ladies, of course, have their own particular enthusiasms and ideals, but they are foolish enough to maintain that a passion for music, for example, or for art or literature, is far more interesting and worthy, even for purposes of conversation alone, than the one subject which now seems to drive everything else out of the young male mind. We certainly hope they will come in increasing numbers to the help of Plato against the stupefying influence of unlimited athletics.

At any rate, we must hope that, either through surfeit and reaction from excess, or through the rousing of college authorities to their duty in the premises, a change may come. In some way the present maladjustment of college ideas ought to be corrected, so that a good scholar need not apologize for attention to his studies, or a lover of letters or art or science be obliged to point to some physical infirmity as his sufficient excuse for not having done his part in upholding the true glory of the college in the scrimmages of the football field.

NEW FEATURES IN RAILWAY FINANCE.

THE plan of reorganization of the Chicago, St. Paul and Kansas City Railway has a number of features novel in American railway finance which deserve study and discussion. This company has had a chequered career. It has often been charged against Mr. Stickney that his ambition led him to build an unnecessary railroad, one which must continue to prove a thorn in the side of the trans-Mississippi companies until the traffic grows up to the combined carrying capacity. At least it is true that the railway has not been able to earn interest on its cost, though its promoters feel confident about the future. Three years ago the bondholders agreed to fund their coupons, these coupons forming a "priority loan" on which interest has been paid. The funding plan expires by limitation next January, making necessary a reorganization. Under these circumstances an English committee has formulated a plan modelled after the English method of dealing with railway debentures and preference stocks.

Under the Illinois statute of 1885, a new corporation, the Chicago Great Western, was formed, to which the old road should be leased and into whose shares the old Kansas City Railway bonds and stocks should be exchanged. Each old first-mortgage bondholder is offered $500 in 4 per cent. debenture stock, and $600 in 5 per cent. preferred stock A. The new company secures payment of "interest" on the debenture stock, and a fair accounting for the preferred, by executing a deed of trust to some trust company. This trust deed provides (a) that in case of liquidation the net assets shall be applicable to the new stocks or securities in their order; (b) that holders shall from their own number select a Finance Committee which shall have general supervision and control of the company's finances; (c) that further issues of debenture or A stocks shall be made only by a majority vote, or, in the case of an issue of bonds, by a two-thirds vote, subject also to approval of the Finance Committee; (d) that in case of a default in debenture interest, the trustee under the deed of trust shall, when required by the Finance Committee, appoint a receiver to apply the income and manage the property subject to the control of the debenture and A holders, the stockholders having no voice; (e) that in case the company makes good its default, possession shall revert to the company. Any surplus above debenture interest shall go absolutely to holders of A stock; any failure to distribute all such earnings shall also be an infraction of the trust deed and bring the same penalties. Present income and stockholders are assessed, the money so raised to be used to buy a branch road, to pay floating-debt, and for meeting rolling-stock warrants; the priority loan of $2,820,000 to remain as a mortgage as at present.

It will at once be seen that this plan is a departure from our customary methods about railway mortgages. Though the idea has been abandoned in Great Britain, we in the United States continue to regard railroad bonds as foreclosable. In theory they are; in practice they are not. A mortgage upon a house and one upon a railway are different in their real nature, no matter how closely the legal language of the one resembles that of the other. Practically, the railway cannot stop running, so its mortgage is really upon its earning power as a carrier, and not upon its plant; for the plant, unlike a house or factory, is useless for any other business. The English law recognizes this distinction; so English debentures cannot be foreclosed. The Stickney reorganization attempts to modify American theory to conform to these facts. So far as it puts the real state of things clearly before the bondholders and the people of the United States it is to be heartily commended, for it sets a precedent which, under the criticism of time and experience, may be followed in other cases, with the result of securing in our railway law and finance that progress which we see in other departments of business and law.

The plan evidently intends if possible to make the debenture shares partly a bond and partly a stock. How far this is legal is a question, though it may prove workable in actual practice. There have been attempts before to give to preferred stock the nature of a bond. The St. Louis and San Francisco first-preferred stockholders have only just given up their claim to 7 per cent. guaranteed dividends, under a series of defeats. A stockholder cannot be a creditor and a partner at the same time. Nevertheless all future creditors have notice of the deed of trust, whatever that may amount to. Yet something of the kind has proved a workable theory in England, where stockholders lose control of their property if they do not pay the debenture interest—as is also provided for in the Chicago and Great Western plan. The success of such a form of railway organization depends, even more than is usual in the United States, upon the assent of all concerned, for the plan is really a change in the articles of copartnership, if that expression may be used of a corporation. There are many instances where the equities of former bondholders have, in a reorganization, been recognized by giving preferred stock in exchange—indeed, the most of our existing preferred stock represents bond losses; but holders have been content to become stockholders simply. The Chicago Great Western plan is an endeavor to confer greater rights upon such former bond-owners by providing that their debentures shall have a sure payment of interest (not called debenture "dividend," be it noted) under definite penalties, and that the A stockholders shall receive all the contingent earnings, whatever they may be, without the possibility of diversion by the directors. No doubt the English committee thought they were checking an American abuse in this last provision, requiring distribution of all earnings; and no doubt they felt secure in inserting such a section, since they also permit a further issue of debentures or other securities to raise capital; yet, after all, they may wish they had left such payment somewhat discretionary when the road comes to need more money.

Public interest will probably centre around that feature of the plan which provides harmoniously for a transfer of control without litigation from the common to the guaranteed stockholders, should misfortune bring about a suspension of debenture payments. Its practical working would prove an experiment which railroad and financial men would gladly see tried. The feature has in its favor the fact that it attempts to bring our railway and legal procedure into line with modern transportation and commercial principles, though its complete adoption would work a revolution in our established law.

THE RELIGIOUS QUESTION IN FRANCE.

PARIS, November 15, 1892.

IN attempting to analyze broadly the political situation in France, I have had more than once to allude to the religious question. The fact is, that this question is mixed up with every other, and that, by its wide ramifications, it is undoubtedly one of the principal factors of what may be called the psychology of our country. It is of the first importance to try to indicate in what it consists. To do so exhaustively would need a volume; but I will endeavor to set it forth, in so far as it is distinctly political, by a rapid sketch of the position of the Roman Catholic Church in reference to the Republic—that is to say, the French Church and the Republican party in France.

The origin of the present state of things is known to all. Before 1789 the clergy were a separate order in the State, enjoying numerous privileges and possessing considerable property. The Revolution, in abolishing the order, suppressed its privileges and confiscated its property. In addition to these measures others were taken, so that at the end of the revolutionary period the Church in France found itself in every way in the most complete state of chaos. Bonaparte, when First Consul, wished to put an end to this state of things. Negotiations were entered into for this purpose with the Court of Rome, and the Concordat of 1801 was the result. The Concordat itself was afterwards supplemented by a law which is known in our history under the name of the "Organic Articles." We have not at present to examine in detail these articles and laws; we need only refer to those which assume importance by their relation to present circumstances. It should first be noticed that the Concordat is an arrangement between two parties, a diplomatic treaty, in fact, signed between two Powers which accordingly cannot modify it except by common accord. On the other hand, the members of the clergy have become, in a sense, the paid functionaries of the State. The appointment of bishops is made after consultation and agreement between the Government and the Court of Rome, and the curés appointed by the bishops have to be accepted by the Government, while both bishops and curés receive a State stipend in exchange for the revenues formerly confiscated, which the Church pledges itself never to claim. This very fact of the bishops and the curés being appointed with salaries fixed by law places them in a position similar to that occupied by other functionaries of the State, and gives the State the means of enforcing obedience on their part in any case in which their attitude may have given offence.

If the Concordat has, since its conclusion, been always the basis of action in matters affecting the Catholic Church in France, there have been and are many other factors at work in any questions that have occurred and do occur from time to time for settlement, so that it is impossible to consider the Concordat as altogether apart from these. There is, first of all, what may be called the moral situation. The French population is almost entirely Catholic, and this consideration alone would suffice to give the Church great importance. Then, again, the Governments that have succeeded each other since the beginning of the century have been, in general, well disposed towards the Church. It is true, the July Monarchy was not religious in its sympathies; but the Restoration, both the First and the Second Empires, even the Republic of 1848, then that of 1870 at the beginning, not only showed respect to the Church, but were often enough very religious in their sympathies. From this attitude there resulted a state of things favorable to the members of the Church. For instance, the ministers of religion were dispensed from all military service; the law of 1870 in reference to primary education allowed them to be teachers in the schools, and dispensed them from compliance with certain regulations compulsory in the case of laics; and, to quote again from the history of the educational question, a time came when all the primary schools fell into the power of the Church, and one order in particular, that of the Jesuits, opened a number of educational establishments which soon became very powerful.

Things began to change some years after the proclamation of the Third Republic, at a moment when the latter, ceasing to be a Provisional Government awaiting the restoration of the monarchy, passed into the hands of a definite Republican party. Before long there was open warfare between the Government and the Church, and the struggle went on increasing in intensity in proportion as the power veered more to the Radical side. The causes of this change are manifold, some being related to the Republican principle itself, others to the Church. The Republican party as a whole is not well disposed towards religion, and least of all towards the Catholic Church. First of all pushing it in the direction of extreme measures, there is the kind of contradiction that exists between the Republican principles and those of the Church. The absolute sovereignty of the people harmonizes badly with the ideas of obedience taught by the Church. Then, the development of the formula, "liberty and equality," in the manner in which the Republicans conceive it—the notion of the absolute respect due to liberty of thought—leads to the desire not to offend the Protestants by favors bestowed on the Catholics, as also not to impose religious forms on free-thinkers; and so by degrees comes the desire for the absolute secularization of the State. The recollections of the Revolution have also to be taken into account. The Revolution struck at the Church. Consequently, those who call themselves its children are likely to imitate its action. And lastly, Republicans dread the influence the clergy may acquire over the consciences and therefore over the votes of the people; and this it is which has chiefly contributed to exasperate them, the Church having often assumed an attitude openly hostile to the Government.

Independently even of the hostility that exists perhaps necessarily between the principles of the Church and those of the republican democracy, the Church has private griefs against the latter. It cannot forget that the Revolution has lowered it in every way, both by attacking its influence and by subjecting it to the civil power and confiscating its property. Hence it is naturally disposed to fight against those who declare themselves the children of the Revolution and proclaim their desire to continue and complete its work; and it is accordingly constrained to ally itself with parties purely political, that seek, in the name of conservative principles, to hinder the development and application of the ideas born of the Revolution. In this manner may be explained the alliance concluded between the Church and the royalist parties—an alliance all the closer because the latter, realizing what advantage they might get from having such an auxiliary, for a long time spared no trouble, and let no opportunity escape, to identify their own cause with that of the Church.
